(*b*) *Irrigation Schemes.* The second division comprises the schemes constructed and under construction for the supply of water to between twenty to thirty irrigation districts. Up to 1906 these schemes were controlled by local Trusts which had obtained the moneys for the construction on loans borrowed from the State. By the Water Act 1905 all local control was abolished and the districts were transferred to the State Rivers and Water Supply Commission. Since this date the Government has adopted a vigorous irrigation policy and the expenditure on construction during the past three years amounts to £1,000,000. The irrigation works draw their supplies mainly from headworks constructed on the Murray, Goulburn, and Loddon rivers. The cost of these works, which now stands at £1,082,000, is not debited to the districts benefited but is borne entirely by the State. Within the last two years the State has adopted the policy of purchasing large areas of land commanded by these schemes and subdividing them for intensive culture. The settlement of the areas on these lines will mean a large increase in the population of the State.

(*c*) *Domestic and Stock Schemes.* The third division takes into account the schemes constructed and under construction for the supply of water for domestic and stock purposes to very large tracts of country. The principal works of this division are situated in the Wimmera and Mallee districts. and cover an area of about 6000 square miles. The loan expenditure in 1909 within this area amounted to between £40,000 and £50,000, while for 1910 it is estimated that the expenditure will amount to over £70,000. In addition to the Commissions' districts some large areas are still administered by local authorities.

It should be mentioned that in 1899 the State deemed it advisable to write-off the sum of £1,073,000 from capital accounts of the local bodies then controlling the works in each of the above divisions.

(iii.) *Mildura.* The first settlement of Mildura dates from 1884. After being managed until 1887 by Chaffey Bros., and then until 1895 by Chaffey Bros. Company Limited, it was in that year taken over by the First Mildura Irrigation Trust and has

since then made great progress. Its population, which at the Census of 1891 was 2321, has increased to about 5000. The exports of dried and canned fruit from Victoria, nearly all of which came from Mildura, amounted in 1909 to £173,785, viz.:—Canned fruits, £54,014; dried fruits—raisins, £84,548; other, £35,223. Of these exports £162,318 worth were sent to the other States of the Commonwealth, chiefly New South Wales, and Queensland, while the balance of £11,467, of which raisins accounted for £5099, was exported oversea.

No precise figures are available as to the capital cost of the works at Mildura; probably the sum was not less than £180,000. The amount due to Government is £67,382, exclusive of £16,851 for accumulations of interest.

(iv.) *Area Irrigated.* The area of country lands within the State artificially supplied with water for domestic and ordinary use and for watering stock is 16,975 square miles, equal to 10,864,000 acres. The extent of land under irrigated culture for all kinds of crop is 129,771 acres, a decrease of 47,102 acres compared with the area irrigated in 1908-9. Last year, however, the usual supply was not available for the districts supplied from the Loddon River Works on account of the breaking of the Laanecoorie Weir. Of this area, 23,715 acres were under cereals, 24,124 acres under lucerne and other permanent fodder crops, 8094 acres under sorghum and other annual fodder crops, 50,541 acres under pasture, 17,524 acres (of which 9609 acres at Mildura) were vineyards, orchards, and gardens, while the balance of 5773 acres was in fallow, etc.

(v.) *The Trawool Scheme.* A project was mentioned some time ago of constructing a weir across the Upper Goulburn river at the Trawool Gorge, in the neighbourhood of Seymour. If this scheme should ever be carried out, the weir would have to be about 1700 feet long, and at the deepest part of the river 140 feet high. It was expected that the weir would impound water for about twenty miles upstream, and that it would provide a reservoir of a capacity of 60,000 million cubic feet. About 20,000 acres of gullies and river flats would be permanently submerged. The cost was estimated at about £1,500,000. This would make it by far the largest reservoir in existence, the Assouan dam only holding 35,840 million cubic feet, while the capacity of the Waranga basin amounts to 8811 million cubic feet. The Barren Jack reservoir, now in course of construction, in New South Wales, will, with water of a maximum depth of 224 feet, hold 33,630 million cubic feet. For the present the Trawool scheme remains, however, in abeyance.

4. **Queensland.**—The main irrigation works in Queensland are as follow:—(*a*) those at Ayr, which utilise the waters of the Burdekin River, and shallow wells on its banks; (*b*) those at Bingera, near Bundaberg, which utilise water pumped from the Burnett River just above the point of meeting of the salt and fresh waters, and (*c*) those at Fairymead, which utilise water pumped from a number of shallow spear wells sunk on the alluvial flats on the north side of the Burnett River and about six miles from Bundaberg. Apart from the persons benefiting from the two schemes mentioned, there were said to be not more than 363 irrigators in 1909, chiefly farmers and graziers, in the State.

5. **South Australia.**—(i.) *The Renmark Irrigation Trust.* The Renmark Irrigation Trust was established on similar lines to Mildura, but on a considerably smaller scale. At present the land assessed for the purpose of the trust measures about 3600 acres, and maintains a population of about 1000. The export of Renmark products averages about £35,000 per annum. It is claimed that without irrigation the land would barely feed 500 sheep.

(ii.) *Other Waterworks.* The Bundaleer reservoir consists in a large earth and clay embankment which impounds water in a natural basin away from the main water-courses. Its capacity is stated as 1,319,000 gallons.

The Barossa waterworks have a reservoir wall of concrete seventy-five feet in height. The reservoir has a holding capacity of 993,340,000 gallons.

A reservoir, the first in the northern part of the State, was completed at the end of 1909 on Pekina Creek, above Orroroo.

The largest of the South Australian undertakings is the Beetaloo waterworks, which command the towns of Port Pirie, Moonta, Wallaroo, Kadina, and fifteen others, besides one million acres of country lands. The cast-iron reticulation pipes in connection with Beetaloo are 637 miles in length, and the capital cost of the works was £989,950.

None of the South Australian works, Renmark excepted, are, however, irrigation works properly so called, although they are to some extent used for irrigation purposes.

(iii.) *Area under Irrigation.* The area under irrigation in South Australia, including reclaimed lands along the Murray, amounted to only 20,000 acres at the beginning of 1911. The Government, however, proposes to push on with the irrigation schemes along the Murray as fast as possible. The Cobdogla station, held under grazing permits, will be the next area taken in hand, and notice for the resumption of 118 square miles has been given to the present occupiers. The area comprises practically the whole of the original Lake Bonney irrigation scheme, and is contiguous to the Berri irrigation area, which contains a further 19,000 acres of the Cobdogla run. It is proposed to start the reticulation with channels for an area of 5000 acres, between the Cobdogla homestead and Lake Barmera (formerly Lake Bonney), which lends itself to economical irrigation. A large central pumping station will be erected at the south end of the lake, and will command the whole of the irrigation area, including the 5000 acres, the maximum lift being about 90 feet.

6. **Conflicting Interests.**—The relative rights of the States of New South Wales, Victoria, and South Australia to the waters of the Murray River are undetermined. Territorially the south bank of the Murray was the boundary between the two former States, *i.e.*, the region of the river itself, up to the point where it enters South Australia, was wholly within New South Wales.

At the Federal conventions which preceded the establishment of the Commonwealth the South Australian representatives expressed their fear lest too much irrigation on the Murray and Darling might impair the navigability of the latter river, and the result was the insertion of a provision in the Commonwealth Constitution which reads as follows:—

"*Section 100.*—The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or the residents therein to the reasonable use of the waters of rivers for conservation and irrigation."

Under this section negotiations have for several years been in progress between the three interested States. In January, 1911, a conference took place in Melbourne between the Premiers of New South Wales, Victoria, and South Australia on the Murray Water question. One of the primary objects of this Conference was to discuss the provision in the Murray Works Act, passed by the South Australian Government in 1910, authorising the carrying out of certain works at Lake Victoria in New South Wales subject to an agreement being made for the acquisition by South Australia of the Lake together with the two watercourses, known as Rufus River and Frenchman's Creek, connecting the River Murray with the Lake. The Premier of South Australia claimed the right to have enough water sent down the river to maintain navigation, and also asserted a right to the waters flowing down the Goulburn in Victoria, and the Murrumbidgee in New South Wales, into the Murray, as well as to the waters of the Murray itself, not only for navigation, but also for the irrigation purposes contemplated by the Government of South Australia. In support of the navigation proposal it was stated that South Australia had in view a scheme for cutting a canal from the Murray to Victoria Harbour,

with harbour improvements, etc., which altogether would cost a million sterling. Briefly stated, the results of the conference were that South Australia was to be allowed to carry out storage works at Lake Victoria, New South Wales, and lock her own portion of the Murray at her own expense, but New South Wales and Victoria would not recognise the claims of navigation in any way, and would not bind themselves to deliver any quantity of water at the point of intake into South Australia. No rights to navigation were conceded by New South Wales and Victoria, and the upper portions of the river were left free for irrigation. The storage works which the South Australian Government proposes to construct at Lake Victoria will cost about £162,000, and the total scheme, which will include the construction of at least five locks, will cost between £600,000 and £700,000. It is estimated that as the result of the storage works 22,000,000,000 cubic feet of water can be impounded in Lake Victoria. It is stated that there will be no difficulty in filling the Lake in the winter months.

SECTION XV.

COMMERCE.

§ 1. Introductory.

1. **General.**—The development of the commerce of Australia might be considered from several standpoints—for example, the historical, the legal, or the purely financial—all of which are important.

The importance of the subject demands a reference to the constitutional power of the Commonwealth in respect to commerce and to the various Acts which have been passed in the exercise of that power, since these profoundly affect its trade and commerce.

In setting out the statistics of commerce regard will be had to the significant features of its development, both from the historical and financial point of view.

2. **Constitutional Powers of Commonwealth in regard to Commerce.**—Under the provisions of the Commonwealth Constitution Act [*vide* pp. 38 to 45 of this volume] power to make laws with respect to "trade and commerce with other countries and among the States" is vested in the Commonwealth Parliament. [Chap. I., Part V., sec. 51 (i.), *vide* p. 39.]

The Constitution Act further provides in relation to trade that:—

"On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, shall pass to the Executive Government of the Commonwealth." [Section 86.]

"Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth." [Section 88.]

"On the imposition of uniform duties of customs the power of the Parliament to impose duties of customs and of excise, and to grant bounties on the production or export of goods, shall become exclusive.

"On the imposition of uniform duties of customs all laws of the several States imposing duties of customs or of excise, or offering bounties on the production or export of goods, shall cease to have effect, but any grant of or agreement for any such bounty lawfully made by or under the authority of the Government of any State shall be taken to be good if made before the thirtieth day of June, one thousand eight hundred and ninety-eight, and not otherwise." [Section 90.]

"Nothing in this Constitution prohibits a State from granting any aid to or bounty on mining for gold, silver, or other metals, nor from granting, with the consent of both Houses of the Parliament of the Commonwealth expressed by resolution, any aid to or bounty on the production or export of goods." [Section 91.]

"On the imposition of uniform duties of customs, trade, commerce, and intercourse among the States, whether by means of internal carriage or ocean navigation, shall be absolutely free." [Section 92, 1st paragraph].

"The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to railways the property of any State." [Section 98.]

"The Commonwealth shall not, by any law or regulation of trade, commerce, or revenue, give preference to one State or any part thereof over another State or any part thereof." [Section 99.]

"The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or of the residents therein to the reasonable use of the waters of rivers for conservation or irrigation." [Section 100.]

"There shall be an Interstate Commission, with such powers of adjudication and administration as the Parliament deems necessary, for the execution and maintenance, within the Commonwealth, of the provisions of this Constitution relating to trade and commerce, and of all laws made thereunder." [Section 101.]

"The Parliament may by any law with respect to trade or commerce forbid, as to railways, any preference or discrimination by any State, or by any authority constituted under a State, if such preference or discrimination is undue and unreasonable or unjust to any State; due regard being had to the financial responsibilities incurred by any State in connection with the construction and maintenance of its railways. But no preference or discrimination shall, within the meaning of this section, be taken to be undue and unreasonable, or unjust to any State, unless so adjudged by the Interstate Commission." [Section 102.]

"The members of the Interstate Commission—

(i.) Shall be appointed by the Governor-General in Council;

(ii.) Shall hold office for seven years, but may be removed within that time by the Governor-General in Council, on an address from both Houses of the Parliament in the same session praying for such removal on the ground of proved misbehaviour or incapacity;

(iii.) Shall receive such remuneration as the Parliament may fix; but such remuneration shall not be diminished during their continuance in office." [Section 103.]

"Nothing in this Constitution shall render unlawful any rate for the carriage of goods upon a railway, the property of a State, if such rate is deemed by the Interstate Commission to be necessary for the development of the territory of the State, and if the rate applies equally to goods within the State and to goods passing into the State from other States." [Section 104.]

Provisions of a temporary nature and which have now ceased to operate were also made as follows:—

"But notwithstanding anything in this Constitution, goods imported before the imposition of uniform duties of customs into any State, or into any colony which, whilst the goods remain therein, becomes a State, shall, on thence passing into another State within two years after the imposition of such duties, be liable to any duty chargeable on the importation of such goods into the Commonwealth, less any duty paid in respect of the goods on their importation." [Section 92.]

"Notwithstanding anything in this Constitution, the Parliament of the State of Western Australia, if that State be an original State, may, during the first five years after the imposition of uniform duties of customs, impose duties of customs on goods passing into that State and not originally imported from beyond the limits of the Commonwealth; and such duties shall be collected by the Commonwealth.

"But any duty so imposed on any goods shall not exceed during the first of such years the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and shall not exceed during the second, third, fourth, and fifth of such years respectively, four-fifths, three-fifths, two-fifths, and one-fifth of such latter duty, and all duties imposed under this section shall cease at the expiration of the fifth year after the imposition of uniform duties.

"If at any time during the five years the duty on any goods under this section is higher than the duty imposed by the Commonwealth on the importation of the like goods, then such higher duty shall be collected on the goods when imported into Western Australia from beyond the limits of the Commonwealth." [Section 95.]

§ 2. Commonwealth Commercial Legislation.

1. **Customs Act 1901 (No. 6 of 1901).**—"An Act relating to the Customs," assented to on the 3rd October, 1901, came into operation by proclamation on the 4th October, 1901. This provided for the establishment of the necessary administrative machinery for all matters pertaining to the customs, and prescribed, *inter alia*, the manner in which customs duties shall be computed and paid. It does not, however, determine the rates thereof.

During the interval between the inception of the Commonwealth, viz., on 1st January, 1901, and the coming into operation of the Customs Act 1901, the Customs Acts of the several States were administered by the Executive Government of the Commonwealth, under section 86 of the Constitution.

2. **Customs Tariff Act 1902 (No. 14 of 1902).**—The first Commonwealth Customs Tariff imposing uniform rates of customs duty in all the States was introduced in the House of Representatives on the 8th October, 1901. "An Act relating to Duties of Customs," assented to on the 16th September, 1902, made provision that uniform duties of customs specified in the tariff schedule should be imposed from the 8th October, 1901, at four o'clock in the afternoon, reckoned according to the standard time in force in the State of Victoria. From this time onwards trade between the States became free, with, however, the exception, under section 95 of the Constitution Act, of the right of Western Australia to levy duty on the goods from other States. [Repealed by the Customs Tariff Act 1908 (No. 7 of 1908.)]

3. **Sea Carriage of Goods Act (No. 14 of 1904).**—"An Act relating to the Sea Carriage of Goods," assented to on the 15th December, 1904, to commence on the 1st January, 1905, provides that—"Where any bill of lading or document contains any clause, covenant or agreement whereby (*a*) the owner, charterer, master, or agent of any ship or the ship itself, is relieved from the liability for loss or damage to goods arising from the harmful or improper condition of the ship's hold, or any other part of the ship in which goods are carried, or arising from negligence, fault, or failure in the proper loading, stowage, custody, care, or delivery of goods received by them or any of them to be carried in or by the ship; or (*b*) any obligations of the owner or charterer of any ship to exercise

due diligence and to properly man, equip, and supply the ship, to make and keep the ship seaworthy, and to make and keep the ship's hold, refrigerating and cool chambers, and all other parts of the ship in which goods are carried, fit and safe for their reception, carriage, and preservation, are in any wise lessened, weakened, or avoided; or (*c*) the obligations of the master, officers, agents, or servants of any ship to carefully handle and stow goods, and to care for, preserve, and properly deliver them, are in any wise lessened, weakened, or avoided; that clause, covenant, or agreement shall be illegal, null and void, and of no effect.

"In every bill of lading with respect to goods a warranty shall be implied that the ship shall be, at the beginning of the voyage, seaworthy in all respects and properly manned, equipped, and supplied.

"In every bill of lading with respect to goods, unless the contrary intention appears, a clause shall be implied whereby, if the ship is at the beginning of the voyage seaworthy in all respects and properly manned, equipped, and supplied, neither the ship nor her owner, master, agent, or charterer shall be responsible for damage to or loss of the good resulting from (*a*) faults or errors in navigation; or (*b*) perils of the sea or navigable waters; or (*c*) acts of God or the King's enemies; or (*d*) the inherent defect, quality, or vice of the goods; or (*e*) the insufficiency of package of the goods; or (*f*) the seizure of the goods under legal process; or (*g*) any act of omission of the shipper or owner of the goods, his agent, or representative; or (*h*) saving or attempting to save life or property at sea; or (*i*) any deviation in saving or attempting to save life or property at sea."

4. **Secret Commission Act 1905 (No. 10 of 1905).**—"An Act relating to Secret Commissions, Rebates, and Profits," assented to on the 16th November, 1905, provides that—"Any person who, without the full knowledge and consent of the principals directly or indirectly, (*a*) being an agent of the principal, accepts or obtains, or agrees or offers to accept or obtain, for any person, for himself, or for any person other than the principal; or (*b*) gives or agrees to give or offers to the agent of a principal, or to any person at the request of an agent of the principal, any gift or consideration as an inducement or reward for any act done or to be done, or any forebearance observed or to be observed, or any favour or disfavour shewn or to be shewn in relation to the principal's affairs or business, or on the principal's behalf, or for obtaining or having obtained, or aiding or having aided to obtain for any person an agency or contract for or with the principal, shall be guilty of an indictable offence.

"Any person who (*a*) gives to an agent; or (*b*) being an agent receives or uses, with intent to deceive the principal, any receipt, account, or document in respect of which the principal is interested or in relation to a dealing, transaction, or matter in which the principal is interested, the receipt account, or document being false, erroneous, or defective in any material particular, or likely in any way to mislead the principal, shall be guilty of an indictable offence.

"Any agent who, without the full knowledge and consent of the principal, buys from or sells to himself, or any firm of which he is a partner, or any company of which he is a director, manager, officer, or employee, or in which he or any person for him or on his behalf is a shareholder, any goods for or on behalf of his principal, shall be guilty of an indictable offence.

"Whoever aids, abets, counsels, or procures, or is in any way directly or indirectly knowingly concerned in or privy to (*a*) the commission of any offence against this Act; or (*b*) the commission outside Australia of any act, in relation to the affairs or business or on behalf of a principal residing in Australia, which, if committed in Australia, would be an offence against this Act, shall be deemed to have committed the offence and be punishable accordingly.

"This Act applies to trade and commerce with other countries and among the States, and to agencies of and contracts with the Commonwealth or any department or officer thereof."

5. **Commerce (Trade Descriptions) Act 1905 (No. 16 of 1905).**—"An Act relating to Commerce with other Countries," assented to on the 8th December, 1905, and brought into operation by proclamation on the 8th June, 1906, gives power to compel the placing of a proper description on certain prescribed goods, or on packages containing the same, being imports or exports of the Commonwealth. In this Act, unless the contrary intention appears, "trade description" in relation to any goods, means any description, statement, indication, or suggestion, direct or indirect, "(*a*) as to the nature, number, quantity, quality, purity, class, grade, measure, gauge, size, or weight of the goods; or (*b*) as to the country or place in or at which the goods were made or produced; or (*c*) as to the manufacturer or producer of the goods or the person by whom they were selected, packed, or in any way prepared for the market; or (*d*) as to the mode of manufacturing, producing, selecting, packing, or otherwise preparing the goods; or (*e*) as to the material or ingredients of which the goods are composed, or from which they are derived; or (*f*) as to the goods being the subject of an existing patent privilege, or copyright, and includes a customs entry relating to goods; and any mark which, according to the custom of the trade or common repute, is commonly taken to be an indication of any of above matters, shall be deemed to be a trade description within the meaning of this Act.

" 'False trade description' means a trade description which, by reason of anything contained therein or omitted therefrom, is false or likely to mislead in a material respect as regards the goods to which it is applied, and includes every alteration of a trade description, whether by way of addition, effacement, or otherwise, which makes the description false or likely to mislead in a material respect."

The operation of the Act is restricted to the following classes of goods:—(*a*) Articles used for food or drink by man, or used in the manufacture or preparation of articles used for food or drink by man; or (*b*) medicines or medicinal preparations for internal or external use; or (*c*) manures; or (*d*) apparel (including boots and shoes), and the materials from which such apparel is manufactured; or (*e*) jewellery; or (*f*) seeds and plants.

6. **Australian Industries Preservation Act 1906 (No. 9 of 1906).**—"An Act for the Preservation of Australian Industries and for the Repression of Destructive Monopolies," assented to 24th September, 1906, provides that any person or any corporation making or engaging or continuing in any combination "with intent to restrain trade or commerce to the detriment of the public or with intent to destroy or injure by means of unfair competition any Australian industry the preservation of which is advantageous to the Commonwealth, having due regard to the interests of the producers, workers, or consumers," or any person or corporation monopolising or attempting or conspiring to monopolise any part of the trade of the Commonwealth with intent to control, to the detriment of the public, the supply or price of any service, merchandise, or commodity, is guilty of an offence. (Amended, see Acts No. 5 of 1908 and No. 26 of 1909-1910.)

7. **Customs Tariff 1906 (No. 14 of 1906).**—"An Act relating to Duties of Customs" amends the Customs Tariff of 1902 in relation to the duties on harvesters and agricultural implements and machinery and prescribes the prices to be the maximum prices of Australian harvesters and drills delivered to the purchaser at the railway station or port nearest to the factory where they are made. [Repealed by Customs Tariff Act 1908 (No. 7 of 1908.)]

8. **Customs Tariff (South African Preference) 1906 (No. 17 of 1906).**—"An Act relating to Preferential Duties of Customs on certain goods the produce or manufacture of the British Colonies or Protectorates in South Africa which are included within the South African Customs Union," assented to 12th October, 1906, to operate from 1st October, 1906, provides for special preferential rates of duty on certain goods imported from and being the produce of any of the Colonies or Protectorates included within the South African Customs Union.

9. **Australian Industries Preservation Act 1907 (No. 5 of 1908).**—"An Act to amend the Australian Industries Preservation Act 1907," assented to 14th April, 1908, provides additional machinery for procuring evidence of offences against the principal Act.

10. **Customs Tariff 1908 (No. 7 of 1908).**—"An Act relating to Duties of Customs," assented to 3rd June, 1908, repeals Section 5 of the Customs Tariff 1902 (No. 14 of 1902) and the schedule of that Act and the whole of the Customs Tariff 1906 (No. 14 of 1906) as from 8th August, 1907, at 4 o'clock in the afternoon, reckoned according to the standard time in the State of Victoria,[1] and imposes new rates of Customs Duties from that time. This Act provides preference rates of customs duties on certain "goods the produce or manufacture of the United Kingdom which are shipped in the United Kingdom to Australia and not transhipped, or if transhipped then only if it is proved to the satisfaction of the Collector (of customs) that the goods have not, since they were shipped in the United Kingdom, been subjected to any process of manufacture."

11. **Customs Tariff Amendment 1908 (No. 13 of 1908).**—"An Act to amend the Tariff Act of 1908," assented to 10th June, 1908, provides that where the rate of duty to be paid on goods the produce or manufacture of the United Kingdom is not set out in the Customs Tariff 1908, and where such goods are not expressly declared to be free, the "General Tariff" rates shall apply. This Act also provides that no higher duty shall be payable under the South African Preference Act 1906, than the duty under the General Tariff of the Customs Tariff 1908, and that no duty shall be payable under that Act on any goods which are free of or exempt from duty under the General Tariff of the Customs Tariff 1908. The purpose of this Act is merely to remove possible doubt as to the intention of the original Acts.

12. **Australian Industries Preservation Act 1909 (No. 26 of 1909).**—"An Act to amend the Australian Industries Preservation Acts 1906-1907" formally repeals Sections 5 and 8 of the parent Act, which were declared by the High Court to be *ultra vires*; also provides that, in relation to trade and commerce with other countries or among the States, the payment of rebates, or the refusal to sell, "either absolutely or except upon disadvantageous conditions," with the purpose of promoting exclusive dealing, shall be an offence.

13. **Customs (Interstate Accounts) Act 1910 (No. 9 of 1910).**—Repeals Sections 272 and 273 of the Customs Act 1901. These sections relate to the passing of dutiable goods from one State to another State of the Commonwealth and their repeal was consequent on the termination of the book-keeping system of accounts between the Commonwealth Government and the Governments of the States in favour of a system of payments based on population.

14. **Australian Industries Preservation Act 1910 (No. 29 of 1910).**—An Act to amend the Australian Industries Preservation Act 1906-1909. This Act removes from the principal Act the obligation to prove *intent* to restrain trade and detriment to the public.

15. **Customs Act 1910 (No. 36 of 1910).**—An Act to amend the Customs Act 1901 gives the Customs control of all goods for export, the exportation of which is subject to compliance with any condition or restriction under any Act or regulation, extends the machinery provisions for the prevention of the importation or exportation of goods which are prohibited imports or exports respectively, amends the provisions for the payment of duty under protest, gives the Governor-General power to prescribe the nature, size, and material of the coverings for packages, and the maximum or minimum weight or quantity to be contained in any one package of goods imported or exported, or trans-

1. "Standard time" is identical in the States of New South Wales, Victoria, Queensland, and Tasmania.

ported coastwise from one State to another; the condition of preparation or manufacture for export of any articles used for, or in the manufacture of, food or drink by man; the conditions as to purity, soundness, and freedom from disease to be conformed to by goods for export.

16. **Customs Tariff 1910 (No. 39 of 1910).**—An Act relating to duties of Customs, amends the Customs Tariff of 1908 by more explicit definition of certain tariff items, and by alteration of some rates of duty.

§ 3. Method of Recording Imports and Exports.

1. **Value of Imports.**—The recorded value of goods imported from countries beyond the Commonwealth represents the amount on which duty is payable or would be payable if the duty were charged *ad valorem*. The value of goods is taken to be 10 per cent. in advance of the fair market value in the principal markets of the country whence the goods were exported, the increase being roughly intended to represent the cost plus insurance, freight, and other charges to the place of landing.

2. **Value of Exports.**—The recorded value of goods exported is taken to represent the value in the principal markets of the Commonwealth in the ordinary commercial acceptation of the term.

3. **Records of Past Years.**—In the years preceding federation each State independently recorded its trade, and in so doing did not distinguish other Australian States from foreign countries. As the aggregation of the records of the several States is, necessarily, the only available means of ascertaining the trade of Australia for comparison with later years, it is unfortunate that past records of values and the direction of imports were not on uniform lines admitting of the preparation of a record for Australia as a whole. On the introduction of the Customs Act 1901, the methods of recording values were made uniform throughout the States, but it was not until September, 1903, that a fundamental defect in the system of recording transhipped goods was remedied. Up to this date goods arriving in any Australian port for transhipment to a port in another Australian State were recorded at the latter port only, where they were ordinarily recorded as from the transhipping State, and not as an import from the oversea country.

In recording exports an analogous defect also existed in most of the States, since goods despatched from one Australian State for transhipment in another State to an oversea country were simply recorded in the former as an export to the transhipping State; thus no proper record of the export oversea was made. Owing to this defect the oversea trade prior to September, 1903, is understated by an amount which it is impossible to accurately estimate, since it varies with the development of the shipping facilities of the States concerned. To discover the direction of the transhipped trade is not possible. The figures presented in the tables hereinafter are therefore the values as recorded, and must be taken as subject to the defects explained.

4. **Vessels (Ships) Imported and Exported.**—The imports or exports of vessels were not recorded prior to the year 1905. The value of vessels imported during the years 1905, 1906, 1907, 1908, and 1909 was, respectively, £265,957, £366,300, £680,700, £700,050, and £757,100, while the exports for the same years were respectively £79,975, £51,365, £90,201, £82,355, and £38,600.

5. **Ships' Stores.**—Prior to 1906 goods shipped in Australian ports on board oversea ships as ships' stores were included in the general exports. From 1906 ships' stores have been specially recorded as such, and omitted from the return of exports. The value of ships' stores during 1906 amounted to £875,966 (of which bunker coal represented £575,471, or 65.7 per cent.), during 1907 to £998,897 (bunker coal representing £663,724, or 66.45 per cent.), during 1908 to £1,196,106 (bunker coal £867,707, or 72.55 per cent.), and during 1909 to £1,071,677 (bunker coal £781,113, or 72.90 per cent.).

§ 4. Oversea Trade.

1. **Total Oversea Trade.**—The following table shews the total trade of the Commonwealth with oversea countries from the earliest date for which records are available. In consequence of the defects of record, referred to in the preceding section, the results can be only approximate to the actual figures. The very marked rise and sudden fall in the value of imports during the period 1837 to 1842 were contemporaneous with heavy land speculation and a subsequent severe financial crisis. The great increase of trade in the early fifties is due to the discovery of gold. In the State of Victoria the value of imports from oversea countries increased from £500,000 in 1851 to nearly £11,000,000 in 1853, and to £13,000,000 in 1854; while in New South Wales similar imports rose from £1,390,000 in 1851 to £5,500,000 in 1854, when the total imports into the Commonwealth reached the sum of £34 13s. 10d. per head, and the total trade £56 3s. 10d. per head of the population. The rapid influx of persons anxious to share the good fortunes of these times, however, soon reduced the value of the trade per head, till, in 1858, it had declined to £31 19s. 6d. per head. The period 1867-1872 shews a marked reduction in the value of trade per head. For some years prior to this period New South Wales had experienced a succession of indifferent seasons, and Victoria was suffering from a congested labour market consequent on the decline of alluvial gold-mining in that State. This congestion of the labour market during the years 1862 to 1866 gave rise to the agitation for a protective tariff to provide employment in manufactures, and in April, 1866, the Tariff Act, which expressed the protective policy since adhered to in Victoria, was assented to.

1. Reckoned on mean population of the year.

The graphs illustrating the movement of the oversea trade of Australia (see pages 659 and 660) shew that periods of depressed trade have been recurrent at more or less regular intervals of from seven to nine years, and measured by population, each succeeding depression since 1855 has carried the trade per head lower than the preceding one, until the lowest point was reached in 1894.

The year 1892 marked the beginning of a period of acute financial stress, culminating in the commercial crisis of 1893. The collapse of these years, by no means confined to Australia, but affecting in varying degree many countries, is plainly reflected in the records of the trade of that period, for the trade for 1894 had fallen to £54,028,227, a decline of no less than 26.75 per cent. in three years. In 1895 there was slight recovery, and a continuous upward movement until 1901, when the trade reached £92,130,183, or £24 5s. 10d. per head. A decline, due to drought, in the exports of agricultural, pastoral, and dairy produce, reduced the trade of 1902 to £84,591,037, but although in the next year there was a further shrinkage in the exports of agricultural produce, the increase in the value of the exports of metals, specie, butter, and wool was so large as to effect an increase in the total trade. From 1902 the increase in the value of trade continued, till in 1907 it reached the amount of £124,633,280, equal to £29 19s. 10d. per inhabitant.

The imports during 1907 were, doubtless, to some extent inflated by the importation of goods in anticipation of the tariff revision of that year. The trade of 1908 shews a decline of £10,523,000 as compared with 1907, of which £8,513,000 was in the value of exports, notwithstanding an increase of £3,447,767 in the export of gold and specie. This decline in the value of exports was largely due to reduced prices ruling for wool and metals in consequence of the financial crisis in the United States during the previous year, and in lesser degree to the smaller exports of agricultural and pastoral produce, due to the unfavourable season experienced in some of the States.

The trade of 1909 shews a continued buoyancy. The value of imports during 1909 was greater by £1,372,623 than in 1908, while the total exports shewed an increased value of £1,007,778, although the shipments of gold-bullion and specie were lower by £5,193,587. The particular classes of goods from which these increases arise are shewn on pages 633 and 634.

2. **Ratio between Exports and Imports.**—The foregoing table shews the percentage of exports on imports for each year. From this it will be seen that, with few exceptions, due to temporary dislocations of trade, prior to 1892 the balance of trade has been on the side of imports, but from 1892 the reverse has been the case, the value of exports having increased by 92.72 per cent. and the imports by 65.40 per cent. The excess of imports in the earlier years represents the introduction of capital in the form of Government loans and for investment in private undertakings, and the excess of exports in the later years represents mainly the interest and profit on the earlier investments, repayment of loans to foreign bondholders, and also freight on trade which is carried mainly by ships of the United Kingdom and foreign countries.

§ 5. Direction of Trade.

1. **Country of Shipment and Country of Origin.**—From the 1st January, 1905, the Trade and Customs Department, in addition to the usual record of the countries whence goods directly arrived in Australia, has kept a record of the countries of their origin. The following table shews, for the years 1905 and 1909, the value of imports recorded as direct from the principal countries, and also the disposition of the value of imports against the countries where they were produced or manufactured. A similar comparison for the years 1906, 1907, and 1908 will be found in previous issues of this work.

The only country from which the value of direct imports exceeds by any large amount the value of the imports of goods which were manufactured or produced therein, that is to say, the only country which shews a balance of any magnitude as a distributor of the goods of other countries to Australia, is the United Kingdom. The records of our imports therefrom during the year 1909 shew that while the total direct imports from that country amounted to £31,171,828, the value of the manufactures or produce of the United Kingdom itself, imported from all countries whatsoever during the same year, was £25,862,618. From the foregoing figures it appears that goods to the value of *at least* £5,309,210 were received from other countries through the United Kingdom.

Other countries which shew balances as distributors to Australia, though absolutely of much less amount, are Belgium, Hong Kong, New Zealand, Straits Settlements, and Ceylon. The countries mentioned are, of course, not the only countries through which goods are indirectly imported into Australia, for the direct imports from other countries, notably France and Germany, include considerable values which are not of the produce of those countries. These values, however, are more than balanced by value of French and German goods received through the United Kingdom and other countries.

2. **Direct Imports according to Country of Shipment.**—The following table, shewing the average yearly value of imports from each of the principal countries during each succeeding quinquennial period from 1887 to 1906, and for the year 1909, shews

considerable change in direction of imports during the past twenty years. The countries mentioned in this table are those where the goods were shipped or whence they were directly consigned to Australia.

3. **Imports from the United Kingdom.**—The foregoing tables shew that while the value of direct imports from the United Kingdom during 1909 is above the yearly average of the period under review, the proportion to total imports has diminished, having fallen from 70.14 per cent. during the years 1887-91 to 60.92 per cent. in 1909.

It will be observed, however, that the percentage proportion for 1909 is an advance on that of the quinquennium 1902-6, and is also higher than in the year 1908, when the proportion was 60.10 per cent. The position of the United Kingdom as indicated by her percentage proportion of the total trade is largely affected by the imports of vegetable foodstuffs, a branch of trade in which the United Kingdom cannot participate. The apparent diversion of Australian trade from Great Britain is more fully dealt with hereinafter, viz., in sub-section 11 of this chapter. The values of the principal imports of United Kingdom origin during the year 1909 are as follows:—

Ale and beer, £322,803; apparel and textiles—apparel, £2,112,830, textiles, £6,905,681; arms, ammunition and explosives, £567,214; books and periodicals, £465,719; brushware, £56,981; earthenware, etc., £195,516; clocks and watches, £38,486; cocoa and chocolate, £144,200; confectionery, £133,583; cordage, metal, £80,692; cordage, other, £127,033; cutlery, £145,231; drugs and chemicals—alkalies (soda), £79,259, fertilisers, £74,014, medicines, £123,428, other drugs and chemicals, £459,153; electrical and gas appliances, £149,434; electrical materials, £164,446; fancy goods, £165,431; fish, fresh and preserved, £143,694; furniture, £66,162; glass and glassware, £107,964; indiarubber manufactures, £174,844; instruments, musical, £54,507; instruments, scientific, etc., £143,144; iron and steel—pig, £129,212, bar, hoop, ingot, etc., £426,743, scrap, £37,125, girders, beams, etc., £77,648, plate and sheet, galvanised and corrugated, £1,375,433, not galvanised or corrugated, £148,537, pipes and tubes, £422,616, rails, fishplates, etc., £436,872, tinned plates, plain, £284,446; wire, £139,037; wire netting, £216,186; jewellery and precious stones, £239,586; leather and leather manufactures, £209,086; machines and machinery, £1,758,340; metals, manufactures of, £1,241,622; milk, preserved, £135,240; oils (not essential), £181,869; paints and colours, £279,322; paper, £587,426; pickles, sauces, etc., £101,148; plated ware, £174,836; soap, £34,994; specie, £52,697; spirits, £632,122; stationery, £662,740; tobacco, £37,852; tools of trade, £216,568; varnishes, £63,487; vehicles—bicycles, etc., £149,003, motors, £303,975, other vehicles, £60,061; vessels (ships), £749,950; yarns, £125,968.

4. **Imports Shipped from British Possessions.**—The growth of the value of imports from other British possessions during the past twenty years has been such as to increase the proportion to total imports from 12.41 per cent. in the years 1887-91 to 13.45 per cent. in 1909, the actual values being respectively £4,389,783 and £6,885,094. Of the total imports from British possessions during 1909, 32.84 per cent., or 4.29 per cent. of all imports, was from New Zealand, 26.85 per cent., or 3.51 per cent. of all imports, from India, and 11.07 per cent., or 1.45 per cent. of all imports, from Ceylon.

5. **Principal Imports, the Produce of British Possessions, 1909.**—These are as follows:—

(i.) *Africa, South.* Bark, tanning, £12,369; maize, £66,438; precious stones, £74,343.

(ii.) *Canada.* Apparel and textiles, £14,315; boots and shoes, £6472; drugs and chemicals, £4141; fish, £49,969; furniture, £11,197; agricultural implements and machinery, £150,541; other machines and machinery, £10,666; rails and fishplates, £132,963; other metal manufactures, £12,934; paper, £136,803; timber, £84,849; bicycles and other vehicles, £27,244.

(iii.) *Ceylon.* Coffee and chicory, £1700; nuts, £13,803; tea, £701,757. The large increase in the imports from Ceylon—from £124,057 during the years 1887-91, to £739,016 in 1909—is due to the displacement of China teas in the Australian markets by those of India and Ceylon. Of the total imports of tea during the year 1909, 64.52 per cent. was the produce of Ceylon.

(iv.) *Fiji.* Bananas, £96,307; copra, £4796; sugar and molasses, £227,682.

(v.) *India.* Bags and sacks, £1,189,937; canvas and hessians, £157,713; carpets, mats, etc., £15,155; coffee and chicory, £26,820; cotton, raw, £8422; other unmanu-

factured fibres, £10,718; iron, pig, £7644; rice, £1475; shellac, £9537; manures, £16,847; oils, £39,682; skins and hides, £28,302; spices, £11,790; tea, £224,644; timber, £2708; wax, paraffin, £10,572; yarns, £10,453.

(vi.) *Mauritius.* Sugar, £54,256.

(vii.) *New Zealand.* Apparel and textiles, £10,319; animals—horses, £67,721, sheep, £11,482; military stores, £26,898; coal, £10,828; fibres, £109,154; fish, £29,829; gold, bullion and ore, £937,828; grain—barley, £12,277; oats, £32,366, hops, £8178; implements and machinery (agricultural), £5601; machines and machinery, £5240; meats, £19,467; seeds, £30,285; ships, £4150; skins and hides, £167,833; timber, £460,969; wool, £21,810; cordage and twines, £17,336.

(viii.) *Straits Settlements.* Rice, £1731; oils, fats, and waxes—paraffin wax, £11,299, benzine, £12,651, other oils, etc., £3930; spices, £29,021; sago and tapioca, £42,991; wood and wicker, £8046.

6. **Imports Shipped from Foreign Countries.**—The imports direct from foreign countries during the year 1909 represented 25.63 per cent. of the total imports, as compared with 17.45 per cent. during the years 1887-91. Compared, however, with the average of the quinquennium 1902-6, the proportion during the year 1909 shews a decline mainly due to the smaller proportion of the import trade drawn from the United States of America. Of the total imports into Australia shipped from foreign countries 25.40 per cent.—6.51 per cent. of all imports—was from Germany, and 38.15 per cent.—9.78 per cent. of all imports—was from the United States.

7. **Principal Imports the Produce of Foreign Countries.**—The details are as follows:—

(i.) *Austria-Hungary.* Apparel and textiles, £115,680; furniture, £19,386; chinaware, £13,359; glassware, £12,449; fancy goods, £16,659; jewellery and precious stones, £7379; pipes, smoking, etc., £7095.

(ii.) *Belgium.* Apparel, £58,366; textiles, £95,583; candles, £2666; drugs, chemicals, and fertilisers, £9847; glass and glassware, £114,199; iron and steel—partly manufactured, £66,874, girders, beams, etc., £758, plate and sheet, £21,613, railway iron, £21,693; wire, £11,447; wire netting, £1118; jewellery, £37,388; machines and machinery, £13,471; matches and vestas, £28,239; metal manufactures, £45,273; motors and parts, £17,622; paper, £22,722; zinc manufactures, £22,337.

(iii.) *Chile.* Soda nitrate, £6711.

(iv.) *China.* Apparel and textiles, £57,447; fish, £11,080; fruit, £9720; ginger, £8965; rice, £58,507; nuts, £7900; oils, £10,513; tea, £75,063.

The decline of the value of imports from China during the past twenty years is due to the loss of the tea trade, which now draws its supplies mainly from India and Ceylon.

(v.) *France.* Apparel and textiles, £857,705; cream of tartar, £131,269, other drugs and chemicals, £42,484; fruits, £7948; fancy goods, £32,088; jewellery, £22,473; timepieces, £4679; pipes, smoking, etc., £48,675; motor vehicles and parts, £101,642; rubber manufactures, £35,226; leather, £18,853; spirits, £155,940; tiles, £12,208; wine, £94,073; machinery and manufactures of metal, £47,947.

(vi.) *Germany.* Ale and beer, £60,281; apparel and textiles, £1,295,976; arms, ammunition, and explosives, £89,432; brushware, £28,146; cement, £27,726; chinaware, etc., £41,690; earthenware, £18,427; drugs and chemicals—calcium carbide, £6258, fertilisers, £22,180, other drugs, etc., £140,152; fancy goods, £121,015; furniture, £9490; minor articles for furniture, £7185; glass and glassware, £77,112; hops, £9846; indiarubber manufactures, £140,320; metals and manufactures of metals—iron and steel—

bar, hoop, ingot, etc., £94,335, plate and sheet, £61,004, pipes and tubes, £40,413, railway iron, £70,201, tools of trade, £21,353; wire, £348,503; wire netting, £150,004; machines and machinery, £168,446; lamps and lampware, £39,488; electrical and gas appliances, £50,044; other manufactures of metals, £241,542; jewellery, cameos, etc., £81,025; leather and leather manufactures (excluding boots and shoes), £69,987; musical instruments, £256,306; paper, £156,143; spirits, £17,180; stationery, £80,827; tobacco, £8107; paints and varnishes, £12,221.

(vii). *Italy.* Apparel and textiles, £142,203; fruits, £31,840; matches and vestas, £15,021; marble and stone, £27,592; oils, £6877; nuts, £10,939; sulphur, £19,424; motors and parts, £29,853.

(viii.) *Japan.* Apparel and textiles, £361,187; bags, baskets, etc., £15,681; chinaware and earthenware, £9213; fancy goods, £8366; fertilisers (superphosphates), £30,454; furniture, £5685; rice, £12,976; oils and waxes, £27,568; sulphur, £71,504; timber, £28,735.

(ix.) *Java.* Cotton, raw, £6021; hats and caps, £6,191; maize, £21,930; rice, £38,712; kapok, £76,516; sugar, £845,734; timber, £1971; tobacco, £3056; tea, £45,251.

(x.) *Netherlands.* Apparel and textiles, £47,687; cocoa and chocolate, £62,433; cameos and precious stones, £9471; paper, £19,755; spirits, £98,160.

(xi.) *Norway.* Calcium carbide, £67,815; fish, £44,686; milk, preserved, £3486; paper, £72,845; timber, £289,684.

(xii.) *Philippine Islands.* Flax and hemp, £53,134; cigars, £34,984.

(xiii.) *Russia.* Flax, £6026; oils, £11,436; timber, £38,796.

(xiv.) *Sweden.* Calcium carbide, £44,016; cream separators, £50,471; matches and vestas, £47,302; paper, £70,772; telephones, £20,307; timber, £133,396.

(xv.) *Switzerland.* Apparel and textiles, £656,897; cigars, £10,984; cocoa and chocolate, manufactured, £24,781; milk, £4437; watches, £65,317.

(xvi.) *United States of America.* Apparel and textiles:—Boots and shoes, £54,278; other apparel, £110,923; textiles, £180,224; ammunition and explosives, £57,425; cameras, magic lanterns, phonographs, etc., £150,277; clocks and watches, £60,193; fish, £130,466; furniture, £45,722; glass and glassware, £28,843; glucose, £35,626; indiarubber manufactures, £27,954; leather, £252,389; meats, £50,139; medicines, £72,372; metal manufactures:—iron and steel: bars, ingots, hoop, etc., £47,982, girders, beams, etc., £12,825, pipes and tubes, £57,825, plate and sheet, £83,787, railway iron, £140,300, tools of trade, £159,531; wire, £207,199; machines and machinery, agricultural, £158,166; other machines and machinery, £661,865; other metal manufactures, £251,360; musical instruments, £27,379; oils, fats and waxes—kerosene, £577,602, lubricating oils and greases, £116,551, naphtha, £33,790, paraffin wax, £25,210, turpentine, £37,516; paper, £164,563; resin, £28,919; soap, £33,376; stationery, £66,652; timber, £594,141; tobacco, cigars, etc., £433,718; wood manufactures, £80,114; vehicles, bicycles and motors, and parts, £100,327.

8. **Direction of Exports.**—The following table shews the average yearly value of exports to principal countries during each quinquennial period from 1887 to 1906 and for the year 1909. As in the case of the import trade, considerable alteration in the direction of exports is evident. The largest increases in exports to British possessions are shewn to the various South African colonies and to India and Ceylon. During the South African war large shipments of gold were sent from the Commonwealth to that country, and the decline in the value of the export to Cape Colony and Natal during 1909 is due to the cessation of these shipments together with a decline in the exports of timber. The value of exports to India and Ceylon is also mainly of gold, of which exceptionally heavy shipments were made during 1904 and 1905. The large increases in the case of Belgium,

Germany, and France are probably more apparent than real, being mainly due to the increase in local sales of wool, skins, etc., and the resulting direct export to the countries mentioned, while formerly a much larger proportion of wool, etc., was sent to the United Kingdom for sale, and ultimately found its way from there to the Continent. The figures given below, however, do not, even now, denote the total purchases by European countries of Australian produce, as large quantities are still distributed from London.

9. **Exports to the United Kingdom.**—Notwithstanding an increase of 40.5 per cent. in the actual value of exports to the United Kingdom during the year 1909 as com-

pared with the yearly average of the period 1887-91, the proportion of the total exports despatched to the United Kingdom has fallen from 74.74 per cent. in the earlier period to 47.33 per cent. in the year 1909. This decrease is, to some extent, undoubtedly due to the fact that wool and other commodities which were formerly despatched to the United Kingdom, and distributed from that centre, are now to a greater extent shipped direct to continental ports.

The principal exports to the United Kingdom during the year 1909 were as follows:—Butter, £2,085,306; fruit—apples, £129,745, other, including pulp, £22,095; grain—wheat, £5,441,982; flour, £284,410, other, £61,772; hair, £27,803; jewellery and precious stones, £137,591; leather, £334,902; meats, frozen—beef, £533,044, mutton and lamb, £1,161,475, rabbits and hares, £419,544, other frozen meat, £15,100, potted meat, £79,869, meat, preserved in tins, £333,807; minerals and metals—copper, ingots, £214,867, in matte, £855,406, ore, £69,288; gold—bullion, £1,914,079, in matte, £487,613, ore, £51,614; silver—bullion, £43,342, in matte, £338,300, silver and silver-lead ore, £19,995; lead—pig, £159,761, in matte, £337,522; ores, n.e.i., £46,933; spelter and concentrates, £63,355; tin, ingots and ore, £668,976; oil, cocoanut, £98,915; pearlshell, £171,084; skins—hides, £177,738, rabbit and hare, £251,657, sheep, £787,669, other skins, £340,492; specie, gold, £445,242; tallow, £1,103,332; timber, £161,799; wine, £91,604; wool—greasy, £8,340,210, scoured, £2,222,719.

10. **Exports to British Possessions.**—The value of exports to British Possessions during 1909 is the lowest recorded since 1901, having declined from a yearly average of £13,876,127 during the years 1902-6 and £13,122,673 in 1907, to £9,224,126. This decline is due to reduced exports of gold, which fell from an average of £8,396,113 during the years 1902-6, and £6,449,790 in 1907, to £4,036,214 in 1909. From 1899 the shipments of gold to India, Ceylon, and South Africa have been very large, being particularly heavy during the quinquennium 1902-6. If, therefore, this element of the export trade be eliminated, it will be seen that the sales of merchandise to British Possessions have been materially increased.

11. **Principal Exports to British Possessions, 1909.**—These are as follows:—

(i.) *Canada.* Butter, £17,946; meats, £17,447; oil, cocoanut, £2770; skins, £16,100; timber, £5615; tin, £4352; wool, £7748.

(ii.) *Cape Colony.* Butter, £94,884; grain—wheat, £680,002, flour, £80,131; leather, £56,848; meats—frozen beef, £3871, mutton and lamb, £1240, other meats, £4424; sheep (living), £6110; sugar, £39,529; timber, £2388.

(iii.) *Ceylon.* Butter, £6639; horses, £2201; gold, bullion, £90,572; specie, £853,300; grain—flour, £20,602; lead, pig, £21,550; silver, bullion, £166,760; soap, £11,467; sugar, £1159.

(iv.) *Fiji.* Apparel and textiles—apparel, including boots and shoes, £20,577; textiles, £15,109; bags, sacks, and cordage, £7836; biscuits, £18,621; coal, £15,688; drugs and chemicals, £9486; grain, prepared—bran, pollard, and sharps, £23,131; flour, £19,662; machines and machinery, £10,263; metal manufactures, £37,709; oils, £7204; specie, £41,050; timber, £8345.

(v.) *Hong Kong.* Butter, £19,696; coal, £17,908; fish, £16,524; flour, £15,462; lead, pig, £22,062; sandalwood, £25,546; specie, gold, £385,056; timber undressed, £30,298.

(vi.) *India.* Coal, £34,151; copper, ingots, £6800; gold, bullion, £1,016,262; specie, £301,093; horses, £125,631; grain, wheat, £18,771; hay and chaff, £4125; lead, pig, £5850; meats, £14,973; silver, bullion, £74,320; tallow, £2802; timber, £364,485; wool, £16,657.

(vii.) *Natal.* Animals, living — horses, £100, sheep, £8870; butter, £16,988; fruit, £2499; grain—wheat, £29,706; flour, £148,906; jams and jellies, £5176; leather, £9645; meats, frozen—beef, £14,380, mutton, £22,338, rabbits and hares, £2274, meats, other, £4478; specie, gold, £650,000; sugar, £42,000; tallow, £11,904; timber, £22,315.

(viii.) *New Zealand.* Apparel, textiles, etc.:—apparel—boots and shoes, £11,394; other apparel, £33,007; textiles, £68,804; bags and sacks, £2663; bark, tanning, £31,414; books and periodicals, £49,537; cameras, magic lanterns, etc., £29,045; coal, £119,973; copper, ingots, £2572; drugs and chemicals — fertilisers, £78,119; medicines, £33,880; other drugs, etc., £35,773; electrical materials, £13,754; fruit, fresh, £55,891, dried, £2003; glass and glassware, £7154; grain—wheat £13,654; flour, £51,117; rice, £29,549; indiarubber manufactures, £46,607; iron, pig, £2855; jewellery and precious stones, £15,848; lead, pig, £8633; leather and leather manufactures, £44,232; metals, manufactures of—agricultural implements and machinery, £18,568; other machines and machinery, £59,653; other manufactures of metals, £66,771; oils, etc., £17,836; onions, £6264; plants, trees, and bulbs, £10,056; potatoes, £1884; salt, £16,230; seeds, £7063; soap, £24,214; specie—gold, £702,800; spirits, £16,941; stationery, £54,598; sugar, £18,341; tea, £64,790; timber, £188,955; tin, ingots, £20,812; tobacco, £80,479; wine, £25,513.

(ix.) *Papua.* Apparel and textiles, etc., £8159; flour, £2511; meats, £8788; tobacco, £14,017.

(x.) *Straits Settlements.* Butter, £20,536; coal, £78,201; grain, flour, £64,653; horses, £10,339; machines and machinery, £5004; meats, £22,980; tin ore, £186,191; tin concentrates, £22,425; timber, undressed, £6370.

12. **Exports to Foreign Countries.**—The foregoing table shews a very great increase in the value of exports to foreign countries, both in actual amounts and in relation to total exports. The value of exports to foreign countries during 1909 shews an increase of 408 per cent. over similar figures for the years 1887-91, thus increasing the proportion per cent. of all exports from 16.80 per cent. in the earlier years to 38.55 per cent. in 1909. This increase is chiefly due to the growing demand among foreign nations for Australian wool, large consignments of which are now made direct to Belgium, France, Germany, and the United States.

13. **Principal Exports to Foreign Countries.**—These are as follows:—

(i.) *Argentine Republic.* Agricultural implements and machinery, £88,043; timber, £7499.

(ii.) *Belgium.* Bark, tanning, £5966; copper, £406,061; grain, wheat, £27,128; lead, £52,066; leather, £22,700; silver ore, £69,582, concentrates, £369,161; hides and skins, £384,591; zinc concentrates, £1,065,682; timber, £12,154; tin, £48,584; wool, £2,230,206.

(iii.) *Chile.* Coal, £258,478.

(iv.) *China.* Butter, £17,397; coal, £7470; copper, £23,100; flour, £2671; lead, £13,716; sandalwood, £12,180; specie, gold, £30,402; timber, undressed, £26,606.

(v.) *Egypt.* Butter, £7732; flour, £14,405; meats—beef, £26,747, mutton, £4987, other meats, £934; timber, undressed, £62,096.

(vi.) *France.* Concentrates—silver, £37,022, zinc, £85,820, copper, £31,140; hides and skins, £635,983; lead, £13,958; ores, £33,334; tallow, £17,000; tin, £2780; wool, £5,594,983.

(vii.) *Germany.* Bark, tanning, £43,063; concentrates—silver, £39,444; zinc, £99,630. Copper, £117,370; fruit, fresh, £26,835; grain—bran, pollard, and sharps, £3487, wheat, £9003; hides and skins, £168,341; lead, £87,215; linseed cake and oilcake, £4100; oil, cocoanut, £8036; ores—scheelite, £6861, silver and silver lead, £85,515, wolfram, £45,570, other ores, £12,347; sausage casings, £68,857; specie, gold, £450,000; timber, £18,081; wool, £5,006,623.

(viii.) *Italy.* Grain—wheat, £93,648; lead, £16,585; skins, £19,012; tallow, £11,347; wool, £97,756.

(ix.) *Japan.* Butter, £4375; grain, wheat, £12,694; lead, £47,905; manures, £22,393; oils, £9155; specie, gold, £1,450,000; tallow, £17,738; wool, £264,630.

(x.) *Java.* Butter, £54,267; coal, £34,132; fertilisers, £14,549; flour, £132,908; horses, £19,598; meats, £6838; specie, gold, £20,000.

(xi.) *Netherlands.* Concentrates—silver, £89,855, zinc, £48,599; hides and skins, £2241; lead, £26,850; silver ore, £38,616; tallow, £9345.

(xii.) *Peru.* Coal, £22,863; wheat, £141,311.

(xiii.) *Philippine Islands.* Butter, £42,402; coal, £121,668; flour, £117,825; fodder, £17,211; horses, £5303; meats—bacon and hams, £6239, beef, £125,052, mutton, £6059, pork, £5755, other meats, £2489; timber, £3372; wheat, £33,404.

(xiv.) *United States of America.* Coal, £57,430; cocoanut oil, £3708; copper, £238,306; gold, in matte, £35,969; hides and skins, £363,776; pearlshell, £78,361; silver in matte, £28,659; tin, £8028; vessels, £19,000; wool, £1,691,389.

§ 6. Development of Export Trade to Eastern Countries.

1. **Trade with Eastern Countries.**—During recent years attention has been given by Australian exporters to the possibilities of the markets of eastern countries. Commissioners have been sent by the States to eastern trade centres to investigate and advise as to the requirements of these markets in regard to such commodities as Australia is prepared to supply, but a survey of the export returns of the past six years discloses a very small expansion in the value of the export of merchandise in the direction indicated.

The principal countries concerned in this trade are China, India, Ceylon and Burmah, Japan, Java, Philippine Islands, Straits Settlements, and Hong Kong, and the particulars given in the following tables apply to these countries only:—

VALUE OF PRINCIPAL ITEMS OF MERCHANDISE EXPORTED FROM THE COMMONWEALTH TO EASTERN COUNTRIES, 1904 to 1909.

From the above table it will be seen that the value of merchandise shipped to Eastern countries during 1909 is less than in any year since 1904. The trade of 1909 compared with 1907 — when it reached its greatest magnitude — shews a decrease of £1,046,208, or 27.6 per cent. This decline is general, both in regard to commodities and to the particular countries dealt with. The only item in which a steady growth of trade is shewn is butter. The trade in wheat and flour, which is hampered by the uncertainty of supplies, and the meat trade, shew material fluctuations. The exports of timber (mainly to India) during 1909, though somewhat below those of 1906, shew a substantial increase over the immediately preceding years. In regard to other items the trade of 1909 is far below the average of the preceding five years.

The following tables shew the value of the principal articles exported to each of the undermentioned eastern countries during each of the years 1904 to 1909:—

VALUE OF COMMONWEALTH EXPORTS OF MERCHANDISE TO PRINCIPAL EASTERN COUNTRIES, 1904 to 1909.

The increase in the exports of coal since 1905 is really greater than appears from the above figures, as prior to 1906 "bunker" coal was treated as an export to the country for which the ship cleared. These exports of coal are chiefly from New South Wales. The exports of coal during 1909 would, doubtless, have been greater but for the coal miners' strike in November, 1909. Mr. J. B. Suttor, Commercial Commissioner for New South Wales in the East, in his report for 1909, says, that owing to the uncertainty of deliveries from Australia, in consequence of labour troubles, the time is far distant when the trade will again reach the dimensions of recent years.

The wool exported to the East by the several States during 1909 was as follows :— New South Wales, £238,289 ; Victoria, £18,610 ; Queensland, £24,638.

§ 7. Trade of Commonwealth since Federation.

1. **Classified Summary of Australian Trade.**—The tables hereunder present the trade of the Commonwealth during each of the years 1901 and 1905 to 1909, arranged in classes according to the nature of the goods.

It was long ago pointed out[1] that the statistical presentation of imports and exports would be increased in value by being properly arranged under categories (classes and orders). The following arrangement has been adopted, viz. :—

STATISTICAL CLASSIFICATION OF IMPORTS AND EXPORTS.

Class.	Articles.
I.	FOODSTUFFS of animal origin, excluding, however, living animals.
II.	FOODSTUFFS of vegetable origin, and common salt.
III.	BEVERAGES, non-alcoholic only, and the substances used in making them.
IV.	SPIRITS AND ALCOHOLIC LIQUORS, including spirits for industrial purposes, and such pharmaceutical preparations as are dutiable as spirits.
V.	TOBACCO, and all preparations thereof.
VI.	LIVE ANIMALS.
VII.	ANIMAL SUBSTANCES, mainly unmanufactured, which are not foodstuffs.
VIII.	VEGETABLE SUBSTANCES and non-manufactured fibres.
IX.	APPAREL, TEXTILES, and various manufactured fibres.
X.	OILS, FATS, AND WAXES.
XI.	PAINTS AND VARNISHES.
XII.	STONES AND MINERALS, used industrially.
XIII.	SPECIE, gold, silver, and bronze.
XIV.	METALS, UNMANUFACTURED, and ores.
XV.	METALS, PARTLY MANUFACTURED.
XVI.	METALS, MANUFACTURED, including machinery.
XVII.	LEATHER AND MANUFACTURES of leather, together with all substitutes therefor, and also INDIARUBBER AND INDIARUBBER MANUFACTURES.
XVIII.	WOOD AND WICKER, both raw and manufactured.
XIX.	EARTHENWARE, CEMENTS, CHINA, GLASS AND STONEWARE.
XX.	PAPER AND STATIONERY.
XXI.	JEWELLERY, TIMEPIECES, AND FANCY GOODS.
XXII.	OPTICAL, SURGICAL, AND SCIENTIFIC INSTRUMENTS.
XXIII.	DRUGS, CHEMICALS, AND FERTILISERS.
XXIV.	MISCELLANEOUS.

1. By R. M. Johnston, I.S.O., the Statistician of the State of Tasmania.

COMMONWEALTH IMPORTS ARRANGED IN CLASSES, 1901 and 1905 to 1909.

The exports are shewn according to the same classification, and the usual distinction is made between exports of Australian produce and re-exports. It will be seen what a small proportion of the total exports is made up by re-exports, and that the latter consist largely of specie minted from imported gold.

COMMONWEALTH EXPORTS ARRANGED IN CLASSES, AND DISTINGUISHING AUSTRALIAN PRODUCE AND THE PRODUCE OF OTHER COUNTRIES, 1901 and 1905 to 1909.

From the above table it will be seen that there has been a very substantial expansion in the principal divisions of the export trade of the Commonwealth. Compared with 1901 the exports in 1909 of animal foodstuffs, principally butter and meat, shew an increase of 32.78 per cent.; vegetable foodstuffs, principally wheat, shew an increase during the same period of 83.30 per cent.; animal substances—wool, skins, etc.—shew an increase of 72.84 per cent.; oils, fats, and waxes—mainly tallow—an increase of 65.00 per cent.; and wood, etc.—timber—an increase of 52.28 per cent., while the exports of gold are much lower than in any year during the decade.

§ 8. Movements of Specie and Bullion.

1. **Specie and Bullion.**—The following tables shew the value of gold and silver bullion and specie, including bronze specie, imported and exported during the years 1901 and 1905 to 1909 :—

2. **Imports of Bullion and Specie.**—Of the total imports of bullion and specie into the Commonwealth during 1909, 94.66 per cent. was in the form of gold bullion, and was received almost entirely from New Zealand for the purpose of minting.

3. **Exports of Bullion and Specie.**—Of the total exports of bullion and specie during 1909 gold represented 71.04 per cent., 61.62 per cent. being in the form of specie, and 9.42 per cent. bullion.

The countries which appear as the largest recipients of gold from Australia are the United Kingdom, Japan, India, Ceylon, New Zealand, and Natal, in the order named, but as large amounts of gold, recorded as exported to Ceylon, are shipped *under option*, and may be despatched thence to any country needing gold, the actual amount received by each country cannot be stated.

§ 9. Effects of Prices on the Values of Exports.

1. **Significance of Price in Totals.**—In comparing the value of exports from, and also imports into, any country for a series of years the question naturally arises as to how much any variation in the aggregate value is due to fluctuations in prices, and how much to increase or decrease of actual quantities, for, in aggregates expressed only in value—the only possible method when the commodities differ—the two sources of variation are confused.

The scheme of comparison followed hereinafter is that of the British Board of Trade. This is to select all such articles of export as are recorded by units of quantity, and to apply to the quantities exported during each year the average price per unit ruling in some year, arbitrarily taken for the purposes of comparison as the basic year. The ratio which the total actually recorded for the year under review bears to the total obtained by applying to the quantities of the year under review the average prices ruling during the basic year, may be called the "price-level" of the latter—as compared with the former—for the group of commodities considered, and may be taken (so it is assumed in the method of the British Board of Trade) as a measure of the effect of the change of price in the intervening period. Since the value of the articles used in the calculations represents as much as 84 per cent. of all exports during 1909—after excluding specie and gold bullion, which are not subject to price changes—a fairly extended basis on which an estimate of the effect of prices over the full range of exports can be founded is afforded.[1]

2. **Effect of Prices.**—The following table shews the values of exports as actually recorded in each year, together with the values computed on the assumption that the prices of 1901 were maintained.[2] The table also shews the yearly "price-levels," based upon the results so ascertained.

This table obviously furnishes a measure of the influence of prices on the value of exports of each year since 1901. Column IV.,—values computed on 1901 prices—represents the volume of exports (less specie and gold bullion), expressed in the common denomination of value, and from the figures therein it will be seen that, had the prices of 1901 remained constant, the value of the exports of merchandise during the year 1909, for example, would have been £46,973,200 only, instead of £56,928,460—the value actually recorded. The difference between these amounts (£9,955,260) results from rise of prices,[3] of 21.2 per cent. (i.e., from 1000 to 1212) in the price of commodities for the period intervening between 1901 and 1909.

EFFECT OF PRICES ON THE VALUE OF COMMONWEALTH EXPORTS AND EXPORT PRICE-LEVELS FOR THE PERIOD 1901 to 1909.

(BASIC YEAR, 1901.)

Year.	Exports of Specie and Gold.	Other Exports.		Total Exports (including Specie and Bullion).		Price Levels.[1] Year 1901 = 1000.

1. These are index numbers for the total group of exports, excluding specie and gold bullion.

3. **Influence of Quantity and Price on Total Increased Value of Exports.**—The estimated actual and relative effects of the influence of—(i.) increase or decrease in the exports of specie and gold bullion, (ii.) increase or decrease of *quantities* of other exports, (iii.) variation of prices on the value of the exports, of each year compared with 1901, are shewn below :—

1. This basis is thus subject only to the limitations of the fundamental assumption and to its limitation to 84 per cent. of the total.
2. The method of the British Board of Trade is clearly valid for certain purposes, and is adopted because it widens the field of comparison. It is not, however, universally valid.
3. On the fundamental assumption.

ANALYSIS OF INFLUENCE OF QUANTITY AND PRICE ON INCREASE OR DECREASE IN COMMONWEALTH EXPORTS, 1902 to 1909, COMPARED WITH 1901.

Year.	Particulars.	Variation above (+) or below (—) 1901 Exports due to change in:— Export of Specie and Gold.	Quantity of Export other than Specie and Gold.	Prices of Export other than Specie and Gold.	Total Variation above (+) or below (—) Value of 1901 Exports.

	Variation, per cent.	+17.76	+19.65	+24.94	+40.32
1907.	Variation, actual ... ... £	—3,776,513	+12,208,745	+14,695,843	+23,128,075
	Relative magnitude of variation. Total variation taken as 100	—16.32	+52.78	+63.54	+100
	Variation, per cent.	—26.32	+34.55	+30.90	+46.56
1908.	Variation, actual ... ... £	—739,245	+7,724,413	+7,629,718	+14,614,886
	Relative magnitude of variation. Total variation taken as 100	— 5.06	+52.85	+52.21	+100
	Variation, per cent.	— 5.15	+21.85	+17.72	+29.43
1909.	Variation, actual ... ... £	—5,957,400	+11,624,804	+9,955,260	+15,622,664
	Relative magnitude of variation. Total variation taken as 100	—38.13	+74.40	+63.73	+100
	Variation, per cent.	—41.52	+32.89	+21.19	+31.43

From the above figures it will be seen that the exports of 1909, for example, of specie and gold bullion compared with 1901, shew a decrease of 41.52 per cent., other exports (merchandise) shew an increase of 32.89 per cent. in quantities, and an increase of 21.19 per cent. in the group-prices. These several influences effect an aggregate increase of £15,622,664 or 31.43 per cent. over 1901 as follows:—by increased quantities of merchandise, £11,624,804 (74.40 per cent.); by increased prices, £9,955,260 (63.73 per cent,); accompanied by a decrease of £5,957,400 (38.13 per cent.) in the exports of specie and gold.

10. External Trade of Australia and other Countries.

1. **Essentials of Comparisons.**—Direct comparisons of the external trade of any two countries are possible only when the general conditions prevailing therein, and the scheme of recording, are sensibly identical. For example, in regard to the mere matter of record, it may be observed that in one country the value of imports may be the value at the port of shipment, while in another the cost of freight, insurance, and charges may be added thereto. Or again, the values of imports and exports in the one may be declared by merchants, whereas in the other they may be the official prices, fixed from time to time by a commission constituted for the purpose. The figures relating to the

external trade of any country are also affected in varying degree by the extent to which they include transit or re-export trade. Including bullion and specie, the transit trade of Belgium, for example, represents 40.92 per cent. of the gross trade recorded; of Switzerland, 44.05 per cent.; of France, 21.11 per cent.; and of the United Kingdom, 15.78 per cent.; whereas in Australia the same element represents only 4 per cent., and in New Zealand even less.

2. **"Special Trade" of Various Countries.**—Special trade may be defined, agreeably to the practice of the British Board of Trade, as (*a*) imports entered for consumption in the country (as distinguished from imports for transhipment or re-export), and (*b*) exports of domestic products.

In the following table the figures relate, as nearly as is possible, to imports entered for consumption in the various countries quoted, and to exports of their domestic products. It is to be noted, however, that these figures do not unequivocally denote the same thing throughout, since, in the United Kingdom and other manufacturing countries, raw or partly manufactured materials are imported as for home consumption, and, after undergoing some process of manufacture or further modification, are re-exported as domestic production, and further, the statistical records of many countries do not distinguish between bullion and specie imported for the use of the particular country (home consumption) and the amount in transit, nor between the exports of that produced within the country and that re-exported. Nevertheless a comparison of this character reveals approximately the extent of the external trade which otherwise would not be manifest.

From the following table it may be seen that, for the particular years indicated, the value of the total trade per inhabitant was greatest in New Zealand (£35 19s. 0d. per head); the next country in order of value per inhabitant was Belgium (£32 18s. 10d. per head), followed by Switzerland (£29 14s. 6d. per head). Australia comes fourth (£25 16s. 3d. per head), and is some way in advance of the next country, viz., the Argentine Republic (£23 16s. 10d. per head):—

3. **External Trade as a Measure of Prosperity.**—External trade as a measure of prosperity is by no means unequivocal. Comparisons can be accepted as furnishing satisfactory indications of the relative progress or welfare of different countries, only

when taken together with all other facts that should be considered in this connection It is, for example, obvious that the external trade of a community depends not only upon the aggregate of its requirements, but also upon the extent to which it fails to supply requirements from its own resources. A community largely self-contained, for example, may have but a small external trade per head, and yet, by virtue of its capacity to produce and manufacture its own raw material, may actually enjoy greater prosperity and a higher standard of living than another country whose external trade per head is much greater. The same observation applies equally to comparisons of the trade of the same country at different periods. A young country, the industries and export trade of which are mainly connected with raw or natural products, may, for example, through internal development, find the growth of its external trade diminishing per head of population without necessarily suffering any real diminution in the well-being of its people. And it is further obvious that circumstances may arise when enlargement of both imports and exports is actually a consequence of temporary economic difficulties. For example, in 1903, owing to shortage in the local supply, it became necessary to *import* wheat and flour into Australia to the value of £2,556,968, and to meet the charges for this by equivalent *exports*, the effect, considered *per se*, being to enlarge both. In this case the increase is not an evidence of prosperity.

4. **Australian Trade Evidence of Prosperity.**—Despite the above suggestions regarding the necessity of caution, so as to avoid hasty inferences based upon aggregate trade, a consideration of its general characteristics over a number of years, and of its marked development, will suffice to shew that Australian affairs are progressing rapidly and most favourably, especially when it is taken into account that there are no counter-balancing elements of disadvantage.

11. Trade of the United Kingdom with Australia.

1. **General.**—The failure of the United Kingdom to maintain the position formerly held by her in the import trade of Australia has, during recent years, become a matter of more than ordinary interest in both countries. In June, 1905, Mr. R. J. Jeffray was sent here as a "Commissioner of the Advisory Committee on Commercial Intelligence of the British Board of Trade," to investigate the conditions and prospects of British trade with this country, and early in 1908 Mr. Ben H. Morgan was sent on a similar errand by the Manufacturers' Association of Great Britain, and in particular to report on:—(i.) The extent and possibilities of the market, with a view to (*a*) increasing export trade, (*b*) establishing branch factories inside the tariffs; (ii.) the extent and condition of local industries; (iii.) the nature and condition of foreign competition; (iv.) transport services, with special reference to shipping "rings" and "conferences"; (v.) the operation of local tariffs and effects of preferences. In December, 1908, Mr. C. Hamilton Wickes reached here as a permanent Commissioner of the British Board of Trade, for the purpose of advising British manufacturers of the particular requirements of the Australian markets, with a view to improving the trade between the Commonwealth and the United Kingdom.

In a previous issue of this work (No. 1, 1907) reference was made to the report of Mr. Jeffray, in which he gave the following principal causes of the success of the foreign manufacturer in the Australian market:—(i.) Greater promptitude and attention to orders; (ii.) greater readiness to adapt their goods to the requirements of customers; (iii.) more efficient representation in Australia; (iv.) better package of goods; (v.) more attractive appearance of goods; (vi.) lower freights.

Mr. Morgan reports "that the most important reason for the growth of foreign trade in Australia is that the foreign manufacturer is able to quote lower prices than the British manufacturer for goods of equal value." That the foreign manufacturer is able to do this, is, he contends, due to the following, viz.:—(i.) *Protection.* By virtue of

protection for his home market "the foreign manufacturer can depend on a definite consumption therein, and is thus able to produce in larger quantities, and therefore more cheaply." (ii.) *Lower shipping rates and raw materials.*—"Direct shipping services have been established with foreign countries, who carry goods generally at lower rates than British shipping companies carry British goods, and that, following the development of manufacturing industries in foreign countries and the establishment of those cheap shipping facilities, the markets for raw materials are being diverted to those countries . . . . and by carrying at lower rates, give their manufacturers an advantage in price in such raw materials." After quoting many instances of goods being charged freights from Liverpool to Australia much above those charged on similar goods from New York or Hamburg *via* Liverpool to Australia, Mr. Morgan says:—"This shipping question is one of vital interest to manufacturers, and the time has come when they must, if they are to retain their position in export markets, interest themselves directly in freight matters, instead of leaving them as heretofore to merchants and shipping agents."

Mr. Wickes, addressing the British delegates attending the seventh Congress of the Chambers of Commerce of the Empire, alluding to freights, said:—"I doubt if there is any question which so illustrates the want of organisation among our commercial community," and he suggested that there should be a keener study of freight rates from other parts of the world, and also a closer co-operation of British manufacturers, for the more economical distribution of their manufactures.

2. **Proportion of Trade from United Kingdom.**—The percentages given in the following table shew the proportions of the imports into Australia from the United Kingdom, and from the other countries mentioned, during each of the years 1886 to 1909:—

PROPORTION OF COMMONWEALTH IMPORT TRADE FROM VARIOUS COUNTRIES, 1886 to 1909.

Year.	Percentage Proportions from—					Year.	Percentage Proportions from—

In order to draw accurate conclusions from the above table, however, special attention must be given to the nature of imports from the United States, since the imports from that country have in some years been increased by imports of breadstuffs, a trade in which the United Kingdom could not participate. The years affected by the imports of breadstuffs were 1886, 1889, 1896, 1897, and 1903. Increased imports of such items as kerosene oil and timber also tend to increase the proportion of imports from the United States without any prejudicial effect on the trade of the United Kingdom. Similar modification is not necessary in regard to Germany, as the nature of the imports from that country is substantially the same as from the United Kingdom.

It has already been pointed out in this chapter that, prior to the year 1905, imports into the Commonwealth were recorded only against the country whence they were directly imported. Although the values of direct imports do not afford satisfactory data, it is

necessary for any comparison extending further back than 1905 to use such figures. These figures are unsatisfactory on account of the varying proportions of indirect trade.

In order to furnish a comparison free from the influence of such trade as, from its nature, is not open to the United Kingdom, the following table, shewing the direct imports during the years 1886, 1906 and 1909 of the principal classes of goods which enter largely into the trade of the countries named, has been prepared. It may be mentioned that the imports for the year 1886 were extracted from the "Statistical Registers" of the several States for a comparison—published in a previous issue—with the year 1906, and as their compilation involved a large amount of labour they are again utilised for comparison with the year 1909.

PRINCIPAL *DIRECT* IMPORTS INTO THE COMMONWEALTH FROM THE UNITED KINGDOM, GERMANY, AND THE UNITED STATES, 1886, 1906 and 1909.

	1908	61.11	7.32	12.42	100
	1909	62.10	6.64	9.98	100

The foregoing table shews that the share of the United Kingdom, as indicated by the records according to "Country of Shipment," in the trade of those classes of goods enumerated—representing over 80 per cent. of the total imports from that country—has declined from 89.31 per cent. of the whole in 1886 to 72.70 per cent. in 1909. The value of these imports from the United Kingdom has increased from £20,489,153 in 1886 to only £25,650,092 in 1909, or by 25.20 per cent., while the total value of similar imports has increased from £22,937,818 to £35,275,485, or by 53.70 per cent. Had the United Kingdom maintained her position as in 1886 the value of her share of this trade should have been £31,500,000 in 1909 instead of £25,650,092.

The following table gives an analysis of the imports during the years 1906-1909 according to the countries of origin of the goods, and has been extended to include the products of Belgium and France. It is probable that in 1905* (the first year in which countries of origin were recorded), and in a lesser degree in 1906, some goods were credited to the United Kingdom which were really manufactured elsewhere. This matter is more particularly referred to in a subsequent section dealing with the effect of preference.

IMPORTS INTO THE COMMONWEALTH OF PRODUCTS OR MANUFACTURES OF THE UNITED KINGDOM, BELGIUM, FRANCE, GERMANY, AND THE UNITED STATES OF AMERICA DURING THE YEARS 1906 to 1909.

* For 1905 figures see Official Year Book No. 3. † Mainly pig iron and bar and rod iron.

In the above table the totals only, of the several classes of goods mentioned, have been dealt with. On pages 647 *et seq.* will be found a more detailed analysis, shewing the principal items of United Kingdom origin, in which goods favoured by preferential tariff rates are distinguished from other imports.

COMMONWEALTH PERCENTAGE ON TOTAL IMPORTS, OF IMPORTS OF PRODUCTS OR MANUFACTURES OF THE UNITED KINGDOM, BELGIUM, FRANCE, GERMANY, AND THE UNITED STATES OF AMERICA DURING THE YEARS 1906 to 1909.

Nature of Imports.	Year.	United Kingdom.	Belgium.	France.	Germany.	U.S.A.	All Countries

A comparison of the results given in the immediately preceding tables with those given on pages 642 and 643 discloses the value of the export trade of other countries which reaches the Commonwealth through the United Kingdom.

3. **Significance of Increase of Trade with other Countries.**—It has been suggested that the larger proportion of imports now received from foreign countries is due to the establishment and increase of direct shipping with the countries concerned, and that trade formerly received through English ports is now received direct. From the Australian records it is impossible to ascertain the value of the indirect trade with foreign countries through the United Kingdom prior to 1905. The returns of the British Board of Trade, however, shew the exports from the United Kingdom to Australia of foreign and colonial products distinct from the domestic exports, and from this source the table hereunder has been compiled.

It is proper here to mention that, taken in quinquennial periods, the values of the total exports from the United Kingdom to Australia—after making allowance for freight and charges—are in very close agreement with the corresponding import values recorded in this country.

AVERAGE ANNUAL VALUE OF MERCHANDISE AND BULLION AND SPECIE DESPATCHED FROM THE UNITED KINGDOM TO AUSTRALIA, 1886 to 1909.

Years.	Merchandise.			Bullion and Specie.	Total.	Percentage Proportion of Foreign and Colonial Produce.
	United Kingdom Produce.	Foreign and Colonial Produce.				
		Re-exported.	Transhipped under Bond.			
	£	£	£	£	£	
1886-1890 ...	19,510,884	2,344,309	874,249	90,135	22,819,577	14.16
1891-1895 ...	15,376,625	1,756,065	556,287	402,256	18,091,233	13.07
1896-1900 ...	18,353,571	1,919,912	445,552	117,146	20,836,181	11.42
1901-1905 ...	18,271,705	2,226,321	750,520	79,014	21,327,560	14.01
1906-1909 ...	22,816,688	2,882,447	1,187,658	189,188	27,075,981	15.03

From the above table it will be seen that the average value and the proportion of foreign goods despatched to Australia through the United Kingdom during the last four years is greater than the average of the years 1886-90. During the quinquennium 1886-90 the average value of foreign and colonial produce despatched each year from the United Kingdom to Australia was £3,218,558, equal to 14.16 per cent. of all goods so despatched, while during the period 1906-9 the corresponding amount was £4,070,105, or 15.03 per cent. It is therefore apparent that the increase of direct imports from foreign countries has not been, in the aggregate, at the expense of the indirect trade via Great Britain.

4. **Preferential Tariff.**—The Tariff Act of 1908, at present in force, provides preferential tariff rates in favour of goods produced or manufactured in the United Kingdom in respect of 294 tariff items or sub-items.

In the analyses given in this section the results shewn are those obtained by applying the tariff rates to the imports of the year, whether entered for consumption or re-exported. The re-exports are, however, relatively small.

The following table presents an analysis of the imports during 1909, distinguishing those affected—favourably or adversely – by the preferential provisions of the tariff, from those not affected :—

COMMONWEALTH IMPORTS, 1909—PREFERENTIAL AND NON-PREFERENTIAL.

Particulars.	Country of Origin.			
	United Kingdom.	British Possessions.	Foreign Countries.	Total.
Imports affected by preferential tariff	£	£	£	£
Free	5,241,830	—	—	5,241,830
Dutiable	11,240,202	319,900	7,875,832	19,435,934
Total	16,482,032	319,900	7,875,832	24,677,764
Impts. not affected by preferential tariff				
Free	6,383,897	3,633,361	5,627,264	15,644,522
Dutiable	2,943,418	1,686,958	5,162,859	9,793,235
Total	9,327,315	5,320,319	10,790,123	25,437,757
Total merchandise	25,809,347	5,640,219	18,665,955	50,115,521
Bullion and specie	53,271	999,559	3,545	1,056,375
Total imports	25,862,618	6,639,778	18,669,500	51,171,896

Of the total imports of merchandise (£50,115,521) £24,677,764, or 49.23 per cent., would be affected by the preferential tariff.

The imports during 1909 of United Kingdom origin, favoured by preference, amounted to £16,482,032, representing 63.86 per cent. of the total imports of merchandise from that country, against £15,895,721 during 1908. Under the preferential tariff these imports would be subject to duty equivalent to an average *ad valorem* rate of 13.29 per cent., as compared with an average rate of 18.35 per cent. which the same goods would be required to pay under the general tariff rates—an advantage of £834,268 in the amount of duty. The actual amount of rebate allowed on United Kingdom goods entered for home consumption during 1909, under the varying rates of duty, was £827,251.

The following tables give the comparative results of an application of the preferential tariff rates and the general tariff rates to the imports from the United Kingdom, British Possessions and foreign countries respectively:—

IMPORTS AFFECTED BY PREFERENTIAL TARIFF RATES.

FROM UNITED KINGDOM.

Particulars.	Imports.	Duty which would be payable under—			
		Preferential Tariff.		General Tariff.	
	£	£	Rate %	£	Rate %
(A) Free	5,241,830	...	...	268,138	5.12
(B) Dutiable	11,240,202	2,190,643	19.49	2,756,773	24.53
Total	16,482,032	2,190,643	13.29	3,024,911	18.35

IMPORTS AFFECTED BY PREFERENTIAL TARIFF RATES.

FROM BRITISH POSSESSIONS.

Particulars.	Imports.	Duty which would be payable under—			
		General Tariff.		Preferential Tariff.	
	£	£	Rate %	£	Rate %
Imports similar to group A above	48,267	2,416	5.01	...	...
" " " B "	271,633	55,514	20.44	42,048	15.48
Total	319,900	57,930	18.11	42,048	13.14

FROM FOREIGN COUNTRIES.

	£	£	Rate %	£	Rate %
Imports similar to group A above	1,052,627	52,695	5.01	...	...
" " " B "	6,823,205	1,641,446	24.06	1,262,998	18.51
Total	7,875,832	1,694,141	21.51	1,262,998	16.03

The proportion of the imports from British Possessions adversely affected by the preference to the United Kingdom, though nearly double that of 1908, is relatively small, representing only 5.67 per cent. of the imports of merchandise from those countries. The increase in the value of imports in the preferential group from British Possessions is due to an import from Canada of steel rails, valued at £132,964, and from South Africa of explosives, valued at £19,863. The surcharge of duty on imports from British Possessions during 1909 amounted to £15,882. This sum would, on the basis of the trade of 1909, represent the loss of revenue involved in an extension of the preference given to the United Kingdom to the rest of the Empire, as in the preferential scheme of New Zealand. The British Possessions chiefly affected are India, Canada, Straits Settlements, and New Zealand.

The surcharge on imports, affected by preference, from foreign countries during 1909 would amount to £431,143, as against £458,658 during 1908.

5. **Effect of Preference.**—Owing to the short time during which the preferential tariff has been in operation and to the general dislocation of trade consequent on the introduction of a new tariff which was not finally passed until the 3rd June, 1908, it is doubtful whether any definite conclusions can yet be safely drawn in regard to the effects of preferential treatment on the trade of the United Kingdom, though there are undoubtedly indications that it has been, in many instances, of assistance to British manufactures. The alterations in the classification and grouping of items in the new tariff also present a further difficulty, in many instances, in making correct comparisons with former years. The following results must, therefore, be considered as approximate only.

It may also be mentioned here that the system of recording imports according to "country of origin," was introduced only from the beginning of 1905, and it is probable that in the earlier period of its operation, some goods, imported through the United Kingdom, were wrongly described as of United Kingdom origin. When the question of revenue became involved and a more exact description of the goods was insisted upon, goods which might formerly have been accepted and recorded as British would be correctly classed as foreign.

A comparison of the returns of the British Board of Trade (shewing the exports of produce or manufacture of the United Kingdom to Australia) with the import returns of the Commonwealth supports the belief that the proportion of the trade credited to the United Kingdom in the following tables for the years 1905 and 1906 is too high. If this supposition be correct the apparent decline in the proportion of British goods will be somewhat modified.

The following table shews in regard to imports of United Kingdom origin, that, while the results for the later years are in substantial agreement, those ascertained from the Commonwealth import returns for 1905 are 8.35 per cent. above those ascertained from the returns of the British Board of Trade.

COMMONWEALTH IMPORT RETURNS AND BRITISH BOARD OF TRADE EXPORT RETURNS OF UNITED KINGDOM PRODUCE COMPARED, 1905 to 1909.

Year.	Exports. Board of Trade Returns.	Add 10 per cent. Freight, etc.	Value for Comparison.	Commonwealth Import Returns.
	£1,000	£1,000	£1,000	£1,000
1905	16,991	1,699	18,690	20,251
1906	20,229	2,023	22,252	22,755
1907	24,097	2,410	26,507	26,442
1908	22,942	2,294	25,236	25,043
1909	23,999	2,400	26,399	25,809

The following comparative tables shew the proportion of imports—preferential and non-preferential, respectively—recorded as of United Kingdom origin during the years 1905-1909 :—

PREFERENTIAL IMPORTS, 1905 to 1909.

Year.	Country of Origin.							
	United Kingdom.		British Possessions.		Foreign Countries.		Total.	
	£	%	£	%	£	%	£	%
1905* ...	13,268,596	69.56	151,463	0.78	5,656,611	29.66	19,076,670	100
1906* ...	14,643,287	68.58	165,699	0.78	6,545,603	30.64	21,354,589	100
1907 ...	17,049,196	66.08	210,545	0.82	8,539,885	33.10	25,799,626	100
1908 ...	15,895,721	65.70	162,097	0.67	8,136,004	33.63	24,193,822	100
1909 ...	16,482,032	66.80	319,900	1.29	7,875,832	31.91	24,677,764	100

* See modified figures in the lower table on page 650.

From the proportions shewn above it would appear that the United Kingdom's share in this trade has materially declined since 1905, but, as already mentioned, the accuracy of these figures is open to doubt. Particular instances in which manufactures of foreign countries have obviously been credited to the United Kingdom during the years 1905 and 1906 are alluded to later. A comparison of the trade of 1909 with that of 1908 shews that in the preferential group the United Kingdom has gained 1.1 per cent. of the total, her share being 66.80 per cent. in the latter year, as compared with 65.70 in the former. This appears to indicate the effect of the preferential treatment, for a similar comparison in the non-preferential group shows an opposite result; the United Kingdom's share having fallen from 50.70 per cent. in 1908 to 49.94 per cent. in 1909. Taken together the result shews a net increase of 0.25 per cent., *i.e.*, from 59.36 per cent. in 1908 to 59.61 per cent. in 1909. There is, however, some danger of error in allocating the cause of such small variations between single years.

COMMONWEALTH NON-PREFERENTIAL IMPORTS,* 1905 to 1909.

Year.	Country of Origin.							
	United Kingdom.		British Possessions.		Foreign Countries.		Total.	
	£	%	£	%	£	%	£	%
1905† ...	6,843,465	51.98	1,621,168	12.31	4,701,383	35.71	13,166,016	100
1906† ...	7,952,039	50.81	2,017,296	12.89	5,680,078	36.30	15,649,413	100
1907 ...	9,223,549	51.12	2,277,889	12.64	6,543,733	36.24	18,045,171	100
1908 ...	9,006,821	50.70	2,299,775	12.95	6,456,040	36.35	17,762,636	100
1909 ...	9,137,146	49.94	2,500,859	13.66	6,659,699	36.40	18,297,704	100

* In order to obtain a more satisfactory comparison only goods of a character similar to those affected by preferential rates have been included in this table. Articles such as fruits, grain, cocoa beans, raw coffee, tea, sugar, unmanufactured tobacco, hides, fibres, kerosene, timber, etc., which are not produced in the United Kingdom, have been excluded. The proportion of these goods recorded as of United Kingdom origin during 1909 was only 2.66 per cent. † See modified figures in next table.

As in the preferential group it would appear from the Commonwealth records of the countries of origin of imports that there has also been a decline in the non-preferential group since 1905, but if the value of the total imports of United Kingdom origin during 1905 be modified on the basis of the export returns of the British Board of Trade, a better comparison with more gratifying results is obtained. These results are shewn below.

If, for the reasons mentioned, it be conceded that the figures of the British Board of Trade for 1905 and 1906 with 10 per cent. added are nearer the truth than the Commonwealth records for those years, and in the subsequent years the Commonwealth figures be accepted, the results would be approximately as follows:—

IMPORTS OF UNITED KINGDOM ORIGIN, 1905 to 1909.

Year.	Preferential Imports.		Non-Preferential Imports.*		Total.*	
	Value.	Per cent. on Total Pref. Imports.	Value.	Per cent. on Total Non-Pref. Imports.	Value.	Per cent.
	£	%	£	%	£	%
1905†	12,220,000	63.98	6,321,000	48.18	18,541,000	57.55
1906†	14,316,000	66.80	7,774,000	50.02	22,090,000	59.74
1907	17,049,000	66.08	9,224,000	51.12	26,273,000	59.93
1908	15,896,000	65.70	9,007,000	50.70	24,903,000	59.36
1909	16,482,000	66.80	9,137,000	49.94	25,619,000	59.61

* See note to preceding table. † The figures for these years are based on export returns of the United Kingdom.

From this table it will be observed that instead of declining, as indicated by the Commonwealth records, the position of the United Kingdom has been, on the whole, slightly improved; the improvement being more pronounced in the preferential division.

The principal classes of imports affected by preference are "apparel, textiles and manufactured fibres," and "manufactures of metals, including machinery." Together these two classes represent 71 per cent. of all imports affected, the former class representing 47 per cent. and the latter 24 per cent. The following analysis gives the particulars of the imports of these groups, as recorded, for the past five years:—

COMMONWEALTH IMPORTS OF APPAREL, TEXTILES, AND MANUFACTURED FIBRES,

1905 to 1909.

PREFERENTIAL.

Year.	Country of Origin.							
	United Kingdom.		British Possessions.		Foreign Countries.		Total.	
	£	%	£	%	£	%	£	%
1905	7,586,841	76.98	42,442	0.43	2,228,104	22.60	9,857,387	100
1906	8,240,338	75.92	59,402	0.55	2,554,765	23.53	10,854,505	100
1907	8,725,908	70.20	68,764	0.54	3,637,169	29.26	12,431,841	100
1908	7,716,800	68 35	54,667	0.48	3,519,641	31.17	11,291,108	100
1909	8,038,772	69.26	58,599	0.50	3,509,876	30.24	11,607,247	100

NON-PREFERENTIAL.

1905	903,653	42.28	971,931	45.47	261,815	12.25	2,137,399	100
1906	1,045,608	39.72	1,251,056	47.53	335,389	12.75	2,632,053	100
1907	1,153,666	39.66	1,327,829	45.64	427,325	14.70	2,908,820	100
1908	1,074,671	42.08	1,168,473	45.76	310,435	12.16	2,553,579	100
1909	1,193,196	37.77	1,380,056	43.70	585,239	18.53	3,158,491	100

The above table shews a slight improvement in 1909 as compared with 1908, in the position of the United Kingdom in the supply of apparel and textiles affected by preference, accompanied by a very considerable decline in her position in the non-preferential division.

The detailed tables which are appended, shew the influence of the principal items on the relative position of the United Kingdom in this class of trade. In the preferential division the improvement compared with 1908 has been general, the only exceptions being in hats, etc., cotton and linen piece goods, and in the indefinite item "other" apparel. This latter item does not permit of a closer examination. On the other hand the movement in the non-preferential class has been equally general in the opposite direction, the only items shewing improvement being minor articles for boots and shoes, hessians, tents and flags, and bags and sacks—lines which do not represent large values to the United Kingdom.

The important position held by British Possessions in the non-preferential division of this class is due to the supply of hessians and bags and sacks by India. In 1908 binder twine to the value of £11,446, and in 1909 to the value of £17,338, was also imported from New Zealand. The decline, in the later years under review, in the position held by British Possessions, is due to the fact that the ratio of the value of bags and sacks to the total value of the group has been a decreasing one. In 1906 bags and sacks represented 42.78 per cent. of the total of the non-preferential division of this class, whereas in 1909 the proportion had fallen to 37.88 per cent. In 1909, too, the United Kingdom secured a larger share of the hessian trade in opposition to India and of the trade in binder twine in opposition to New Zealand, notwithstanding that New Zealand's sales of this article increased in the Commonwealth by 51.4 per cent. over the previous year.

The value and proportion of the more important items, included in the above groups of apparel and textiles, recorded as of United Kingdom manufacture, are given below:—

COMMONWEALTH IMPORTS OF PREFERENTIAL ITEMS OF APPAREL AND TEXTILES RECORDED AS OF UNITED KINGDOM ORIGIN, 1905 to 1909.

* Includes cotton socks which were subject to preferential rates to the 28th April only. No separate record was made of the imports of cotton socks during 1908.

The items "gloves," "trimmings, and ornaments," and "silk and velvet piece goods," appear to furnish definite instances of misdescription in the earlier years under review. These goods are largely gathered from other parts of the world into the United Kingdom, whence they are shipped to Australia. The records for 1909 shew that, of the total imports into the Commonwealth of these four items taken conjointly, only 19.34 per cent. was of United Kingdom origin, while as much as 83.63 per cent. was shipped from that country. Under these circumstances it appears probable that, until the question of revenue arose (viz. in August, 1907), some portion of these goods, merely packed in the United Kingdom, were recorded as of British manufacture. This suggestion is again supported by the British trade returns, for although the items presented therein are not identical with the items in the Commonwealth returns, it may be seen that the exports from the United Kingdom to Australia of British silk manufactures bear to the imports into the Commonwealth of silk, etc., piece goods the same ratio in 1908 as in 1905, and in 1909 the two records are consistent.

The records of the imports of metals and metal manufactures may be accepted as free from the defects previously alluded to in regard to apparel and textiles. The proportion of metal goods of foreign origin received via the United Kingdom is relatively small.

The above tables shew that in the supply of metals and metal manufactures the position of the United Kingdom is, in both preferential and non-preferential, slightly better than in 1908. Indeed, in both divisions the improvement has been fairly constant throughout the period, although somewhat more marked in the preferential division. In connection with the supply of metals and metal manufactures, it is of interest to observe that in the less-finished forms of metal goods, whether affected by preference or not, the relative position of the United Kingdom, as indicated by group totals, has declined, whereas, in the supply of machinery and finished articles, again irrespective of preference, it has improved. It should also be remarked that the general tendency of the movement of the relative position of the United Kingdom was in evidence before the introduction of preference, both in the downward movement of the simpler manufactures and in the upward movement of the more complex.

It might also be suggested that the failure of the United Kingdom to maintain for an indefinite period—without extreme protective measures in her favour—the same relatively high position—in an increasing volume of trade and in opposition to the highly organised competition of other nations of more recent industrial development—formerly held by her should not, *per se*, be taken as evidence of her waning industrial or commercial virility.

Taking together the two groups of the simpler forms of iron and steel manufactures, enumerated in the above tables, it appears that in 1905, of a total trade of £2,051,077 the United Kingdom supplied £1,758,638, or 85.74 per cent., while in 1909, when the total value of the same trade had increased to £3,702,080, she supplied £2,916,016, representing, however, only 78.86 per cent. Thus, though the United Kingdom increased her sales to the Commonwealth by £1,157,378 while similar sales by all other countries increased only by £493,625, the relative proportion of the trade supplied by the United Kingdom fell from 85.74 per cent. in 1905 to 78.86 per cent. in 1909. Moreover, in iron and steel plates, pig and scrap iron, and tinned plates representing, in 1909, a total value of £2,156,170, the United Kingdom had 91.58 per cent.—practically a monopoly. That such a monopoly should be preserved to her, in the face of the circumstances referred to above and in view of the rapidly increasing volume of the world's trade, is scarcely to be expected.

The smaller proportion, supplied by the United Kingdom in 1909 compared with 1908, of the less complex forms of iron and steel affected by preference is due to increased competition in the supply of steel rails. In the supply of plate and sheet iron and steel, also, some encroachment was made by the United States, though the United Kingdom still had as much as 95.36 per cent. of this trade.

The countries from which the principal supplies of rails, fishplates, etc., were drawn, and the percentage proportion supplied by each, are shewn in the following table:—

In the similar group of commodities in the non-preferential division the item chiefly affecting the position is bar, rod, angle, and tee iron and steel, in the supply of which Belgium, Germany, and the United States of America have each secured increased shares.

The value of the imports of bar etc. iron and steel, and its percentage on the total value of such imports during 1909 from each of these countries was:—Belgium, £52,353=9.40 per cent.; Germany, £57,096=10.27 per cent.; United States, £39,789=7.16 per cent.

The large increase in the United Kingdom's share of the imports of sewing machines requires special explanation. In the tariff as introduced on the 8th August, 1907, it was provided that sewing machines manufactured in the United Kingdom should be free, while those from other countries should pay 10 per cent. *ad valorem*. On the 16th November, 1907, the preferential provisions were deleted and all sewing machines became free. In the meantime, in order to procure the advantage of the tariff, the largest firm manufacturing these machines and operating both in the United States and in the United Kingdom, transferred its Australian business from its American to its British branch. Notwithstanding the cessation of preference, and in the face of higher freight charges from Liverpool direct than from New York via Liverpool, this firm, rather than again disturb its business arrangements, continued to supply the Australian trade, in certain classes of machines, from its British branch. This transfer, however, did not carry a corresponding amount of employment to the British operatives, for the reason that, while the Australian business was transferred to the United Kingdom, a corresponding amount of trade—unaffected by any preferential tariffs—formerly supplied by the British branch, was transferred to America.

A further list of items, preferential and non-preferential, recorded as of United Kingdom origin is appended:—

6. **General Conclusions as to Preference.**—It will be seen from the foregoing that in order to determine in the first years of preference whether it has been efficient or not, it would be absolutely necessary to have correct records on the same basis for the years preceding the preferential scheme. There is every reason to believe that the records, in many instances, are not sufficiently accurate to allow of just comparisons being made. It is also obvious that a much more detailed analysis is essential than has ordinarily been thought necessary, and it will only be in the course of a number of years that anything like a definite opinion can be reached as to the efficiency of the preferential treatment, for as Professor W. J. Ashley in his preface to Mr. John Holt Schooling's "British Trade Book" says—"No comparison of isolated years, no comparison of short consecutive periods, can be relied upon to give properly comparable data."

Primarily, it will be necessary in some way to eliminate the normal growth in business which would have taken place under any régime whatever in an advancing country; and secondly, the significance of the statistics will depend upon a very rigid adherence to the same method of description in regard to items. If the practice of recording is as variable in the future as it has been in the past, no real deductions can be drawn, and this goes to show the importance of maintaining the same method of describing items, quite irrespective of their significance from the standpoint merely of revenue.

In order to determine the course of trade, it will be essential to maintain in its integrity for a sufficient number of years any classification of items once adopted, and no practicable means of analysis will enable one to penetrate the significance of the trade if that course is not followed, because the determining effect of a preference which, in its nature, is likely to be not too well marked compared with the other elements of growth, can easily be vitiated by the entering of other possibilities of change into the results.

7. **Preferential Tariff of New Zealand.**—"The Preferential and Reciprocal Trade Act 1903" of New Zealand introduced preferential rates of duty in favour of the produce of the British Dominions by imposing extra duties on certain imports which were the produce or manufacture of other countries. The list of preferential items was materially extended by the New Zealand "Tariff Act 1907," from the 31st March, 1908.

The following tables present an analysis of the imports into New Zealand during 1909, distinguishing those which would be affected by an application of the preferential provisions of the "Tariff Act 1907":—

NEW ZEALAND—IMPORTS 1909, PREFERENTIAL AND NON-PREFERENTIAL.

Particulars.	From United Kingdom and British Possessions.	From Foreign Countries.	Total.
	£	£	£
Imports affected by preferential tariff—			
Free	1,342,732	—	1,342,732
Dutiable	2,448,329	842,407	3,290,736
Total	3,791,061	842,407	4,633,468
Imports not affected by preferential tariff—			
Free	5,042,616	1,104,011	6,146,627
Dutiable	3,638,390	398,977	4,037,367
Total	8,681,006	1,502,988	10,183,994
Total merchandise	12,472,067	2,345,395	14,817,462
Bullion and Specie	857,205	52	857,257
Total	13,329,272	2,345,447	15,674,719

NOTE.—In this table the imports affected by the preferential provisions of the tariff are stated, as far as possible, according to the country of origin; those unaffected by preference according to country of shipment, the country of origin of these not being recorded. Without doubt imports from the United Kingdom and British Possessions include goods of foreign origin.

8. **Preferential Tariff of South Africa.**—Preference to goods of United Kingdom origin was first granted by the South African Customs Union Convention of 1903 from the 15th August of that year, and similar treatment was extended to Canada from the 1st July, 1904. The present preferential tariff of the South African Customs Union (Convention, 1906, and amendments, 1908) applies to produce of United Kingdom, Canada, New Zealand and the Commonwealth.

An analysis of the trade of South Africa is appended :—

SOUTH AFRICA.—IMPORTS, 1909—PREFERENTIAL AND NON-PREFERENTIAL.

9. **Preferential Tariff of Canada.**—Preferential tariff treatment of goods of the United Kingdom and certain British Possessions was first given by Canada in 1897.

The published trade returns of Canada do not permit of an analysis similar to those given for the Commonwealth, New Zealand, and South Africa.

10. **Preferential Tariff Comparisons.**—The following table presents a comparative statement of the imports into the Commonwealth, New Zealand, and South Africa during 1909, the imports of each country having been analysed according to the application of its own tariff.

APPLICATION OF PREFERENTIAL TARIFFS.—COMPARATIVE STATEMENT, 1909.

Particulars.	C'wealth of Australia.	Dominion of New Zealand.	Customs Union of South Africa.
1. Total imports of merchandise ... £	50,115,521	14,817,462	28,297,139

10. Rate of rebate per cent. *ad val.*	5.06	13.25	3.00

* See note to table on page 657.

From the foregoing it will be observed that the preferential schemes, as at present in force in the different parts of the empire, are by no means uniform. The preferential tariff of New Zealand applies to a wider range of countries than that of any other part of the empire, inasmuch as the advantage of the lower tariff rates is extended to all parts of the British dominions, while those of Canada and South Africa apply to the United Kingdom and reciprocating British Possessions, and that of the Commonwealth to the United Kingdom only. Apart from the British preferential tariff, however, the Commonwealth, in consideration of its participation in the South African preference, gives a preference to certain products of that country. New Zealand and South Africa have also a special reciprocal trade agreement in addition to the main schemes of preference. Canada, under the Customs Tariff Act of 1907, makes provision for an intermediate tariff, which may be applied to the produce of *foreign* countries. Canada already has a reciprocal trade agreement with France and a similar agreement with the United States of America is at present awaiting ratification by the respective legislatures.

The margin between the rates of duty applied to British and foreign goods, respectively, is also higher in New Zealand than in the Commonwealth or South Africa, though in the latter countries the preferential tariff affects a greater proportion of the trade. On the basis of the imports into New Zealand during 1909 the average margin of preference was 13.25 per cent. of the value of the goods, while in the Commonwealth the similar margin was 5.06 per cent., and in South Africa 3.00 per cent. The average rate of duty charged in New Zealand on British goods, subject to preferential rates, was 13.09 per cent., while similar goods of foreign origin were called upon to pay 26.34 per cent. In the Commonwealth the collateral rates were 13.29 per cent. and 18.35 per cent. respectively, and in South Africa 10.73 per cent. and 13.73 per cent.

11. **South African Preference.**—Under the Commonwealth Customs Tariff (South African Preference) Act, No. 17 of 1906, preferential rates of duty were prescribed for certain goods "when those goods are imported from and are the manufacture of any of the British South African Colonies or Protectorates which are included within the South African Customs Union."

Preference to South African States was further confirmed by the Customs Tariff Amendment Act 1908 (No. 13 of 1908).

The imports during 1909 affected by the above-mentioned Act were as follows:—

IMPORTS INTO THE COMMONWEALTH DURING 1909 OF ARTICLES ENTITLED TO PREFERENCE UNDER THE SOUTH AFRICAN PREFERENCE ACT, AND THE VALUE OF THE PREFERENCE THEREON.

§ 12. Imports of Dutiable and Free Goods.

1. **Classified Statement of Imports.**—The following table shews, classified according to their nature, and distinguishing between dutiable and free goods, the estimated value of imports entered for home consumption during 1909, together with the amount and equivalent *ad valorem* rates of duty collected thereon. As no record is made of the value, entered for home consumption, of goods subject to specific duties, the value has been estimated on the basis of the value of corresponding imports. The free goods entered for home consumption have been taken to be the total imports of free goods less the value of similar goods re-exported.

VALUE OF GOODS (EXCLUDING BULLION AND SPECIE) ENTERED FOR CONSUMPTION IN THE COMMONWEALTH AND DUTY COLLECTED THEREON, 1909.

	Classification of Imports.	Value Entered for Consumption.			Duty Collected, less Refunds.	Equivalent *ad valorem* rate per cent. on—

	Total merchandise ...	29,120,381	20,319,545	49,439,926	9,013,637	30.95	18.23
	Merchandise, excluding stimulants and narcotics	27,012,026	20,319,113	47,331,139	5,769,885	21.36	12.19

* The increase in the average *ad val.* rate of duty paid in this class as compared with 1908 (see previous issue) is mainly due to increased imports of sugar, which paid duty equivalent to an *ad val.* rate of 53 per cent., and to increased imports of dried fruits at an *ad val.* rate of over 100 per cent.

2. **Comparative Rates of Duty.**—Omitting bullion and specie, the proportion of total merchandise entered for "home consumption" free of duty in the undermentioned countries, and also the equivalent *ad valorem* rates of duty charged are as follows :—

PROPORTION OF FREE GOODS AND RATES OF IMPORT DUTY.

Particulars.	Australia.	Canada.	New Zealand.	U.S. of America
Year ended	31/12/09	31/3/10	31/12/09	30/6/09

* Unmanufactured tobacco is admitted to Canada free of duty. † Exclusive of Maoris.

Notwithstanding the increase in the proportion of free goods entered for consumption in the Commonwealth from 35.18 per cent. in 1906 (the last full year of operation of the 1902 tariff) to 41.10 per cent. in 1909, the average rate of duty on all merchandise has increased from 17.59 to 18.23 per cent. The average rate of duty on all dutiable imports has increased from 27.14 in 1906 to 30.95 per cent. in 1909. Excluding liquors and tobacco, the average rate of duty has increased from 17.04 in 1906 to 21.36 per cent. in 1909.

From the above table it will be seen that, excluding spirits, etc., and tobacco, the average rates of duty charged on dutiable goods in the Commonwealth and in New Zealand are substantially the same, though the larger proportion of free goods in the latter country somewhat reduces the average rate on dutiable and free goods as compared with the Commonwealth. On the same basis, *i.e.*, excluding spirits and tobacco, the average rates of duty in Canada are materially higher than in the Commonwealth or New Zealand, though the inclusion of these goods reverses the position. The lower average rate for Canada on total imports is due to the smaller relative proportion of liquors and tobacco imported into that country, in which connection it may be mentioned that, during 1910, 81 per cent. of the value of tobacco imported therein was unmanufactured tobacco admitted free of duty and subject only to excise on manufacture.

§ 13. Trade of the Individual States of the Commonwealth.

1. **Character of Data.**—The tables on pages 666 and 667 shew the trade of each State of the Commonwealth for the quinquennium immediately preceding Federation and for the years 1901 and 1905 to 1909.

Owing to the many differences existing between the statements of trade hitherto published by the various States and by the Commonwealth, and to the frequent alteration of the figures in succeeding editions of the several publications, it is not possible to furnish an exact statement of the trade of the several States. The figures here given, therefore, should be regarded as merely approximate.

2. **Record of Transhipments.**—In order to ensure a correct detailed record of the export trade of the Commonwealth, it has been the practice of the Department of Trade

and Customs, since the 1st September, 1903, to record goods transferred by sea from one State to another State of the Commonwealth, for transhipment abroad from the latter State, in the following manner:—

(i.) As an outward interstate transfer from the State from which the goods are originally moved.

(ii.) As an inward interstate transfer to the State in which the goods are transhipped.

(iii.) As an export (oversea) from the State in which the goods are transhipped abroad.

The record thus obtained in each of the several States does not indicate the proportion of the export trade of the Commonwealth actually contributed by each State, nor does it correctly indicate the amount of interstate trade.

In order to obtain a proper record of the trade of each State with oversea countries, and with other States of the Commonwealth, it is necessary to take into account the goods transhipped, not only in, but also from each State. The exact practice may be understood by giving an example. Five thousand tons of copper are, let us suppose, to be exported from Tasmania to Germany, the available oversea ship starting from a New South Wales port. The following records would then be made, viz.:—

(i.) An "outward interstate transfer" of 5000 tons of copper from Tasmania to New South Wales.

(ii.) An "inward interstate transfer" to New South Wales from Tasmania of 5000 tons of copper.

(iii.) An "oversea export" of 5000 tons of copper from New South Wales to Germany.

In this supposed case the trade is virtually, so far as Tasmanian trade is concerned, a direct export from Tasmania to Germany, and forms no essential element of the trade of New South Wales, either interstate or oversea.

3. **Adjustment of Data.**—In the tables hereinafter the necessary adjustments have been made, so far as sea-traffic is concerned. But goods transferred overland from one State to another, and subsequently exported to oversea countries, are at present necessarily included in the exports from the State in which the goods are shipped oversea. In such cases no adjustment is possible, because the necessary data are not available.

4. **Abolition of Interstate Records.**—With the cessation of the "book-keeping" method of distributing the revenue from customs and excise among the several States of the Commonwealth, all record, by the Commonwealth Government, of interstate trade has from the 13th September, 1910, been discontinued. It will therefore not be possible, in future, to publish returns of the internal trade of the Commonwealth.

5. **Trade of States.**—The following summary table shews the progress of the trade of the Commonwealth with oversea countries and of the trade between the several States. The periods selected for comparison are the quinquennium immediately preceding Federation (1896-1900), the quinquennium immediately following (1901-5), and the latest year (1909). The results shew that the total oversea trade of the Commonwealth has increased by 55.63 per cent., viz., from £74,856,000 per annum in the earlier period to £116,490,732 in 1909, while the interstate trade has risen from £27,484,000 to £42,711,233, equal to 55.40 per cent.

SECTION XVI.

SHIPPING.

§ 1. General.

1. **Legislation.**—The shipping of the Commonwealth has hitherto been conducted partly under Imperial Acts, consolidated in the Merchants Shipping Act of 1894, and amendments of these, and partly under Acts of the several States of the Commonwealth. Since the scope of the local enactments differs materially in the different States, to define the proper limits of the jurisdiction of the Imperial and State laws cannot here be attempted.

By section 98, Part IV., of the Commonwealth Constitution Act, the power to make laws with respect to trade and commerce was extended to navigation and shipping, and in pursuance of this power a Bill for an Act relating to Navigation and Shipping was introduced into the Senate on the 17th March, 1904, but was not proceeded with.

On the 29th June, 1904, a Royal Commission was appointed to inquire into the Bill and report upon its provisions and any matter incidental thereto. In March and April, 1907, a conference between representatives of the United Kingdom, the Commonwealth of Australia, and New Zealand was held in London on the subject of merchant shipping legislation. The result of the deliberations was that an amended Bill was introduced into the Senate on the 12th September, 1907. Owing to pressure of Parliamentary business, however, the consideration of the Bill was held over. It was reintroduced into the Senate on the 17th September, 1908, but has not yet been passed into law. The Bill was drawn largely on the Merchants Shipping Acts and the Acts of New Zealand and New South Wales, and, as introduced, contains 417 sections divided into eleven parts, as follows:—I. Introductory. II. Masters and Seamen. III. Foreign Seamen. IV. Ships and Shipping. V. Passengers. VI. The Coasting Trade. VII. Wrecks and Salvage. VIII. Pilots and Pilotage. IX. Courts of Marine Inquiry. X. Legal Proceedings. XI. Miscellaneous.

2. **Record of Shipping before Federation.**—Prior to Federation it was customary for each State to regard the matter of shipping purely from the State standpoint, and vessels arriving from or departing to countries beyond Australia, via other Australian States, were recorded as if direct from or to the oversea country. Thus a mail steamer from the United Kingdom, which made Fremantle her first port of call in Australia, would be recorded not only there, but also again in Adelaide, Melbourne and Sydney, as an arrival from the United Kingdom. Consequently any aggregation, especially of the recent shipping records of the different States, would repeatedly include a large proportion of the shipping visiting Australia. In earlier years, when many vessels sailed from the

various State ports direct for their destination, the error of repeated inclusion was less serious, but as the commerce of Australia developed, more and more ports of call were included in the voyage of each vessel, and this made the mere aggregation of State records correspondingly misleading. It has, as a matter of fact, led to some erroneous publications of statistical results and deductions.

3. **Shipping since Federation.**—With the inauguration of the Commonwealth, the statistics of its shipping, especially of its oversea shipping, became of greater intrinsic importance. As an index of the position of Australia among the trading countries of the world, such statistics had a constitutional importance commensurate with Commonwealth interests, and correspondingly greater than those of individual States. And the nationality of the shipping trading with Australia became also a matter of greater moment.

4. **Difficulties of Comparisons of Total Shipping.**—From what was said in paragraph 2 above, it is obviously impossible now to obtain results for Australia not subject to the defect of repeated inclusions of the same vessels. Unfortunately the statistical records of the first three years of federal history are subject to the same defect, and do not admit of direct comparison with those now kept. A careful estimate of the extent and effect of repeated inclusion has been made and applied to the records of the earlier years, so as to extend the comparative results to those years. The error of such estimation will be negligible for comparative purposes.

5. **Present System of Record.**—The present system of record treats Australia as a unit, and counts, therefore, only one entry and one clearance for each visit to the Commonwealth. Repeated voyages of any vessel are of course included.

On arrival of every vessel at a port in the Commonwealth, whether from an oversea country or from another port within the Commonwealth, the master is required to deliver to the Customs officer a form giving all particulars, necessary for statistical purposes, in regard to the ship, passengers and crew. Similarly on departure from a port a form containing corresponding information is lodged. These forms, which provide a complete record of the movements of every vessel in Commonwealth waters, are at the end of each month forwarded by the Customs officer at each port to this Bureau, and furnish the material for the compilation of the Shipping and Migration Returns.

Under the system previously in force it was found that the estimates of population, in so far as they were based on seaward movement, were rather unsatisfactory, and it is believed that the method referred to above will give a result as nearly correct as is possible.

§ 2. Oversea Shipping.

1. **Total Oversea Shipping.**—In order to extend, as indicated, the comparison of the oversea shipping to the earliest years for which any records are available, an estimate of its probable amount has been made. This estimate is based on a comparison of the results obtained by merely aggregating State statistics with the defect of multiple records, and the results obtained under the present system, which avoids the multiple record. From the nature of the case, it is obvious that the ratio of repeated inclusion to the total traffic has been continually advancing, and this fact has been duly taken into account in deducing the results in the following table:—

TOTAL OVERSEA SHIPPING ENTERED AND CLEARED THE COMMONWEALTH, 1822 to 1909 (MULTIPLE RECORD EXCLUDED BY ESTIMATION PRIOR TO 1904).

Year.	Vessels.	Tons.	Year.	Vessels.	Tons.	Year.	Vessels.	Tons.
1822	73	30,683	1852	1,896	844,243	1882	3,652	3,010,944
1823	76	30,543	1853	3,364	1,490,422	1883	3,857	3,433,102

1840	915	277,335	1870	2,877	1,381,878	1900	3,719	5,894,173
1841	900	278,738	1871	2,748	1,312,642	1901	4,028	6,541,991
1842	862	232,827	1872	2,788	1,380,466	1902	3,608	6,234,460
1843	736	183,427	1873	3,159	1,609,067	1903	3,441	6,027,843
1844	629	155,654	1874	3,153	1,728,269	1904	3,700	6,682,011
1845	735	164,221	1875	3,437	1,914,462	1905	4,088	7,444,417
1846	888	211,193	1876	3,295	1,863,343	1906	4,155	7,966,658
1847	1,033	245,358	1877	3,157	1,930,434	1907	4,394	8,822,866
1848	1,182	305,840	1878	3,372	2,127,518	1908	4,051	8,581,151
1849	1,137	355,886	1879	3,344	2,151,338	1909	3,910	8,516,751
1850	1,300	425,206	1880	3,078	2,177,877			
1851	1,576	515,061	1881	3,284	2,549,364			

It will be borne in mind that while the above figures in themselves have no absolute significance, nevertheless, on the assumption that the element of duplication has been in fairly constant ratio, they furnish the best available indication of the growth of Australian oversea shipping.

2. **Comparison with other Countries.**—The place of Australia among various countries in regard to oversea shipping is indicated in the following table, both absolutely and in respect of tonnage per head of population:—

OVERSEA SHIPPING OF VARIOUS COUNTRIES.

Country.	Year.	Tonnage Entered and Cleared.		Country.	Year.	Tonnage Entered and Cleared.	
		Total.	Per Inhabitant.			Total.	Per Inhabitant.

* Exclusive of Northern Border and Lake Ports.

3. **Shipping Communication with various Countries.**—Particulars of the number and tonnage of vessels recorded between Australia and various countries, distinguishing

British from foreign countries, are given in the following tables, the table below shewing the tonnage of vessels which were recorded as having entered the Commonwealth from the particular countries mentioned; that on page 672 shews the tonnage of vessels which were recorded as having cleared the Commonwealth for the particular countries, while on page 673 is shewn the total number and tonnage of vessels recorded as entered and cleared from and to the countries named.

In respect of these tables it may be pointed out that the statistics for any country do not fully disclose the extent of its shipping communication with particular countries. The reason of this is that vessels are recorded as arriving from, or departing to, a particular country, whereas, as a matter of fact, many regular lines of steamers call and transact business at the ports of several countries in the course of a single voyage. The lines of steamers trading between Australia and Japan, for example, often call at New Guinea, the Philippine Islands, China, etc., but, being intermediate ports, these countries are not referred to in the statistical records. Similarly in the case of the large mail steamers passing through the Suez Canal. A steamer may call at Colombo, Aden, Port Said, Genoa, Marseilles, London, Antwerp, and Bremerhaven, yet obviously can only be credited as cleared for one of these ports to the consequent exclusion of all the other ports from the records. Further reference is made in the following paragraphs to the more important of those countries with which the shipping of the Commonwealth is not fully represented in the foregoing tables.

4. **General Trend of Shipping.**—(i.) *General.* A grouping of countries into larger geographical divisions, as in the following tables, shews more readily the general

direction of Australian shipping, and to some extent, avoids the limitations of the records in relation to particular countries, by covering more closely the main trade routes.

It has already been shewn in the opening section of this chapter, that direct comparisons of the annual oversea shipping of the Commonwealth are possible only since the beginning of 1904.

A comparison of the total tonnage of shipping which entered and cleared the Commonwealth during 1909 with similar records for 1905 shews an increase of 1,072,334 tons, or 14.40 per cent., vessels with cargo having increased by 1,054,437 tons, or 17.23 per cent., and vessels in ballast by 17,897, or 1.35 per cent. This increase has been general in all directions except that of Africa and North America, the largest increase during the period being in the trade with the United Kingdom and European countries.

(ii.) *Shipping with the United Kingdom and European Countries.* The shipping between the Commonwealth and the United Kingdom and European countries during the past five years shews that steady increase which indicates the consistent development of a well-established trade. The shipping in this direction during 1909 amounted to 3,488,878 tons, or 40.9 per cent. of the total oversea shipping of the Commonwealth, and was recorded against the several countries as follows:—United Kingdom, 2,482,784 tons (71.2 per cent.); Germany, 555,547 tons (15.9 per cent.); France, 177,454 tons (5.1 per cent.); Belgium, 140,218 tons (4.0 per cent.); other European countries, 132,875 tons (3.8 per cent.).

The foregoing figures appear to shew that while the tonnage between the Commonwealth and the United Kingdom increased by 512,059 tons, equal to an increase of 25.98 per cent., the tonnage between the Commonwealth and European continental countries has increased by 314,902 tons, or by 45.44 per cent., or in other words that 61.92 per cent. of the increase was credited to the United Kingdom and 38.08 to the latter countries. As already explained, however, no real significance can be attached to these figures, for in many instances it must be regarded as almost accidental whether tonnage be recorded against the United Kingdom or against Belgium, Germany, or France.

The failure of the statistical records to present, in all cases, the full measure of the shipping communication between particular countries is illustrated by the case of Italy. Although the mail steamers which pass through the Suez Canal call at Naples and Genoa, and during 1909 embarked or landed at those ports 3920 passengers for or from Australia, and also carried a direct trade valued at £486,480 between Italy and the Commonwealth, the records for the year shew only seven vessels as passing between the two countries.

(iii.) *Shipping with New Zealand.* The tonnage of shipping between the Commonwealth and New Zealand shews a very satisfactory expansion from 1,388,374 tons in 1905 to 1,618,567 tons in 1909, an increase of 230,193 tons, or 16.6 per cent., during the four years, though the figures for the later year are somewhat lower than in 1908. The shipping with New Zealand represented 19.0 per cent. of the total shipping of the Commonwealth during 1909.

(iv.) *Shipping with Asiatic Countries and Islands in the Pacific.* The total tonnage between the Commonwealth and Eastern countries during 1909 amounted to 1,726,743 tons, or 20.3 per cent. of the whole, representing an increase of 169,858 tons, or 10.91 per cent., as compared with 1905. The principal countries responsible for this increase and the amount of the same due to each, were:—Japan, 30,371 tons, Straits Settlements, 82,741 tons; South Sea Islands (including Ocean Island), 68,231 tons; India and Ceylon, 21,788 tons; Dutch East Indies, 85,359 tons; Fiji, 7114 tons; and Papua, 72,116 tons. Owing to the limitation of the records, already alluded to, the figures given in the

tables do not represent the full volume of the shipping between the Commonwealth and the Philippines. In addition to the shipping recorded to the Philippine Islands the regular steam lines between the Commonwealth and Japan make Manila a regular port of call, and it is by these vessels that the general trade—apart from the coal trade—is chiefly carried. With the exception of one vessel of 3460 tons the whole of the shipping which was recorded as entered the Commonwealth during 1909 from the Philippines (75,977 tons) was in ballast, and of the 124,816 tons which was recorded as cleared for that country, 102,273 tons cleared from Newcastle with coal. The decline in the shipping tonnage between the Commonwealth and Asiatic countries and Pacific Islands in 1909 as compared with 1908, was largely due to the smaller coal trade, which was in some measure caused by the strike of the New South Wales miners.

(v.) *Shipping with Africa.* The shipping tonnage recorded between the Commonwealth and African countries during 1909 amounted to 454,083 tons, a decrease as compared with 1905 of 195,719 tons. Much of the trade between South Africa and Australia, however, is carried by steamers calling at ports in the former country on their voyages between the Commonwealth and the United Kingdom, and which are not shewn in relation to African ports in the shipping returns. Shipping tonnage with African countries—mainly confined to Cape Colony, Natal, and Portuguese East Africa—rose from 565,759 tons in 1904, to 649,802 tons in 1905, but fell to 527,574 tons in 1906, to 350,581 tons in 1907, and to 225,798 in 1908. So that the figures for 1909 indicate a very material increase. An inspection of the following tables, however, shews that these figures are of no significance as an index of the transport requirements between the two countries, inasmuch as of the total tonnage passing between the two countries 364,281 tons was from Africa to Australia, with only 89,802 the other way. Moreover, of the 364,281 tons which entered the Commonwealth from Africa, 336,605 tons, or 92.4 per cent., was represented by vessels in ballast seeking freights from Australian ports.

(vi.) *Shipping with North and Central America.* The shipping of the Commonwealth with these countries during 1909 amounted to 622,443 tons (7.3 per cent. of the whole) representing a decrease of 86,728 tons, or 12.2 per cent., as compared with 1905, and a decline of 130,683 tons, or 17.35 per cent., as compared with 1908. The large tonnage between the Commonwealth and North America during 1907 was due to unusually heavy exports of coal to the United States. The 622,443 tons of shipping with North and Central America during 1909 were recorded against the several countries as follows:—United States, 432,794 tons (69.5 per cent.); Canada, 143,531 tons (23.1 per cent.); and Mexico, 46,118 tons (7.4 per cent.).

(vii.) *Shipping with South America.* The shipping between the Commonwealth and South American countries during 1909—606,037 tons—was 27 per cent. greater than in 1905, though much less than in any year since 1905. The shipping in this direction during 1909 was mainly engaged in the carriage of coal and wheat to Chile and Peru, and its decline as compared with 1908 is due to the smaller export of coal. Of the total shipping tonnage between the Commonwealth and South America during 1909, 457,437 tons, or 75.5 per cent., is credited to the coal port of Newcastle, 144,558 tons having entered and 312,879 tons having cleared at that port, while of the same total 34,225 tons entered and 5263 tons cleared at the port of Sydney. Of the South American countries, Chile is responsible for 381,884 tons (63.0 per cent.); Peru, 86,859 tons (14.3 per cent.); Argentine Republic, 62,913 tons (10.3 per cent.); Brazil, 34,853 tons (5.8 per cent.), Uruguay, 25,195 tons (4.2 per cent.); and Ecuador, 14,333 tons (2.4 per cent.).

An important fact, from its bearing on freight rates and its consequent possible effect on the coal trade of New South Wales with South America, is the absence of back freights from that country. Of the 249,737 tons of shipping which entered the Common-

wealth from South America during 1909 only three vessels, totalling 6189 tons, carried cargo.

Grand Total	7,444,417	7,966,658	8,822,866	8,581,151	8,516,751

The tonnage of Australian-owned vessels engaged in the oversea trade represents 8.46 per cent. of the total, and the tonnage of New Zealand vessels 11.60 per cent. Both are engaged mainly in the trade with New Zealand and eastern countries. An examination of the figures in the above table shews that, of the increase in tonnage in 1909 as compared with 1905, viz., 1,072,334 tons, 644,134 tons (*i.e.*, 60.06 per cent.) were British and 428,200 tons (*i.e.*, 39.94 per cent.) were foreign. But to sustain the proportion of British tonnage as in 1905 it was necessary that 74.49 per cent. of the increase should be British.

If, however, the tonnage of ships carrying cargo only is considered as indicating more closely the proportion of the actual carrying trade done, the proportion of British vessels in 1909 is practically equal to the average proportion of the previous five years. The relative proportion of British and foreign tonnage which entered and cleared the Commonwealth with cargo during the past five years was as follows:—

PROPORTION OF TONNAGE OF BRITISH AND FOREIGN NATIONALITY ENTERED AND CLEARED THE COMMONWEALTH WITH CARGO, 1905 to 1909.

Nationality.	1905.	1906.	1907.	1908.	1909.
British	76.30	74.42	75.19	76.50	75.65
Foreign	23.70	25.58	24.81	23.50	24.35
Total	100.00	100.00	100.00	100.00	100.00

That the proportion of foreign tonnage should increase is the natural corollary of the extension of the trade of the Commonwealth with foreign countries. This is particularly patent in regard to Germany and France. Both of these countries desire to increase their mercantile marine, and it is therefore natural that the increased direct trade between themselves and Australia should be carried by their own vessels rather than by the vessels of a third country. Recently, too, the Royal Dutch Packet Company has established a line of steamers between Java and other islands of the East Indies and Australia.

The more important competitors for the Australian shipping trade among the foreign nations are Germany, France, and Norway, and it is therefore of interest to consider the general direction of their activity. It is well to bear in mind, when comparing the figures in the table on the next page, that the French shipping from and to France and to New Caledonia is practically identical with the steamers of the Messageries Maritimes, which maintain a regular service between France and New Caledonia via Australian ports, and that the German shipping from and to Germany consists mainly of the vessels of two lines, the Norddeutscher Lloyd, and the German-Australian Steamship Company, which have had regular and frequent services to Australian ports for the past twenty-six years.

SHIPPING OF PRINCIPAL FOREIGN NATIONS BETWEEN AUSTRALIA AND OTHER COUNTRIES DURING 1909.

A further analysis is appended, distinguishing between steam and sailing vessels of British and foreign nationality, which entered and cleared the Commonwealth during the years 1905-9. Steam tonnage during 1909 was 1,639,586 tons greater than in 1905, 1,215,265 tons (*i.e.*, 74.12 per cent.) of the increase being British, and 424,321 tons (*i.e.*, 25.88 per cent.) being foreign. The tonnage of sailing vessels shews a decrease during the same period of 567,252 tons, for while British tonnage fell by 571,131 tons, that of foreign nations shews a small increase of 3879 tons.

The following table shews also the proportion of steam and sailing vessels engaged in the Australian trade. As might be expected, the proportion of sailing vessels is shewn to be a decreasing one, falling during the period under review from 29 per cent. to 19 per cent. of the total tonnage, and it is in this branch of shipping that the foreign element is stronger than the British.

6. **Tonnage in Ballast.**—The following table shews the tonnage of oversea vessels which entered and cleared the Commonwealth in ballast during the years 1905-9. Of the total British tonnage which entered during 1909, 21.06 per cent. was in ballast, and of foreign tonnage 39.80 per cent. was in similar condition. Of the total tonnage which entered the Commonwealth during 1909, 26.18 per cent. was in ballast, while of the tonnage cleared 4.86 per cent. only was without cargo.

TONNAGE ENTERED AND CLEARED IN BALLAST, 1905 to 1909.

1909	21.06	39.80	26.18	3.16	9.39	4.86

Vessels in search of freights arrive in Australia from all parts of the world. The tonnage which entered each State of the Commonwealth, in ballast, during 1909 was as follows:—

TONNAGE OF OVERSEA VESSELS IN BALLAST WHICH ENTERED EACH STATE OF THE COMMONWEALTH DURING THE YEAR 1909.

State	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
Tonnage	617,161	49,727	25,560	214,325	145,776	89,147	1,141,696
Percentage of total ...	54.05	4.36	2.24	18.77	12.77	7.81	100

The large exports of coal from New South Wales afford special inducements to vessels in search of freights. During 1909, 617,161 tons, or 54.1 per cent. of all ballast tonnage arriving in Australia, entered in New South Wales, 471,446 tons having entered at the coal port of Newcastle. The proportion of ballast tonnage entering Newcastle during 1909 was much lower than usual in consequence of the coal miners' strike. The demand for carriage of the large shipments of wheat and wool, however, was sufficient to prevent any material diminution of the large aggregate ballast tonnage to the Commonwealth. The relatively large tonnage in ballast recorded in Tasmania is mainly due to French vessels—sailing under the bounty system—calling at Hobart for orders.

§ 3. Shipping of Ports.

1. **Shipping of Ports.**—Appended is an abstract of the total shipping tonnage—oversea and coastwise—which entered the more important ports of Australia during the year 1909, together with similar information in regard to some of the ports of New Zealand and of the United Kingdom for the same year :—

SHIPPING OF PORTS, AUSTRALIA AND VARIOUS COUNTRIES, 1909.

Port.	Tonnage Entered.	Port.	Tonnage Entered.
AUSTRALIA—		ENGLAND AND WALES—	
Sydney	6,088,313	London	19,293,133
Melbourne	4,835,021	Liverpool (inc. Birkenhead)	14,038,692
Port Adelaide	2,591,699*	Tyne ports	11,567,762
Brisbane...	2,068,598	Cardiff	11,465,794
Newcastle	1,987,994	Southampton	6,384,352
Fremantle	1,695,805	Hull	5,448,462
Townsville	1,092,765	Plymouth	4,456,384
Albany	933,029	Newport	3,131,140
Hobart	788,065	Middlesbrough	3,040,941
Rockhampton	697,152	Sunderland	3,022,356
Mackay	686,589	Swansea	2,820,599
Cairns	652,278	Blyth	2,338,816
Geelong	480,061	Manchester	2,234,805
Port Pirie	435,678	Dover	1,846,718
Bowen	430,274	Grimsby	1,634,561
Thursday Island	319,374	SCOTLAND—	
Wallaroo	275,941	Glasgow	5,532,488
NEW ZEALAND—		Leith	2,282,818
Wellington	2,775,902	IRELAND—	
Lyttelton	2,130,978	Cork (inc. Queenstown) ...	4,284,763
Auckland	1,520,040	Belfast	3,015,138
Dunedin	983,773	Dublin	2,627,710

* Exclusive of coastal shipping—particulars of which are not available.

From the figures above it may be seen that the shipping business of the port of Sydney is only exceeded by that of five ports in the United Kingdom, viz., London, Liverpool, the Tyne, Cardiff, and Southampton.

§ 4. Vessels Built and Registered.

1. **Vessels Registered.**—The number and net tonnage of steam and sailing vessels on the registers at the various ports of the Commonwealth at the end of each of the years 1901 to 1909 are as follows:—

VESSELS ON THE REGISTER, 1901 to 1909.*

Year.	Steam.		Sailing.		Total.	
	Number.	Net Tonnage.	Number.	Net Tonnage.	Number.	Net Tonnage.
1901	943	203,541	1,433	141,722	2,376	345,263
1902	965	208,043	1,483	141,125	2,448	349,168
1903	1,004	219,985	1,578	136,888	2,582	356,873
1904	1,011	223,558	1,700	129,801	2,711	353,359
1905	1,052	222,551	1,690	129,291	2,742	351,842
1906	1,082	238,742	1,644	128,288	2,726	367,030
1907	1,108	249,600	1,555	126,402	2,663	376,002
1908	1,148	255,249	1,571	129,392	2,719	384,641
1909	1,196	274,551	1,535	129,540	2,731	404,091

* Prior to 1904 vessels registered in the Northern Territory of South Australia are not included.

2. **Vessels Built.**—The following table shews the number and net tonnage of steam and sailing vessels built and registered in Australia during the years 1901 to 1909:—

VESSELS BUILT AND REGISTERED, 1901 to 1909.

Year.	Steam.		Sailing.		Total.	
	Number.	Net Tonnage.	Number.	Net Tonnage.	Number.	Net Tonnage.
1901	16	1,533	35	960	51	2,493
1902	21	1,195	58	1,574	79	2,769

1908	20	1,014	20	424	40	1,438
1909	29	1,164	23	523	52	1,687

§ 5. Interstate Shipping.

1. **Total Vessels and Tonnage.**—In the following table are shewn the number and tonnage of vessels recorded as having entered each State of the Commonwealth from any other State therein, and similarly the number and tonnage clearing from each State to other Commonwealth States. The table gives results for the quinquennial intervals since 1886. The shipping on the Murray River, between the States of New South Wales, Victoria and South Australia, is not included.

The figures presented in the above table include oversea vessels—largely mail boats—passing from one State to another. This renders the results somewhat unsatisfactory.

In the earlier part of this section attention was drawn to the custom in vogue prior to Federation of recording vessels from or to "oversea countries via other Commonwealth States" as *direct* from or to the oversea country. At each port in Australia these vessels were, on the inward voyage (to Australia), entered as from the oversea country, and cleared to the next Australian port as "interstate"; on the return journey—the outward voyage—they were entered as "interstate," and cleared as for the oversea country. In order to preserve the continuity of the records of the shipping communication of the several States with oversea countries this method has been followed in continuation of the pre-existing practice, excepting that vessels arriving or departing via other Commonwealth States are now so recorded instead of as "direct."

From the above it will be seen that while certain movements of the vessels referred to are included in the interstate shipping, other movements of the same vessels, between the same ports, are not so included.

To ascertain the aggregate movement of shipping between the States during the year 1909, including the total interstate movements of oversea vessels, the figures in the following table must be added to those of the preceding one :—

SHIPPING ENTERED AND CLEARED FROM AND TO OVERSEA COUNTRIES VIA OTHER COMMONWEALTH STATES, 1909.

South Australia ...	913	2,399,734	946	2,475,784	1,859	4,875,518
Western Australia ...	340	1,084,973	359	1,118,183	699	2,203,156
Tasmania	853	811,851	856	812,622	1,709	1,624,473
Total ... ... (1909	6,738	14,055,607	6,716	14,059,171	13,454	28,114,778
Total ... ... (1906	6,586	12,244,136	6,539	12,277,699	13,125	24,521,835

The necessary data are not available to enable a similar adjustment to be made for earlier years.

3. **Vessels Engaged Solely in Interstate Trade.**—The elimination of the element of oversea vessels, included in the interstate shipping returns, cannot be accurately effected; nevertheless a close approximation is furnished if it be assumed that vessels *entered* in the several States as from "oversea countries via other Commonwealth States" have really been *cleared* from other States as "interstate," and further, that the vessels *cleared* to "oversea countries via other Commonwealth States" have likewise been *entered* elsewhere as "interstate." Applying this suggestion, and also eliminating all interstate movements of oversea vessels, the number and tonnage of vessels engaged solely in the interstate trade during the years 1906 to 1909 will be found to be as follows:—

NUMBER AND TONNAGE OF VESSELS ENGAGED SOLELY IN INTERSTATE TRADE 1906-1909.

Year	Entered.		Cleared.		Total.	
	No.	Tons.	No.	Tons.	No.	Tons.
1906	4,434	5,452,353	4,387	5,485,916	8,821	10,938,269
1907	4,614	5,582,571	4,566	5,580,963	9,180	11,163,534
1908	4,706	5,961,617	4,654	5,916,339	9,360	11,877,956
1909	4,375	5,850,749	4,353	5,854,313	8,728	11,705,062

This treatment cannot be extended to the individual States, as the records do not disclose the particular relationship of the States concerned.

4. **Interstate and Coastal Services.**—The foundation of the coastal steamship services in Australia dates back to the year 1851, when a regular trade was established between Melbourne and Geelong by the small screw steamer "Express." Early in the fifties a company was formed in Tasmania with a capital of £40,000 for the purpose of purchasing steamboats, and employing them in the carriage of passengers and goods between Hobart and Melbourne. This service was commenced in 1852, and was thus the first regular interstate service in Australia. About this time the great influx of population and the increase in commerce, caused chiefly by the gold discoveries, emphasised the desirability of establishing more regular and quicker means of communication between the principal ports of Australia, and in 1862 the regular interstate service between New South Wales and Victoria was inaugurated by the s.s. *You Yangs*, which was put into commission in regular service between Melbourne, Sydney, and Newcastle. In 1875 a company was formed in Adelaide for the purpose of supplying suitable steamers for the requirements of the trade between Adelaide and Melbourne. The first two steamers of the company were named the *South Australian* and the *Victorian*, and were small vessels of only 400 tons burthen. From the start success attended these enterprises, and the services thus initiated were rapidly extended and their operations broadened. Numerous other companies were formed to cope with the increasing trade between ports in the Commonwealth, and the companies engaged from time to time added to their fleets of steamers by the acquisition of more modern and rapid vessels, until at the end of the year 1909 the total net tonnage owned by the eleven companies from whom returns have been received amounted to 156,870 tons. A summary of the various mail services carried on during the year 1909 is given in Section XVIII. of this work.

The subjoined table gives particulars, so far as they are available, of all steamships engaged in regular interstate or coastal services at the end of each of the years 1901 and 1904 to 1909:—

PARTICULARS OF STEAMSHIPS ENGAGED IN REGULAR INTERSTATE AND COASTAL SERVICES IN THE COMMONWEALTH, 1901 to 1909.

* In some cases the vessels included in the above return were subsequently recovered. † The large number of wrecks, during 1908, was due to cyclones on the north west coast of Western Australia destroying a large number of the pearling vessels.

SECTION XVII.

ROADS AND RAILWAYS.

§ 1. Roads and Bridges.

1. **Introduction.**—In Year Books No. 1 (pages 541 to 551) and No. 2 (pages 675 to 685), a brief historical account was given of the construction and development of roads in Australia. It is not proposed to repeat that account in the present issue of the Year Book.

2. **Expenditure on Roads and Bridges.**—Figures shewing the total expenditure on roads and bridges in the States are not available. The subjoined statement, however, gives the amounts of total loan expenditures by the State Governments up to the 30th June, 1910:—

ROADS AND BRIDGES.—TOTAL LOAN EXPENDITURE IN EACH STATE AND IN THE COMMONWEALTH UP TO THE 30th JUNE, 1910.

State, etc. ...	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
Expenditure	£1,797,115	£176,293	£923,656	£1,464,736	£199,055	£2,700,000 *	£7,260,855 *

* Approximate.

The following table shews the annual expenditure from loans on roads and bridges by the central Governments in each State and in the Commonwealth during each financial year since 1901:—

ROADS AND BRIDGES.—LOAN EXPENDITURE BY STATE GOVERNMENTS, 1901-2 to 1909-10.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£
1901-2 ...	150,777	47,104	...	185	740	77,536[1]	276,342
1902-3 ...	73,471	44,770	1,333	200	...	55,687[1]	175,461

1909-10 ...	...	50	...	...	24,117	... [3]	24,167[4]

1. For the calendar years 1901, 1902, and 1903 respectively. 2. For the eighteen months ended 30th June, 1905. 3. Not available separately. 4. Exclusive of Tasmania.

The two tables given above shew only a small proportion of the actual expenditure upon roads and bridges in the different States, for the reason that (*a*) there have been large expenditures from revenue, both by the central Governments and by local authorities, and (*b*) the State Governments have in many cases voted grants and subsidies on the amount of rates collected, and have issued loans to local authorities either for the express purpose of the construction of roads and bridges or for the general purpose of public works construction. Returns of expenditure, where available, are given below for each State. Although no revenue is now derived directly from roads and bridges, they are indirectly of great value to the community, forming, next to railways and public lands, the most considerable item of national property.

3. **New South Wales.**—The control of all roads, bridges, and ferries in New South Wales is now regulated by the Local Government Act 1906, which came into force on the 1st January, 1907 (see Section XXVI. hereinafter). Under the provisions of this Act the eastern and central divisions of the State are divided into shires and municipalities for the general purposes of local government, for the endowment of which a sum of not less than £150,000 is payable annually out of the consolidated revenue on the basis of a percentage subsidy on the proceeds of the general rates received by the District Councils. The control of all roads, bridges, and ferries (except those proclaimed "National" and those in the unincorporated areas of the Western Division) has been transferred from the Roads Department to the respective shire and municipal councils, who are now responsible for their construction and maintenance. Up to December, 1910, 38 miles of roads, 265 bridges, 54 wharves, 99 jetties, and 12 ferries had been proclaimed as "National" works. Power is given to construct new roads, to widen or close existing roads, to make by-laws for the regulation of traffic, etc.; in the case of the acquisition of land for the purpose of constructing new roads or of widening existing roads, the provisions of the Roads Act 1902 are incorporated. The Minister for Works is empowered to pay subsidies to the local authorities to maintain the roads. The roads leading to and within areas of lands which are made available for closer settlement will be constructed by the Government prior to transfer to the shires, as also will roads required mainly for tourists in districts not likely to produce revenue in rates to the local authorities.

(i.) *Principal Main Roads.* The four principal main roads in New South Wales run in the same direction as, and are roughly contiguous to, the four State-owned main railway lines. (*a*) *The Southern Road*, 385 miles in length, runs from Sydney to Albury, and before the days of railway construction, formed part of the highway over which the interstate traffic between Melbourne and Sydney used to flow. (*b*) *The South Coast Road*, 250 miles long, runs from Campbelltown along the top of the coast range and across the Illawarra district as far as Bega, from which place it extends as a minor road to the southern limits of the State. (*c*) *The Western Road*, 513 miles long, runs through Bathurst, Orange and many other important townships as far as Bourke, on the Darling River. (*d*) *The Northern Road*, 405 miles in length, runs from Morpeth, near Newcastle, as far as Maryland, on the Queensland border.

(ii.) *Length and Classification of Roads and Bridges.* The length of roads in the State (exclusive of 38 miles proclaimed as "National works") in 1909 was approximately 82,796 miles, of which 9563 miles were controlled by municipalities, 67,043 by the shires, and 6190 miles were in the unincorporated areas of the western division. The following table gives particulars for the year 1909-10 of roads classified according to whether metalled, etc., formed only, cleared only, or natural surface:—

NEW SOUTH WALES.—APPROXIMATE LENGTH OF ROADS, 1909-10.

Classification.	Metalled, Ballasted, Gravelled etc.	Formed only.	Cleared only.	Natural surface.	Total.
	Miles.	Miles.	Miles.	Miles.	Miles.
Metropolitan...	1,104	321	241	207	1,873
Country Municipalities*	2,388	1,405	1,800	2,097	7,690
Shires	10,766	7,685	18,665	29,927	67,043
Western Division	80	137	2,669	3,304	6,190
Total*	14,338	9,548	23,375	35,535	82,796

* Exclusive of one municipality, which failed to furnish returns.

(iii.) *Bridges, Culverts, and Ferries.* The more important bridges have been proclaimed under the provisions of the Local Government Act as "National works," (see above) and these, together with the bridges, etc., in the Western Division, remain under the control of, and are maintained by, the Public Works Department. Particulars of bridges, culverts, and ferries in the State in 1909 are given in the following table :—

NEW SOUTH WALES.—BRIDGES, CULVERTS, AND FERRIES, 1909.

Particulars.	Bridges, 20 ft. span and over.		Culverts.		Ferries.
	No.	Length.	No.	Length.	No.
		ft.		ft.	
National works	265	105,322	...	...	12
Metropolitan...	126	4,787	626	50,944	16
Country municipalities* ...	616	34,602	3,212	71,620	
Shires*	3,125	186,924	29,232	258,007	89
Western Division (unincorporated) ...	124	21,815	107	1,435	5
Total*	4,256	353,450	33,177	382,006	122

* Exclusive of one municipality and two shires, which failed to furnish returns.

(iv.) *Expenditure on Roads and Bridges.* Since the year 1857 the total expenditure by the Roads Department and Roads Trust on roads and bridges is £24,483,883. In this expenditure is included the cost of administering the Department, services for other Departments, and payments on account of punt approaches and similar works incidental to the road traffic of the country. The amount expended from 1857 to the 30th June, 1900, for the next quinquennium and for each succeeding financial year up to 1909, is given below. Until recent years, the expenditure on these works increased at a much faster rate than the population.

NEW SOUTH WALES.—EXPENDITURE BY ROAD DEPARTMENTS AND ROAD TRUSTS, 1857 to 1909.

Period.	Expenditure by Roads Department.	Expenditure by Trustees.	Total.
	£	£	£
1857 to 30th June, 1900 ...	18,714,078	1,258,027	19,972,105
1901 to 1905	3,340,299	28,944	3,369,243
1906*	457,421	1,171	458,592
1907*	407,268	549	407,817
1908*	158,005	...	158,005
1909*	118,121	...	118,121
Total	23,195,192	1,288,691	24,483,883

* Year ended 30th June.

The amount expended during each year since 1906 has decreased, as the expenditure by the Department is now limited to the construction of roads in closer settlement areas and to the construction and maintenance of national bridges and ferries, and of works in the unincorporated areas of the Western Division.

4. **Victoria.**—Under the Local Government Act 1903, the control, construction, and maintenance of all roads, streets, and bridges are in the hands of Municipal Councils, who are empowered to open new roads, and to close, divert, or increase the width of any existing street or road, provided that no new road less than one chain in width may be opened without the consent of the Minister. The councils are also authorised to make and repair streets, lanes, or passages on private property, or forming means of back access to private property, and may compel the owners of such property to pay the cost of so doing. Footways in front of houses or grounds may be kerbed, flagged, paved, or asphalted, and the owners of such houses or grounds must bear half the cost of so doing. The revenue of the councils is derived from rates which may be either general or extra. The councils are empowered to raise loans for the purpose of making or opening new streets and roads, and for diverting, altering, or increasing the width of streets and roads, provided that the amount of such loan must not exceed ten times the average income of the council during the three years immediately preceding.

(i.) *General and Local Government Expenditure.* The gross amount expended directly by the State Government of Victoria on roads and bridges was £7,756,345 up to the end of June, 1900; figures for succeeding years are given in the table below. The annual expenditure from ordinary revenue by municipalities is not returned separately, but is included in Public Works Construction and Maintenance (see Section xxvi. *Local Government*). The subjoined table shews the cost from general revenue of municipalities of private streets, roads, etc., and also shews the amounts of municipal loan expenditure from 1901 to 1909 inclusive:—

VICTORIA.—EXPENDITURE ON ROADS AND BRIDGES, 1901 to 1909.

Financial Year.[1]	Annual Expenditure by State Government.	Municipal Loan Expenditure.		Formation of Private Roads, Streets, Lanes, etc.[2]	
		Cities, Towns, and Boroughs.	Shires.	Cities, Towns, and Boroughs.	Shires.
	£	£	£	£	£
1901	72,890	16,844	12,928	18,829	4,521
1902	75,855	13,047	15,656	17,655	4,542
1903	69,200	13,540	12,696	15,279	4,028
1904	42,144	12,929	1,444	15,432	4,072
1905	30,393	21,515	2,560	21,593	2,083
1906	56,145	5,673	8,480	18,237	1,390
1907	43,119	21,137	7,495	25,244	3,052
1908	72,246	21,859	5,206	30,907	1,811
1909	99,572	21,389	9,058	34,285	3,603

1. The financial years of Melbourne and Geelong end on the 31st December and the 31st August respectively; those of all other municipalities on the 30th September.
2. Including the cost of flagging, asphalting footpaths, etc., but exclusive of loan expenditure.

5. **Queensland.**—In Queensland the construction and maintenance of public roads are controlled under a system of local self-government, for the purposes of which the whole State is divided into (*a*) towns and (*b*) shires. The duties, rights, and responsibilities of the local authorities with regard to roads, streets, and bridges are regulated by the Local Authorities Act of 1902. The councils are invested with full powers to open, close, divert, or widen streets, roads, and bridges, and to make by-laws for the regulation of traffic, etc. The members of the councils are elected by the ratepayers, and with the aid of executive officers they undertake the supervision and control of all necessary constructions and improvements of roads and bridges within their district. The rates which the councils are empowered to levy are supplemented by Government grants. Separate returns as to the expenditure by towns and shires on roads and bridges are not available, the amounts being included in the returns of expenditure on public works, particulars as to which expenditure may be found in the Section of this book on *Local Government*.

6. **South Australia.**—Under the provisions of the District Councils Acts, 1887 to 1904, and the Municipal Corporations Acts, 1890 to 1903, and of the Roads Acts, 1884 to 1908, the councils are invested with full powers as to the opening and making of new streets and roads, and the diverting, altering, or increasing the width of existing roads; as to raising, lowering, or altering the ground or soil of any street or road; and as to the construction, purchase, and management of bridges, culverts, ferries, and jetties.

(i.) *Main Roads and District Roads.* All the roads in each district are classified either as main roads or as district roads. Both classes of roads are under the direct control either of Municipal Corporations or of District Councils, but in the case of main roads the expenditure on construction and maintenance is chiefly provided for by Government grants, which are paid into a main road fund, while the expenditure on district roads is paid for out of general rates, and out of subsidies on the amount of such rates, granted by the central Government. Under the Main Roads Act 1908, a number of roads was declared to be main roads.

The total estimated length of streets and roads in South Australia up to the 30th June, 1909, was as follows:—

SOUTH AUSTRALIA.—ESTIMATED LENGTH OF ROADS AND STREETS, 1909.

7. **Western Australia.**—In Western Australia the construction, maintenance, and management of roads and bridges throughout the State, except those within the boundaries of municipalities, are under the control of District Road Boards, constituted by the Roads Acts 1902 to 1904.

(i.) *District Roads and Bridges.* Under the provisions of these Acts any part of the State, not within a municipality, may be constituted by the Governor-in-Council into a Road District, under the control of a Board of seven members elected by the ratepayers. The Board is invested with full powers for controlling and managing all roads and bridges

within the district, and is empowered to make by-laws for the general regulation of traffic, to control the weight of engines and machines permitted to cross any bridge or culvert, to regulate the speed limits of vehicles, lights to be carried by vehicles, the lighting of streets and roads, and the licensing of bicycles and motor cars. A District Road Board, may not, however, construct any road or street less than sixty-six feet wide without the consent of the Governor, nor any bridge or culvert at a greater cost than £100, except by the direction of the Minister. The construction of the more important bridges and culverts is generally carried out by the Government, the work, after completion, being handed over to the Road Board for maintenance. In case of land being required for the purpose of constructing a new street or road, or for widening an existing street or road, the provisions of the Public Works Act of 1902 are incorporated in the Roads Acts. A Board may levy general rates within its district not exceeding one shilling and sixpence in the £ on the annual ratable value, and, if valued on the basis of unimproved values of lands, the general rate must not exceed twopence half-penny in the £ on the capital unimproved value. Boards are also empowered to raise loans for the purpose of constructing new roads, but the amount of such loans must not be greater than ten times the average amount of general rates collected for two years. For the purpose of paying the interest on money borrowed a Board may levy a special rate not exceeding one shilling and sixpence in the £. District Road Boards may also exercise the powers of Drainage Boards under the provisions of the Land Drainage Act of 1900.

(ii.) *Municipal Streets, Roads, and Bridges.* As regards roads, streets, and bridges within municipalities, these are under the control of local authorities elected under the provisions of the Municipal Corporations Act 1906. The municipal councils are invested with full powers for making, maintaining, and managing all streets, roads, and bridges within the municipal area, and may request the Governor to declare any such land reserved, used, or by purchase or exchange acquired for a street or way, to be a public highway, and on such request the Governor may, by notice in the *Gazette*, proclaim such highway absolutely dedicated to the public.

(iii.) *Length of Roads, Number of Bridges, and Expenditure on Roads and Bridges.* The following table gives particulars of the operations of the Road District Boards since the 1st January, 1903, when the Roads Act of 1902 (now amended by the Act of 1904) came into force:—

WESTERN AUSTRALIA.—PARTICULARS OF ROADS UNDER CONTROL OF DISTRICT ROAD BOARDS, 1904 to 1909.

1. Returns incomplete, not having been furnished when asked for. 2. Exclusive of three municipalities, which have not supplied the information. 3. Exclusive of four municipalities.

8. **Tasmania.**— In 1906 all the existing Road Trusts and Main Road Boards were abolished by the Local Government Act, which provided that the councils of all municipalities constituted under the Act should exercise all powers conferred upon, and should be liable to all the obligations imposed upon Road District Trusts and Main Road Boards by the Roads Act of 1884. The whole State, with the exception of Hobart and Launceston, is divided into municipal districts, each of which is under the control of a warden and councillors, and each of which is deemed to be a road district and a main road district for the purposes of the Roads Act 1884.

(i.) *Mileage of Roads and Number of Bridges, 1909.* The following table gives particulars for the year 1909 as to lengths of roads and number of bridges and culverts under the control of the municipalities :—

§ 2. Railways.

(A.) General.

1. **Improvements in Railway Statistics.**—In February, 1909, a report was issued by the Commonwealth Statistician to the Minister for Home Affairs on the subject of *The Desirability of Improved Statistics of Government Railways in Australia.* In this report a number of matters were specified in respect to which there was want of uniformity in the form and basis of the statistics published in the annual reports of the Railway Departments of the several States, and the importance and desirability of obtaining more complete and uniform statistics, especially with regard to "passenger-miles" and "ton-miles," were emphasised. This report was brought forward and considered by the Commissioners and General Managers of the Australian State Railways at their last annual conference, held in Melbourne in May, 1909, with the result that resolutions were passed agreeing to publish in the annual reports of the State Railway Departments uniform statistics regarding all the matters referred to by the Commonwealth Statistician, with two exceptions, viz.:—(*a*) with respect to the classification of tonnage carried and the revenue derived therefrom (see further (B) paragraph 17 hereof), and (*b*) with respect to "passenger-mileage" and "ton-mileage" (see further (B) paragraph 18 hereof). The resolutions referred to were to take effect from the 1st July, 1909.

2. **Railway Communication in the Commonwealth.**—Although it was early recognised that railway construction was essential to the proper development and settlement, and to the future commercial prosperity of a large country like Australia, ill supplied with navigable rivers, the progress made in opening up lines during the twenty years which followed the completion of the first line in 1855, was very slow. This was no doubt due partly to the difficulty of borrowing money at a reasonable rate of interest, owing to the depreciation of Australian securities in London, and partly to the sparseness of the population, which it was feared would not justify the necessary expenditure. In the vicinity of Sydney, also, the ranges of mountains in the districts near the coast had to be either traversed or pierced by tunnels at a considerable expenditure of time and money, thus retarding the expansion of the railway systems which have their starting point at that city. Since the year 1875, however, greater activity in the construction of railways has been manifested, and satisfactory progress has been made in all the States of the Commonwealth. The State Governments now fully recognise the great importance to the community of carrying on the work of construction, and of conducting the administration and management of the railways on businesslike principles, free from undue political influence, and yet with regard to the general development of the country. In the eastern, south-eastern, and southern parts of Australia there now exists a considerable network of railway lines converging from the various agricultural, pastoral and mining districts towards the principal ports, which are themselves connected by systems of lines running roughly parallel to the coast. These are shewn on the accompanying map. In the east, lines radiating from Townsville, Rockhampton, Brisbane and Sydney extend inland in various directions for distances ranging up to over 600 miles; in the south-east there are numerous lines, those in Victoria converging towards Melbourne, while others in New South Wales have their terminus in Sydney; in the south there are three main lines, with numerous branches, running from Melbourne, while from Adelaide one main line, with several branches to the coastal towns, runs inland in a northerly direction for a distance of nearly 700 miles, and another line runs in a south-easterly direction to various ports and meeting the main line from Melbourne on the border of South Australia and Victoria. In addition to these main lines and their numerous branches, there are extensive suburban systems in Melbourne and some of the other cities of Australia, a considerable portion of the suburban traffic in Sydney being conducted by means of electric tramways. All these lines which have just been referred to are connected together by the main interstate line, which permits of direct communication between the four capital towns—Brisbane, Sydney, Melbourne, and Adelaide—a distance from end to end of 1790½ miles. The journey from Brisbane

to Adelaide by rail occupies just over three days, including one stop of 8 hours 50 minutes at Sydney, and another of 3 hours 39 minutes at Melbourne. The distance between the capitals and the times occupied are as follow:—

Brisbane to Sydney ...	... 725 miles	... 27 hours 20 min.
Sydney to Melbourne ...	... 582½ „	... 16 „ 51 „
Melbourne to Adelaide ...	... 482¾ „	... 17 „ 26 „

The longest railway journey which can be undertaken in Australia, on one continuous line of railway, is from Longreach in Queensland to Oodnadatta in South Australia, a total distance of 3303 miles. In Western Australia there is a connected system of main or trunk lines between the ports of the State and the agricultural, pastoral, and mining districts. From these main lines a number of branches has been constructed, opening up fresh agricultural areas to the ports and markets of the State. The majority of such branch lines will, on being ultimately extended, form connections between main lines and thus provide short and convenient routes between principal centres. In the northern parts of Queensland and in the Northern Territory there are also a number of disconnected lines running inland from the more important ports. In Tasmania the principal towns are connected by a system of lines, and there are also, more especially in the western districts, several lines which have been constructed for the purpose of opening up mining districts.

3. **Mileage Open for Traffic.**—In all the States of the Commonwealth the principle that the control, construction, and maintenance of the railways should be in the hands of the Government has long been adhered to, excepting in cases presenting unusual circumstances. In various parts of the Commonwealth lines have been constructed and managed by private companies, but at the present time practically the whole of the railway traffic in the Commonwealth is in the hands of the various State Governments. A large proportion of the private lines which are at present running have been laid down for the purpose of opening up forest lands or mining districts, and are not generally used for the conveyance of passengers or the public conveyance of goods. (See D. *Private Railways*, hereinafter.)

(i.) *Mileage of Government and Private Lines, 1855 to 1910.* The subjoined table shews the mileage of both Government and private lines open for traffic (exclusive of sidings and cross-overs) in each State and also in the Commonwealth at suitable periods since the inauguration of railways in Australia in 1855 up to the year 1910. The figures from 1855 to 1881 are given as up to the end of the calendar year; later figures are as up to the end of the financial year ended on the 30th June, unless otherwise stated, excepting the mileages for private lines which are in all cases taken for the calendar year:—

GOVERNMENT AND PRIVATE RAILWAYS.—MILEAGE OPEN, 1855 to 1910.

Year.	N.S.W.	Vict.	Q'land.	S. Aust.	N. Ter.	W. Aust.	Tas.	Cwlth.
	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.
1855	14	2½	*	†6¾	*	*	*	23¼
1861	73	114	*	56	*	*	*	243
1871	358	276	218	133	*	12	45	1,042
1881	1,040	1,247	800	845	*	92	168	4,192
1890-1	2,263	2,763	2,205	1,666	145½	‡656	‡425	10,123½
1900-1	2,926	3,238	2,904	1,736	145½	1,984	§618	13,551½
1908-9	3,889	3,457	3,866	1,946	145½	2,683	667	16,653½
1909-10	3,909	3,542	4,205	1,970	145½	2,987	673	17,431½

* No railways yet constructed. † To the 31st December. This line between Goolwa and Port Elliot was opened in 1854 as a horse tramway, but now forms part of the railway system. ‡ To the 31st December, 1891. § To the 31st December, 1901.

It will be seen from the above table that the rate of construction up to the year 1871 was very slow, the average annual length of lines opened from 1861 to 1871 being only 80 miles for the whole Commonwealth. By the middle of the following decade, however, the

principal mountain ranges had been crossed, and the work of construction could be proceeded with at a greater rate, and at a less cost per mile. The greatest period of activity was from 1881 to 1891, when the average annual length opened for traffic was 593 miles for the whole Commonwealth; the corresponding figures for the following periods from June, 1891, to June, 1901, and from June, 1901, to June, 1910, were 343 miles and 431 miles respectively.

4. **Comparative Mileage of State-owned and Private Lines, 1910.**—The subjoined table shews for each State and for the Commonwealth (*a*) the length of lines owned by the respective State Governments, all of which lines are of course open for general use by the public, (*b*) the length of private lines available for general use by the public, and (*c*) the length not so available. The mileages specified in the case of State-owned lines are as up to the 30th June, 1910; those given for private lines are as up to the 31st December, 1909.

GOVERNMENT AND PRIVATE RAILWAYS.—COMPARATIVE MILEAGE OF STATE-OWNED LINES, OF PRIVATE LINES AVAILABLE FOR GENERAL TRAFFIC, AND OF PRIVATE LINES NOT SO AVAILABLE, 1909-10.

1910 ...	3,643	3,491	3,660¾	1,912½	145½	2,144½	469½	15,466½

* To the 31st December.

The following statement shews the actual mileage opened for traffic in the year 1909-10, and also the annual average increase in mileage opened since 1901 in each State:—

GOVERNMENT RAILWAYS.—MILEAGE OPENED ANNUALLY.

State	N.S.W.	Vic.	Qld.	S.A.	N.T.	W.A.	Tas.	Cwlth.
Mileage opened during 1909-10	19¾	80¾	162¾	24¼	...	100	6½	394
Average annual mileage opened (1901 to 1910)	88½	28	95½	19¾	...	87¾	1¼	320¾

(i.) *New South Wales.* During the year ended 30th June, 1910, an extension from Casino to Kyogle was opened for traffic.

(ii.) *Victoria.* The following lines were opened for traffic during 1909-10:—Ultima to Chillingollah (20 miles); Alexandra-road to Alexandra (4¼ miles); Moe to Walhalla, 2 ft. 6 in. gauge, (26 miles); Nyora to Woolamai (16¾ miles); and Woolamai to Powlett coal-fields (13¾ miles).

(iii.) *Queensland.* The increase of 162¾ miles in the mileage opened for traffic in 1909-10 was due to the opening of the following lines:—Caboolture to Woodford (18 miles); Mount Chalmers to Yeppoon (17 miles); Tolga to Yungaburra (10 miles); Clermont to Blair Athol (11 miles); Goondiwindi to Talwood (53¾ miles); and Cloncurry to Friezland (53 miles).

(iv.) *South Australia.* The only line opened for traffic in this State during the year 1909-10 was that from Laura to Booleroo Centre, a distance of 24¼ miles.

(v.) *Western Australia.* The following new sections of railway were taken over from the Public Works Department during the year 1909-10 and opened for public traffic:—Mundaring Weir Branch (5 miles); Widgemooltha to Norseman (56¾ miles); Newcastle to Bolgart (23½ miles); and Pinjora to Marrinup (14¾ miles).

(vi.) *Tasmania.* During the year 1909-10 an extension of the Derwent Valley line from Glenora to Russell was opened for traffic.

2. **Non-conformity of Gauge.**—With but few exceptions, all the railway lines in the Commonwealth open for general traffic are now owned and managed by the respective States in whose territory they run, but, unfortunately for the purpose of interstate

traffic, the construction of the various systems in different parts of Australia has proceeded without uniformity of gauge. In 1846 Mr. Gladstone, then Colonial Secretary, recommended in a despatch to the Governor of New South Wales that the 4 ft. 8½ in. gauge should be adopted. In 1850, however, the engineer to the Sydney Railroad and Tramway Company strongly advocated the adoption of the 5 ft. 3 in. gauge, and in 1852 an Act was passed making it compulsory that all railways in New South Wales should be constructed to the wider gauge, the Governors of Victoria and South Australia being duly advised of the step that had been taken. But in 1852 the company mentioned, having changed their engineer, also changed their views as to the gauge question, and in the following year they succeeded in obtaining the repeal of the Act of 1852 and in passing another, under the provisions of which the narrower gauge was made imperative. This step was taken without the concurrence of the other States concerned, and a considerable amount of ill-feeling arose, especially in Victoria, where two private companies had already placed large orders for rolling stock constructed to the broad gauge originally chosen. The result was that it was decided in Victoria to adhere to the 5 ft. 3 in. gauge as the standard gauge for that State, while the Sydney Railroad and Tramway Company proceeded with the construction of their lines to the 4 ft. 8½ in. gauge, and these two gauges have since been adhered to as the standard gauges of the respective States. The Queensland Government had at the outset adopted a gauge of 3 ft. 6 in. as being best suited to the requirements of the colony, and have since adhered to that gauge throughout the State, so that all goods have to be discharged and reloaded at the boundary between that State and New South Wales. In South Australia the broad gauge of Victoria was at first adopted, and the part of the interstate line between Adelaide and the Victorian boundary was constructed to that gauge, so that the line from Melbourne to Adelaide is uniform. In the lines which have been constructed more recently, however, and in the Northern Territory, the South Australian Government has, with a view to economy in construction, adopted a gauge of 3 ft. 6 in. In Western Australia and Tasmania the 3 ft. 6 in. gauge was also adopted. It was recognised in both these States that the construction of railways was essential to their proper development, but as their financial resources would not bear a heavy initial expenditure in connection with the establishment of railway lines, it was decided to adopt the narrow-gauge. In Victoria light railways have been constructed in recent years to a gauge of 2 ft. 6 in., whilst in Tasmania short lengths have been laid down to a 2 ft. gauge.

3. **Interstate Communication.**—Until the railway systems of the eastern States were connected at the common boundaries the inconvenience of non-conformity of gauge was not felt. Since then, however, the necessary transhipments of both passengers and goods have been a source of trouble, delay, and expense. On the 14th June, 1883, a railway bridge over the River Murray at Wodonga was opened for traffic, and communication was then established between Melbourne and Sydney. On the 19th January, 1887, the last section of the Victorian line to Serviceton, on the South Australian border, was completed, and a junction was thus effected with the South Australian line to Adelaide. On the 16th January, 1888, a junction was effected between the New South Wales and Queensland lines at Wallangarra, but there was still a break in the line from Sydney at the Hawkesbury River, thirty-six miles from Sydney. This last link was, however, completed on the 1st May, 1889, by the opening of the Hawkesbury River bridge, 2900 feet in length, and railway communication was thus established between the four capital cities, Brisbane, Sydney, Melbourne, and Adelaide.

In February, 1911, a conference of officers of the Commonwealth and State Governments was held in Melbourne under the presidency of the Minister for Defence to consider matters of defence as affected by the facilities for transport of troops and armaments in the event of war. The proposal laid before the conference was that a railway central staff should be formed, so that in case of war the Defence Department would have at hand not only a well considered scheme of mobilisation, but also an organised staff of men ready to carry out the work of transport. The deliberations of this conference were held in private, and up to the time of publication of this section of the Year Book, no statement as to the results of the conference had been made public.

4. **Unification of Gauge.**—The development of the railway systems of the Commonwealth has shewn that the adoption of different gauges on the main lines in the several States was a serious error. The extra cost, delay, and inconvenience incurred by the necessity of transferring through-passengers and goods at places where there are breaks of gauge, though not at present of any appreciable magnitude, are becoming more serious as the volume of business increases. As an indication of the extra cost thus involved the following junction charges payable on interstate traffic between New South Wales and Victoria and *vice-versa* are given :—

JUNCTION CHARGES.—NEW SOUTH WALES AND VICTORIA, 1910.

General Merchandise. 1st to 3rd Classes.	Vehicles for which rate per mile operates.	Live Stock.	Empty Returns.	Other Goods.*
2s. 6d. per ton	1s. 6d. each	3s. per truck.	1s. per ton.	1s. 6d. per ton.

* No junction charge is made on wool.

Although the cost of alteration to a uniform gauge would be great, many propositions have from time to time been put forward with the object of securing such a gauge, and attention has been drawn to the importance of the unification of gauges before further expenditure on railway construction is incurred by the States. The problem is, however, one which is by no means easy of solution, and the difficulties are increased by the introduction of what may be called questions of local or State policy. That its solution would facilitate the development of commerce and the settlement on the land throughout the Commonwealth, is now widely recognised. The economic disadvantages of breaks of gauge, and of any artificial restrictions in regard to trade finding its proper geographical outlets, are also seen by dispassionate observers. It is obvious, too, that in the event of a foreign invasion of any part of the seaboard, the interchange and concentrations of rolling stock for the transport of men and war material would be impeded, and might result in confusion and loss. It is asserted, moreover, that unification of gauges would tend to reduce to a negligible quantity all tendency to disorganisation and undue congestion likely to occur at times of bountiful seasons; that various trades and industries would be benefited by the concentration, at times of abnormal or periodic activity, of idle trucks from other States; that there would be a large saving in the aggregate capital expenditure on rolling stock; in other words, that the fullest use of all rolling stock and the meeting of all exigencies would be facilitated.

As regards the unification of gauges, the question naturally arises as to which gauge, if any, should be adopted as the universal gauge of the Commonwealth. As regards Government railways only, the New South Wales gauge has a mileage of 3643; Victoria and South Australia have a combined mileage of 3983 of 5 ft. 3 in. gauge; while Queensland, South Australia, the Northern Territory, and Western Australia have together 7265 miles of 3 ft. 6 in. gauge. By far the greater part of the mileage of private railways open for general traffic has also been constructed to the 3 ft. 6 in. gauge. The mere question of preponderance of mileage, therefore, indicates the 3 ft. 6 in. gauge for adoption. But this question is obviously subordinate to those involving engineering and economic considerations. Thus, the relative efficiency from the widest point of view, the relative costs of alterations of permanent way and rolling stock, of carrying capacity and speed, that is to say, questions of a technical nature about which figures are not available, enter into the grounds for decision. As regards the unification of the New South Wales and Victorian lines, the advantage of reducing the broad gauge to the 4 ft. 8½ in. gauge is that there would be no necessity for the alteration of tunnels, cuttings, bridges, or viaducts.

In 1897 a conference was held between the Railway Commissioners of New South Wales, Victoria, and South Australia to consider and report upon the unification of the railway gauges of these States. In their report the Commissioners specified the mileage

including double roads, sidings, and private coal lines) of 4 ft. 8½ in. and 5 ft. 3 in. gauges in the several colonies to be as follows:—

UNIFICATION OF 4 ft. 8½ in. AND 5 ft. 3 in. GAUGES IN NEW SOUTH WALES, VICTORIA, AND SOUTH AUSTRALIA. MILEAGE OPEN, 1897.

Particulars.	New South Wales.		Victoria.	South Aust.	Total.	
Gauge ...	4 ft. 8½ in.	5 ft. 3 in.	5 ft. 3 in.	5 ft. 3 in.	4 ft. 8½ in.	5 ft. 3 in.
Mileage ...	3,340	51	3,868	590	3,340	4,509

The cost of unification of the gauges as estimated by the Commissioners at the conference was as follows:—

COST OF UNIFICATION OF 4 ft. 8½ in. AND 5 ft. 3 in. GAUGES, NEW SOUTH WALES, VICTORIA, AND SOUTH AUSTRALIA, 1897.

Particulars.	Alteration of Permanent Way and Works.	Alteration of Rolling Stock.	Temporary Workshops and Material.	Total.
	£	£	£	£
New South Wales, conversion from 4 ft. 8½ in. to 5 ft. 3 in.	2,518,000	1,702,000	40,000	4,260,000
Victoria, South Australia, and *New South Wales* (51 miles) conversion from 5 ft. 3 in. to 4 ft. 8½ in.	493,000	1,827,500	40,000	2,360,500

It may be seen that the difference in estimated cost in favour of change from the 5 ft. 3 in. gauge to 4 ft. 8½ in. gauge was £1,899,500. The Commissioners agreed that the work could be carried out within five years from the date of its commencement.

Military officers have asserted that from a defence point of view it is imperative that the present mixture of gauges should be abolished. Reference has already been made (see paragraph 3 hereof) to the Railway War Conference, which was called more particularly to deal with the break of gauge problem as it would affect the transport of troops and armaments. It may also be observed that in South Australia the Break of Gauge Commission is enquiring into the local aspect of what is practically the same problem, presented in its commercial aspect only.

5. Average Mileage Worked, Train Miles Run, Number of Passenger Journeys, and Tonnage of Goods and Live Stock Carried on Government Railways, 1901 to 1910.—The table at head of page gives the actual mileage open for traffic at the end of each financial year, but, in considering the returns relating to revenue and expenditure and other matters, it is desirable to know the average number of miles actually worked during each year. The next table shews the average number of miles worked, the total number of train miles run, the number of passenger journeys, and the tonnage of goods and live stock carried by the Government railways of each State during each financial year from 1900-1 to 1909-10 inclusive:—

GOVERNMENT RAILWAYS.—AVERAGE MILEAGE WORKED, TRAIN MILES RUN, NUMBER OF PASSENGER JOURNEYS, AND TONNAGE OF GOODS AND LIVE STOCK CARRIED, 1901 to 1910.

Year.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	N. Ter.	West. Aust.	Tasmania.	C'wealth.

* For the calendar years 1901, 1902, and 1903 respectively. The average mileage worked is larger than the actual mileage open, owing to the fact that the Government Railways have running powers over certain private lines. † The returns are for a period of six months ended the 30th June, 1904; the figures here given are estimated for a full period of twelve months. ‡ These figures are partly estimated, the actual returns excluding journeys by season ticket holders. § Exclusive of live stock. ‖ Exclusive of live stock returns for Queensland and Tasmania.

6. **Length and Gauge of Railway System in each State.**—A map shewing the State railway lines, and also the private lines open to the public for general traffic, in the different States of the Commonwealth is given at the end of this sub-section. In all the States the Government railways are grouped, for the purpose of convenience of administration and management, into several divisions or systems, some of which have already been briefly referred to above in dealing with the history of construction of the railways.

The subjoined summary shews concisely the gauge and length of the main and branch lines included in each division or system of the different States of the Commonwealth for the year ended the 30th June, 1910:—

GOVERNMENT RAILWAYS, 1909-10.

Particulars.	Length.	Gauge.
	Miles.	ft. in.
1. NEW SOUTH WALES.		
(i.) The Northern line and branches—		
(*a*) Main line. Strathfield-Wallangarra	489	4 8½
(*b*) Branch lines	472	4 8½
(ii.) The Grafton-Tweed line	168¾	4 8½
(iii.) The Western line and branches—		
(*a*) Main line. Granville-Bourke	495	4 8½
(*b*) Branch lines	714¼	4 8½
(iv.) The Southern line—		
(*a*) Main line. Granville-Wodonga	381	4 8½
(*b*) Branch lines	742½	4 8½
(v.) The South-coast (Illawarra) line—		
(*a*) Main line. Sydney to Nowra...	93	4 8½
(*b*) Branch lines	7	4 8½
(vi.) Suburban lines	40½	4 8½
(vii.) Broken Hill line. Broken Hill-Tarrawingee	40	4 8½
Total	3,643	...
2. VICTORIA.		
(i.) The South-eastern system—		
(*a*) Main lines. Dandenong-Port Albert, Aspendale-Stony Point	145	5 3
(*b*) Branch lines	43½	5 3
(ii.) The Eastern system—		
(*a*) Main lines. Dandenong-Bairnsdale, Bayswater-Gembrook, Croydon-Healesville	18	2 6
	202	5 3
(*b*) Branch lines	97	5 3
	29	2 6
(iii.) The North-eastern system—		
(*a*) Main line. Craigieburn-Wodonga	171	5 3
(*b*) Branch lines	30	2 6
	446½	5 3
(iv.) The Northern system—		
(*a*) Main line. Digger's Rest-Echuca	135	5 3
(*b*) Branch lines	946	5 3
(v.) The North-western system—		
(*a*) Main line. Rockbank-Serviceton	266	5 3
(*b*) Branch lines	210	5 3
(vi.) The Western and South-western system—		
(*a*) Main line. Werribee-Portland	272	5 3
(*b*) Branch lines	30	2 6
	262	5 3
(vii.) The Suburban system— Including the lines to Aspendale, Dandenong, Bayswater, Croydon, Eltham, Craigieburn, Digger's Rest, Rockbank, and Werribee	188	5 3
Total	3,491	...

7. **Administration and Control of Government Railways.**—In each State of the Commonwealth the policy has now been established that the railways should be kept under the control of the Government. This policy, as has been shewn, was early actualised in Australia, and, excepting in cases presenting unusual circumstances, may be regarded as the settled policy of the country. It may here be observed that for many years past nationalisation of railways throughout Europe has been a feature of the development of railway policy, and so far there is no sign of any movement in an opposite direction. Indeed it may be said that the Governments have recognised the supreme importance of a railroad policy, not only as an element in the industrial, but even in the political life of nations, and have felt that nothing short of complete ownership and direct management of the railroads would give them the power which, for national reasons, they must exert. In America the modern tendency is to so condition the freights by Governmental action as to give at least a quasi-national character to the railways.

(i.) *New South Wales.* Prior to the year 1888 the control of the State railways in New South Wales was vested in the Minister for Works, under the provisions of the Railways Act of 1858, the actual management being in the hands of a Commissioner. In 1888, however, the Act referred to was repealed by a new Act, the object of which was to improve the administration and to free it from political influences. Under this Act, as amended in 1901, three Commissioners were appointed for a period of seven years, but in 1906 an amending Act was passed, which provides for the appointment of a Chief Commissioner, with supreme power, an Assistant Commissioner for Railways, and an Assistant Commissioner for Tramways. The Chief Commissioner is required to present an annual report to Parliament, through the Minister for Railways, setting forth an account of his proceedings, and of the revenue and expenditure during the previous year. New lines are constructed by the Railway and Tramway Construction Branch of the Public Works Department, and on completion are handed over to the control of the Chief Commissioner.

(ii.) *Victoria.* In consequence of general dissatisfaction in regard to the management of the railways by political heads, a new Railway Act was passed and came into

force on the 1st November, 1883. Under its provisions the management and control of the State railways were placed in the hands of three Commissioners, who supervised the construction of new lines as well as the general management of lines already open for traffic. On the 1st January, 1892, the duty of the construction of new lines was transferred to the Board of Land and Works, and the Minister, under the provisions of the Railways Act of 1891, was given greater powers to interfere in matters of policy. In 1895 the Government appointed a Board to inquire into and report upon the general working of the Railway Department, and as a result of their report the Railways Act of 1896 was passed. The management was placed in the hands of one Commissioner until the year 1903, when the Victorian Railway Commissioners Act was passed, and the administration was again placed in the hands of three Commissioners.

Proposals for the construction of new lines are in every case, in which the estimated cost is in excess of £20,000, investigated by the Parliamentary Standing Committee on Railways, whose recommendation is submitted to the Legislature. Any new line authorised by Parliament is constructed under the supervision of the Chief Engineer for Railway Construction, who is responsible to the Minister of Railways for the time being, and is not subject to the control of the Commissioners. New lines are constructed under the authority of the Railway Lands Acquisition Acts 1893 to 1899.

(iii.) *Queensland.* The first Act referring to the construction of railways, passed by the Queensland Legislature in 1863, provided for the appointment of a Commissioner of Railways, who was to be the permanent head of the Railway Department, but was, however, also to be subordinate, as regards all matters of administration, to the Minister in charge of the railways for the time being. This arrangement was continued until the year 1888, when an Act was passed providing for the appointment of three Commissioners invested with full powers as to the administration, management, and construction of the railways, the control of which was thus removed from political influence. The functions of a Minister for Railways were not abolished, but they were so defined and limited that the Minister became in effect an intermediary between the Commissioners and Parliament, to which body the Commissioners were bound to make an annual report, setting forth an account of their proceedings and a financial statement for the previous year. The Railways Act Amendment Act of 1896 again provided for the appointment of one Commissioner only, for a term not exceeding three years, extended in 1902 to a maximum term of seven years. Under the Act of 1896 the Commissioner is required to prepare an annual report of the Railway Department. New lines are constructed by the Commissioner under the Railways Act of 1906. Under this Act the ratepayers in any district in which a new line is constructed are liable for the amount of any deficiency in case the earnings in any year are less than the working expenses, together with interest at the rate of 3 per cent. on the cost of construction. The separation from each other by long distances of some of the railway lines in Queensland puts difficulties in the way of their economical administration and supervision, since it is found necessary to maintain, in connection with each of the principal detached lines, a separate staff of engineering and managing officials.

(iv.) *South Australia.* The Railway Clauses Consolidation Act, passed in South Australia in March, 1847, was the first Act passed in Australia referring to the construction of railways; its provisions, however, contained many obsolete clauses of English railway legislation, and were soon modified. In 1887 an Act to make better provision for the construction, maintenance, and management of railways was passed, and came into force on the 1st June, 1888; it removed the control of the railways from political influence and provided for the appointment of three Commissioners, into whose hands the management and the supervision of the railways passed. The Act of 1887 was, however, amended by the Railway Commissioners Act of 1894, which provides for one Commissioner only, assisted by a Board of Advice. Under the Act of 1894 the Commissioner has the same

powers as were vested in the three Commissioners under the Act of 1887. Further amendments were made in the years 1902 and 1906, but since the Act of 1894 was passed the management, maintenance, and construction of the railways have remained in the hands of one Commissioner, who is required to present to Parliament an annual report of his proceedings, and of the revenue and expenditure during the previous year.

(v.) *Western Australia.* From the time of the inception of railways in this State until the granting of responsible government in 1890, the construction, maintenance, and control of all railways were in the hands of an official holding the title of Commissioner of Railways, and having a seat in the Executive Council. This official was invested with very extensive powers for all purposes connected with railways, and had also to supervise the safe working and the charges made by private railway owners. On the institution of responsible government the office of Commissioner was converted into a Ministerial one; the active management was placed in the hands of an officer styled General Manager of Railways, while construction works on new lines were carried out by the Department of Public Works. In 1902 a Bill was introduced into Parliament providing for the appointment for a term of five years of a Railway Commissioner to be free from political influence. This Bill received the Vice-regal assent on the 20th December, 1902. The former Railway Acts, of which the Act in question was an amendment, continued to remain in force, with the result that certain anomalies and ambiguities arose, in consequence of which a Consolidating Government Railways Act was passed in 1904. Under its provisions the administration of all Government railways was placed in the hands of the Commissioner, who was relieved from the supervision of private railways. The construction of new railways or of extensions is left, as formerly, in the hands of the Minister controlling the Department of Public Works. The Act of 1904 was amended in certain details in 1907.

(vi.) *Tasmania.* The law relating to the control and management of the Tasmanian Government railways was amended and consolidated by the Railway Management Act of 1891, which has in turn been amended by Acts passed in 1893, 1896, and 1901. The control and construction of Government railways are vested in a responsible Minister, the active management and maintenance being in the hands of an officer styled the General Manager, who is subject to such directions as he may receive from the Minister. A Bill to amend the Railway Management Act 1891 has been introduced in Parliament; it provides for the appointment of a Railway Commissioner to hold office for four years.

8. **Lines under Construction, and Authorised and Proposed Lines, 1910.**—The following statement gives particulars up to the 30th June, 1910, of the mileage of Government railways (*a*) under construction, and (*b*) authorised for construction but not commenced:—

MILEAGE UNDER CONSTRUCTION AND AUTHORISED, 30th JUNE, 1910.

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	Cwlth.
Mileage under construction ...	253½	114	345	29	281	24	1,046½
Mileage authorised	311	213¼	148	286	182	...	1,140¼

(i.) *Lines under Construction.* In spite of the great extension of State railways which has taken place since the year 1875 throughout the Commonwealth, there are still, in some of the States, tracts of country of immense area, which are as yet practically undeveloped, and in which little in the nature of permanent settlement has been accomplished; the general policy in the States is to extend the existing lines inland, in the form of light railways, as settlement increases, and although it is true that lines which

were not likely to be commercially successful in the immediate future have been constructed from time to time, for the purpose of encouraging settlement, the general principle that the railways should be self-supporting is kept in view. (*a*) In *New South Wales* the lines under construction are chiefly of the "pioneer" class, and are made with a view to affording railway communication over level country to districts in which the traffic would not warrant the expenditure necessary to provide thoroughly equipped lines. As the traffic increases the permanent way is strengthened in order to allow the heavy types of engines to run over it. It is probable that railway extension in New South Wales, in the near future, will be mainly confined to lines of the "pioneer" class. Two of the most important lines now under construction are those from Maitland to Dungog, a distance of 32¾ miles, Dungog to Gloucester, 38¾ miles, and from Gloucester to Taree, a distance of 44 miles. The extension of these lines as far as Grafton, a further distance of 195 miles, has been authorised, and, when completed, will form part of an alternative main route between Newcastle and Brisbane. Other lines under construction are as follow:—Lockhart to Clear Hills (53 miles), Cowra to Canowindra (24½ miles), Narromine to Peak Hill (36 miles), and Cooma to Nimitybelle (24½ miles). (*b*) *Victoria.* In this State the following lines were under construction by the Board of Land and Works on the 30th June, 1910:—*5 ft. 3 in. gauge:* Mildura to White Cliffs (7 miles), Ouyen to Cow Plains (57 miles), and Beeac to Newtown (35¾ miles), making in all 99¾ miles. *2 ft. 6 in. gauge:* Beech Forest to Crow's (14¼ miles). (*c*) *Queensland.* At the end of the year 1909-10, fourteen railways, having a total length of 345 miles, were under construction, viz.:—Kannangur to Blackbutt (28 miles), Boyne Valley branch (53 miles), Atherton to Evelyn (31 miles), Kingsthorpe towards Main Range (21 miles), Dalby to Tara (52 miles), Yungaburra to Johnstone River (9 miles), Friezland to Mount Elliot (18 miles), Talwood to Bullamon (39 miles), Pittsworth to Millmerran (27 miles), Warwick to Meryvale (19 miles), Laidley Creek branch (7 miles), Port Alma branch (17 miles), Cattle Creek branch extension (8 miles), and Kingaroy to Nanango (16 miles). (*d*) *South Australia.* In this State the lines under construction on the 30th June, 1910, were as follows:—Gawler to Angaston (24 miles), Gawler to Angaston Extension (2½ miles), and Port Adelaide to Largs (2½ miles),—all on the 5 ft. 3 in. gauge. (*e*) In *Western Australia* the following lines were in course of construction by the Public Works Department on the 30th June, 1910:—Mt. Magnet to Black Range (93 miles), Nannine to Meekatharra (24 miles), Marrinup extension (2 miles), Port Hedland to Marble Bar (114 miles), Upper Chapman (26 miles), and Bridgetown to Wilgarup (22 miles). (*f*) *Tasmania.* At the end of the year 1909-10, one line, viz., Scottsdale to Branxholm, 24 miles in length, was in course of construction.

(ii.) *Lines Authorised for Construction.* (*a*) In *New South Wales*, in addition to the North-coast railway extension from Taree to Grafton, a distance of 195 miles, the construction of lines from Nimitybelle to Bombala (40 miles) and from Moree to Mungindi (76 miles) had been authorised up to the 30th June, 1910. (*b*) In *Victoria* the following lines were authorised, but their construction had not been commenced up to the end of June, 1910:—*5 ft. 3 in. gauge*, Eltham to Hurst's Bridge (6¾ miles), Gheringhap to Maroona (100¾ miles), Noradjuha to Toolondo (11¼ miles), Bairnsdale to Orbost (60 miles), and Jeparit to Lorquon (14½ miles); *2 ft. 6 in. gauge*, Whitfield to Tolmie (20 miles). (*c*) *Queensland.* In addition to the new lines upon which work has been commenced, lines from Mount Morgan to the Dawson River (69 miles), Oakey to Cooyar (38 miles), Rosewood to Marburg (9 miles), Cordalba to Dallornil (31 miles), and McGregor Creek branch extension (1 mile), have been approved of by Parliament. (*d*) In *South Australia* the construction of a line from Tailem Bend to Brown's Well (100 miles) on the 5 ft. 3 in. gauge, and of lines from Yeelanna to Mannipa Hill (108 miles), and Cummins to Darke's Peak (78 miles) on the 3 ft. 6 in. gauge, was authorised during the year 1909-10. It is proposed to electrify the Adelaide-Glenelg (6½ miles) line at an estimated cost of £115,000, and also to construct light lines in newly settled districts to be run by District Councils. (*e*) In *Western Australia* three lines having a total length of 182 miles were authorised for construction up to the 30th June, 1910. These

lines were—Dowerin to Merredin (97 miles), Goomalling to Wongan Hills (33 miles), and Boyup to Kojonup (52 miles).

(iii.) *Proposed Transcontinental Lines.* (*a*) *Port Augusta to Kalgoorlie Line.* A proposal which has recently received considerable attention is to connect the railways of the eastern and southern districts of Australia with the Western Australian lines by the construction of a line between Port Augusta, in South Australia, and Kalgoorlie, on the Western Australian goldfields, a distance of 1100 miles. The Transcontinental Railway Bill, passed in 1907 by the Federal Houses of Parliament, provided for the expenditure of a sum of £20,000 for a preliminary survey of the proposed line. This survey was commenced in 1908, and was completed in March, 1909. The route of the preliminary survey may be seen on reference to the map on page 741 hereof; the route *via* Tarcoola was, for several reasons, chosen in preference to that *via* Gawler Range and Fowler's Bay. It is stated in the report of the surveyors that while some part of the country which it is proposed to traverse is impossible for settlement, there is an area of good country, extending to about 40,000 square miles, which can be considered favourable for pastoral development. The estimated cost of construction and equipment of the line on the basis of a 4 ft. 8½ in. gauge is £3,988,000. It is claimed that the line would be of immense benefit in the expedition of the European mails to the southern and eastern parts of the continent, and, if occasion should arise, in facilitating the transport of troops. It is intended to introduce a Bill in the Commonwealth Parliament at an early date to authorise the construction of a line from Port Augusta to Kalgoorlie. A consulting engineer has been appointed by the Department of Home Affairs to prepare working plans and specifications, calculate quantities, and collate all other information necessary, in order that construction may be commenced as soon as parliamentary sanction to the project has been obtained. (*b*) *Northern Territory Transcontinental Line.* Another proposal is to extend the main northern line from Adelaide, which at present terminates at Oodnadatta, as far as Pine Creek, the southern terminus of the Northern Territory line from Palmerston. The distance between Oodnadatta and Pine Creek by the route followed by the telegraph wire is 1140 miles, and it is claimed that, if a railway line were constructed between these two places, it would be practicable for passengers and mails to reach London from Adelaide in seventeen days, *via* Port Darwin and the trans-Siberian railway. In the course of the year 1896 offers were made on behalf of various syndicates to construct this line, but the Government was not at that time prepared to recommend the acceptance of any offer based upon the land grant or guarantee system. In 1902, however, the Transcontinental Railway Act was passed, and the Government invited tenders for the construction of 1063 miles of 3 ft. 6 in. line on the land grant system, to be built at the rate of at least 100 miles in any one year, the grant of land offered amounting to nearly 80,000,000 acres. No tenders were accepted and subsequent offers have been refused. The country through which this line would pass presents no great engineering difficulties; for the most part it is one vast plain, with an occasional sand ridge or a watercourse. The construction of this line is provided for in the Northern Territory Acceptance Act 1910. (See pages 22 and 23 hereinbefore.) Under that Act the property in the railways from Port Augusta to Oodnadatta and from Palmerston to Pine Creek has been transferred to the Commonwealth Government as from the 1st January, 1911. In the meantime these lines are being worked under the control of the South Australian Railway Commissioner by agreement between the Commonwealth and South Australian Governments.

9. **Cost of Construction and Equipment of Government Railways.**—The total cost of construction and equipment of the State railways of the Commonwealth at the 30th June, 1910, amounted to £146,882,474, or to an average of £9497 per mile open for

traffic. Particulars as to the capital expenditure incurred in each State are given in the following table :—

GOVERNMENT RAILWAYS.—COST OF CONSTRUCTION AND EQUIPMENT TO THE 30th JUNE, 1910.

State.	Length of Line Open.	Total Cost of Construction and Equipment.	Average Cost per Mile Open.	Cost per Head of Population.
	Miles.	£	£	£
New South Wales	3,643	48,925,348	13,430	29.77
Victoria	3,490¾	43,142,329	12,358	32.97
Queensland	3,660¾	24,336,372	6,647	41.28
South Australia	1,912¼	13,879,523	7,258	33.49
Northern Territory	145½	1,173,224	8,063	391.07
Western Australia	2,144½	11,377,262	5,304	40.73
Tasmania	469½	4,048,416	8,632	22.08
Commonwealth	15,466¼	146,882,474	9,497	33.21

It will be seen that the lowest average cost per mile open is in Western Australia, and is only £5304, which is less than one-half of the highest average cost, namely, £13,430 in New South Wales, compared with an average of £9497 for the whole Commonwealth. In Western Australia there have been comparatively few engineering difficulties to contend with, and also the system has been adopted in that State of giving contractors the right to carry traffic during the period of their contracts, with the result that, at all events in all goldfields railway contracts, the cost of construction has been considerably lessened.

(i.) *Reduction of Cost per Mile in Recent Years.* The average cost per mile of the lines constructed lately in the Commonwealth is very much less than the figure given in the above table, in consequence of the construction of light "pioneer" lines, which have already been referred to, and which it was originally considered in New South Wales could be laid down at a cost of £1750 per mile (exclusive of stations and bridges). It should also be remembered that in the early days of railway construction there were considerable engineering difficulties to overcome, and that labour was scarce and dear. Since 1891 over one thousand miles of the "pioneer" lines have been opened in New South Wales, the average cost ranging from about £2000 to £7500 per mile, according to the difficulties met in the country traversed. The lowest cost per mile for any line previously constructed had been that of the line from Nyngan to Cobar, the average cost of which, to the end of June, 1910, was £3759. In Victoria also the cost of construction has been greatly reduced in recent years. The total cost to the 30th June, 1910, of the narrow gauge (2 ft. 6 in.) lines, having a length of one hundred and seven miles, was only £270,902, which gives an average cost per mile of only £2532. In the other States also the cost of construction per mile has been reduced by building light railways as cheaply as possible. Fairly substantial permanent way is laid down with reduced ballast, and, as settlement progresses and traffic increases, the road is strengthened and the stations and siding accommodation enlarged. The subjoined table gives examples of some of the more expensive lines, most of which were built in the early days :—

GOVERNMENT RAILWAYS.—EXAMPLES OF LINES CONSTRUCTED AT LARGE CAPITAL EXPENDITURE PER MILE OPEN.

Line.	Gauge.		Length.	Total Cost.	Average Cost per Mile.	Date of Opening.
	ft.	in.	Miles.	£	£	
NEW SOUTH WALES—						
Penrith to Bathurst	4	8½	112⅓	2,998,939	26,743	1876
Sydney to Kiama	4	8½	72¼	2,030,442	27,959	1887
Homebush to Waratah ...	4	8½	96⅓	3,116,914	32,291	1887
VICTORIA—						
Melbourne to Bendigo ...	5	3	101	4,849,548	48,068	1862
North Geelong to Ballarat ...	5	3	53¼	1,907,387	35,846	1862

The next table gives instances of lines which have been constructed in more recent years at a comparatively small cost per mile.

The average cost per mile of the 435⅜ miles comprised in the above table was £34,221, whereas the average cost of the 547⅓ miles referred to in the next table was £1816.

GOVERNMENT RAILWAYS.—EXAMPLES OF LINES CONSTRUCTED AT SMALL CAPITAL EXPENDITURE PER MILE OPEN.

Line.	Gauge.		Length.	Total Cost.	Average Cost per Mile.	Date of Opening.
	ft.	in.	Miles.	£	£	
NEW SOUTH WALES—						
Parkes to Condobolin	4	8½	62¾	130,587	2,079	1898
Dubbo to Coonamble	4	8½	95⅞	236,772	2,463	1903
VICTORIA—						
Wangaratta to Whitfield ...	2	6	30½	39,228	1,287	1899
Birchip to Cronomby	5	3	26⅛	40,946	1,548	1899
Rupanyup to Marnoo	5	3	15⅛	27,481	1,787	1909
QUEENSLAND—						
Dalby to Bell	3	6	23½	31,799	1,353	1906
Jericho to Blackall	3	6	71¼	139,539	1,960	1908
SOUTH AUSTRALIA—						
Port Lincoln to Cummins ...	3	6	42	83,964	2,004	1907
Tailem Bend to Pinnaroo ...	5	3	86⅓	127,264	1,470	1906
WESTERN AUSTRALIA—						
Goomalling to Dowerin ...	3	6	15⅓	17,726	1,171	1906
Coolgardie to Widgiemooltha ...	3	6	51½	78,433	1,527	1908
Narrogin to Wickepin ...	3	6	26½	39,983	1,515	1909

The comparisons afforded in the two preceding tables are subject to certain limitations, inasmuch as the figures in each case represent the total cost to date, and the cost is naturally greater in the case of the older lines. Further, the figures given represent the cost of construction only (i.e., are exclusive of cost of equipment), and cannot therefore be directly compared with the average cost per mile open given in the preceding table.

(ii.) *Adoption of Special Means of Locomotion.* The Railway Commissioner of South Australia has given orders for the construction of a truck to be run on one rail. The experiment is to be made with a view to the solution of the problem of how to get produce to stations in the Pinnaroo district. The propelling force of the engine to be used will be petrol. If the test prove a success, the Government intends to construct small lines as feeders to the Pinnaroo railway and thus convey produce over the sand hills cheaply.

A Renard road train (consisting of one motor and four vehicles) has recently been equipped for use in connection with the Queensland Government railways. The train

is to be used between Inglewood and the Texas district, and arrangements are now being made with the local authorities for the improvement of a few difficult portions of the road.

(iii.) *Capital Cost of Construction and Equipment, Total and per Mile Open, 1901 to 1910.* The increase in the total capital cost of construction and equipment of Government railways in each State and in the Commonwealth on the 30th June in each year from 1901 to 1910 inclusive is shewn in the following table:—

GOVERNMENT RAILWAYS.—CAPITAL COST OF CONSTRUCTION AND EQUIPMENT, 1901 to 1910.

Year.	N.S.W.	Victoria.	Q'land.	S'th. Aust.	N. Ter.	West. Aust.	Tas.	C'wealth.
				TOTAL COST (,000 OMITTED).				
	£	£	£	£	£	£	£	£
1901 ...	38,933	40,145	19,740	12,707	1,165	7,098	3,799[1]	123,587
1902 ...	40,565	40,614	20,119	12,826	1,155	7,410	3,841[1]	126,530
1903 ...	41,655	40,974	20,302	12,952	1,169	8,142	3,884[1]	129,078
1904 ...	42,289	41,217	20,888	13,068	1,175	8,956	3,901	131,494
1905 ...	43,063	41,279	21,611	13,138	1,173	9,808	3,921	133,993
1906 ...	43,626	41,398	21,741	13,141	1,173	9,966	3,927	134,972

* For the financial years 1901, 1902, and 1903 respectively. † For twelve months ended the 30th June, 1904.

11. **Coaching, Goods, and Miscellaneous Receipts, 1901 to 1910.**—The gross revenue is composed of (*a*) receipts from coaching traffic, including the carriage of mails, horses, parcels, etc., by passenger trains; (*b*) receipts from the carriage of goods and live stock, and (*c*) rents and miscellaneous items. The subjoined table shews the gross revenue, during the years 1901 to 1910 inclusive, classified according to the three chief sources of receipts. The total of the three items specified has already been given in the preceding paragraph hereof.

* Tasmanian figures for 1901, 1902, and 1903 are for years ended the 31st December.
† For twelve months ended the 30th June, 1904.

(i.) *New South Wales.* In New South Wales, owing, no doubt, to the reductions made in rates and fares in recent years, and to the general prosperity of the State, the traffic receipts continue to shew substantial development, the total earnings for the past year having amounted to £5,485,715, an increase over the previous year of £457,265. The increases occurred in all branches of passenger and goods traffic, except in coal, coke, and other minerals.

(ii.) *Victoria.* In Victoria each sub-division of traffic shewed an increase over the figures for the previous year and was also higher (with the exception of live-stock) than in any previous year. The most notable increases were in goods and minerals (£148,895, or 8.2 per cent.), and passengers (£86,694, or 4.8 per cent.).

(iii.) *Queensland.* In Queensland the increase in 1909-10 in gross earnings, £235,349 above 1908-9, is to some extent accounted for by the opening of new lines, but it is stated that the expansion of traffic upon the older established lines has been enormous. The chief increases in earnings were in respect of passengers (£68,955 or 12.01 per cent.), general merchandise (£66,741 or 9.72 per cent.), live stock (£43,600 or 27.71 per cent.), and wool (£37,449 or 21.16 per cent).

(iv.) *South Australia.* In this State the increase for the last year in coaching traffic receipts amounted to £52,801; there were also considerable increases in respect of minerals (£98,816) and wheat (£14,222). There was, however, a decrease in respect of live stock amounting to £22,631.

(v.) *Western Australia.* In this State the earnings in 1909-10 shewed an increase, as compared with 1908-9, in every branch of traffic and are the highest on record. What may be regarded as personal traffic rendered an additional amount of over £20,000, giving evidence of increased activity in business and pleasure, while goods and live stock returned £97,000 more than the previous year. Miscellaneous receipts were £17,000 higher, the most notable increases being in the terminal charges in connection with placing the increased quantities of wheat and timber alongside shipping for export.

(vi.) *Tasmania.* The gross revenue in 1909-10 was the largest yet recorded. As compared with 1908-9, the increase from passenger traffic was £1658; live stock, £1005; rents and miscellaneous, £1964; whilst there was a decrease in goods and mineral traffic of £699.

The following table shews for the year 1909-10 the percentage which each class of receipts bears to the total gross revenue:—

PERCENTAGE OF REVENUES FROM VARIOUS SOURCES ON TOTAL REVENUE, 1909-10.

Particulars.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	Cwlth.
	%	%	%	%	%	%	%
Coaching traffic receipts ...	38.72	48.21	34.88	31.62	31.00	49.05	39.37
Goods and live stock traffic receipts	59.99	50.01	64.15	65.58	65.07	47.28	58.77
Miscellaneous receipts	1.29	1.78	0.97	2.80	3.93	3.67	1.86

12. **Coaching Traffic Receipts per Average Mile Worked, per Passenger-train Mile, and per Passenger Journey.**—The subjoined table shews the receipts from coaching traffic per average mile of line worked, per passenger-train mile, and per passenger journey in each State and in the Commonwealth for the year ended the 30th June, 1910:—

GOVERNMENT RAILWAYS.—COACHING TRAFFIC RECEIPTS PER MILE OPEN, PER PASSENGER-TRAIN MILE, AND PER PASSENGER JOURNEY, 1910.

State.	Number of Passenger-Train Miles.	Number of Passenger Journeys.	Coaching Traffic Receipts.		
			Gross.	Per Passenger-Train Mile.	Per Passenger Journey.
	No. ,000.	No. ,000	£ ,000.	d.	d.
New South Wales	7,270	53,644	2,124	70.13	9.50
Victoria	6,437 *	85,280	2,143	79.88	6.03
Queensland	2,521	13,259	816	77.65	14.77
South Australia	2,117	15,282	582	66.01	9.14
Northern Territory ...	10	3	4	87.56	311.33
Western Australia	2,117 †	13,171	507	57.52	9.25
Tasmania	375 ‡	1,651	139	89.07	20.26
Commonwealth ...	20,847	182,290	6,315	72.70	8.31

* The returns include 2,514,406 mixed-train mileage, which has been divided between passenger-train miles and goods-train miles in the proportion of one-third and two-thirds respectively. † The returns include 962,093 mixed-train mileage, which has been divided as just stated. ‡ The returns include 702,300 mixed-train mileage, which has been divided as just stated.

The above table shews that, in the several States, there is a considerable difference in the amount of the average receipts per passenger journey. Disregarding the Northern Territory, this amount ranges from 6.03 pence in Victoria, where there is a large metropolitan suburban traffic, to 20.26 pence in Tasmania. The difference in these amounts cannot be accounted for by the amounts of rates charged, which are fairly uniform in the several States (see paragraph 20 hereof), but is largely due to the different traffic conditions which prevail on various lines in the Commonwealth (see paragraph 17 hereof). In order to adequately analyse these figures it would be necessary to have particulars regarding the number of passenger-miles, *i.e.*, the total distance travelled by passengers, in each State, which particulars are not generally available (see paragraph 18 hereof).

The preponderance in the number of passenger journeys in Victoria is accounted for, to a great extent, by the large number of metropolitan suburban passengers in that State. Of the total number of passengers carried in Victoria, 78,554,426 were metropolitan suburban passengers, *i.e.*, were carried between stations within twenty miles of Melbourne, while in New South Wales the number of suburban passengers (between stations within thirty-four miles of Sydney and Newcastle, and including Richmond and Branxton lines) was 48,147,012. In Sydney a large proportion of the metropolitan suburban traffic is carried on the electric tramways, the number of passenger journeys during the year 1909-10 being 187,537,000. In Melbourne, on the other hand, the number of passengers carried on the cable tramways systems during the same period was 68,695,853; and on the St. Kilda-Brighton and the North Melbourne tramways was 3,232,220, making a total of 71,928,073, which is not as great as the number carried on the metropolitan suburban railways in Melbourne. This matter is referred to hereinafter. (See paragraph 17.)

13. **Goods and Live-Stock Traffic Receipts per Mile Worked, per Goods-train Mile, and per Ton Carried.**—The following table shews the gross receipts from goods and live-stock traffic per mile worked, per goods-train mile, and per ton carried for the year ended the 30th June, 1910:—

GOVERNMENT RAILWAYS.—GOODS AND LIVE-STOCK TRAFFIC RECEIPTS PER MILE WORKED, PER GOODS-TRAIN MILE, AND PER TON CARRIED, 1910.

State.	Number of Goods-Train Miles.	Goods and Live-Stock Tonnage.	Goods and Live-Stock Traffic Receipts.		
			Gross.	Per Goods-Train Mile.	Per Ton Carried.
	No. ,000.	Tons ,000.	£ ,000.	d.	d.
New South Wales	8,198	8,393	3,291	96.34	94.10
Victoria	5,269*	4,468	2,222	101.24	119.36
Queensland	5,636	2,656§	1,500	63.88	135.55
South Australia	3,304	2,481	1,208	87.78	116.91
Northern Territory	20	2	7	78.85	740.89
Western Australia	2,281†	2,242	1,066	112.11	114.05
Tasmania	684‡	423§	134	47.10	76.23
Commonwealth	25,392	20,665	9,428	89.11	109.49

* The returns include 2,514,406 mixed-train mileage, which has been divided between passenger-train miles and goods-train miles in the proportion of one-third and two-thirds respectively. † The returns include 962,093 mixed-train mileage, which has been divided as just stated. ‡ The returns include 702,300 mixed-train mileage, which has been divided as just stated. § Exclusive of live-stock tonnage.

From the above table it may be seen that, disregarding the Northern Territory, the average amount of freight paid per ton ranges from 76.23 pence in Tasmania to 135.55 pence in Queensland. The remarks made in the preceding paragraph (12) hereof with

regard to the average fare paid per passenger and to passenger-miles, apply equally to the average amount of freight paid per ton and to ton-miles.

14. **Working Expenses.**—In order to make an adequate comparison of the working expenses of the Government railways in the several States, allowance should be made for the variation of gauges and of physical and traffic conditions, not only on the railways of the different States, but also on different portions of the same system. Where traffic is light, the percentage of working expenses is naturally greater than where traffic is heavy; and this is especially true in Australia, where ton-mile rates are in many cases based on a tapering principle—*i.e.*, a lower rate per ton-mile is charged upon merchandise from remote interior districts—and where on many of the lines there is but little back-loading. Further, though efforts have been made from time to time to obtain a uniform system of accounts in the several States, the annual reports of the Commissioners do not yet comprise fully comparable data of railway expenditure.

The following table shews the total annual expenditure, comprising expenses on (*a*) maintenance of way, works, and buildings; (*b*) locomotive power—repairs and renewals; (*c*) carriages and wagons—repairs and renewals; (*d*) traffic expenses; (*e*) compensation; and (*f*) general and miscellaneous charges; and also the percentage of these expenditures upon the corresponding gross revenues in each State from 1901 to 1910:—

* Including amounts paid for pensions and gratuities, and also special expenditures and charges for belated repairs and in reduction of deficiencies as follows:—For the year 1900-1, £111,943; for 1901-2, £115,244; for 1902-3, £196,137; for 1903-4, £220,092; for 1904-5, £351,141; for 1905-6, £217,179; for 1906-7, £276,630; and for 1907-8, £150,122. † For the calendar years 1901, 1902, and 1903 respectively. ‡ Estimated for a period of twelve months ended the 30th June, 1904.

(i.) *New South Wales.* In this State the total working expenses in 1909-10 amounted to £3,276,409, an increase of £323,585 over the previous year. This increase was mainly owing to the large additional traffic, heavy repairs, special expenditures caused by floods, increased cost of fuel owing to the coal strike, and increased rates of pay to the staff under the awards of Wages Boards.

(ii.) *Victoria.* In Victoria the increase in working expenses, £303,021, was mainly due to the increased cost of coal, to the greater traffic, to reductions in working hours and advances in salaries and wages of the staff, to a larger contribution to the accident

and fire insurance fund, and to the payment of £170,000 into the rolling-stock replacement fund.

(iii.) *Queensland.* In this State the working expenses increased from £1,227,098 (58.35 per cent. on gross earnings) in 1908-9 to £1,414,271 (60.48 per cent.) in 1909-10. It is stated that this increase was expected in view of the renewals necessary upon the older lines, the fact that new railways are being pushed out into districts which are not yet closely settled, and also that the system of fortnightly pay resulted in including more day's wages in the expenditure for 1909-10 than were charged in the previous year.

(iv.) *South Australia.* In South Australia (proper) the working expenses in 1909-10 shewed an increase of £7597, viz., from £114,490 to £122,087. This was to a large extent due to the increased cost of fuel.

(v.) *Western Australia.* The causes of the increased expenditure (£121,600) in 1909-10 as compared with 1908-9, may be briefly stated as follows:—(*a*) Increased salaries, etc., £27,000; (*b*) repairs and renewals of locomotives, £20,000; (*c*) cost of water and fuel, £22,000; (*d*) proportion of cost of fire at workshops, £22,600, and (*e*) renewals of permanent way, £30,000. These items are partly due to increased train mileage.

(vi.) *Tasmania.* The working expenses in 1909-10 were £211,677 as compared with £204,127 in the previous year, being an increase of £7550.

From the preceding table it may also be seen that during the last three financial years there have been for the whole Commonwealth increases in the percentages of working expenses to gross earnings. This increase is partly due to the fact that in four of the States, consequent on the favourable results of previous years, reductions were made in passenger fares and freight rates.

(vii.) *Working Expenses per Average Mile Worked and per Train Mile Run, 1901 to 1910.* The following table shews the working expenses per average mile worked and per train mile run in each State for the years 1901 to 1910 inclusive:—

GOVERNMENT RAILWAYS.—WORKING EXPENSES PER AVERAGE MILE WORKED, AND PER TRAIN MILE RUN, 1901 to 1910.

* See footnote * to preceding table. † See footnote † to preceding table. ‡ See footnote ‡ to preceding table.

17. **Traffic Conditions.**—Reference has already been made to the difference in the traffic conditions on many of the lines of the Commonwealth (see paragraphs 12, 13, and 14 hereof). These conditions differ not only in the several States, but also on different lines in the same State, and this is true with regard to both passenger and goods traffic. By far the greater part of the population of Australia is confined to a fringe of country near the coast, more especially in the eastern and southern districts. A large proportion of the railway traffic between the chief centres of population is therefore carried over lines in the neighbourhood of the coast, and is thus, in some cases, open to sea-borne competition. On most of the lines extending into the more remote interior districts traffic is light; the density of population diminishes rapidly as the coastal regions are left behind; there is a corresponding diminution in the volume of traffic, while, in comparison with other more settled countries, there is but little back-loading.

As an indication of the different traffic conditions prevailing in the several States, the following table is given shewing the numbers of passenger journeys and the tons in goods carried (*a*) per 100 of the mean population; and (*b*) per average mile worked of each State during the financial year 1909-10:—

PASSENGER JOURNEYS AND TONNAGE OF GOODS AND LIVE STOCK, 1909-10.

Goods and live stock	Tons	518	343	*464	601	72	820	*226	472
(*b*) PER AVERAGE MILE OF LINE WORKED.									
Passenger journeys	No.	14,798	24,784	3,753	8,071	18	6,266	3,482	11,982
Goods and live stock	Tons	2,315	1,299	*752	1,310	15	1,067	*892	1,358

* Exclusive of live stock.

Particulars of the actual numbers of passengers and tons of goods and live stock carried have already been given (see paragraph 5 hereof).

(i.) *Metropolitan and Country Passenger Traffic.* A further indication of the difference in passenger traffic conditions might be obtained from a comparison of the volume of metropolitan, suburban, and country traffic in each State. Particulars are, however, available only for the States of New South Wales and Victoria. The subjoined table shews the number of metropolitan and country passengers carried in each of the States mentioned and the revenue derived therefrom during the year 1909-10:—

METROPOLITAN, SUBURBAN, AND COUNTRY PASSENGER TRAFFIC, 1909-10.

Particulars.	Number of Passenger Journeys.			Revenue.		
	Metropolitan.	Country.	Total.	Metropolitan.	Country.	Total.
				£	£	£
N.S.W. ...	*48,147,012	5,497,259	53,644,271	*564,463	1,259,630	1,824,093
Vic. ...	†78,638,035	6,642,200	85,280,235	†783,178	1,089,603	1,872,781

* Within 34 miles of Sydney and Newcastle, and including Richmond and Branxton lines.
† Within 20 miles of Melbourne.

From this table it may be seen that the number of passenger-journeys in country districts in Victoria is only slightly greater than the corresponding number in New South Wales, while the number of metropolitan passenger-journeys in Victoria is far greater than in New South Wales, although in the latter State both Sydney and Newcastle are included. In Sydney a larger proportion of the suburban traffic is carried by the tramway systems than in Melbourne.

(ii.) *Melbourne Suburban Passenger Traffic, 1908-9.* In a report of the Victorian Railways Commissioners with regard to the approximate financial results of the Melbourne suburban passenger traffic for the year ended 30th June, 1909, it is stated that the gross revenue, including that derived from passengers, parcels, horses, dogs, mails, telegraphs, rentals, advertising, etc., was £781,983, and the working expenses, including maintenance and replacements of rolling-stock, general expenses, pensions and gratuities, and accident and fire insurance funds, etc., was £603,293, or 77.14 per cent. on the gross revenue. The net revenue was, therefore, £178,690, but taking into consideration an amount of £224,350 for interest charges, estimated on the basis of 3.73 per cent. on the capital cost allocated to the suburban passenger traffic, viz., £6,014,759, the approximate deficiency on the year's operations was £45,660.

The following table shews the train mileage, approximate allocation of gross revenue, estimated working expenses, and annual interest charges (calculated at 3.73 per cent. on the estimated capital cost) in respect of the specified sub-divisions of the Melbourne suburban passenger service for the year ended 30th June, 1909 :—

Total	3,368,049	781,983	603,293	224,350	827,643	53,756	99,416

The allocation of the aggregate passenger revenue to the various suburban services in the above table is only a close approximation, as the precise apportionment could not be determined except by the tolling process, but as the allocation is based on the known outwards bookings, and on the tolled results of some years ago, it is sufficiently accurate for the purpose.

(iii.) *Goods Traffic.* The differing conditions of the traffic in each State might also, to some extent, be analysed by an examination of the tonnage of various classes of commodities carried and of the revenue derived therefrom. Comparative particulars regarding the quantities of some of the leading classes of commodities carried on the Government railways are available for all the States except Tasmania ; information regarding the revenue derived from each class of commodity is not, however, generally available in a comparable form. In this connection it may be stated that the following resolution was passed at the Interstate Conference of Railway Commissioners held in Melbourne in May last (see paragraph 1, page 696 hereof) :—"That in view of the variations in the

character and classification of the goods traffic in the different States the sub-divisions of tonnage carried and revenue in each State shall be those which best suit local conditions."

The following table shews the number of tons of various representative commodities carried, and the percentage of each class on the total tonnage carried during the financial year 1909-10:—

CLASSIFICATION OF COMMODITIES CARRIED, 1909-10.*

18. **Passenger-Mileage and Ton-Mileage.**—The useful comparisons and analyses which can be made with regard to the operations of the Government railways in the Commonwealth are to some extent limited, by the absence in the annual reports of the Railway Departments of some of the States, of particulars relating to "passenger-mileage" (*i.e.*, the total distance travelled by passengers) and "ton-mileage" (*i.e.*, the total distance for which goods and live stock are carried), and it is not possible to furnish totals for the Commonwealth in respect of these important particulars. The matter of passenger-mileage and ton-mileage has already been referred to (see page 696). The following resolution in regard thereto was passed at the Interstate Conference of Railway Commissioners held in Melbourne in May, 1909:—"That, in view of the differing conditions in each State, and of the expense involved, it is undesirable to include passenger-mile and ton-mile statistics in the annual reports." The general question as to the desirability of collecting and publishing "passenger-mile" and "ton-mile" statistics by railway companies in the United Kingdom has recently been made the subject of inquiry by a departmental committee appointed by the President of the Board of Trade. The report of this committee has been published in England as a parliamentary paper.[1]

Information regarding "passenger-miles" and "ton-miles" is available either wholly, or in part, for four of the States only, viz., New South Wales, South Australia, Western Australia, and Tasmania, but is not available at all for either Victoria or Queensland. Of the four States which give particulars of the nature indicated, New South Wales is the only one which furnishes the information in a classified form according to class of passengers and nature of commodities carried. The

1. See Cd. 4697. This report is also published at length in "The Statist," London, 19th June, 1909, Vol. LXII., No. 1634. In this report it is stated that ton-mile statistics have been used in India for forty years and for a longer period in America. They are now compiled by the railways of nearly all foreign countries; in England, however, they are not generally compiled. Among the more important statistics deduced from ton-miles and passenger-miles the following are mentioned:—(*a*) The average Train Load of goods and of passengers, obtained by dividing the ton-mileage and the passenger-mileage respectively by the carriage-mileage. (*b*) The average Wagon Load and Carriage Load, obtained by dividing the ton-mileage by the wagon-mileage and the passenger-mileage by the carriage-mileage. (*c*) Ton-miles per Engine Hour. (*d*) The average Length of Haul for goods and passengers respectively, obtained by dividing the ton-mileage and the passenger-mileage by the tonnage and the total number of passengers conveyed. (*e*) The average Receipts per Ton per Mile and per Passenger per Mile, obtained by dividing the goods receipts by the ton-mileage and the passenger receipts by the passenger-mileage. (*f*) The average Density of Traffic per mile of road or per mile of track, obtained by dividing the ton-mileage and passenger-mileage by the length of road or by the length of track.

other three States supply particulars for all classes of passengers and goods together respectively. The mere record of the total number of passenger-miles and ton-miles for all classes of passengers and for all classes of goods respectively, although of considerable value, would appear to be insufficient to enable the whole field of railway operations to be adequately analysed, or the extent to which efficiency has been secured and improvements in working have been effected to be accurately gauged.

(i.) *Passenger-Miles.* Particulars for the whole of the Commonwealth period regarding total "passenger-miles" are available for one State only, namely, Tasmania. For New South Wales particulars are available for suburban and extended-suburban traffic—*i.e.*, including all stations within 22 miles of Newcastle, within 34 miles of Sydney, and including Richmond and Branxton. For South Australia particulars are available for each year since 1904. No particulars are available for other States. In the tables given below the average number of passengers carried per "train," etc., is obtained by dividing the number of "passenger-miles" by the number of "passenger-train-miles." The averages given for New South Wales are naturally smaller than those for the other States, since the figures for New South Wales refer to suburban and extended-suburban traffic only.

SUMMARY OF "PASSENGER-MILES," 1901 to 1910.

* Not available for suburban lines. † Suburban lines only; includes distances within 34 miles of Sydney and including Richmond and Branxton. ‡ Partly estimated. § Compiled on new basis, so as to be uniform with other States.

(ii.) *Ton-Miles.* Particulars regarding total "ton-miles" are available for each year since 1901 for the States of New South Wales, South Australia, and Tasmania; corresponding particulars for Western Australia are available for the last four years only. The average freight-paying load carried per "train" is obtained by dividing the total "ton-miles" in the third column by the goods-train mileage in the first column. In New South Wales the tonnage carried is exclusive of coal, on which only shunting and haulage charges are collected, and the amount of earnings specified excludes terminals. In South Australia and Tasmania they include terminals, while in Western Australia they exclude wharfage and jetty dues, but include all other charges.

SUMMARY OF "TON-MILES," 1901 to 1910.

* Particulars for previous years not available. † Exclusive of live stock. ‡ To 31st December for years 1901, 1902, and 1903; to 30th June for succeeding years. § Partly estimated.

(iii.) *Density of Traffic, 1909-10.* The average densities of passenger traffic and of goods traffic, obtained by dividing the passenger-mileage and the ton-mileage respectively by the average length of line worked during year, are shewn in the following table for the year 1909-10 for those States for which particulars are available :—

DENSITY OF TRAFFIC PER AVERAGE MILE OF LINE OPEN, 1909-10.

Density of—	N.S.W.	S. Aust. (proper).	W. Aust.	Tasmania.
Passenger traffic	94,206	93,901	*	71,869
Goods ,, ...	190,386	160,212	77,812	40,013

* Not available.

(iv.) *Classification of Commodity Ton Mileage, 1910.* New South Wales is the only State for which particulars, specifying the ton-mileage and the earnings per ton-mile for various classes of commodities, are available. It is hoped that in future years it will be possible to give corresponding particulars for the other States.

The subjoined statement gives particulars for the last financial year. Miscellaneous traffic consists of timber, bark, firewood, bricks, drain-pipes, coal, road-metal in six-ton lots, agricultural and vegetable seeds in five-ton lots, and traffic of a similar nature. A and B classes consist of lime, vegetables, tobacco leaf, caustic soda and potash, cement, copper ingots, fat and tallow, water and mining plant in six-ton lots, leather in one and three-ton lots, agricultural implements in five-ton lots, and other traffic of a similar nature. The table does not include 244,320 tons of coal on which only shunting and haulage charges are collected, nor does it include £41,798 for haulage, tonnage dues, etc.

NEW SOUTH WALES.—SUMMARY OF TON-MILEAGE FOR YEAR ENDED 30th JUNE, 1910.

19. **Interest Returned on Capital Expenditure.**—It may be seen from the figures given in the table in paragraph 16 hereof, that the Government railways in Australia have, on the whole, made a substantial profit during each year since the inception of the Commonwealth, but unfortunately the community does not get the full benefit of this profit, owing to the high rates of interest at which money for railways was borrowed in the early days. Though the average rate during the year ended the 30th June, 1910, was about 3 per cent., an average does not accurately express the position. At an early period the need of constructing railways for the sole purpose of opening up undeveloped districts was recognised, and lines were built which could not possibly pay for some years to come; as these railways always preceded population the money had to be raised at an almost speculative rate of interest, frequently amounting to 6 per cent., while the more recent loans have been effected at less than 3 per cent., hence the railways have been handicapped by a burdensome interest. At the present time also, spur lines are constructed, which can scarcely be expected to instantly return revenue in excess of the expenditure, and so must, for a time at any rate, be a charge on the more developed branches of the railway systems, and tend to increase the ratio of working costs to revenue. It may be noted, however, that although the loans made for expenditure on railway construction and equipment very largely increase the amount of the public debt of the Commonwealth, forming, in fact, more than half the total debt, the money borrowed has not been sunk in undertakings which give no return, but has been expended on works which are increasingly reproductive, yielding in most cases a direct return on the capital expended, and representing a greater value than their original cost. In Europe the national debts of various countries have been incurred principally through the expenses of prolonged wars and the money has gone beyond recovery, but in Australia the expenditure is represented to a large extent by public works which pay a direct return, which is, on the whole, greater than the amount of interest due upon capital invested. In addition to the purely commercial aspect of the figures relating to the revenue and expenditure of the Commonwealth railways, it is of great importance that the object with which many of the lines were constructed should be kept clearly in view; the anticipated advantage in building these lines has been the ultimate settlement of the country rather than the direct returns from the railways themselves, and the policy of the State Governments has been to use the railway systems of the Commonwealth for the development of the country's resources, to the maximum extent consistent with the direct payment by the customers of the railways of the cost of working and interest charges. Further, the money has been spent in developing immense agricultural, pastoral, and mineral resources, which add to the wealth of the community, while the benefits conferred in providing a cheap and convenient mode of transit, and in generally furthering the trade and the best interests of the Commonwealth, are incalculable.

(i.) *Profit or Loss after Payment of Working Expenses and Interest, 1901 to 1910.* The net revenue of the Government railways in each State after payment of working expenses is shewn in paragraph 16 hereof. The following table shews the amount of interest payable on expenditure from loans on the construction and equipment of the railways in each State, the actual profit or loss after deducting working expenses and interest and all other charges from the gross revenue, and the percentage of such profit or loss on the total capital cost of construction and equipment.

In this table the positive sign indicates a profit, the negative a loss. It may be seen that for the Commonwealth as a whole there has been a net profit on the Government railways during each of the last five years of the period dealt with.

The same satisfactory state of affairs applies also to the States of New South Wales, South Australia proper, and Western Australia, and with the exception of the year 1907-8, to Victoria. Tasmania and the Northern Territory both shew a loss for each year of the period 1901 to 1910, as also does Queensland, with the exception of the year 1906-7.

* The positive sign indicates a profit, the negative a loss. † Allowing for payment of special expenditure and charges (see paragraph 14 above).

20. **Passenger Fares and Goods Rates.**—Considerable reductions have been made in recent years in passenger fares and in freight rates. These fares and rates are not only changed from time to time to suit the convenience and varying necessities of the railways, but, as traffic is developed and revenue increased, they are also in many cases reduced to an extent consistent with the direct payment by the customers of the railways of the cost of working and interest charges. In New South Wales, though no reduction in rates was made during the year 1909-10, a reduction to the amount of £60,000 per annum was made on the 10th January, 1909, and further reductions in both rates and fares took effect from the 1st July, 1910. In Western Australia reductions were made in rates in many directions. These account to a large extent for the falling-off in revenue as compared with the previous year, more especially in respect to goods

earnings (see paragraph 11 hereof). In New South Wales the accumulated reductions in rates and fares made since October, 1906, amount to £337,000 per annum, and the rebates from the carriage of fodder and starving stock during the three years prior to June, 1909, to about £140,000, while in Victoria the accumulated reduction in rates and fares since February, 1906, represents an annual value of £332,000.

(i.) *Passenger Fares.* On the Australian Government railways two classes are provided for passenger traffic. The fares charged may be classified as follows:—(*a*) Fares between specified stations (including suburban fares). (*b*) Fares computed according to mileage rates. (*c*) Return, season, and excursion fares. (*d*) Special fares for workingmen, school pupils, and others. Fares in class (*a*) are issued at rates lower than the ordinary mileage rates. Fares in class (*b*) are charged between stations not included in class (*a*). Generally it may be said that mileage-rate fares are computed on the basis of about twopence per mile for first-class and about 1¼ pence per mile for second-class single tickets. In Tasmania, however, the fares are computed on the general basis of 1½ pence per mile first-class, one penny per mile second-class, with a terminal charge of one penny and one-sixth added to total. In New South Wales, Victoria, and Queensland the mileage rates are based upon a tapering principle, *i.e.*, a lower charge per mile is made for a long journey than for a short journey. First-class return fares are generally about 1½ to 1¾ times the single fare, and the second-class are about 30 to 45 per cent. lower than the first-class fares. In Tasmania, however, return fares (except excursions) are double the single fares. Excursion tickets are issued for the return journey at from about single fare to about 1¼ times the single fare. Season tickets and special fares are issued at reduced rates.

The following table shews the passenger fares for different distances charged in each State, between stations for which specific fares are not fixed:—

ORDINARY PASSENGER MILEAGE RATES ON GOVERNMENT RAILWAYS, 1910.

* Ordinary mileage rates are not published; the amounts given are therefore computed from fares between specified stations. † Exclusive of Tasmania for hauls of 300 miles and upwards.

(ii.) *Parcel Rates.* In all the States parcels may be transmitted by passenger train upon payment of the prescribed rates, which are based upon weight and distance carried. The rates vary slightly in the different States. In New South Wales they range from threepence for a parcel not exceeding 3 lbs. for any distance up to 75 miles, to eleven shillings and threepence for a parcel weighing from 84 lbs. to 112 lbs., for a distance of 500 miles. In Victoria the charge for a parcel weighing from 84 lbs. to 112 lbs. for a distance over 450 miles is twelve shillings. The rate in Queensland for a parcel weighing from 85 to 112 lbs. for 500 miles is twelve shillings and sixpence; in South Australia eleven shillings and threepence; in Western Australia thirteen shillings; and in Tasmania for a distance of 250 miles the rate is five shillings and sixpence.

(iii.) *Goods Rates.* The rates charged for the conveyance of goods and merchandise may generally be divided into three classes, viz.:—(*a*) Mileage rates, (*b*) District or "development" rates, and (*c*) Commodity rates. In each of the States there is a number—ranging from 5 in Tasmania to 9 in Victoria—of different classes of freight. The mileage rates are based upon a tapering principle, *i.e.*, a lower charge per ton-mile is made for a long haul than for a short haul. District rates are charged between specified stations and are somewhat lower than the mileage rates excepting in Western Australia, where the terms refer to a special toll of 1s. per ton on goods travelling over certain "district" railways as part payment of the extra cost of working lines laid for developmental purposes through sparsely settled districts. In addition to the ordinary classification of freights under class (*a*), certain commodities, such as wool, grain, agricultural produce, and crude ores, are given special rates, lower than the mileage rates, under class (*c*).

Space will not permit of anything like a complete analysis of goods rates in the several States being here given. As an indication of the range and amount of such rates the subjoined tables are given. The first table shews for each State the truck-load rates charged for hauls of different distances in respect of agricultural produce not otherwise specified; these special rates are here given for this class of produce, since it is generally forwarded in truck-loads.

RATES FOR AGRICULTURAL PRODUCE IN TRUCK-LOADS ON GOVERNMENT RAILWAYS, 1911.

Average per ton-mile* d.	1.12	1.00	0.86	0.71	0.66	0.61

* Exclusive of Tasmania for hauls of 300 miles and upwards.

The classification of commodities varies in the several States. Generally the highest-class freight includes expensive, bulky, or fragile articles, while the lowest-class comprises many ordinary articles of merchandise, such as are particularly identified or connected with the primary industries of each State.

In New South Wales, for example, the highest-class freight comprises such articles as boots, drapery, drugs, groceries, furniture, liquors, crockery and glassware, cutlery, ironmongery, confectionery, and carpets. In the same State the lowest-class freight includes agricultural produce, ores, manures, coal, coke, shale, firewood, bricks, screenings, rabbit-proof netting, and posts and rails.

21. **Numbers and Description of Rolling Stock, 1910.**—The following table shews, so far as possible in a comparable manner, the number of locomotives and of various classes of rolling stock in use on the Government railways in each State. The figures

given are subject to certain limitations, inasmuch as the classification adopted, as well as the various types of rolling stock in use, are not identical in the several States. In Victoria and Queensland, for example, the brake-vans classified under the heading of coaching vehicles are used indiscriminately for coaching and goods traffic. Again, it is believed that in New South Wales the number of passenger vehicles is really greater than that shewn, certain of the other classes of vehicles being used for composite purposes.

CLASSIFICATION OF LOCOMOTIVES AND ROLLING STOCK, 1909-10.

22. **Number of Railway Employees, 1901 to 1910.**—The following table shews the number of employees in the Railway Departments of each State in the year 1901 and in each year from 1906 to 1910 inclusive, classified according to (*a*) salaried staff, and (*b*) wages staff.

From these figures it will be seen that there has been a steady increase in the number of persons engaged in the Railway Departments of the several States. During the period from 1901 to 1910, the total for the Commonwealth has increased from 42,321 to 58,669 —an increase of 16,348, or about 38½ per cent. The largest numerical increase for the individual States was that of New South Wales, viz., 7104.

Separate returns for salaried and wages staff are not available for South Australia or the Northern Territory; the number of salaried staff is therefore included in the wages staff.

GOVERNMENT RAILWAYS.—NUMBER OF EMPLOYEES IN RAILWAY DEPARTMENTS, 1901 to 1910.

(c) Graphical Representation of Government Railway Development.

1. **General.**—Its railways are so important a factor in the development of Australia that it has been deemed desirable to graphically represent the main facts of their progress from their beginning, viz., from 1855 onwards. To this end the graphs shewn on pages 742 to 744 have been prepared. The distribution of the railways is shewn on the map on page 723.

2. **Capital Cost and Mileage Open** (page 742).—The graph shews that the ratio between these elements was, naturally enough, very variable from 1855 to 1870, conse-

quent upon progressive decrease in cost of construction. It then became subject to a more regular change, implying reduction of average cost.

3. **Cost per Mile Open.**—The fluctuations in cost per mile open are clearly indicated by the graph on page 742. In 1855 the cost per mile open was no less than £28,430; by 1858 it had fallen to £17,752, when it rose again to a maximum of £35,958 in 1862. It then diminished rapidly till 1883—when it reached £10,496 per mile—then slowly till 1887, when it amounted to £10,017 per mile. Again rising, this rate attained to £10,537 in 1892, since which it has, on the whole, been declining, attaining its lowest value, £9497, in 1910.

4. **Gross Revenue.**—This graph (page 742) exhibits considerable irregularities, the most striking of which are the maxima at 1892 and 1902. The fall commencing in 1892 was in consequence partly of the commercial crisis and partly of the then droughty conditions of several of the States, while that of 1902-3 was due to drought. In the latter case the recovery was very rapid.

5. **Working Expenses and Net Revenue.**—The characteristics of these graphs (page 742), are similar to those of "Gross Revenue," and the same remarks apply. It may be noted, however, that the working expenses are increasing at a much slower rate than gross and net revenue.

6. **Percentage of Working Expenses to Gross Revenue.**—This is shewn for each State and for the Commonwealth on page 743, and for the Commonwealth only, on a larger scale, on page 742. The curve shews considerable fluctuations, but points also to the fact that, although a slight rise occurred in 1908, there was from 1903 to 1907 a rapid, and therefore very satisfactory, decline in the percentage of working expenses to gross revenue; since 1907, however, there has been a steady increase. The fluctuations of this percentage, for the individual States, call for no special comment.

7. **Percentage of Net Revenue on Capital Cost.**—For the Commonwealth this graph is shewn on a large scale on page 742 and on page 744 both for Commonwealth and States. After exhibiting somewhat remarkable oscillations in the earlier years, and less marked ones between 1885 and 1900, and also a rapid fall to 1903, the curve from that year shews a well marked increase until the year 1908, a slight fall occurring in the last year. Maxima were reached in 1865, 1877, 1881, and 1907—viz., 3.44, 3.71, 4.14, and 4.36 per cent.

For the individual States the results are in general very satisfactory, the increases in the percentages recently being greatest for Queensland, New South Wales, and South Australia, less marked for Victoria and Tasmania, and oscillatory for Western Australia.

The remarkable maximum for Western Australia in 1896 is consequent upon the large use made of the western railways at the time of the development of the Western Australian goldfields.

8. **General Indications of Graphs.**—Reviewing the cost of railways, as a whole, it may be noted that for the periods indicated the average cost per mile open on the entire total runs as follows:—

GOVERNMENT RAILWAYS.—AVERAGE COST PER MILE OF LINE OPEN, COMMONWEALTH, 1855 to 1910.

Period	1855-1872.	1873-1882.	1883-1892.	1893-1902.	1903-1910.
Cost per mile	£ 24,561	£ 13,700	£ 10,286	£ 10,010	£ 9,658

For the period 1903 to 1907 the fall in percentage of working expenses on gross revenue was from 68.80 to 57.18 per cent. but it then gradually increased to 61.70 per cent. in 1910. The rise of the percentage of net revenue on total capital cost for the years 1903 to 1907 was from 2.53 to 4.35 per cent., but subsequent years shew a falling off.

While the sinister influence of the drought of 1902 is strikingly shewn in the curves (*a*) by the fall in the gross and net revenue in 1902 and 1903, (*b*) by the fall in the percentage of net revenue on capital cost, and (*c*) by the increase of working expenses on gross revenue, the rapidity of recovery is even more striking, and goes to indicate the great elasticity of the economic condition of the Commonwealth. Still more remarkable is the fact that a group of railways, necessarily constructed largely in accordance with a policy of widespread development of Australia's resources rather than as mere commercial enterprises, and costing so large a sum as £146,882,474 for construction and equipment up to the 30th June, 1910, should, nevertheless, yield so large a revenue, bringing in for the year 1909-10 a return, as pointed out, of no less than 4.18 per cent.

(D.)—Private Railways.

1. **Total Mileage Open, 1910.**—As has been stated in a previous part of this Section (see A. 3) a number of private railway lines have from time to time been constructed in the Commonwealth. By far the greater proportion of such lines, however, has been laid down for the purpose of hauling timber, coal, or other minerals, and is not generally used for the conveyance of passengers or for public traffic; in many cases the lines are often practically unballasted and are easily removable, running through bush and forest country in connection with the timber and sugar-milling industries, and for conveying firewood for mining purposes. Many of these lines may perhaps be said to be rather of the nature of tramways than of railways. Private railways referred to herein include (*a*) lines open to the public for general passenger and goods traffic; and (*b*) branch lines from Government railways and other lines which are used for special purposes and which are of a permanent description. Other lines are referred to in the part of this Section dealing with Tramways (see § 3, *Tramways*).

The following table gives particulars of private railways in the Commonwealth open for traffic up to the 30th June, 1910. A classification of these lines according to their gauge has already been given (see A. 6).

MILEAGE OF PRIVATE RAILWAYS OPEN, 1910.

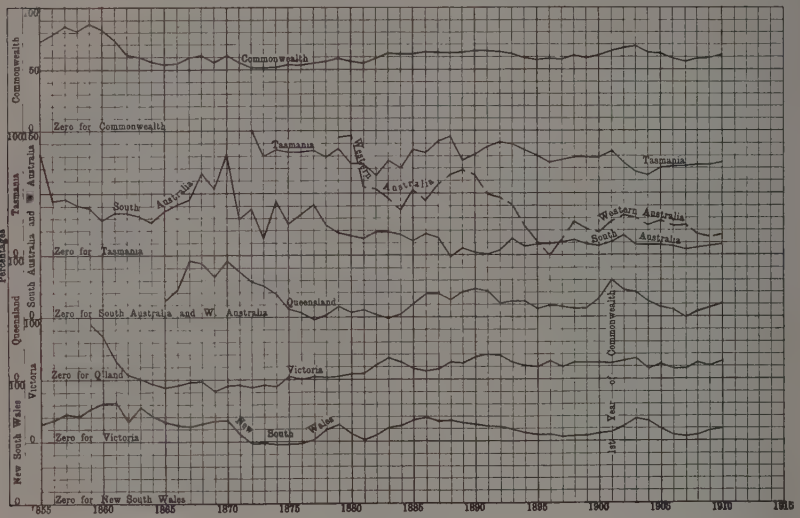
GRAPHS SHEWING THE FINANCIAL POSITION OF THE GOVERNMENT RAILWAYS OF THE COMMONWEALTH, 1855 TO 1910.

(See pages—total capital cost, 714; mileage open, 700; gross revenue, 715; working expenses 719; net revenue, 722; average cost per mile, 714; percentage of working expenses to gross revenue, 719; percentage of net revenue to capital cost, 722.)



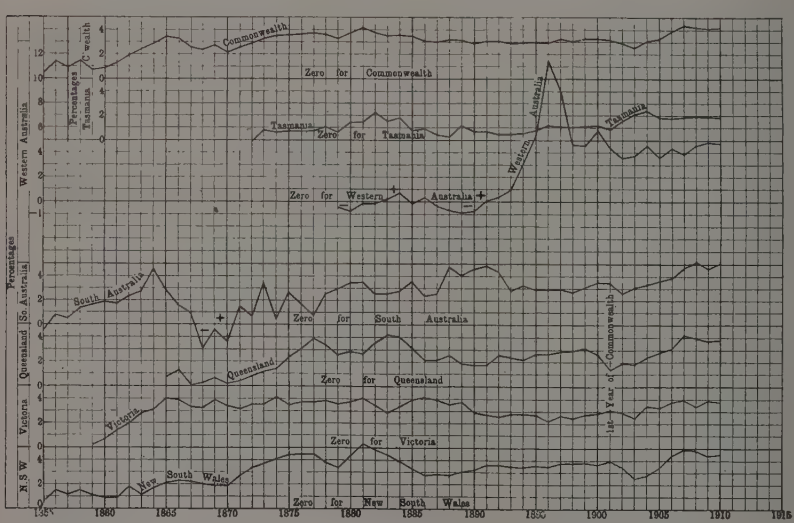
EXPLANATION OF GRAPHS.—In the above diagram the base of each small square represents throughout one year. The significance of the vertical height of each square varies, however, according to the nature of the several curves

In the heavy curve denoting the total capital cost of the railways of the Commonwealth, the vertical side of each square denotes £2,000,000.

In the three lighter curves, representing (i.) gross revenue, (ii.) working expenses, and (iii.) net revenue, the vertical height of each single square denotes £400,000. For the curve of average cost per mile open, the vertical side of the small square denotes £2000. The mileage open is shewn by a dotted curve the vertical side of each square representing 200 miles.

For the percentages a new zero is taken at "20" on the scale for the general diagram. The vertical height of each square represents 2 per cent. in the curve shewing the percentage of working expenses to gross revenue. For the curve of percentage of net revenue to capital cost, the vertical height of each square represents only 0.2, that is to say, the vertical scale is ten times that of the preceding curve.

GRAPHS SHEWING PERCENTAGES OF WORKING EXPENSES TO GROSS REVENUE OF GOVERNMENT RAILWAYS FOR STATES AND COMMONWEALTH, 1855 TO 1910.



(See page 719.)

EXPLANATION OF GRAPHS.—In the above diagram the base of each small square represents throughout one year. The vertical side of a small square denotes throughout 10 per cent., the heavy zero lines being different for each State and the Commonwealth, with, however, one exception, viz., that the zero line for South and Western Australia is identical.

The curve for Victoria commences in 1859; that for Queensland in 1865; that for Tasmania in 1872; and that for Western Australia in 1879, these being the years in which the Government Railway systems of the several States were inaugurated.

GRAPHS SHEWING PERCENTAGES OF NET REVENUE TO CAPITAL COST OF GOVERNMENT RAILWAYS FOR STATES AND COMMONWEALTH, 1855 TO 1910.

(See page 722.)

EXPLANATION OF GRAPHS.—In the above diagram the base of each small square represents throughout one year. The vertical side of a small square denotes 1 per cent., the thick zero lines, however, for each State and for the Commonwealth being different. This was necessary to avoid confusion of the curves.

Where the curve for any State falls below that State's zero line, loss is indicated, the working expenses having exceeded the gross revenue.

The curve for Victoria commences in 1859; that for Queensland in 1865; that for Tasmania in 1872; and that for Western Australia in 1879, these being the years in which the Government railway systems of the several States were inaugurated.

3. **New South Wales.**—In this State the mileage of private railways open to the public for general traffic at the end of 1909, was 141, and of lines used for special purposes, 125 miles. Most of these lines were constructed primarily for the purpose of conveying coal from the mines to the Government railway systems. Particulars for the year 1909 of the operations of lines open for general traffic are given, so far as available, in the table on page 747.

(i.) *Private Railways Open for General Traffic.* The most important of the lines open for general traffic are as follows:—(*a*) *The Deniliquin-Moama Line.* In 1874 permission was granted by the New South Wales Government to a private company to construct a line forty-five miles long from Deniliquin, in the Riverina district, to Moama, connecting with the Victorian Railway system at the Murray Bridge, near Echuca. The line was opened in 1876, the land required being granted by the Government. (*b*) *The Cockburn-Broken Hill Line.* This line is owned by the Silverton Tramway Company. It was opened in 1888, and connects Broken Hill with the South Australian railway system, having a total length of 36 miles. (*c*) *East Greta Line.* This line, belonging to the East Greta Coal Mining Company, runs from East Greta Junction, on the Northern line of the Government railways, to Stanford Merthyr, a distance of 8 miles. (*d*) *The New Redhead Coal Company's Railway.* The lines owned by this company branch from the Northern line of the Government railways, and run from Adamstown to Burwood Extended colliery, and from Adamstown to Dudley colliery, a total distance of 8 miles. The lines are worked by the Railway Department, coal waggons being supplied in part by the coal companies using the line. The colliery companies using the line pay a way-leave for right to run their coal over the line, and the Railway Commissioners allow the New Redhead Company a proportion of the revenue from the passenger and goods traffic. (*e*) *The Seaham Coal Company's Railways.* This line runs from Cockle Creek to West Wallsend and Seaham Collieries, and has a total length of 6 miles. The company leases four passenger coaches from the Government railways, by which all goods and live stock traffic on the line is handled. (*f*) *Hexham-Minmi Railway.* This line branches from the Northern line of the Government railways and has a length of 6 miles. Further particulars are not available. (*g*) *The Commonwealth Oil Corporation's Railway.* This line runs from Newnes Junction on the Great Western Line of the Government railways to the company's refinery, a distance of 32 miles. Three of the Shay geared type of locomotives are in use on this line. (*h*) *The Warwick Farm Line* is a short line, three-quarters of a mile in length, connecting the Government line near Liverpool with the Warwick Farm Racecourse. Government rolling-stock is used.

In addition to the lines referred to above, legislative sanction was obtained in 1890 for the construction of a private line from the flux quarries at Tarrawingee to the Broken Hill line, a distance of 40 miles. The line was purchased by the Government in 1901, and was leased to the Silverton Tramway Company to work for a period of five years at an annual rent of 3 per cent. on the capital outlay.

4. **Victoria.**—In Victoria the only private railway open for general traffic is the Kerang-Koondrook tramway, opened in 1889. The cost of construction of this line to the end of 1909 was £29,213, paid out of a loan advanced by the Victorian Government. The total length is 14¼ miles. The line is at present controlled by the Kerang Shire Council, but proposals have recently been made for its transfer to the Railway Department.

A line running from Elsternwick to Oakleigh, a distance of about 5 miles, has been constructed by a private company, but is not in use.

5. **Queensland.**—In this State private railways open for general traffic may be grouped under two heads:—(i.) Lines constructed primarily for mining purposes, and (ii.) Shire tramways.

(i.) *Mining Railways.* (*a*) *The Chillagoe Railway.* The most important of these is the Chillagoe railway, constructed under the Mareeba to Chillagoe Railway Act 1897,

and opened in 1901. This line runs from Mareeba, on the Cairns railway, to Mungana, a distance of 103 miles. (*b*) *The Stannary Hills Line.* This line branches from the Chillagoe railway at Boonmoo and runs to Rocky Bluff, *via* Stannary Hills, a total distance of 21 miles. The gradients on this line, which has a gauge of 2 feet, range as high as 1 in 27, while the radius of some of the curves is as low as 1¼ chains. An additional length of 8 miles has been surveyed with a view to extending the line. (*c*) *The Mount Garnet Railway.* This line also branches from the Chillagoe railway at Lappa Junction, and runs for a distance of 33 miles, as far as Mount Garnet.

(ii.) *Shire Tramways.* Under Part XV. of the Local Authorities Act of 1902 provision is made whereby not less than one-third of the ratepayers in any district may petition the local authority to apply to the Governor for the constitution of a tramway area. The Governor may define the area and may also approve of the plans and specifications of the proposed tramway. The amount which may be advanced by the Government for the construction or purchase of a tramway may not exceed a sum equal to £3000 for every mile of its length. As regards repayment of loans, no sum need be paid during the first three years, but after the expiration of that period the principal and interest must be repaid by half-yearly instalments on the basis provided for by the "Local Works Loans Act 1880 to 1899." For the purpose of raising the money to pay these instalments the local authority may levy a rate upon all ratable property within the tramway area. The money required for the tramway may be raised by the local authorities by the issue of debentures.

6. **South Australia.**—In this State there are no private railways open for general traffic. The only private line is that owned by the Broken Hill Proprietary Company, running from Iron Knob to the seaboard near the head of Spencer's Gulf, a distance of 58 miles. The line is utilised for the carriage of flux for use in connection with the smelting works at Port Pirie.

7. **Western Australia.**—Owing to the Government's past difficulty in constructing lines urgently required for the development of the country, private enterprise was encouraged to undertake the work of construction on the land-grant principle, and two trunk lines were thus constructed. The greater part of the private lines now open, however, have been constructed in connection with the timber industry. (i.) *The Midland Railway.* This line is 277 miles in length, and runs from the Midland Junction, ten miles from Perth, to Walkaway, where it joins the Government line running to Geraldton. It was constructed under a concession of 12,000 acres of land per mile of line constructed, to be selected along the entire route of the railway. (ii.) *The Great Southern Railway.* This line, which was built by private enterprise under the land-grant system, is 243 miles in length, and was acquired by the Government by purchase on the 1st January, 1897. The total price paid, with all the interests of the private company and of the original concessionaire, was £1,100,000, which was divided by the Government for book-keeping purposes into £300,000 for the land and £800,000 for the railway. (iii.) *Millar's Karri and Jarrah Company's Lines.* These lines have mostly been built under special timber concessions and leases. There were, at the end of the year 1909, in all seven lines situated in various parts of the State extending into the bush, whence logs are brought to the mills. At the end of 1909 the total length of these lines was 245 miles. (iv.) *Other Lines.* There are also a number of other lines in various parts of the State used chiefly in connection with the timber industry. These are specified in the tabular statement on page 740.

8. **Tasmania.**—In this State there are three private lines open for general traffic. They are all situated in the western part of the island.

(i.) *The Emu Bay Railway Company.* The lines owned by this company run from Burnie to Waratah, from Guildford to Zeehan, and from Rayna to Dundas, and have a total length of 103 miles.

(ii.) *The Mount Lyell Mining and Railway Company.* The Mount Lyell railway runs from Regatta Point, Strahan, to Queenstown, and the North Mount Lyell line from

Kelly Basin to Linda. The former line, 22 miles in length, was constructed in 1895-6, while the latter line, 30 miles long, was taken over from the North Mount Lyell Copper Company on the amalgamation of the two companies in 1903. The line from Kelly Basin to Linda is now run only intermittently.

(iii.) *The Magnet Silver Mining Company's Railway.* This line runs from Magnet Junction, near Waratah, on the Emu Bay Company's line to Magnet, a distance of 10 miles.

9. **Operations of Private Railways, 1909.**—The tabular statement given below shews particulars, so far as returns are available, for the year 1909 of all private railways open to the public for general traffic in the Commonwealth :—

§ 3. Tramways.

1. **General.**—Tramway systems are in operation in all the States of the Commonwealth, and in recent years considerable progress has been made in the adoption of electrical traction, the benefit of which is now enjoyed by a number of the principal towns of the Commonwealth.

There are also in many parts of Australia private tramway lines which are used for special purposes, usually in connection with the timber, mining, or milling industries. Though efforts have been made to collect particulars of these lines, the returns are generally too incomplete for publication.

(i.) *Total Mileage Open and Classification of Lines.* The following table shews the total mileage of tramway lines open for general passenger traffic in each State and in the Commonwealth at the end of the year 1909-10, classified (*a*) according to the motive power utilised and (*b*) according to the nature of the authority by which the lines are controlled :—

TRAMWAYS.—CLASSIFICATION OF MILEAGE OPEN FOR PASSENGER TRAFFIC, 1909-10.

2. **New South Wales.**—In this State the tramways, with but few comparatively unimportant exceptions, are the property of the Government, and are under the control of the Railway Commissioners.

(i.) *Government Tramways.* In Sydney and suburbs the Government tramways are divided into distinct systems. There were in June, 1910, five such systems in operation within the metropolitan area, the most important being the city and suburban lines—94 miles in length (160½ miles single track)—and the North Shore line—16¾ miles in length (24 miles single track). Both of these systems are now operated by electricity. There are four systems on which the motive power used is steam, namely—(*a*) the line

from Ashfield to Mortlake and Cabarita, 8½ miles long, (*b*) from Kogarah to Sans Souci, 5½ miles in length, (*c*) from Manly to Brookvale, 3½ miles long, and (*d*) from Arncliffe to Bexley, 2½ miles long. There are also Government steam tramways in operation at Newcastle, Broken Hill, Parramatta, and from East to West Maitland.

(*a*) *Sydney Tramways.* The first tramway constructed in Sydney ran from Bridge-street to Hay-street *via* Hunter-street. It was opened in September, 1879, and the motive power was steam. In the following few years these steam tramways were considerably extended. The electric system was not introduced into the city until the close of the year 1899, though it had at that time been in operation for some years in North Sydney. The tramways in the heart of the city, running along King-street to the suburb of Woollahra, as well as those in North Sydney, were originally worked by underground cables, and have since been converted into electric lines on the overhead trolley system. In December, 1899, the electric tramway, extending from the Circular Quay along George-street to the Redfern Station, and thence to the densely-populated district of Pyrmont, was opened for traffic. This tramway is a double track, and is 3¼ miles in length. Single lines have been constructed along Castlereagh and Pitt streets, with the object of relieving the traffic along George-street. The whole of the steam tramways in Sydney and suburbs, with the exception of the Ashfield-Mortlake, the Kogarah-Sans Souci, the Manly lines, and the Arncliff-Bexley, have now been converted into electric lines, and provision for the extra power required for the electrification of the first two of these lines has been made at the central station.

(*b*) *Other Tramway Systems.* In Newcastle the first section of the tramways, from Perkins-street to Plattsburg, was opened in 1887; the total length open on the 30th June, 1910, was 17 miles. At Broken Hill and Parramatta the first sections of the tramways were opened in 1902. On the 30th June, 1910, the mileage open at Broken Hill amounted to 9, and at Parramatta to 4½ miles. The line from East to West Maitland, 4 miles long, was opened in February, 1909. There are also three short lengths of tramways in New South Wales run by private companies. Further particulars are given below.

(*c*) *Particulars of all Government Tramways, 1901 to 1910.* The following table shews the total length, the capital cost, the gross revenue, working expenses, and net earnings, and the percentages of working expenses on gross revenue, and of net earnings on capital cost, for each financial year from 1900-1 to 1909-10 inclusive.

NEW SOUTH WALES.—PARTICULARS OF WORKING OF GOVERNMENT TRAMWAYS, 1901 to 1910.

Year ended the 30th June.	Total Length of Lines Open.	Capital Expended on Lines Open.	Gross Revenue.	Working Expenses.	Net Earnings.	Percentage of Working Expenses on Gross Revenue.	Percentage of Net Earnings on Capital Cost.
	Miles.	£	£	£	£	per cent.	per cent.
1901 ...	79¼	2,194,493	551,674	462,471	89,203	83.83	4.07

1906 ...	126	3,669,096	851,483	665,083	186,400	78.11	5.08
1907 ...	128¾	3,669,524	908,701	727,947	180,754	80.11	4.92
1908 ...	132¾	3,732,991	1,011,994	809,065	202,929	79.95	5.44
1909 ...	151½	4,252,731	1,097,565	875,560	222,005	79.77	5.61
1910 ...	165½	4,668,797*	1,185,568	983,587	201,981	82.96	4.33

* £47,455 of this sum has been paid from the Consolidated Revenue, and no interest is payable thereon.

The net result, after providing for all working expenses and £156,102 for interest on the capital invested, was a surplus of £45,879 in 1909-10, as compared with £79,174 in the preceding year. During the year 1909-10, 201,151,021 passengers were carried without any accident resulting in loss of life to any of the passengers.

(*d*) *Particulars of Different Systems of Government Tramways, 1909-10.* In the subjoined statement particulars are given of the working of the electric and steam tramways in Sydney, and of the other Government tramways at Newcastle, Broken Hill, Parramatta, and Maitland :—

NEW SOUTH WALES.—PARTICULARS OF THE WORKING OF THE VARIOUS GOVERNMENT TRAMWAYS, 1909-10.

Particulars.	Sydney and Suburbs.			Newcastle. (Steam.)	Broken Hill. (Steam.)	Parramatta. (Steam.)	East to West Maitland (Steam).	Total.
	Electric.	Steam.	Total.

* The positive sign indicates a profit, the negative a loss.

The total capital cost shewn in the preceding table was made up as follows :—

CAPITAL COST OF NEW SOUTH WALES GOVERNMENT TRAMWAYS, AS AT 30th JUNE, 1910.

Permanent Way.	Rolling Stock	Power-house, Sub-stations, and Plant.	Machinery.	Workshops.	Furniture.	Total.
£2,633,644	£976,669	£896,753	£43,623	£115,716	£2,392	£4,668,797

The average cost per mile open was £15,892 for permanent way and £12,281 for all other charges, making a total of £28,173 per mile.

During the year 1909-10, twelve new extensions, amounting in all to a length of 14¾ miles, were opened for traffic. On the 30th June, 1910, six extensions having a total length of 21½ miles were under construction, and up to the same date ten additional extensions, amounting to about 7 miles, had been authorised for construction.

(*e*) *Sydney Electric Tramways.* The total route mileage of the city and suburban lines is 94, and of the North Shore line 16¾ miles, making the total length of the electric tramways in Sydney 110¾ miles. The current for the operation of these tramways is generated at the power-house at Ultimo, which has been erected at a total cost of £896,753, including the cost of the sub-stations and plant. The current generated at the power-house is partly continuous and partly alternating, and is used both for lighting and traction purposes. The standard voltage of the continuous current is 600; the alternating current is transmitted by means of high-tension cables to sub-stations, where it is converted to continuous current at the standard voltage. The total output of the power-house, for both lighting and traction purposes, during the year 1909-10, was 56,462,781 kilowatt-hours, of which the direct-current supply was 13,933,062, and the alternating current 42,529,719 kilowatt-hours. The output for traction purposes only was 45,500,128 kilowatt-hours. The following table gives particulars of the working of the electric tramways for each financial year from 1901 to 1910, inclusive :—

NEW SOUTH WALES.—PARTICULARS OF SYDNEY ELECTRIC TRAMWAYS, 1901-1910.

Year ended 30th June.	Mileage Open for Traffic (Track).	Total Cost of Construction and Equipment.	Gross Revenue.	Working Expenses.	Net Revenue.

1909	42,299	17,813	173,733	906	5,514
1910	45,500	19,394	187,574	939	6,065

* 103¾ route miles. † Including £50,500 written off for depreciation, etc.

The net revenue on capital invested was 4.82 per cent. in 1909-10 as against 5.97 per cent. in the preceding year.

(ii.) *Private Tramways.* There are three private tramway lines in New South Wales open for general traffic. (*a*) There is an electric tramway running from Rockdale to Brighton-le-Sands, a distance of one and a-quarter miles. This line was originally opened as a steam tramway in 1885, but was subsequently converted into electric. The total cost to the end of 1909 was £13,000. During that year the number of tram-miles run was 32,000. (*b*) A private steam tramway passes through the township of Parramatta. Commencing at the park gates, it runs as far as the Duck River, a distance of 2¾ miles, where it connects with the Parramatta River steamers, conveying passengers and goods to and from Sydney. This line was opened for traffic in 1883. In 1909 the number of tram miles run was about 17,520, and the number of passengers conveyed about 67,700. (*c*) Another steam tramway runs between Fassifern and Toronto, on Lake Macquarie, a distance of two and three-quarter miles, and was first opened in 1891. This line was taken over by the Railway Commissioners in August, 1910.

Particulars regarding private tramways used for special purposes are not available.

(iii.) *Sydney Harbour Ferries.* As the ferry services on the waters of Port Jackson are mainly subsidiary to the suburban railway and tramway systems, it has been thought advisable to include them here rather than under shipping. Returns for the year 1909 were received from five companies, and shew that these companies had 62 boats in commission which were licensed to carry a total of 106,114 passengers, or an average of 1711 per boat and per trip. The total number of passengers carried during the year is stated as 24,729,807, an average of over 67,000 per day. In addition to the ordinary passenger traffic there are two lines providing for vehicular traffic, and thus affording the only rapid means of transit between the city and the northern suburbs.

The five companies employed during the year a total of 735 persons. The capital expenditure to the end of 1909 amounted to £114,762, the gross revenue during 1909 to £223,741, and the expenditure to £143,721, thus giving a net revenue of £80,020. The services are well managed, and the boats constructed during recent years—double-ended screwboats—are claimed to be superior in size and equipment to boats employed on similar service in any part of the world.

3. **Victoria.**—In Melbourne there is a number of tramway systems carried on under the control of various authorities, the most important being the cable system worked by the Melbourne Tramway and Omnibus Company. There are also three lines of electric tramways, one running from St. Kilda to Brighton, a distance of five and one-eighth miles, belonging to the Government, and under the control of the Railway Commissioners; one from Flemington Bridge to the Saltwater River and Keilor Road, a distance of seven and a-quarter miles, is run by a private company; and one from Prahran to Malvern, four and a-half miles in length, controlled by a joint municipal trust. There is also a private cable tramway, two and a-quarter miles in length, between Clifton Hill and Preston. Two private tramways worked by horses—one, seven miles in length, running from Sandringham to Cheltenham via Beaumaris, the other, one and a-half miles long, from Brunswick to Coburg, are owned privately, while three similar ones are worked by the Melbourne Tramway and Omnibus Company, viz., Victoria Bridge to Kew, Richmond Bridge to Hawthorn, and the Zoological Gardens lines. There is a short steam tramway, about one mile long, at Sorrento. There are also systems of electric tramways at Ballarat and Bendigo, constructed and run by a private company. A number of tramways has been constructed for special purposes in various parts of the State under the provisions of the Tramway Act 1890. The work of constructing electric tramways at Geelong was commenced in January, 1911.

(i.) *Melbourne Cable Tramways.* The Melbourne Omnibus Company began its services by the initiation of omnibus services in 1869, and in 1878 the company changed its name to the Melbourne Tramway and Omnibus Company, with a view to the introduction of a tramway system in the city and suburbs of Melbourne. It was not, however, until the year 1883, when the Melbourne Tramway and Omnibus Company's Act was passed, that the necessary authority was given by Parliament for that purpose. Under this Act the company was empowered to construct tramways in the streets of Melbourne and suburbs, with the consent of the municipalities interested, who had the option of electing to construct the tramways themselves. All the municipalities decided to exercise the option conferred upon them, and, according to the provisions of the Act, a Tramways Trust was formed. This body, which is composed of seven members from the Melbourne City Council and one member each from the councils of eleven of the surrounding municipalities, received full power to construct tramways, and to borrow money for that purpose, secured on the municipal properties and revenues and on the tramways themselves. The Trust raised sufficient funds to pay for the construction of the tramway tracks and the engine-houses from which the cables are worked. It was required by the original Act, as amended in 1892, to complete the tramways by the end of the year 1893, and to grant a thirty-two years' lease of the tramways to the company, dating from the 1st July, 1884—when the liability for interest on the loans commenced—and expiring on the 1st July, 1916. The company is required to find sufficient capital to build the rolling-stock and to equip the lines and engine-houses with all necessary working requisites. The company pays to the Trust annually the interest due upon the loans raised, and also a sufficient sum as a sinking or redemption fund, to repay by its accumulation the principal of the loans raised by the Trust, and at the expiration of the lease must hand back the lines in good working order to the Trust. The expenses of the Trust were paid out of the loan up to the end of the year 1903, but since that date have been paid by the company to an amount not exceeding £1000 per annum, the municipalities being liable for the remainder. The total amount the Trust was empowered to borrow was £1,650,000, which has been raised in London by means of debentures bearing interest at 4½ per cent. The premiums received amounted to £55,794,

making a total of £1,705,794. This amount had been expended by the end of the year 1893, when further loan expenditure ceased. The first line—that to Richmond—was opened to traffic in November, 1885, and the work being rapidly pushed on, the others were opened at short intervals, and the whole system was completed in 1891. The complete system consists of forty-three and a-half miles of double-track cable lines, using constantly over ninety miles of wire rope, and four and a-half miles of double-track horse lines.

(*a*) *Particulars of Working, 1901 to 1910.* The subjoined statement shews the tram mileage, the number of passengers carried, and the revenue and expenditure for each year ended the 30th June from 1901 to 1910 inclusive:—

MELBOURNE CABLE TRAMWAYS.—PARTICULARS OF WORKING, 1901 to 1910.

Year ended the 30th June.	Tram Mileage.	Number of Passengers Carried.	Revenue.			Working Expenses.			
			Traffic Rec'pts.	Other.*	Total.*	Wages.	Repairs & Maintenance.	Other.*	Total.*
	No.	No.	£	£	£	£	£	£	£
1901	8,964,734	47,195,647	465,427	18,025	483,452	122,014	80,006	60,480	262,500
1902	9,226,883	47,261,572	454,683	20,152	474,835	125,596	68,689	75,269	269,554

1910	10,010,975	68,695,853	581,390	45,307	626,697	162,956	78,022	63,540	304,518

* Including amounts on account of omnibus lines.

It may be noted that the "Wages" item in the above table does not represent all that is paid in wages by the company, as a considerable portion is merged in the item "Repairs and maintenance." The figures under working expenses classed as "Other" comprise feed, fuel, licenses, rates, insurance, law costs, stationery and office expenses, salaries of staff, and directors' and auditors' fees.

(ii.) *Electric Tramways.* There are in Melbourne three electric tramway systems, namely (*a*) the St. Kilda-Brighton line, (*b*) the North Melbourne tramways, and (*c*) the Prahran-Malvern lines.

(*a*) *The St. Kilda-Brighton Line.* Under the St. Kilda and Brighton Electric Street Railways Act 1904 the Board of Land and Works was authorised to construct a tramway from St. Kilda to Brighton. The amount of interest payable on the cost of the land acquired for the tramway was guaranteed by the municipalities of St. Kilda and Brighton for a period of twenty years, and authority was given by the Act to the municipalities to levy either a general or special rate not exceeding one shilling in the pound for the purpose of paying the guarantee. The profit, if any, during the first twenty years is to be set off in reduction of the guarantee. The line was opened for traffic in May, 1906, and the extension to Brighton Beach was opened in the following year. A proposal has been made to extend the line along the foreshore as far as Mordialloc. The total capital cost to the 30th June, 1910, exclusive of rolling-stock, was £43,052, and of rolling-stock was £15,560, making a total of £58,612. The subjoined statement gives particulars of the working of this line for the financial years ended the 30th June, 1907 to 1910:—

ST. KILDA-BRIGHTON ELECTRIC STREET TRAMWAY, 1907 to 1910.

Year ended 30th June.	Mileage Open.	Car Mileage.	Passengers Carried.	Gross Revenue.	Working Expenses.	Interest.	Net Loss.
				£	£	£	£
1907	5.13	303,777	1,030,242	9,590	17,392*	1,980	9,782
1908	5.13	335,007	1,146,484	10,374	14,299†	2,140	6,065
1909	5.13	338,214	1,265,492	10,941	9,075	2,038	172
1910	5.13	340,254	1,361,925	11,885	9,860	2,092	67

* Including an amount of £9941 for replacement of rolling stock, car-shed and equipment destroyed by fire. † Including an amount of £3311 for replacement of rolling-stock, etc., caused by fire.

The average fare paid per passenger was 2.08 pence in 1909-10 as against 2.06 pence in 1908-9. The gross revenue in 1909-10 was 8.38 pence per passenger car mile and £2316.76 per mile of track open. In the same year the percentage of working expenses on gross revenue was 82.96 as against 82.94 in the preceding year.

(*b*) *The North Melbourne Tramways*, extending through the northern suburbs to the Saltwater River and to Keilor Road, were constructed by a private company, and were opened for traffic towards the end of the year 1906.

(*c*) *The Prahran-Malvern Tramway.* This line has been constructed under the control of a trust, which consists of five members appointed by the city of Prahran and the town of Malvern. The total track mileage (including double track 2¼ miles) is 7⅛ miles, the estimated total capital cost being £90,000. The current is supplied by the Melbourne Electric Supply Company Limited at a price varying according to the consumption of current and the price of fuel. Any surplus revenue, after providing for operating expenses, interest, sinking fund, and renewal reserve, is to be paid to the municipalities of Prahran and Malvern in proportion to the car mileage run in their respective districts. The lines were opened for traffic on 31st May, 1910. From that date to 30th September, 1910, the number of tram miles run was approximately 415,668, the number of passengers carried was 2,867,889, the gross revenue £20,806, and the working expenses (excluding interest and renewals reserve) £15,301. The number of cars in use was 13, and the number of persons employed 70.

(*d*) *The Ballarat and Bendigo Electric Tramways* are under the control of a private company, and run along the main streets and to and from the outlying suburbs of the two towns. The total length of lines open for traffic is 22 miles.

(*e*) *Particulars of Working of all Electric Tramways, 1904 to 1910.* The following table gives particulars of the working of all electric tramways in Victoria for each year from 1904 to 1910 inclusive :—

VICTORIA.—PARTICULARS OF WORKING OF ELECTRIC TRAMWAYS, 1904 to 1910.

Year.	Current Generated for Traction Purposes at Central Stations.	Mileage Open for Traffic.	Total Cost of Construction and Equipment.	Gross Revenue.	Working Expenses.	Tram Miles Run.	Number of Passengers Carried.	Number of Cars in Use.	Number of Employees.
	Kilowatt-hrs. (000 omitted.)	Miles.	£	£	£	No. (000 omitted.)	No. (000 omitted.)	No.	No.

* Incomplete. † Not available. ‡ Exclusive of Prahran-Malvern Tramway, which was opened for traffic on 31st May, 1910.

(iii.) *Private Tramways for Special Purposes.* There are in Victoria a number of tramways used for special purposes, chiefly in connection with the timber, mining, and milling industries. These lines have been constructed either under authority of the Department of Public Works, pursuant to Section 36 of the Tramway Act 1890, or under leases or licenses issued by the Department of Lands and Survey, pursuant to Sections 144 and 145 of the Land Act 1901. Particulars of these lines are too incomplete for publication.

4. **Queensland.**—In this State there is a system of electric tramways running through the streets of the city and suburbs of Brisbane and controlled by a private company which has its head office in London. The total length of the Brisbane system was thirty and

three-quarter miles at the end of the year 1910. There is also a number of tramways, having a total length of about 640 miles, run in connection with sugar mills. Particulars of Shire tramways have been given in the part of this section dealing with private railways (see pp. 746 and 747).

(i.) *Brisbane Electric Tramways.* These tramways are run on the overhead trolley system, the voltage of the line current being 550. The total cost of construction and equipment to the end of the year 1909 was approximately £1,250,000. It is understood that certain extensions of the system at an early date are contemplated. The following table gives particulars of these tramways for each calendar year from 1901 to 1910, inclusive:—

QUEENSLAND.—BRISBANE ELECTRIC TRAMWAYS, PARTICULARS OF WORKING, 1901 to 1910.

Year.	Current Generated.	Mileage Open for Traffic.	Tram Miles Run.	Number of Passengers Carried.	Gross Revenue.	Working Expenses.	No. of Cars in Use.	Number of Persons Employed

* Not available.

(ii.) *Sugar-Mill Tramways.* There is a number of tramways in various parts of Queensland used in connection with the sugar-milling industry, chiefly for the purpose of hauling cane to the mills. Some of these lines are of a permanent nature, running through sugar-cane plantations, while others are portable lines running to various farms. At the end of the year 1908, there were 28 sugar-mills running tramways. The total mileage was 640, of which 460 miles were steam and 180 miles horse tramways.

5. **South Australia.**—Up to the year 1906 there was a number of horse tramways in the principal streets of Adelaide and suburbs run by various private companies. Power to acquire part of these lines, with a view to their electrification, was given to the Adelaide Corporation by the Municipal Tramways Trust Act 1906. In accordance with the provisions of the Act, a Trust consisting of eight members, of whom two were nominated by the Governor, two elected by the City Corporation, and two each by the Suburban Corporations and the District Councils, was formed in 1907, and a length of forty-nine route miles of horse traction tramways was purchased from the private companies at a cost of £283,357. On the 9th March, 1909, the electric car system was inaugurated on the Kensington route. At the end of July, 1910, a length of 29½ route miles had been electrified and opened for traffic; the corresponding length of track opened was 53¼ miles. The power-house is located at Port Adelaide, nine miles from the city. It is equipped with three 1500-kilowatt turbo-alternators generating current at 11,000 volts, which are stepped down and passed through rotary converters to direct current at 600 volts. The cost of construction of the whole undertaking when complete will be approximately £750,000. There are also in South Australia nineteen and three-quarter miles of Government horse tramways in country districts, worked in connection with the railway system,

and six miles of private tramways used for passenger service. The subjoined statement gives various particulars of these lines:—

SOUTH AUSTRALIA.—PARTICULARS OF HORSE TRAMWAYS, 1910.

Particulars.	Length.	Gauge.	Nature of Traffic.
	GOVERNMENT TRAMWAYS.		
	Miles.	ft. in.	
Moonta, Moonta Bay, and Hamley Flat	5⅕	5 3	Passengers and goods.
Gawler	1⅛	5 3	,, ,,
Victor Harbour and Breakwater ...	1	5 3	,, ,,
Dry Creek and Magazine	1	2 0	Explosives.
Magazine and Broad Creek	1½	2 0	,,
Port Broughton and Mundoora ...	10	3 6	Passengers and goods.
	PRIVATE TRAMWAYS.		
Port Adelaide and Alberton	2¼	5 3	Passengers.
Glenelg and Brighton	3¾	4 3½	,,

6. **Western Australia.**—In this State there are a number of horse tramways, amounting in all to a length of twenty-three miles, which are the property of the Government. Of these the most important is the line between Roeburne and Cossack, constructed on a 2 ft. gauge and under the control of the Colonial Secretary's Department. The length of this line is eight and a-half miles. The remaining fourteen and a-half miles belonging to the Government are made up of eleven short lengths varying from eight chains to four and a-half miles, worked in connection with the jetties at various ports for the purpose of providing the necessary communication between such jetties and the goods sheds or warehouses. Most of these short lines are leased at annual rentals, and they are under the supervision of the Harbour Master. Their maintenance and improvement is in the hands of the Public Works Department. In addition to these Government lines there are electric tramway systems at Perth and Kalgoorlie carried on by private companies, and at Fremantle, under municipal control.

(i.) *Government Tramways.* Particulars as to the working of the Government horse-tramways or as to the rents received therefrom are not generally available. The following statement, however, shews particulars of the working of the Roeburne-Cossack line for the financial year ended the 30th June, 1909:—

WESTERN AUSTRALIAN GOVERNMENT TRAMWAYS.—PARTICULARS OF THE ROEBURNE-COSSACK LINE, 1908-9.

Mileage Open.	Cost of Construction and Equipment.	Gross Earnings.	Working Expenses.	Interest.	Loss.
8½	£24,827	£1,595	1,728	£864	£997

The total loss on the working of this line since its inception to 30th June, 1909, amounted to £22,468.

(ii.) *Electric Tramways.* There are now five towns in Western Australia which enjoy the benefits of electric tramway systems, namely, Perth, Fremantle, Kalgoorlie, Boulder City, and Leonora.

(*a*) *The Perth Electric Tramways* were opened for traffic by a private company in 1899, and the system has since been extended to many of the outlying suburbs. On the 31st December, 1909, there were 22 miles of line open, the total cost of construction and equipment to that date being £474,275. Two small extensions in North Perth amounting to one mile in length, have been opened since the end of 1909.

(*b*) *The Kalgoorlie and Boulder City Tramways* are also run by a private company, the first line being opened in 1902. At the beginning of 1904 legislative authority was given for the construction of lines in Boulder City and suburbs, and in November, 1904, the last section of the Boulder system was completed. At the end of the year 1909 the total mileage of the whole system—in Kalgoorlie and Boulder City—amounted to 19 miles, the total cost of construction and equipment being approximately £448,840.

(*c*) *The Fremantle Tramways* were opened in November, 1905, under the control of the municipality. On the 31st August, 1910, there were 8¾ miles of line open for traffic, the cost of construction and equipment at that date being £95,432.

(*d*) *The Leonora-Gwalia Tramway*, three miles in length, formerly a steam tramway, was opened for traffic by electrification on 5th October, 1908.

(*e*) *Particulars of Working of all Electric Tramways, 1901 to 1909.* The subjoined table shews, so far as returns are available, particulars of the working of all electric tramway systems in the State for each year from 1901 to 1909 inclusive:—

WESTERN AUSTRALIA.—PARTICULARS OF ELECTRIC TRAMWAYS, 1901 to 1909.

Year.	Current Generated.	Mileage Open for Traffic.¶	Total Cost of Construction and Equipment.	Tram Miles Run.	Number of Passengers Carried.	Gross Revenue.	Working Expenses.	No. of Cars in Use.	No. of Persons Employed.

* Exclusive of Kalgoorlie tramways, for which returns are not available. † Exclusive of Perth tramways. § Not available. ‖ Including returns for the Fremantle tramways for a period of ten months ended the 31st August, 1906, at which date the municipal financial year ends. ¶ For the years 1907 to 1909, inclusive, miles of route are given; for previous years the figures represent miles of single track.

7. **Tasmania.**—In Hobart there is a system of electric tramways, amounting in all to a length of nine miles, owned by a private company. Under the authority of the Launceston Tramway Act of 1906 the Launceston City Council entered into an agreement with a private company for the construction of a system of electric tramways in the city and suburbs of Launceston. The agreement provided that the company was to run the tramways for a period of twenty-five years, when the Council could purchase the lines and stock at cost price; the electric power required was to be supplied by the Council. This agreement, however, lapsed, and the Council is now constructing the tramways, and will run them as a municipal undertaking. The route mileage of the system will be about 5½ miles, and will be opened for traffic about the middle of 1911.

(i.) *Hobart Electric Tramways.* These tramways were opened for traffic in 1893, the total cost of construction and equipment to the 31st December, 1909, being £90,824. The following table gives particulars of the working of this system for each year from 1901 to 1909, inclusive:—

TASMANIA.—PARTICULARS OF WORKING OF HOBART ELECTRIC TRAMWAYS, 1901-9.

SECTION XVIII.

POSTS, TELEGRAPHS, AND TELEPHONES.

§ 1. Posts.

1. **The Commonwealth Postal Department.**—Under the provisions of section 51 of the Commonwealth Constitution Act the Commonwealth Parliament was empowered to make laws with respect to the control of the postal, telegraphic, and telephonic services in Australia, and by proclamation, made under section 69 of the same Act, the six separate State Post and Telegraph Departments were amalgamated and taken over by the Federal Executive on the 1st March, 1901. On the 1st December following, the Commonwealth Post and Telegraph Act 1901 came into operation, and the provisions of the various State Acts referring to the postal and telegraphic services thereby ceased to apply; it was, however, specially provided by the Act of 1901 that all regulations in force and all rates and charges levied under any State Act should continue in force and be applied in the same manner as if such State Act were not affected by the Commonwealth Act. The administration of the Act of 1901 was placed in the hands of a Postmaster-General, a responsible Minister with Cabinet rank, and of a Secretary having chief control of the Department throughout the Commonwealth under the Postmaster-General, whilst a principal officer in each State was provided for under the style of Deputy Postmaster-General. The rates and charges levied in each State for the transmission of letters, telegrams, and postal articles at the date of Federation remained in force until the Post and Telegraph Rates Act came into operation on the 1st November, 1902. This Act secured uniformity throughout the Commonwealth in the rates charged for the conveyance of newspapers by post, and for the transmission of telegrams, but did not alter the charges made in the individual States for the transmission of letters, cards, parcels, and packets. Uniform postage rates will, however, exist in all the States when the Postal Rates Act of 1910 comes into force. (See paragraph 8 hereof.)

2. **Postal Services in Early Days.**—The first Australian office for postal purposes was established in Sydney by Lieutenant-Governor Paterson under a Government order dated the 25th April, 1809, and the site selected was in High-street (now known as George-street) at the residence of Mr. Isaac Nicholls. The duties of this office were extended in June, 1810, by Governor Macquarie, who established it as a regular post office, at which all parcels and letters, either colonial or foreign, were to be deposited previous to their distribution. After the establishment of this office in Sydney very little improvement in regard to postal matters took place for a number of years, and it was not until 1825 that an Act was passed by Sir Thomas Brisbane, with the advice of the Council, "to regulate the postage of letters in New South Wales." A proclamation under this Act was issued, fixing the rates of postage and the salaries and allowances of postmasters, and inviting tenders for the conveyance of mails between Sydney and Parramatta, Windsor and Liverpool; between Liverpool and Campbelltown; from Parramatta to Emu Plains, and thence to Bathurst. It was not, however, until 1828 that the provisions of the Act were put into full force and a system of general post-office communication was established. In that year rates of postage were fixed, depending

upon the distance and the difficulty of transmission. The lowest single inland rate was threepence and the highest one shilling, the postage on a letter increasing according to its weight, the minimum fee being charged on letters not exceeding a quarter of an ounce. The fee for newspapers was one penny. Letters from New South Wales to Van Diemen's Land were charged threepence each, while other letters by ship were charged fourpence each single rate, and sixpence for any weight in excess. The Act of 1825 was amended by the Postal Act of 1835, under which the Governor was authorised to establish a General Post Office in Sydney, and to make rules and regulations, and to fix rates for the conveyance of letters and parcels. In 1837 a post office was established in Melbourne, and a fortnightly service was established between that city and Sydney. In the same year stamps were introduced in the form of stamped covers or wrappers, which are said to have been the first postage stamps ever used. Post offices were established and a postal service was organised in the other States of the Commonwealth shortly after their settlement, and a tolerably good overland service by horses and mail coaches soon developed between the capitals and the up-country towns, villages, and stations as settlement progressed.

3. **Development of Postal Services.**—In the early days mails were conveyed along the main roads by coaches, built after the style of the old-fashioned English mail coaches; after the discovery of gold, in 1851, coaches built on the model of the Mexican estafeta gradually supplanted the old style. Mails were despatched at night and were delivered with greater rapidity until they were finally sent by railway. The history of the post office in Australia, subsequent to the discovery of gold, has been one of great progress and improvement.

(i.) *Number of Post Offices, Letters and Postcards, and Newspapers, 1841 to 1909.* The number of post offices open in each State and in the Commonwealth at decennial periods since 1841, and at the end of the years 1907, 1908, and 1909 is given in the subjoined table, which also shews, for the same years, the total number (in thousands) of letters and postcards dealt with, and the number per 100 of the population, as well as the total number (in thousands) of newspapers dealt with, and the number per 100 of the population in each State and in the Commonwealth. The true total number of letters and postcards and of newspapers dealt with is not obtained by merely adding the figures of the several States together, since interstate letters are counted both in the State from which they are despatched and in that in which they are received for delivery. A second total is therefore given, excluding such interstate excess, obtained by subtracting from the first total for all the States half the sum of the number of interstate letters despatched and received in each of the States.

8. **Rates of Postage.**—The charges made for the postage of newspapers and parcels, and of interstate and foreign letters, are the same in all the States of the Commonwealth. The rates for the transmission of inland letters, however, are not uniform, the Post and Telegraph Act 1901 having specially provided that the rates and charges levied in any State should continue in force. The last-mentioned regulation, however, was repealed by the Postal Rates Act of 1910, which will come into force on a date—not later than 1st May, 1911—to be fixed by proclamation.

The following rates on letters, newspapers, and other postal articles posted in the Commonwealth for delivery therein will be in force after the date of proclamation of the operation of the Postal Rates Act of 1910 :—

POSTAL RATES OF ARTICLES POSTED IN THE COMMONWEALTH FOR DELIVERY THEREIN AFTER APRIL, 1911.

Postal Articles.	Rates of Postage.
LETTERS	1d. per ½ ounce.
LETTER-CARDS	Single, 1d. each. Reply, 1d. each half.
POST CARDS	Single, 1d. each. Reply, 1d. each half.
PRINTED PAPERS AS PRESCRIBED	½d. per 2 ounces or part of 2 ounces.
BOOKS PRINTED OUTSIDE AUSTRALIA ...	½d. per 4 ounces or part of 4 ounces.
BOOKS PRINTED IN AUSTRALIA	½d. per 8 ounces or part of 8 ounces.
MAGAZINES.—That is to say—	
(*a*) magazines, reviews, serials, and other similar publications printed and published in Australia in numbers at intervals not exceeding three months	½d. per 8 ounces or part of 8 ounces.
(*b*) magazines, reviews, serials, and other similar publications (including newspapers) printed and published outside Australia in numbers at intervals not exceeding three months ...	½d. per 4 ounces or part of 4 ounces.
HANSARD.—That is, reports of Parliamentary Debates printed and published by the authority of the Commonwealth or of a State	½d. per 12 ounces or part of 12 ounces.
COMMERCIAL PAPERS, PATTERNS, SAMPLES, AND MERCHANDISE AS PRESCRIBED ...	1d. per 2 ounces or part of 2 ounces.
NEWSPAPERS (without condition as to the number contained in each addressed wrapper) posted by registered newspaper proprietors, or by newsvendors, or returned by an agent or newsvendor to the publishing office	1d. per 20 ounces on the aggregate weight of newspapers so posted by any one person at any one time.
ALL OTHER NEWSPAPERS	For each newspaper, ½d. per 10 ounces or part of 10 ounces.

Whilst the bookkeeping sections of the Constitution Act (see Section XIX., § 1, hereinafter) were in force, each State had necessarily to use its own postage stamps, and stamps sold in one State were only allowed to be used on letters posted in that State. The necessity for this arrangement disappeared with the change in the keeping of the Commonwealth accounts, and since the 14th October, 1910, stamps of any State can be affixed to letters, irrespective of the State in which they are posted. With the object of issuing a uniform postage stamp for the Commonwealth, the Postmaster-General has called for designs for a stamp which must contain characteristic features of Australia.

(i) *Letters.* The rates as mentioned hereunder will be, in some cases, altered when the rates specified in the preceding table come into force. At present the inland letter postage is at the rate of one penny per half-ounce on town and twopence per half-ounce on country letters throughout the Commonwealth, except in the States of Victoria and South Australia. In Victoria the charge made is one penny per half-ounce, and in South Australia twopence per half-ounce, on all letters posted for delivery within the State. In Victoria the minimum charge was altered in 1890 from twopence per ounce to one penny per half-ounce, but the diminution in revenue at that time was so great that in 1892 the rate was again raised to twopence per ounce; on the 1st April, 1901, it was once more reduced to one penny per half-ounce under the provisions of an Act passed in December, 1900. In New South Wales the town rate of one penny per half-ounce, which is now in force in the metropolitan suburban district, is also in operation within a twelve-mile radius of Newcastle, and a thirteen-mile radius of the majority of the other principal country towns. In Queensland the present town rate extends to all places within a radius of eleven miles from the General Post Office at Brisbane, and also includes all letters to be delivered from the same office at which they were posted. In Western Australia and Tasmania the existing town rates have effect within a radius of thirteen miles from the General Post Offices at Perth and Hobart respectively, and in other towns and suburbs within a radius depending upon their population. The postage to the United Kingdom was reduced in January, 1891, from sixpence per half-ounce *via* the Red Sea, and fourpence *via* the Cape of Good Hope, to the uniform rate of twopence halfpenny. In 1891 the States were represented at the Congress of the Universal Postal Union held in Vienna, and on the 4th July a convention was signed on their behalf, by which they joined the Union from the 1st October of that year. On that date the rate of postage to all British possessions and to foreign countries included in the Union was reduced to twopence halfpenny. The present charge for postage of interstate letters and of letters to the United Kingdom and to British possessions is now uniformly twopence per half-ounce throughout the Commonwealth; the rate on letters to foreign countries and to other places is twopence half-penny for each half-ounce.

(ii.) *Newspapers.* The different rates charged for the carriage of newspapers in the various States, prior to Federation, continued after the control of the Postal Departments had been taken over by the Commonwealth, until the 1st November, 1902, when a uniform rate was imposed by the Post and Telegraph Rates Act 1902. At present the rates on all newspapers posted for delivery within the Commonwealth (without condition as to the number contained in each addressed wrapper posted) by registered newspaper proprietors, or by newsvendors, or returned by newsvendor or agent to the publishing office, is one penny per twenty ounces on the aggregate weight. On all other registered newspapers posted within the Commonwealth for delivery therein the charge is a halfpenny per ten ounces for each newspaper. At the end of the year 1909 there were in all 1649 publications registered in the Commonwealth under section 29 of the Post and Telegraph Act 1901 for transmission by post as newspapers. The charge on postage of registered newspapers for transmission to the United Kingdom is one penny for each newspaper not exceeding eight ounces in weight by the ordinary route, and one penny for each newspaper not exceeding sixteen ounces in weight by the All Sea Route. To other parts of the world the rate is one penny up to four ounces, and a halfpenny for every additional two ounces. Newspapers which are not registered are charged at the same rates as other printed papers.

(iii.) *Parcels.* Parcels may not exceed 11 lbs. in weight, 3 ft. 6 in. in length, or 6 ft. in length and girth combined. The rate for the inland postage of parcels is sixpence up to 1 lb., and then threepence for every additional pound. For interstate transmission the rate is eightpence up to 1 lb., and then sixpence per lb., and for transmission to the United Kingdom the rate is one shilling up to 1 lb., and sixpence for every additional pound.

(iv.) *Packets.* The regulations for the conveyance of packets vary in the several States. The ordinary rate is one penny for each two ounces. Packets must not as a rule exceed 2 ft. in length, 1 ft. in breadth or depth; or, if in a roll, 2 ft. 6 in. in length. Special rates are allowed for the conveyance of commercial papers, patterns, samples, etc.

9. **Registered Letters.**—Under section 38 of the Post and Telegraph Act 1901 provision is made for the registration of any letter, packet, or newspaper upon payment of the prescribed fee, and any person who sends a registered article by post may obtain an acknowledgment of its due receipt by the person to whom it is addressed by paying the prescribed fee (see hereunder) in advance at the time of registration in addition to the registration fee.

(i.) *Registration Fees.* The fee payable upon registration of an article is threepence, and the fee payable in order to obtain an acknowledgment of the delivery of the registered article is twopence halfpenny in addition. Registered letters must, as a rule, be handed in at least half-an-hour before the closing of the mails.

(ii.) *Number of Registered Letters Posted, 1909.* The subjoined table shews the number of registered letters posted in each State during the year 1909, classified according to the places to which they were despatched for delivery:—

NUMBER OF REGISTERED LETTERS POSTED DURING 1909.

(,000 OMITTED.)

State.	Posted in each State for Delivery within that State.	Posted in each State for Delivery in other States.	Posted in each State for Delivery in Places outside the C'wealth.	Total.
New South Wales	694	70	49	813
Victoria	792	87	49	928
Queensland	384	46	22	452
South Australia	178	28	9	215
Western Australia	271	35	21	327
Tasmania	183	13	5	201
Commonwealth ...	2,502	279	155	2,936

10. **Ocean Mail Services.**—Regular steamship communication between Australia and Europe was established in 1852 by a service run by the Peninsular and Oriental Company between Singapore and Sydney, *via* King George's Sound, Adelaide, and Melbourne. This service was inaugurated in September, 1852, by the arrival at Melbourne of the "Chusan," and was continued until 1854, when it was stopped in consequence of the Crimean War; in 1856 a line of steamers was again started, and the service was carried

on by the Peninsular and Oriental Company, in conjunction with the Royal Mail Company, for some years.

(i.) *Mail Route via San Francisco.* The service *via* the Red Sea did not at that time give much satisfaction to the public, and was looked upon with a certain amount of disfavour in New South Wales and New Zealand. The effect was to stimulate the colonists to agitate for an improved service, and proposals were made for the establishment of a line of mail packets from Sydney to Panama *via* Wellington, by rail across the isthmus, and thence to Great Britain. The result was that in 1866 the line was started, and continued in operation until the end of 1868, when it was terminated through the failure of the company by which it had been carried out. The completion of the railway across the American continent in 1869, with its western terminus at San Francisco, opened up a new and agreeable route, and in that year a monthly service was inaugurated by the Union Steamship Company, in conjunction with the Pacific Steamship Company, from Sydney to San Francisco *via* Auckland. This service was subsidised to the extent of £37,000 per annum, of which New South Wales paid £25,750 and New Zealand £11,250, and was continued until November, 1890, when a new contract was entered into and the amount of the subsidy largely reduced, the amount of the contribution being based upon the weight of mail matter carried. Various extensions of the contract were made, but the last agreement made between the New Zealand Government and the Oceanic Steamship Company of San Francisco expired on the 10th November, 1906, and has not since been renewed. From that date mails were carried at Postal Union rates until the 12th April, 1907, when the service was discontinued.

(ii.) *Route via Suez Canal.* The establishment of a mail route *via* America had the effect of stimulating the steamship owners who were engaged in the service *via* Suez, and from that time there was a marked improvement in the steamers, as well as in the punctuality and speed with which the mails were delivered. The Peninsular and Oriental Company have, with very few interruptions, carried mails from the Australian States almost from the inception of the ocean steam service. Towards the end of 1878, the Orient-Pacific Company commenced carrying mails between Australia and the United Kingdom, and has continued to do so ever since. New contracts were entered into with the Peninsular and Oriental and the Orient-Pacific Companies for a weekly service, subsidised by the Imperial Government and by all the States of Australia, to commence on the 1st February, 1898, for a period of seven years. The total amount of the subsidy was £170,000 per annum, of which £98,000 was payable by the Imperial Government and £72,000 by the Australian States in proportion to their population. These contracts expired on the 31st January, 1905, and pending negotiations for a new contract the mails were carried at poundage rates. On the 1st February, 1905, the Peninsular and Oriental Company commenced its eighth Australian contract with the British Postmaster-General on behalf of the Imperial Post Office only, and in connection with the India and China mail services, one payment being arranged for the whole service, and the Commonwealth Government not, as hitherto, being a party to the contract. Mails are still carried from Australia by the Peninsular and Oriental Company, but are carried at Postal Union rates and not under contract with the Commonwealth. On the 25th April, 1905, the Orient-Pacific Company concluded a new contract with the Commonwealth Government for a fortnightly service between England and Australia. The subsidy was at the rate of £124,880 per annum. This contract has now been replaced by the new mail contract referred to in the next sub-section hereof. Fremantle has, since the year 1900, been the first and last port of call for the mail steamers to Europe, in lieu of Albany, the original port of call; the Peninsular and Oriental and Orient-Pacific Companies' steamers sail alternately conveying the weekly homeward and outward mails.

(*a*) *The New Mail Contract.* On the 1st January, 1906, tenders were invited by the Commonwealth Postmaster-General for a fortnightly mail service between Adelaide and Brindisi, to alternate with a similar service to be provided by the Imperial Government, and a contract was entered into with Sir James Laing and Company Limited, providing for a service at an annual subsidy of £125,000. This contract, however, fell through, and new tenders were accordingly called for. On the 15th November, 1907, an agreement was entered into with the Orient Steam Navigation Company Limited providing for a fortnightly service for a period of ten years, commencing in February, 1910. The mail service is to be carried out by existing vessels belonging to the company and by five new mail ships, which have been specially built, and which are each over 12,000 tons gross registered tonnage and of not less than seventeen knots speed. Two more new vessels are to be added within eighteen months and six years respectively from February, 1910. The vessels are to call at Fremantle, Adelaide, Melbourne, Sydney, and Brisbane, and at least six of them at Hobart during the months of February to May inclusive. The voyage from Taranto to Adelaide is to be completed within twenty-six days fourteen hours, and from Adelaide to Taranto within twenty-seven days two hours, but the latter period may be exceeded by thirty-six hours during the prevalence of the south-west monsoon. The amount of the subsidy is fixed at £170,000 per annum; but, if the earnings of the company be decreased, or the expenses increased, by reason of any Commonwealth shipping legislation passed subsequently to the date of the agreement, to the extent of not less than £5000 a year, the contractors have the right to terminate the agreement unless the subsidy is increased. Insulated space of not less than 2000 tons of forty cubic feet is to be provided in each of the new vessels, and the freights are not to exceed one halfpenny per lb. for butter and sixty shillings per ton for fruit. White labour only is to be employed, and no discrimination is to be made between unionists and non-unionists. If before or during the sixth year of the period of the contract an accelerated service is provided by any competing line of mail ships, the contractors must, if so required by the Postmaster-General, provide a service equal to the competing service, at an increased subsidy, to be determined by agreement or arbitration. The Commonwealth flag must be flown on the mail ships, which the Commonwealth has the right to purchase at a valuation at any time. Within six months of the Postmaster-General establishing a permanent wireless telegraphy station at Rottnest Island, or at any point on the coast between Fremantle and Brisbane, the company must fit the mail ships with wireless telegraphy installations. The new service was inaugurated on the 11th February, 1910.

(*b*) *French and German Subsidised Mail Services.* Vessels belonging to the Messageries Maritimes and the Norddeutscher Lloyd, which are under contract respectively with the French and German Governments to convey mails monthly between Marseilles and New Caledonia and between Bremen and Sydney, *via* Genoa, also carry mails for the Commonwealth Government from Australia to Europe at Postal Union rates. The Messageries Maritimes service commenced in November, 1882; the amount of the annual subsidy granted by the French Government is £120,000. The first contract for the establishment and maintenance of a mail steamship line between Germany and Australia was made between the Imperial German Government and the Norddeutscher Lloyd in 1885, and the service was inaugurated in July, 1886, with the steamer "Salier."

(iii.) *Route via Vancouver and Canadian-Pacific Railway.* During the year 1893 a direct monthly service was started between Sydney and Vancouver, in British Columbia, *via* Wellington, in New Zealand, and thence to Liverpool *via* the Canadian-Pacific Railway, the New South Wales Government paying an annual subsidy of £10,000 for the maintenance of this service for a period of three years. In 1896 the agreement was renewed for a further period of three years, and in 1899 was again renewed for four years, subject to the same terms and conditions, except that the route was *via* Brisbane instead of Wellington. The contract was further extended, at an

increased subsidy, from time to time until the 31st July, 1910, at a subsidy of £26,626 per annum, pending the receipt of tenders for an improved and accelerated service.

(iv.) *Other Ocean Mail Services.* In addition to the mails *via* the Suez Canal and *via* Vancouver a number of other services, both regular and irregular, are maintained between the Commonwealth and various parts of the world, and also between the principal ports in the various States and a number of small ports in the less settled parts of the Commonwealth which are inaccessible by rail. The following statement gives a summary, in so far as returns are available, of all mail services maintained between the Commonwealth and other countries and between ports in the Commonwealth. The amounts of subsidies specified are the amounts payable per annum unless otherwise stated.

SUMMARY OF MAIL SERVICES, COMMONWEALTH OF AUSTRALIA, 30th JUNE, 1910.

Description of Service.	Frequency of Service.	Ports between which Service is maintained.	Particulars regarding Subsidies.
1. *To and from Europe, via Suez*—			
(a) Peninsular and Oriental* ...	Fortnightly	Adelaide, Fremantle and London, *via* Brindisi and Marseilles	Subsidised by Imperial Govt. Mails from Aust. at Postal Union rates
(b) Orient-Pacific*	,,	Adelaide, Fremantle & London, *via* Taranto	Subsidised. Date of agreement, 15th Nov., 1907. Term from Feb., 1910. Amt. of subsidy £170,000. Subsidy paid by all States on a *per capita* basis.
(c) Messageries Maritimes	13 voyages yearly	New Caledonia and Marseilles, *via* Fremantle and Adelaide	Subsidised by French Govt. Mails from Aust. at Postal Union rates.
(d) Norddeutscher Lloyd	,,	Fremantle, Adelaide & Bremen, *via* Genoa	Subsidised by German Govt. Mails from Aust. at Postal Union rates.
2. *To and from Europe, via Vancouver*†			
Canadian Australian Steamship Co.	Monthly	Sydney and Vancouver, B.C., *via* Brisbane, Fiji, Honolulu, and once every eight weeks to Fanning Island	Subsidised by agreement dated 31st July, 1907, for two years, extended to 31st July, 1911. Amount of subsidy, £26,626. Subsidy paid by all States on a *per capita* basis.‡
3. *To and from New Zealand*—			
(a) Conjointly by Union S.S. Co. and Huddart, Parker Proprietary	Weekly	Sydney, Melbourne, Hobart, Bluff, Dunedin, Christchurch and Wellington	Poundage rates.
(b) Do. do. do. ...	,,	Sydney, Hobart, and Auckland	,, ,,
(c) Conjointly by Shaw, Savill and Albion Co. & N.Z. Shipping Co.	Fortnightly	Hobart, Bluff, Dunedin, and Wellington	,, ,,
(d) Other Steamers	Irregularly, when convenient	Sydney, Wellington, Auckland, and Lyttelton	,, ,,
4. *To and from ports in N.S. Wales*—			
(i.) Northern Ports—			
(a) North Coast S.N. Co. ...	Twice weekly	Sydney, Manning River, Port Macquarie, Macleay, Nambucca, Bellinger Rivers, Coffs Harbour, Clarence River, Byron Bay, and Richmond River	Poundage rates.
(b) Cain's Co-Operative S.S. Co....	Weekly	Sydney & Port Macquarie	,, ,,
(ii.) South Coast Ports—			
Illawarra and S. Coast S.N. Co....	Twice weekly	Sydney, Eden, Bega and Tathra	,, ,,

* Mails carried also to India *via* Colombo. † Carries also mails to Canada and the United States. ‡ A new agreement for a service from New Zealand to Vancouver has been entered into. The matter of extending this service to Australian ports is under the consideration of the Commonwealth Government.

Particulars of amounts paid for the carriage of mails at poundage rates and by railways and other conveyances are given in a later part of this section. (See Paragraph 24. *Distribution of Expenditure of Postal Department.*)

12. **Average and Fastest Time of Mails to and from London.**—Great progress has been made in regard to the means of postal communication with the United Kingdom and the continents of Europe and America. In 1857 there was an unsatisfactory ocean mail service, which nominally brought monthly mails, with news nearly sixty days old; at the present time, though but fifty years have elapsed, there are four lines of modern ocean steamships, which bring the mails in about twenty-nine days to Adelaide, in addition to the monthly service *via* Vancouver, by which mails are sent from Sydney to London in thirty-five days. After leaving Fremantle, where the Western Australian mails are landed, the outward mail steamers *via* the Suez Canal all call at Adelaide, where the remaining mails are landed and conveyed to their ultimate destination by rail. The subjoined table shews the average and the fastest times occupied in the conveyance of mails from London to Adelaide and *vice versâ* during the year 1909:—

AVERAGE AND FASTEST TIME OCCUPIED IN CONVEYANCE OF MAILS VIA SUEZ CANAL, BETWEEN LONDON AND ADELAIDE, AND VICE VERSA, DURING 1909.

Service.	London to Adelaide.				Adelaide to London.			
	Average Time.		Fastest Time.		Average Time.		Fastest Time.	
	Days.	Hours.	Days.	Hours.	Days.	Hours.	Days.	Hours.
Peninsular and Oriental S.N. Co., *via* Brindisi and Colombo ...	28	6	28	0	29	20	29	8
Orient Pacific S. N. Co., *via* Naples and Suez	30	11	29	16	31	22	31	3
*Messageries Maritimes, *via* Marseilles	...		...		33	4	32	3
*Norddeutscher Lloyd, *via* Genoa	...		...		32	22	31	3

* No mails were received from London by the Messageries Maritimes or by the Norddeutscher Lloyd services.

The journey by rail from Adelaide, where the mails for the eastern States are landed, to Melbourne takes 17½ hours; from Adelaide to Sydney, 42 hours, including a stop of about seven hours at Melbourne; while the through journey from Adelaide to Brisbane takes just over three days. The journey from Melbourne to Hobart occupies about 29 hours, *via* Launceston, and about 32 hours direct.

The subjoined table shews the average and the fastest times occupied in the conveyance of mails between Sydney and London and *vice-versâ* by the mail routes *via* Vancouver during the year 1909:—

AVERAGE AND FASTEST TIMES OCCUPIED IN CONVEYANCE OF MAILS VIA VANCOUVER BETWEEN LONDON AND SYDNEY, AND VICE VERSA, DURING 1909.

Service.	London to Sydney.		Sydney to London.	
	Average Time.	Fastest Time.	Average Time.	Fastest Time.
	Days.	Days.	Days.	Days.
Canadian-Australian Line, *via* Vancouver ...	$37\frac{1}{13}$	36	$36\frac{4}{13}$	34

12. **Money Orders and Postal Notes.**—The issue of money orders and postal notes in the Commonwealth is regulated by sections 74 to 79 of the Post and Telegraph Act

1901. A money order, which may be issued for payment either within the Commonwealth or abroad, may not be granted for a larger sum than £20, nor a postal note, which is payable only within the Commonwealth, for a larger sum than twenty shillings. Money orders are sent direct from the Commonwealth to the United Kingdom, and to most of the British colonies and possessions; to the German Empire and German colonies; to Italy; and to the United States of America. Money orders, payable in Japan and China, are sent *via* Hong Kong; orders payable in all other countries are sent through the General Post Office in London, where new orders are issued and forwarded to the addresses of the payees, less threepence for every £5, or part thereof. In order that the full amount of the original order may be forwarded to the payee, this extra commission must be paid by the remitter.

(i.) *Value of Orders Issued and Paid and of Notes Sold, 1909.*—The following table shews the total value of money orders issued and paid, and of postal notes sold in each State and in the Commonwealth during the year 1909, together with the total amount of commission on money orders and poundage on postal notes received by the Postal Department:—

VALUE OF MONEY ORDERS ISSUED AND PAID AND OF POSTAL NOTES SOLD, TOGETHER WITH THE TOTAL AMOUNTS OF COMMISSION AND POUNDAGE RECEIVED IN EACH STATE DURING 1909.

State.	Value of Money Orders Issued.	Value of Money Orders Paid.	Net Money Order Commission Received.	Value of Postal Notes Sold.	Poundage Received on Postal Notes.
	£	£	£	£	£
New South Wales ...	2,746,164	2,840,639	21,437	999,313	19,380

The Commonwealth... ...	0 6	0 6	1 0	1 0	1 6	1 6	2 0	2 0
New Zealand and Fiji ...	0 6	1 0	1 6	2 0	2 6	3 0	3 6	4 0
U. Kingdom & other countries	Sixpence for each £1 or fraction of £1							
Papua—British New Guinea ...	Ninepence ,, £5 ,, ,, £5 up to £20							

Remittances may also be made by telegraph to and from money order offices in the Commonwealth which are also telegraph or telephone offices, and to New Zealand.

The charge for a telegraph money order is the cost of the telegram of advice in addition to the ordinary commission. The remitter must also send a telegram to the payee advising the transmission of the money, which telegram must be produced by the payee when applying for payment.

(iii.) *Rates of Poundage on Postal Notes.* The values of the notes issued have been so arranged that any sum of shillings and sixpences up to £1 can be remitted by not more than two of these notes. Broken amounts not exceeding fivepence (but not fractions of a penny) may be added by affixing postage stamps. The poundage or commission charged on notes of different denominations is as follows :—

POUNDAGE RATES, POSTAL NOTES, 1910.

Denomination of Note ...	6d. to 1s. 6d.	2s. to 4s. 6d.	5s.	7s. 6d.	10s. to 20s.
Poundage charged ...	½d.	1d.	1½d.	2d.	3d.

14. **Number and Value of Money Orders and Postal Notes Issued and Paid, 1901 to 1909.**—The following table shews the total number and face value of money orders and postal notes issued and paid in the Commonwealth during each year from 1901 to 1909 :—

NUMBER AND VALUE OF MONEY ORDERS AND POSTAL NOTES ISSUED AND PAID, 1901 TO 1909.

18. **Postal Notes Issued and Paid at Capital Cities.**—In the subjoined table, figures are given shewing the number and value of postal notes issued and paid at the principal cities in each of the States of the Commonwealth during the year 1909 :—

POSTAL NOTES ISSUED AND PAID AT CAPITAL CITIES IN THE COMMONWEALTH DURING 1909.

City.	Postal Notes Issued.		Postal Notes Paid.	
	Number.	Value.	Number.	Value.
		£		£
Sydney	134,177	52,014	933,951	334,375
Melbourne	101,007	40,872	790,664	282,892
Brisbane	47,862	19,666	191,770	73,720
Adelaide	59,280	22,837	262,567	95,029
Perth	39,565	20,015	230,999	97,306
Hobart	24,493	9,771	421,826	130,681

19. **The Value Payable Post.**—This is a system under which the Postal Department undertakes to deliver registered articles sent by parcel post within the Commonwealth, and to recover from the addressee on delivery a specified sum of money fixed by the sender, and to remit the sum to the sender by money order, for which the usual commission is charged. The object of the system is to meet the requirements of persons who wish to pay at the time of receipt for articles sent to them, and also to meet the requirements of traders and others who do not wish their goods to be delivered except on payment. In addition to the ordinary postage, commission on the value of the articles transmitted at the rate of twopence on sums not exceeding ten shillings, and one penny for each additional five shillings or part thereof, must be prepaid by postage stamps affixed to the articles distinct from the postage and marked "commission." The registration fee (threepence) and the proper postage must also be prepaid. If the addressee refuse delivery, the parcel is returned to the sender free of charge. Any article that can be sent by parcel post may be transmitted as a value-payable parcel. Letters may also be sent as value-payable parcels, if prepaid at the letter rate of postage and handed

to the parcels clerk in the same manner as in the case of parcels. The subjoined statement gives particulars of the number and value of parcels sent through the Value Payable Post in each State during the years 1907, 1908, and 1909. From these figures it will be seen that the business in Queensland is greatly in excess of the combined transactions of all the other States, owing to the fact that the system has been established in that State for some years, but was only extended to the whole Commonwealth with the advent of Federal control of the post office.

VALUE PAYABLE PARCELS POST.—NUMBER POSTED, VALUE COLLECTED, AND REVENUE, 1907 to 1909.

* Exclusive of postage.

20. **Transactions of the Dead Letter Office, 1909.**—Under sections 45 to 53 of the Post and Telegraph Act 1901 the Postmaster-General may cause all unclaimed and undelivered postal articles originally posted within the Commonwealth which have been returned from the place to which they were forwarded to be treated as unclaimed articles and opened. Every unclaimed letter and postal article must be kept for the prescribed period at the office to which it has been transmitted for delivery, and must then be sent to the General Post Office. Letters and packets originally posted elsewhere than in the Commonwealth are returned to the proper authorities in the country in which they were so posted, or, if originally posted in another State, are returned to the General Post Office of that State; but unclaimed or undelivered newspapers may be forthwith sold, destroyed, or used for any public purpose. Opened postal articles not containing anything of value are returned to the writer or sender if his name and address can be ascertained, but may otherwise be destroyed forthwith. As regards opened letters and packets containing valuable or saleable enclosures, a list and memorandum of the contents are kept, and a notice is sent to the person to whom the letter or packet is addressed if he be known, or otherwise to the writer or sender thereof if he be known. Upon application within three months of the date of such notice the letter or packet may be claimed by the addressee, or, failing him, by the writer or sender. If unclaimed within three months, the letter and contents may be destroyed or sold, and the proceeds paid into the consolidated revenue fund. The following table shews the total number of letters, postcards, and packets dealt with by the Dead Letter Offices in the Commonwealth during the year 1909, together with the number of inland, interstate, and international letters either returned to writers, delivered, etc., destroyed, or returned as unclaimed :—

25. **Royal Commission on Postal Services.**—On 22nd June, 1908, a Royal Commission was appointed to report upon the Postal, Telegraphic, and Telephonic Services of the Commonwealth, and more particularly in relation to the following matters :—(*a*) Management ; (*b*) Finance ; (*c*) Organisation, including discipline ; (*d*) Extensions in country districts, and particularly in remote or sparsely-populated parts of the Commonwealth ; and (*e*) Complaints in relation to the services. The inquiry was commenced in July, 1908, and occupied 228 sittings. The Commissioners visited every State and took evidence at each State capital and also at Fremantle, Kalgoorlie, and Launceston. In addition, personal visits of inspection were made to all the General Post Office buildings and many branch telephone exchanges and suburban post-offices of Sydney and Melbourne. The number of witnesses examined by the Commissioners was 190, including representatives of public and commercial institutions, experts, and prominent members of the Commonwealth Public Service. Recommendations numbering 175, were made by the Commission in a report laid before Parliament on 30th September, 1910. These refer to a great variety of subjects and matters, but owing to exigencies of space particulars in regard thereto cannot be given in this publication.

§ 2. Telegraphs.

1. **First Lines Constructed.**—The electric telegraph was first introduced into Australia for use by the public in the year 1854, when a line from Melbourne to Williamstown was opened. The first line in South Australia, from Adelaide to Port Adelaide, was opened in 1856, while the first line in New South Wales was brought into operation in 1858, when the line from Sydney to Liverpool, twenty-two miles in length, was opened. In Tasmania the first telegraphic line was completed in 1857, while in the following year communication was established between Sydney, Melbourne, and Adelaide. The first line to be constructed in Queensland was that between Brisbane and Rockhampton, a distance of 396 miles, which was opened in 1864. In Western Australia the first telegraph constructed was from Perth to Fremantle, a distance of twelve miles, which was brought into use in 1869, and in the same year the cable joining Tasmania with the continent of Australia was completed.

2. **Development of Services.**—During the period from 1871 to 1881 great progress was made throughout Australia in the way of telegraphic construction, over 14,000 miles of line, exclusive of railway telegraph lines, being opened for use during the period mentioned, making the total length of the line open at the end of the year 1881, 25,470 miles. In the case of South Australia this increase was to a large extent due to the construction of the transcontinental lines (*a*) from Adelaide to Port Darwin (a distance of 2230 miles), which was completed on the 22nd August, 1872, at a cost of nearly half a million sterling, and (*b*) from Port Augusta to Port Lincoln, and thence along the coast of the Great Australian Bight as far as Eucla, on the Western Australian border. In Queensland there was a large increase resulting from the construction of the line to Normanton, on the Gulf of Carpentaria, while in Western Australia the line from Perth to Albany was extended as far as Eucla on the 9th December, 1877, thus establishing telegraphic communication between the six capital towns, Brisbane, Sydney, Melbourne, Adelaide, Perth, and Hobart. At the present time the systems of telegraph lines throughout Australia are well developed. The longest line extends from Thursday Island, in Torres Straits, by submarine cable to Paterson, on the mainland of Cape York Peninsula; from Paterson the line runs in a southerly direction as far as Brisbane, where it joins the main interstate line to Sydney, Melbourne, and Adelaide; from Adelaide it runs to Port Augusta, then on to Port Lincoln, on Eyre's Peninsula, and thence to Eucla, on the Western Australian boundary; from Eucla the line extends along the coast of the Great Australian Bight to Albany, and thence it runs adjacent to the west coast of Western Australia as far as Onslow, *via* Perth, Geraldton, and Carnarvon. From Onslow connection extends to Broome, in Roebuck Bay, from which place communication is made to Singapore by the Eastern Extension Company's cable. From Roebuck Bay the line crosses the Kimberley district in an easterly direction, and then runs north as far as the terminus at Wyndham. In Queensland a line runs to Burketown, near the coast of the Gulf of Carpentaria, *via* Normanton; another line extends to Cloncurry and Urandangi, in the extreme west of the State. Branch lines extend to all important coastal and inland towns, while considerable networks of lines converge from the country districts towards the centres of population. From Adelaide the transcontinental line, referred to above, runs in a northerly direction to Port Darwin, from which place communication is provided with Europe by submarine cable by way of Batavia, Singapore, and Madras. In Western Australia a line runs from Eucla to the Coolgardie goldfields *via* Balladonia and Dundas, and from Coolgardie communication is provided with Perth and with Sir Samuel, in the East Murchison district.

3. **Number of Telegraph Offices and Length of Lines and Wire Open, 1901 to 1909.**—The following table shews the number of telegraph offices and the length of telegraphic lines and of telegraph wire, exclusive of railway telegraphs, available for use in the Commonwealth at the end of the year 1901, and from 1905 to 1909 inclusive:—

NUMBER OF TELEGRAPH OFFICES, LENGTH OF LINE AND WIRE, AVAILABLE FOR USE, 1901 to 1909.

Particulars.	1901.	1905.	1906.	1907.	1908.	1909.

6. **Telegrams Despatched from, and Received at, Capital Cities.**—The following table shews the number of telegrams despatched from, and received at, the principal offices in each State of the Commonwealth during 1909 :—

TELEGRAMS DESPATCHED FROM, AND RECEIVED AT, CAPITAL CITIES IN THE COMMONWEALTH, 1909.

City.	Despatched.	Received.	City.	Despatched.	Received.
	Number.	Number.		Number.	Number.
Sydney	574,995	*	Adelaide	261,792	341,405
Melbourne	452,961	869,868	Perth	307,432	398,693
Brisbane	428,256	481,722	Hobart	98,880	150,190

* Not available.

7. **Rates for Transmission of Telegrams.**—The present rates for the transmission of telegrams within the Commonwealth were fixed by section 7 of the Post and Telegraph Rates Act 1902, and came into force on the 1st November, 1902. Under this Act charges are made for telegrams according to whether they are "ordinary" or "press" telegrams. "Press" telegrams are defined to mean those the text of which consists of political, commercial, etc., information, and of news intended for publication in a newspaper. The telegram must be sent by an authorised correspondent, and must be addressed to a registered newspaper or recognised news agency. The subjoined tables shew the scales of charges:—

SCALE OF CHARGES FOR ORDINARY TELEGRAMS, 1910.

Particulars.	Town and Suburban, within Prescribed Limits, or within 15 Miles from the Sending Station.	Other Places within the State, except Town and Suburban.	Interstate.
	s. d.	s. d.	s. d.
Including address and signature—			
Not exceeding 16 words	0 6	0 9	1 0
Each additional word	0 1	0 1	0 1

Double the foregoing rates are imposed for the transmission of telegrams on Sunday, Christmas Day, and Good Friday, and between the hours of 8 p.m. and 9 a.m., and for telegrams sent on "urgent" forms.

SCALE OF CHARGES FOR PRESS TELEGRAMS, 1910.

From 25 to 100 words			1 6
Every additional 50 words			0 6

8. **Wireless Telegraphy.**—Under the Wireless Telegraphy Act 1905 the Postmaster-General is given the exclusive privilege of establishing and using stations and appliances for receiving and transmitting messages by wireless telegraphy within Australia. The Postmaster-General is empowered to grant licenses to establish and use stations and appliances for wireless telegraphy, on the fulfilment of the prescribed conditions and payment of the prescribed fees. The Act does not apply to ships belonging to the King's Navy. Tenders for the erection of high-power stations at Sydney and Fremantle were invited and received by the Postmaster-General early in 1910, and the tender of the Australasian Wireless Ltd. was accepted at a contract price of £4150 for each station. The site originally chosen for the wireless station in the former State was altered to Pennant Hills, about thirteen miles from Sydney, on the Newcastle railway line, while Fremantle is the selected position in Western Australia. In consequence of the New South Wales site having been changed, the contract price for that station was increased to £6150, on

account of the higher-powered plant that will be required. The contractors have agreed to complete the installation of these stations within twelve months from the dates on which the sites are handed over to them. The system to be used is the "Telefunken." The company guarantees that the plant shall be effective over a range of 1250 miles, subject to a penalty of £5000. Tenders are being called for the erection of stations at Thursday Island and Papua. Certain vessels trading on the coast of Australia are being fitted with wireless telegraphy apparatus of the "singing spark" type, which is largely used in Japan, Africa, and the United States.

In December, 1909, a conference of representatives of the Commonwealth, New Zealand, the High Commissioner for the Western Pacific, Fiji, the Admiralty, and the Pacific Cable Board was convened at Melbourne to report upon the establishment of wireless telegraphy in the Pacific. The chief recommendations of this Conference were :—(*a*) That high-power stations be established at Sydney, Doubtless Bay (New Zealand), Suva (Fiji), and Ocean Island, and (*b*) that medium-power stations be established at Tulagi (Solomon Islands), and Vila (New Hebrides). The total cost of construction of the scheme covered by these recommendations was £42,000, while the total annual cost was estimated at £13,820 for a continuous service, and £9970 for a restricted service. It was proposed to apportion the cost between Great Britain, New Zealand, Fiji, and Australia. These recommendations have been adopted by the Commonwealth Government.

§ 3. Submarine Cables.

1. **First Cable Communication with the Old World.**—As far back as 1857 the question of connecting Australia with the old world by means of submarine cables was brought forward in South Australia. No steps, however, were taken in the direction of constructing the cable until the year 1869, when various schemes were proposed. About this time the British Australian Telegraph Company was formed for the purpose of laying a cable to Australia without subsidy or guarantee. Communication had already been provided between London and Singapore *via* Bombay and Madras, and also through Java from Batavia to Banjoewangie. The proposal of the above company was to lay cables from Singapore to Batavia and from Banjoewangie to Port Darwin, from which place connection would be made overland with the Queensland telegraph system at Normanton. It was, however, subsequently decided that the company's line should end at Port Darwin, the South Australian Government undertaking to construct an overland line from Port Augusta to Port Darwin, a distance of 1971 miles. In November, 1871, the submarine cable was completed, and communication was established between Port Darwin and London. On the 22nd August, 1872, the construction of the line from Port Darwin to Adelaide was accomplished at an expenditure of nearly £500,000. The cable from Port Darwin is now under the control of the Eastern Extension Telegraph Company.

2. **The Tasmania-Victoria Cables.**—In the meantime the cable joining Tasmania to the continent of Australia had been laid, and was open for use in 1869, the total length being 170 miles. The line was owned by the Eastern Extension Telegraph Company, and was subsidised by the Tasmanian Government until the year 1909. On the 28th February, 1908, the Postmaster-General entered into an agreement with Messrs. Siemens Brothers and Company Ltd., of London, for the manufacture and laying of two submarine cables between Tasmania and Victoria. The laying of these cables was completed in February, 1909. Their aggregate length is approximately 350 nautical miles of main cable, and 20 nautical miles each of intermediate and shore end cable, making a total of 390 nautical miles. The contract price, excluding the supply of spare cable, was £49,455.

3. **The Eastern Extension Company's Cables.**—In addition to the Victoria-Tasmania cable and the original cable from Port Darwin referred to above, the Eastern Extension

Company has constructed and has control over several other cables connecting with various places in the Commonwealth. (*a*) In 1879 the original cable *via* Banjoewangie was duplicated, the States of New South Wales, Victoria, South Australia, Western Australia and Tasmania having agreed to pay the above company a subsidy of £32,400 per annum for a period of twenty years, the amount to be divided between the States on a population basis. (*b*) In 1881 a cable was constructed connecting Broome, in Roebuck Bay, W.A., with Banjoewangie ; from Broome there is direct telegraphic communication with Perth, from which place communication is made with the Eastern States by the interstate line *via* Albany, Eucla, and Port Augusta. (*c*) In July, 1899, the company offered to lay a cable direct to Great Britain *via* the Cape of Good Hope, and also offered reductions in the rates charged, if the States would agree to certain conditions giving the company the right of direct dealing with the public. The States of South Australia, Western Australia and Tasmania accepted the terms offered, and New South Wales entered into the agreement in January, 1901. The cable was opened *via* Fremantle and Durban in October, 1901. (*d*) Another submarine cable from Fremantle to Adelaide forms an alternative line of communication between the eastern States and Western Australia. (*e*) There is an alternative route, partly belonging to the Eastern Extension Company and connecting the Port Darwin-Singapore cable with London, *via* Hong Kong, Shanghai, Possiet Bay (Pacific Russia), Libau (Russian Baltic), and Newbiggin (England).

4. **The Pacific Cable.**—In July, 1898, a conference of representatives of Great Britain, Canada, New South Wales, Victoria, Queensland, South Australia and New Zealand was held for the purpose of considering a project for a cable to be laid across the Pacific Ocean, touching only British territory on its way from Australia to Canada, thus providing an "All Red" route, as it is termed, for a cable system between England and Australia. In the following year it was agreed at a meeting held by representatives of the countries interested that the cable should be laid and that Great Britain and Canada should each pay five-eighteenths of the cost, and the States of New South Wales, Victoria, Queensland, and the Dominion of New Zealand should each pay one-ninth. The construction and management of the cable were placed under the control of a Board composed of seven members—two each from Great Britain, Canada, and Australia, and one from New Zealand—called the Pacific Cable Board. The Australian shore-end of the cable was landed at Southport, Queensland, in March, 1902, and the cable was completed and opened for use on the 3rd November, 1902. There are cable-stations at Norfolk Island, Fiji, and Fanning Island, and a branch cable runs from Norfolk Island to New Zealand. The following table shews particulars of the revenue, expenditure, total loss, and the proportion of the loss payable by the Commonwealth for each financial year since the opening of the cable :—

REVENUE, EXPENDITURE, AND LOSS ON WORKING OF PACIFIC CABLE, 1903 to 1910.

Year ended the 31st March.	Revenue.	Expenditure (including Annuities and Renewal Fund).	Loss.	Commonwealth Proportion of Loss.
	£	£	£	£
1903 ...	...	...	90,518	30,172
1904 ...	80,118	167,869	87,751	29,250
1905 ...	87,446	163,296	75,850	25,283
1906 ...	91,952	164,508	72,556	24,185
1907 ...	113,516	167,439	53,923	18,307
1908 ...	110,160	172,523	62,363	20,787
1909 ...	113,093	173,981	60,888	20,296
1910 ...	111,724	171,312	59,588	19,863

The total cost of construction to the 31st March, 1910, was £1,999,127, originally paid by Great Britain. The proportions of this cost payable by the other countries is to be paid off by 50 annual instalments. The total amount of the annuity paid to Great Britain during the year 1909-10 was £77,545, while the amount paid to the renewal fund was £30,000.

5. **New Zealand Cables.**—A submarine cable joining New Zealand to the Australian Continent was laid in 1876. The line is 1191 miles in length. The Australian shore-end of the cable is at Botany Bay, while the New Zealand terminus is at Wakapuaka, near Nelson, in the Middle Island, from which place another cable, 109 miles in length, is laid to Wanganui, in the North Island. For a period of ten years after its opening the cable was subsidised by the New South Wales and New Zealand Governments, the total contributions amounting to £10,000 a year. The branch from Norfolk Island to New Zealand of the Pacific cable was opened on the 23rd April, 1902. The length of this cable is 597 miles, the New Zealand terminus being at Doubtless Bay in the north of the North Island.

6. **The New Caledonian Cable.**—In April, 1892, a French company, known as the Compagnie Française des Cables Télégraphiques, entered into an agreement with the French, the New South Wales, and the Queensland Governments to lay down a submarine cable between New Caledonia and Queensland in return for guarantees by the French Government to the extent of £8000, and by the Governments of New South Wales and Queensland to the amount of £2000 each annually for a period of thirty years. The cable was opened for use in October, 1893, the Australian shore-end being at Bundaberg. The Governments of New South Wales and Queensland are entitled to use the cable for the transmission of official messages up to the amount of their guarantees.

7. **Number of Cablegrams Received and Despatched, 1907 to 1909.**—The subjoined table shews the number of cablegrams received and despatched in the Commonwealth from 1907 to 1909 :—

CABLEGRAMS RECEIVED AND DESPATCHED, COMMONWEALTH, 1907 to 1909.

Particulars.	Cablegrams Received.			Cablegrams Despatched.			Total Cablegrams Received and Despatched.		
	1907.	1908.	1909.	1907.	1908.	1909.	1907.	1908.	1909.
Number... ...	219,854	221,976	221,442	230,808	231,214	231,701	450,662	453,190	453,143

The following table shews the total number of cablegrams received and despatched in each State during the year 1909. The figures given are exclusive of interstate cablegrams, which are classed as interstate telegrams (See § 2 hereof) :—

NUMBER OF CABLEGRAMS RECEIVED AND DESPATCHED IN EACH STATE, 1909.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.†	C'wealth. *
Number received ...	102,785	73,645	9,317	18,433	11,707	5,555	221,442
,, despatched...	108,031	75,649	10,735	15,883	15,313	6,090	231,701
Total	210,816	149,294	20,052	34,316	27,020	11,645	453,143

* Exclusive of interstate cablegrams, which are included with interstate telegrams (see § 2 *ante*).

It may be seen that the figures given in the above table for Tasmania and the Commonwealth are exclusive of interstate cablegrams. In 1909 the number of such cablegrams received in Tasmania was 146,687, and the number despatched 135,959, giving a total of 282,646.

8. **Lengths of Cable Routes.**—The following table gives the lengths of various cable routes :—

LENGTHS OF CABLE ROUTES.

Via Roebuck Bay.	Miles.	*Via* Port Darwin.	Miles.	*Via* South Africa.	Miles.
Perth to Roebuck Bay ...	1,485	Adelaide to Port Darwin	2,134	Perth to Mauritius ...	4,417
Roebuck Bay to Banjoewangie	970	Port Darwin to Banjoewangie	1,150	Mauritius to Durban ...	1,786
Banjoewangie to London	9,841	Banjoewangie to London	9,841	Durban to Cape Town ...	800
				Cape Town to Madeira ...	5,715
				Madeira to Penzance ...	1,341
				Penzance to London ...	260
Total	12,296	Total	13,125	Total	14,319

Via Vancouver.	Miles.	*Via* Russia.	Miles.
Southport (Queensland) to Norfolk Island	963	Sydney to Port Darwin	2,992
Norfolk Island to Suva (Fiji)	1,129	Port Darwin to Hong Kong	4,237
Suva to Fanning Island	2,351	Hong Kong to Possiet Bay	2,647
Fanning Island to Bamfield (Canada) ...	3,980	Possiet Bay to Libau	6,399
Across Canada	3,450	Libau to Newbiggin (England)	1,657
Canada to Ireland	2,450		
Total	14,323	Total	17,932

9. **Cable Rates.**—In 1872 the cable rate to England was nine guineas for twenty words, but when word rates were brought into general use in 1875, the rate between Great Britain and Australia was fixed at ten shillings and sixpence, subsequently altered to ten shillings and eightpence. This remained the standard rate for eleven years, when the Eastern Extension Telegraph Company reduced it in 1886 to nine shillings and fourpence a word for ordinary messages, to seven shillings and a penny for Government messages, and to two shillings and eightpence a word for press messages. At a conference of the postal and telegraphic authorities held in March, 1891, the proposal to reduce the rates to four shillings a word for ordinary messages, three shillings and eightpence for Government, and one shilling and tenpence for press messages was agreed to, the States of New South Wales, Victoria, South Australia, Western Australia, and Tasmania undertaking to make good half the loss which the Eastern Company might suffer through such reductions. The States guaranteed to the company one-half of the amount of receipts short of the sum of £237,736—the amount received by the company in 1889 in respect of cable charges—the other half to be borne by the company. The Government of South Australia was also guaranteed by the other contracting States against any loss to the revenue which the lower cable rates might cause in the working of the overland lines. Queensland subsequently joined the other States in these guarantees. Owing to various circumstances the cable traffic did not respond to the reductions, and heavy losses were incurred. It was therefore decided at a conference held at Melbourne to increase the rates for ordinary messages to four shillings and ninepence per word. The new rates came into force on the 1st January, 1893, concurrently with an agreement under which New Zealand joined the guarantees to the company and to South Australia.

(i.) *Present Rates to Great Britain.* On the acceptance by three of the States of the terms offered by the Eastern Extension Telegraph Company for the construction of a

cable *via* South Africa the rate for ordinary messages was reduced in May, 1900, to four shillings a word. It was further reduced to three shillings and sixpence in January, 1901, and to three shillings in January, 1902, at which amount the standard rate by all routes for cablegrams to Great Britain has since remained. The scale of reductions is governed by a revenue standard, and when the latter averages £330,000 per annum a further reduction to two shillings and sixpence will be made. In July, 1909, the "through" charge for press cables was reduced from one shilling to ninepence per word.

(ii.) *Rates to New Zealand.* As a result of the completion of the New Zealand branch of the Pacific cable in 1902, the rates charged for cablegrams between Australia and New Zealand, except to and from Tasmania, were uniformly reduced to fourpence-halfpenny per word. Between New Zealand and Tasmania the charge was fixed at five-pence-halfpenny a word, but it has since been reduced to fourpence-halfpenny. The charge for ordinary cablegrams from New Zealand to Great Britain was reduced from the 1st June, 1902, from five shillings and twopence to three shillings and fourpence a word, and has since been further reduced to three shillings a word.

10. **Subsidised Press Cable Service.**—In October, 1909, a Select Committee of the Commonwealth Senate was appointed to report upon the question of the supply, conditions of sale, and distribution, which control the Press Cable Service within and from outside the Commonwealth. A majority report of this Committee was issued in December, 1909, and recommended (*a*) the completion of an "All Red" cable route *via* Canada, (*b*) the conditional subsidisation of a press cable association, (*c*) the utilisation of the High Commissioner's office for the dissemination in Australia of Empire news, and (*d*) the amendment of the Copyright Act in regard to cables.

In accordance with the recommendations of this Committee the Commonwealth has granted a subsidy of £6000, extending over a period of three years, to the Independent Press Cable Service, on the conditions that at least 6000 cable words are supplied each week, to be sent *via* Pacific, and that any newspaper proprietary in the Commonwealth is permitted to become a subscriber at rates approved by the Government.

11. **Cable Subsidies paid by each State, 1901 to 1909.**—The agreement between the State Governments and the Eastern Extension Telegraph Company expired on the 30th April, 1900. Since the year 1895 the amounts guaranteed—£237,736 to the company and £37,552 to South Australia—have been met by the receipts, and the contracting States have, therefore, not been called upon to contribute.

(i.) *Total Subsidies Paid, 1901-9.* The following table shews the total amounts paid by way of cable subsidies for the calendar year 1901, and from 1903 to 1909 inclusive:—

TOTAL AMOUNT OF CABLE SUBSIDIES PAID, 1901 to 1909.

Year.	1901.	1903.	1904.	1905.	1906.	1907.	1908.	1909.
Amount ... £	13,207	38,056	37,911	35,160	24,997	30,837	29,313	40,898

(ii.) *Subsidies Paid by each State, 1909.* The subjoined statement shews the amounts paid by each State in respect of each cable service during the year 1909:—

AMOUNTS PAID BY THE SEVERAL STATES IN RESPECT OF EACH SUBSIDISED CABLE SERVICE, 1909.

State.	Tasmania-Victoria.	New Caledonia.	Pacific.	Total.
	£	£	£	£
New South Wales	...	2,000	6,932	8,932
Victoria	5,135	...	6,769	11,904
Queensland	...	2,000	11,932	13,932
South Australia	1,587	...	...	1,587
Western Australia	1,043	...	...	1,043
Tasmania	3,500	...	...	3,500
Commonwealth ...	11,265	4,000	25,633	40,898

As the agreement in connection with the Tasmanian cable expired in 1909, and as new cables have been laid by the Commonwealth Government (see page 787 *ante*), the guarantees were, in the course of the year 1909, reduced to those in connection with the New Caledonia and Pacific cables.

§ 4. Telephones.

1. **Development of Telephone Services.**—The Postal Department has established telephone services in all the capital towns and in many of the important centres of population throughout the Commonwealth. Particulars as to the revenue from telephone services in each State for the years 1901 to 1909 are given on page 782 *ante*, while particulars of the expenditure on telephone works in each State for the year 1909 are given in a subsequent table on the following page.

(i.) *Number of Telephone Exchanges, etc., in Commonwealth, 1901 to 1909.* The following table shews the number of telephone exchanges, the number of telephone connections, and the length of telephone wire, exclusive of telegraph and railway telephone wire, in the Commonwealth at the end of the year 1901 and from 1905 to 1909 inclusive :—

NUMBER OF TELEPHONE EXCHANGES AND CONNECTIONS AND LENGTH OF WIRE, 1901 TO 1909.

Particulars.	1901.	1905.	1906.	1907.	1908.	1909.
Telephone Exchanges ... No.	119	150	178	226	285	328
,, Connections ... ,,	24,583	35,321	38,152	47,205	54,512	62,091
Length of Wire ... miles	47,276	71,911	78,854	119,052	145,572	166,489

(ii.) *Number of Telephone Exchanges, etc., in each State, 1909.* The following table gives corresponding particulars for each State at the end of 1909 :—

TELEPHONE EXCHANGES, CONNECTIONS, AND LENGTH OF WIRE IN EACH STATE, 1909.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Cwlth.
Tel. Exchanges No.	132	56	55	25	38	22	328
,, Connections ,,	25,682	17,004	8,017	4,109	5,142	2,137	62,091
Length of Wire miles	69,332	54,788	17,306	10,359	12,223	2,481	166,489

2. **Telephone Rates.**—The charges mentioned in the table hereunder are payable for the different classes of telephone services specified therein :—

TELEPHONES.—RENTAL CHARGES, 1910-11.

In Telephone Networks having a Population of—	Radius of Network with Main Exchange as Centre.	Minimum Annual Charge— For an Exclusive Service.	For each Subscriber or Instrument on a Two-party Line.	For each Subscriber or Instrument on a Three or more party Service.
	Miles.	£ s. d.	£ s. d.	£ s. d.
From 1 to 10,000	5	3 0 0	2 10 0	2 0 0
„ 10,001 to 100,000 ...	10	3 10 0	2 15 0	2 5 0
„ 100,001 upwards ...	10	4 0 0	3 0 0	2 10 0

It is provided that for all effective calls originated the subscriber will be charged the following rates:—(*a*) For calls not exceeding 2000 half-yearly, two calls for one penny; and (*b*) for calls above 2000 half-yearly, three calls for one penny.

Another regulation permits persons occupying offices in the same building, or occupying the same private residence, to subscribe jointly under one exchange number (in addition to rental as for one person at the respective rates prescribed) of £1 per annum for each additional subscriber. This fee covers the insertion of the additional subscriber's name in the telephone list. If additional instruments are required the subscribers must pay the rates prescribed for party lines.

3. **Miscellaneous Particulars, 1909.**—The following table gives various interesting particulars of the operation of the telephone services in each State for the year 1909 :—

PARTICULARS OF OPERATION OF TELEPHONE SERVICES, 1909.

Particulars.		N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	Cwlth.

* Capital value of telephone networks (excluding telephone trunk lines) on 30th June, 1909.

4. **Financial Position of Telephone Branch.**—In 1909 an investigation into the financial position of the telephone branch of the Postmaster-General's Department was commenced, and in December of that year a report was issued dealing with the telephone accounts of the system in the State of Victoria. This report shews that during each of the years 1901 to 1908 there was a profit on the working of the system, amounting in all to £150,580; in the financial year 1908-9 there was a loss of £7789, giving a net profit up to the 30th June, 1909, of £142,791.

The following table shews the revenue and expenses of the Melbourne metropolitan network during each year of Federal control, the expenses comprising working expenses, maintenance, depreciation, rent, interest on capital, insurance, and head-office charges:—

MELBOURNE METROPOLITAN TELEPHONES.—REVENUE AND EXPENSES, 1901 to 1909.

Particulars.	Four mths. to 30th June, 1901.	1901-2.	1902-3.	1903-4.	1904-5.	1905-6.	1906-7.	1907-8.	1908-9.
Revenue £	16,392	56,733	62,720	71,077	73,818	80,118	88,828	89,466	92,960
Expenses £	11,225	36,692	44,234	49,169	54,671	60,844	66,383	83,924	100,455

The total revenue for the period specified in the above table was £632,112, and the total expenses £507,597, giving a net profit on metropolitan lines of £124,515, out of a total net profit on all lines of £142,791. It is stated in the report that the decrease in profit 1907-8 and the loss in 1908-9 are attributable to the introduction of the measured system of telephone rates introduced in February, 1907.

SECTION XIX.

COMMONWEALTH FINANCE.

§ 1. General.

1. **Financial Provisions of the Constitution.**—The main provisions of the Constitution relating to the initiation and development of the financial system of the Commonwealth are those contained in Chapter IV., "Finance and Trade," being sections 81 to 105 of the Constitution Act. Two other sections which have a most important bearing on questions of Commonwealth finance are sections 69 and 51.

2. **Departments Transferred or Transferable under Constitution.**—In section 69 it is provided that the Departments of Customs and Excise in each State should become transferred to the Commonwealth on its establishment, and that on a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments should become transferred:—

(i.) Posts, telegraphs, and telephones.
(ii.) Naval and military defence.
(iii.) Lighthouses, lightships, beacons and buoys.
(iv.) Quarantine.

Under proclamation dated 12th February, 1901, and published in the Commonwealth *Gazette* of the 14th of that month, the Departments of Posts, Telegraphs, and Telephones in each State became transferred to the Commonwealth as from the 1st March, 1901, while under a similar proclamation dated 19th February, 1901, and gazetted on the 20th, the Departments of Naval and Military Defence in each State also became transferred to the Commonwealth as from 1st March, 1901. In the case of Quarantine, an Act (No. 3 of 1908) has been passed and control has tentatively been assumed by the Commonwealth.

The requisite proclamation of transfer has not yet been made in the case of departments dealing with "Lighthouses, lightships, beacons, and buoys," nor has any legislation relative thereto been passed by the Federal Parliament, although the matter was before the legislature, in the form of a bill, during the sessions of 1909 and 1910. These departments, therefore, still remain under State control.

3. **Departments Transferable by Means of Commonwealth Legislation.**—In addition to the departments here mentioned which pass to the Commonwealth either automatically or by proclamation, there are several others whose duties the Commonwealth is empowered to undertake after the passing by the Commonwealth of the legislation necessary to authorise the assumption of such duties. These are referred to in section 51 of the Constitution, which contains a statement of all matters respecting which power is (subject to the Constitution) conferred on Parliament "to make laws for the peace, order and good government of the Commonwealth." The matters contained in this

section include those already mentioned as being covered by section 69. The principal matters involving for the due performance of the duties connected therewith the creation or transfer of departments of the Public Service are:—

(i.) Trade and commerce.
(ii.) Taxation.
(iii.) Bounties on production or export of goods.
(iv.) Postal, telegraphic, telephonic, and other like services.
(v.) Naval and military defence.
(vi.) Lighthouses, lightships, beacons, and buoys.
(vii.) Astronomical and meteorological.
(viii.) Quarantine.
(ix.) Census and statistics.
(x.) Bankruptcy and insolvency.
(xi.) Copyrights, patents, and trade marks.
(xii.) Naturalisation and aliens.
(xiii.) Marriage.
(xiv.) Divorce and matrimonial causes.
(xv.) Invalid and old-age pensions.
(xvi.) Immigration and emigration.
(xvii.) Conciliation and arbitration.

4. **Commonwealth Departments.**—As a result of legislation passed from time to time in accordance with section 51, various departments and sub-departments have been transferred from the States to the Commonwealth, whilst other departments necessary for the due performance of the Commonwealth functions have been brought into existence. In the former class are such departments as those of Patents, Trade Marks, Copyrights, Designs, Naturalisation and Meteorology, while in the latter are the Ministerial Departments of External Affairs, Home Affairs, Treasury, Trade and Customs, Defence, Attorney-General and Postmaster-General, as well as such general departments as Public Service Commissioner's Office, Treasury, Audit Department, Crown Law Department, Bureau of Census and Statistics, and Federal Land Tax Office. It may, therefore, be said that, so far as its financial aspect is concerned, the effect of Federation up to to the present time has been the transfer from States to Commonwealth of the revenue obtainable from the great revenue-producing Departments of Customs and Excise, and of the expenditure connected with various departments whose number is gradually increasing, and that, in addition, the various functions of the Commonwealth have necessitated further new expenditure.

5. **Adjustment of Accounts between Commonwealth and States.**—The fact that the Departments of Customs and Excise were responsible in the several States for the production of a very large proportion of the total revenues of the States, and that the financial relief afforded to the States by means of the transfer of expenditure to the Commonwealth would not, at least initially, be at all commensurate with this transfer of revenue, naturally led to the inclusion in the Constitution of a provision for the repayment to the States of surplus Commonwealth revenue. The means to be adopted for securing an equitable allocation of such repayment amongst the several States received very extensive consideration at the several conventions at which the framing of the Constitution took place, and the basis ultimately agreed upon was that involving for at least ten years after the establishment of the Commonwealth the provisions of what is generally known as the Braddon clause (section 87), and for at least five years after the imposition of uniform duties of Customs, the scheme of allocation which has become known as the "*book-keeping system.*" (Sections 89 and 93.)

6. **The "Braddon" Clause.**—This clause (section 87 of the Constitution) is so called after Sir Edward Braddon, a Tasmanian delegate to the Federal Convention of 1897 and

1898, by whom it was introduced. In its original form the clause provided that for all time the Commonwealth should return to the States not less than three-fourths of the net revenue of the Commonwealth from duties of Customs and Excise, not prescribing, however, what should be returned to *each* State. At the Melbourne session of the Federal Convention, held in 1898, provision was made that surplus revenue, instead of being returned to a State, might be applied towards the payment of interest on debts of that State taken over by the Commonwealth, and at the Premiers' Conference, held in Melbourne in 1899, a further amendment of the clause was effected by limiting its operations to a "period of ten years after the establishment of the Commonwealth, and thereafter until Parliament otherwise provides." The provisions of this clause *per se* were held to be complied with if the total amount returned to the States as a whole was not less than three-fourths of the total net revenue from Customs and Excise, and the Commonwealth was not under an obligation to return to each State three-fourths of the net Customs and Excise revenue collected in respect thereof. Thus, since the establishment of Federation, although the total amount of surplus Commonwealth revenue distributed amongst the States has in every year except 1907-8, 1908-9, and 1909-10 largely exceeded three-fourths of the total net revenue from Customs and Excise, the amount paid to one of the States, viz., Queensland, has in several of these years fallen short of three-fourths of the net Customs and Excise revenue collected in respect of that State. This occurred in the years 1901-2, 1903-4, 1904-5, 1907-8, 1908-9, and 1909-10, and was due in a large measure to the heavy expense involved in working the Commonwealth departments in that State. The amount returned to Tasmania for 1907-8, 1908-9, and 1909-10, also fell short of three-fourths of the net Customs and Excise Revenue collected in respect of that State, while a similar shortage occurred in the two latter years in Victoria and Western Australia.

7. **The "Book-keeping System."**—The scheme set forth in the Constitution for determining the amount to be paid to the several States is contained in sections 89 and 93, the former of which relates to the period prior to the imposition of uniform duties of Customs, the latter to the first five years after the imposition of such duties, and thereafter "until Parliament otherwise provides." The principle involved in this scheme is that of crediting each State with the Commonwealth revenue collected in respect of that State, and of debiting it with the expenditure incurred on its behalf in connection with transferred departments, as well as its share on a *per capita* basis of the new expenditure of the Commonwealth. On this account the method of allocation provided by the Constitution became very generally known as the "*book-keeping system.*" As the imposition of uniform duties of Customs and Excise took place throughout the Commonwealth on 9th October, 1901, the five years provided for in section 93 expired on 8th October, 1906, and consequently the "*book-keeping system,*" though remaining in force until 30th June, 1910, was liable to be changed at any time by the Commonwealth Parliament. In section 93 provision was made that the duties chargeable on goods imported into one State and consumed in another should be credited to the consuming State, the evident intention being that of safeguarding the interests of such States by allowing to each the revenue which its citizens actually contributed, since presumably the duty ultimately falls upon the consumer. The balance in favour of any State was payable monthly by the Commonwealth.

8. **Western Australian Sliding Scale.**—Owing to the exceptional circumstances of Western Australia, and the fact that the immediate introduction of interstate freetrade would seriously interfere with the development of the State, through the diminution in the funds at the disposal of its Treasurer, provision was made in section 95 of the Constitution for the retention of interstate duties by Western Australia during the five years after the imposition of uniform duties, such duties to be collected by the Commonwealth. It was stipulated that during the first of these years the duty so imposed on any goods should not exceed the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and that during the succeeding

years the amount imposed should not exceed four-fifths, three-fifths, two-fifths, and one-fifth respectively, and should cease at the expiration of the fifth year. This special concession to Western Australia, known as the "*Western Australian special tariff*," came to an end on 8th October, 1906, since when trade between all the States has been free. The amount collected under this special tariff during the five years of its operation from 9th October, 1901, to 8th October, 1906, was as follows:—

DUTY COLLECTED UNDER W.A. SPECIAL TARIFF, 1901-2 to 1906-7.

Year ... — ...	1901-2.	1902-3.	1903-4.	1904-5.	1905-6.	1906-7.	Total.
Amount ... £	201,569	233,467	196,936	142,549	77,666	16,776	868,963

9. **Special Assistance.**—A clause (section 96 of the Constitution) which has a very important bearing on the financial relations of the States and the Commonwealth was inserted by the Premiers' Conference of 1899. This clause provides that the Commonwealth Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit. It is said to have been introduced with the object of rendering the Constitution more elastic in the matter of aid to the States than would be possible if the Braddon clause and the book-keeping system were rigidly adhered to. No claim for such special assistance has yet been made on the part of any of the States, although it appears that the framers of the clause anticipated that it might be required during the early years of Federation.

10. **Transfer and Consolidation of State Debts.**—Under section 105 of the Constitution power is given to the Commonwealth Parliament to take over from the States either the whole of the public debts of the States as existing at the establishment of the Commonwealth, or a proportion of those debts calculated on a population basis, and to defray the interest payable in respect of such debts from the portions of the surplus revenue of the Commonwealth payable to the several States. The prospective savings in the matter of interest to be effected by means of the consolidation of the State debts formed a strong argument in pre-federal days for those supporting the federal movement. A drawback to the scheme provided for in the Constitution lay in the fact that under it the maximum amount of debt which could be assumed by the Commonwealth was slightly more than two hundred millions, as existing at the establishment of the Commonwealth, whereas since that date an addition of upwards of fifty millions had been made to the debts of the States. A "proposed law" to provide for an amendment of the Constitution, allowing the Commonwealth unlimited power to assume States debts, was passed by the Federal Parliament in the session of 1909, and the requisite referendum in connection with the amendment took place at the General Elections on 13th April, 1910, when the proposed law received the endorsement of the electorate.

11. **Disadvantages of the Book-keeping System.**—Under the book-keeping system of regulating the financial relations of the States and Commonwealth an endeavour was made to distribute the surplus revenue in the exact proportion in which it had been contributed by the several States. If these be regarded as States which had merely transferred some of their ordinary functions to the Commonwealth, the crediting each with the revenue received in respect to itself, and debiting it with the expenditure which the administration of Commonwealth affairs on its behalf had occasioned, might be deemed to be as equitable as any method that could be suggested. There were, however, certain practical objections to such a system, which may be summarised as follows :—

(i.) The trouble and expense which the necessary record entailed.
(ii.) The practical impossibility of ensuring that in every case a consuming State would be duly credited with revenue collected on its behalf in a distributing State.
(iii.) The difficulty involved in equitably determining the amount to be debited to the several States in respect of general Commonwealth expenses.
(iv.) The uncertainty on the part of the State Governments as to the amount which would become available.
(v.) The impossibility of securing independent State and Commonwealth finance.

12. **Proposals to Modify Book-keeping System.**—Various proposals were from time to time made for modifying the "book-keeping" system in such a manner as to obviate certain of its inherent disadvantages. The principal of these proposals were those which may be classified under the following heads :—

(i.) A *per capita* distribution of surplus.
(ii.) Payment of a fixed annual sum.
(iii.) Payment of a fixed annual amount per head.
(iv.) Increase in liability transferred to Commonwealth.

Some of the proposals that were made involved features of more than one of the systems here specified, and in certain cases combined them with those of the book-keeping system. A dissertation on the merits and demerits of any of the proposals would be beyond the scope of the present publication, but it may be noted that the scheme put forward by Sir George Turner when Commonwealth Treasurer was based on an increase in the liability transferred to the Commonwealth; that the scheme of Sir John Forrest and that of Sir William Lyne were based mainly on the payment of a fixed annual sum; while the scheme agreed to by the Commonwealth and State authorities in conference in 1909 and subsequently approved by the Federal Parliament was based on the payment of a fixed annual amount (25s.) per head of population. The scheme finally adopted by Mr. Fisher and ultimately assented to on 2nd September, 1910, retains this fixed annual payment of 25s. per head of population for a period of ten years.

13. **Interstate Conferences.**—Since the establishment of the Commonwealth, conferences of State Ministers have been held from time to time, at which proposals for adjusting the financial relations between the States and the Commonwealth have been considered. At the conference held in Melbourne in October, 1906, and that held in Brisbane in May, 1907, the scheme put forward by Sir John Forrest was very fully discussed, and, in so far as the proposals for the allocation of surplus Commonwealth revenue are concerned, was, with some minor amendments, agreed to. The proposals made by Sir John Forrest for the transfer of State debts did not, however, meet with the approval of the conferences. After the retirement of Sir John Forrest from the Commonwealth Ministry, his scheme was abandoned by the Commonwealth Government. A fresh proposal by Sir William Lyne was substituted for it, and was considered by the Conference of Premiers held in Melbourne in 1908, who expressed their dissent from its provisions. A further Conference of Premiers was held in Hobart in March, 1909, at which a scheme was drawn up providing for the unlimited extension of the Braddon clause in an amended form, the amount returnable to the States to be not less than three-fifths of the gross revenue from Customs and Excise nor less than £6,750,000 in any one year, and a special concession to be made in the case of Western Australia. In August, 1909, a conference between Commonwealth and State authorities was held in Melbourne at which an agreement was arrived at between the Prime Minister of the Commonwealth and the Premiers of the several States. This Agreement was subsequently made the basis of a proposed law for amending the Federal Constitution, which, during the session of 1909, was passed by the statutory majority in both Houses of the Federal Parliament. It is not necessary to reproduce the exact provisions of the Agree-

ment, which were given *in extenso* in the third issue of the Year Book. The proposed law was submitted to a referendum at the elections of 13th April, 1910, and rejected.

14. **Financial Arrangement between Commonwealth and States.**—The financial relations between Commonwealth and States are now regulated by the "Surplus Revenue Act 1910," which amended the "Surplus Revenue Act 1908." The most important sections are given hereunder in full :—

3. "From and after 31st December, 1910, section 87 of the Constitution shall cease to have effect, so far as it affects the power of the Commonwealth to apply any portion of the net revenue of customs and excise towards its expenditure, and so far as it affects the payment of any balance by the Commonwealth to the several States, or the application of such balance towards the payment of interest on the debts of the several States taken over by the Commonwealth."

4. (*a*) "The Commonwealth shall during the period of ten years beginning on 1st July, 1910, and thereafter until the Parliament otherwise provides, pay to each State by monthly instalments, or apply to the payment of interest on debts of the State taken over by the Commonwealth, an annual sum amounting to twenty-five shillings per head of the number of the people of the State:

Provided that in the six months ending the 30th June, 1911, the Commonwealth may deduct from the amounts payable in pursuance of this section the amounts set out in the Schedule."

(*b*) "If in order to comply with section 87 of the Constitution the sums paid and applied under this section during the six months ending on 31st December, 1910, amount to more than twelve shillings and sixpence per head of the number of the people of the several States, the amounts paid and applied under this section during the next six months shall be correspondingly reduced, so that the amounts so paid and applied during the whole of the financial year ending on 30th June, 1911, shall not amount to more than twenty-five shillings per head of the number of the people of the several States, less the deductions provided for in the proviso to the last subsection."

5. (*a*) "The Commonwealth shall during the period of ten years beginning on the 1st July, 1910, and thereafter until Parliament otherwise provides, pay to the State of Western Australia, by monthly instalments, an annual sum which in the first year shall be two hundred and fifty thousand pounds, and in each subsequent year shall be progressively diminished by the sum of ten thousand pounds.

(*b*) One-half of the amount of the payments so made shall be debited to all the States (including the State of Western Australia) in proportion to the number of their people, and any sum so debited to a State may be deducted by the Commonwealth from any amount payable to the State in pursuance of this Act."

Section 6 provides for the final payment of any surplus revenue there may be to the States "in proportion to the number of their people."

Section 7 provides that "the number of the people" in any financial year shall be deemed for the purposes of this Act to be the number estimated by the Commonwealth Statistician as existing on the 31st December falling in that financial year.

The Schedule referred to in section 4, sub-section (*a*) is as follows:—

THE SCHEDULE.

Amounts to be deducted from payments to the States in the financial year ending 30th June, 1911.

New South Wales	£178,973
Victoria	143,092
Queensland	63,788
South Australia	30,529
Western Australia	20,113
Tasmania	13,505
	£450,000

§ 2. Consolidated Revenue Fund.

(A) Nature of Fund.

The provisions made for the formation of a Commonwealth Consolidated Revenue Fund, and the means to be adopted for operating on that fund, are contained in sections 81, 82, and 83 of the Constitution. In section 81 it is provided that "All revenues or moneys raised or received by the Executive Government of the Commonwealth shall form one Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth in the manner and subject to the charges and liabilities imposed by this Constitution." A strictly literal interpretation of this section would appear to require all loan and trust moneys received by the Commonwealth Executive to be paid to Consolidated Revenue. It is, however, held by Quick and Garran, in their "Annotated Constitution," that the "generic word *moneys* must be controlled by the preceding specific word *revenues*, and limited to moneys in the nature of revenue." This is the view of the matter which has been adopted by the Commonwealth Treasury in the preparation of its accounts. At present the Commonwealth has no Loan Account, but certain moneys received, which are not of the nature of revenue, are paid to Trust Account. As regards expenditure from the Consolidated Revenue Fund, section 82 provides that the costs, charges, and expenses incident to the collection, management, and receipt of the Consolidated Revenue Fund should form the first charge thereon, while section 83 stipulates that "no money shall be drawn from the Treasury of the Commonwealth except under appropriation made by law." Such appropriations are either special, and as such are provided for by means of a permanent Act, or are annual, and provided for in an annual Appropriation Act.

(B) Revenue.

1. **Total Collections.**—The consolidated revenue of the Commonwealth, which in 1901-2, the first complete financial year under the new regime, amounted to £11,296,985, had, in 1909-10, reached a total of £15,540,669, an increase in eight years of £4,243,684.

Particulars concerning the total amount of revenue collected by the Commonwealth Government and credited to the several States from 1st July, 1905, to 30th June, 1910, are contained in the following table:—

CONSOLIDATED REVENUE OF THE COMMONWEALTH, 1905-6 to 1909-10.

State to which Credited.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
New South Wales ...	4,314,829	4,782,122	5,816,755	5,621,958	6,017,118
Victoria	3,292,885	3,537,602	4,063,736	3,750,161	4,054,761
Queensland	1,550,360	1,707,136	1,967,618	1,989,540	2,144,538
South Australia	987,792	1,113,450	1,355,751	1,307,621	1,482,547
Western Australia ...	1,287,103	1,216,416	1,270,732	1,166,126	1,292,568
Tasmania	448,955	476,165	544,442	515,387	549,137
Commonwealth ...	11,881,924	12,832,891	15,019,034	14,350,793	15,540,669

The revenue collected by the Commonwealth during the financial year 1907-8 was, in all the States except Western Australia, higher than in any preceding year, the large increase being mainly due to the additional revenue collected in connection with the new tariff introduced on the 8th August, 1907. In the case of Western Australia the year in which the maximum collection of Commonwealth revenue took place was 1902-3, a continuous decline having been experienced from that year until 1906-7, and a slight rise for 1907-8. For 1908-9 the revenue in all the States except Queensland was lower than that for the preceding year, but the total for the Commonwealth shews a substantial excess over any year prior to 1907-8. For 1909-10 the revenue in all the States shewed a marked increase, and the total for the Commonwealth was the largest ever collected.

2. **Collections per Head.**—In the table given hereunder particulars are furnished of the amount of Commonwealth revenue per head of population collected in respect of each State for the last five years:—

COMMONWEALTH REVENUE PER HEAD OF POPULATION, 1905-6 to 1909-10.

State to which Credited.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
New South Wales ...	2 17 10	3 2 8	3 14 2	3 10 8	3 14 2
Victoria	2 14 1	2 17 5	3 5 1	2 19 0	3 2 1
Queensland	2 18 9	3 3 10	3 12 8	3 12 0	3 14 11
South Australia	2 12 3	2 18 0	3 9 1	3 4 3	3 11 3
Western Australia ...	5 1 0	4 12 11	4 17 2	4 7 4	4 14 6
Tasmania	2 9 7	2 12 10	2 19 2	2 15 6	2 18 9
Commonwealth ...	2 18 8	3 2 4	3 11 7	3 7 2	3 11 0

In four of the States, viz., Western Australia, Queensland, New South Wales, and South Australia, the revenue per head for 1909-10 exceeded the average for the Commonwealth. Throughout the period under review the revenue per head has been highest in Western Australia and lowest in Tasmania, with a distinct tendency in evidence for the former to diminish and the latter to increase.

3. **Proportions Collected in respect of the several States.**—In the following table particulars are given of the percentage which each State's contribution for the several years was on the total Commonwealth revenue:—

PROPORTION OF REVENUE COLLECTED IN RESPECT OF EACH STATE, 1905-6 TO 1909-10.

State.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	%	%	%	%	%
New South Wales	36.31	37.26	38.73	39.18	38.72
Victoria	27.71	27.57	27.06	26.13	26.09
Queensland	13.05	13.30	13.10	13.86	13.80
South Australia	8.32	8.68	9.03	9.11	9.54
Western Australia	10.83	9.48	8.46	8.13	8.32
Tasmania	3.78	3.71	3.62	3.59	3.53
Commonwealth ...	100.00	100.00	100.00	100.00	100.00

A comparison of the percentages for 1909-10 with those for 1905-6 reveals the fact that, whilst the proportion of the Commonwealth revenue contributed by New South Wales has during the period increased considerably and the proportions contributed by Queensland and South Australia have increased moderately, those for Victoria, Western Australia, and Tasmania exhibit decreases, the extent of the decrease being most marked in the case of Western Australia, where a fall in percentage took place from 10.83 in 1905-6 to 8.32 in 1909-10. This rapid decline in Western Australia is due to a variety of causes, the three most important being :—(i.) The abolition of interstate duties, (ii.) the increase in interstate trade, and (iii.) the gradual tendency to equalisation of conditions with those existing in the eastern States.

In view of the various proposals for adjusting the financial relations of the Commonwealth and the States on a *per capita* basis, the following comparison of the proportion of Commonwealth revenue collected in respect of each State with that State's proportion of the total Commonwealth population is of considerable interest :—

COMPARISON OF REVENUE AND POPULATION PROPORTIONS, 1909-10.

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	Cwlth.
	%	%	%	%	%	%	%
Percentage on Commonwealth revenue	38.72	26.09	13.80	9.54	8.32	3.53	100.00
,, ,, ,, population	37.07	29.80	13.09	9.51	6.25	4.28	100.00

In the case of New South Wales, Queensland, Western Australia, and South Australia the revenue percentage is higher than the population percentage, while in Victoria and Tasmania the population percentage is the higher. The most extensive proportionate divergences occur in the cases of Western Australia and Tasmania.

4. **Details of Revenue, 1909-10.**—The principal revenue-producing departments of the Commonwealth are the Customs, Excise, and Postal, the Customs collections for 1909-10 representing more than 60 per cent. of the total revenue, Excise about 13½ per cent., and Postal about 24 per cent. Details of the Commonwealth revenue collected in respect of each State for the year 1909-10 are given in the following table :—

COMMONWEALTH REVENUE, 1909-10.

Source of Revenue.	Revenue Collected in respect of—						Total Revenue Collected by C'wealth Govt.
	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	
	£	£	£	£	£	£	£
Customs ...	3,789,515	2,366,701	1,243,512	942,972	824,477	338,678	9,505,855
Excise ...	706,035	682,310	342,764	142,749	160,938	52,514	2,087,310
Postal ...	1,487,748	937,820	531,593	381,013	293,680	149,887	3,731,741
Defence ...	7,942	8,048	2,986	1,085	767	1,019	21,847

Total	11,881,925	12,832,891	15,019,034	14,350,793	15,540,669

The maximum annual collection of Customs revenue during the period was the total of £9,505,854 obtained during 1909-10, the nearest approach to this figure being that of £9,341,108 obtained during the financial year 1907-8. The Customs revenue for 1906-7 was practically identical with that for 1901-2. The minimum annual collection was £7,089,379 in 1905-6. In the case of Excise a maximum for the period was attained in 1907-8, followed by marked decreases in subsequent years, for which a falling off in the excise revenue on spirits and sugar was mainly responsible. In the case of Postal revenue the amounts collected have increased almost continuously from year to year, the Postal revenue for 1909-10 exceeding that for 1905-6 by 32 per cent.

6. **Customs.**—As already noted, several of the provisions of the Constitution were made dependent for their date of commencement on the imposition of uniform duties of Customs. Thus the book-keeping system and the Western Australian special tariff provisions both hinged upon the date on which the uniform duties of Customs were imposed. The Bill to provide for the collection of such duties was introduced in the Commonwealth House of Representatives on 9th October, 1901, and, in accordance with the usual practice, a resolution to protect the revenue and provide for the collection forthwith of the duties specified in the Bill, was duly carried. This date, 9th October, 1901, is consequently that on which the uniform duties of Customs are considered as having been imposed. A reference to the various enactments of the Commonwealth Legislature relative to the imposition of Customs duties will be found in Section XV., "Commerce," pages 607 to 611.

7. **Customs Revenue, 1909-10.**—The Customs revenue, after deduction of drawbacks and refunds, collected in respect of the several States during the year 1909-10, is given hereunder, details being furnished for the principal classes of dutiable articles imported :—

The figures given in the above table represent the net amount of Customs revenue credited to each State, after adjustment has been made in accordance with section 93 of the Constitution in respect of duties collected in one State on goods subsequently passing for consumption into another State.

8. **Customs Revenue for Past Five Years.**—Corresponding particulars for the Commonwealth as a whole, for the five years 1905-6 to 1909-10, are furnished in the following table :—

COMMONWEALTH CUSTOMS REVENUE, 1905-6 to 1909-10.

Leather, etc.	154,038	172,459	218,918	208,120	253,376
Paper and stationery	112,052	145,241	193,813	164,677	167,531
Vehicles	77,590	101,782	148,003	95,888	122,212
Musical instruments	50,672	60,117	90,905	72,128	82,949
Miscellaneous articles	80,112	97,403	191,782	205,697	220,580
Other receipts	35,782	30,759	35,193	32,202	31,700
Total Customs	7,089,379	7,660,874	9,341,108	8,626,521	9,505,854

It will be seen that throughout the period here dealt with the Customs revenue from stimulants and narcotics has represented, approximately, 40 per cent. of the total Customs revenue. The other principal articles from which Customs revenue was derived were "apparel and textiles," "metals and machinery," and "agricultural products." The most marked increase in the amount of duty collected is in the class of "metals and machinery," the revenue under this head for 1909-10 exceeding that for 1905-6 by £515,546.

In all cases except those of "Sugar," "Agricultural products," "Oils, paints, etc.," and "Miscellaneous articles," the revenue for 1908-9 fell short of that for 1907-8, owing mainly to the somewhat abnormal collections of 1907-8, consequent on the tariff of that year.

9. **Excise.**—The commodities on which Excise duties are levied are beer, spirits, starch, sugar, and tobacco, whilst the department also obtains a small revenue from the granting of licenses for the manufacture of stimulants and narcotics.

The revenue collected in respect of each State during 1909-10, under each of these heads, is shewn in the following table :—

COMMONWEALTH EXCISE REVENUE, 1909-10.

Particulars.	Excise Revenue Collected in respect of—						Total for Commonwealth.
	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	
	£	£	£	£	£	£	£
Beer	194,893	189,868	76,588	44,607	58,819	19,728	584,503
Spirits	92,774	84,139	41,769	34,382	11,784	3,029	267,877
Starch	1,857	895	810	Dr. 235	398	172	3,897
Sugar	137,672	229,981	126,626	9,373	32,526	12,538	548,716
Tobacco	276,602	175,156	94,584	53,483	56,717	16,895	673,437
Licenses	2,237	2,271	2,388	1,139	694	151	8,880
Total Excise ...	706,035	682,310	342,765	142,749	160,938	52,513	2,087,310

Of the total Excise revenue collected, beer, spirits, and tobacco were responsible for about 73 per cent. The figures given in this table are those obtained after deducting drawbacks and refunds and making the necessary adjustments between the States in connection with goods produced or manufactured in one State and consumed in another.

10. **Excise Collections, 1905-6 to 1909-10.**—Particulars concerning the amount of Excise collected under each head during each of the years ending 30th June, 1906 to 1910, are given hereunder:—

COMMONWEALTH EXCISE REVENUE, 1905-6 to 1909-10.

Particulars.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
Beer	502,399	513,473	555,720	551,859	584,503
Spirits	276,516	285,295	351,763	243,736	267,877
Starch	24,597	27,321	25,917	23,558	3,897
Sugar	536,079	546,590	741,928	750,776	548,716
Tobacco	560,409	604,960	618,599	638,017	673,437
Licenses	10,106	10,043	10,250	9,667	8,880
Agricultural machinery	...	...	67	Dr. 67	...
Total Excise ...	1,910,106	1,987,682	2,304,244	2,217,546	2,087,310

Comparing the Excise collections for 1909-10 with those for 1905-6 it will be seen that whilst the revenue obtained from beer increased by nearly 16 per cent., and that from tobacco by about 20 per cent. during the period, the increase in revenue from sugar was only moderate, while decreases were experienced in spirits, starch, and licenses.

11. **Commonwealth Taxation.**—Under section 51, sub-section (ii.) of the Constitution, power is given to the Commonwealth Parliament to make laws with respect to taxation, but so as not to discriminate between States or parts of States. Section 90 of the Constitution makes the power of the Commonwealth Parliament to impose Customs and Excise duties an exclusive one, but it would appear that as regards all other forms of taxation the States and Commonwealth possess concurrent powers. The question of the imposition by the Commonwealth Parliament of direct taxes such as land and income taxes is one which has been the subject of considerable discussion, and the opinion has been expressed that the intention of the framers of the Constitution was that of restricting the taxation powers of the Commonwealth to the imposition of Customs and Excise duties except in cases of great national peril. Whatever the intention of the framers may have been in this matter, the Constitution itself contains no such provision, and the Commonwealth Parliament is given an absolutely free hand in the imposition of taxation. Up to the end of the financial year 1909-10 the only taxes so levied were those of Customs and Excise, referred to in detail in the foregoing paragraphs. During the 1910 session of the Federal Parliament, however, an Act—assented to on 17th November, 1910—was passed, giving to the Commonwealth the power of levying a tax upon the unimproved value of all lands within the Commonwealth which were owned by taxpayers, and not specially exempted. More detailed reference to this Act is made on page 808.

The total amounts obtained from Customs and Excise in respect of each of the States since the inauguration of Federation are given hereunder:—

COMMONWEALTH TAXATION, 1901 to 1909-10.

13. **Commonwealth Land Tax.**—(i.) *Legislation.* As previously indicated the land taxation, as far as the Commonwealth is concerned, is regulated by "The Land Tax Assessment Act 1910," No. 22 of 1910, which received assent on 17th November, 1910. Under this Act the taxable value of all the land owned by any person is deemed to be (*a*) in the case of an absentee—the total sum of the unimproved value of each parcel of the land; (*b*) in the case of an owner not an absentee—the balance of the total sum of the unimproved value of each parcel of the land, after deducting the sum of £5000. Every part of a holding which is separately held by any occupier, tenant, lessee, or owner, is deemed to be a separate parcel. All land owned by a company is considered to be owned by the shareholders of the company as joint owners, in the proportion of their interests in the paid-up capital. It may be noted that a company is never treated as an absentee, but individual shareholders who are absentees are separately assessed and liable as such. Land owned by a Mutual Life Assurance Society (except such as it holds as mortgagee in possession, or which it has acquired by virtue of a mortgage) is deemed to be owned by the Society as trustee for the Australian policy-holders in proportion to the surrender value of their policies.

(ii.) *Exemptions.* The following are the principal exemptions:—

(*a*) All land owned by a State or Municipal or other public authority.

(*b*) All land owned by any Society registered under a State Act as a friendly society, or trades-union, or building society; excepting, in the case of the latter, such land as it might acquire through the foreclosure of a mortgage.

(*c*) All land held in trust for a charitable or educational institution not carried on for the purposes of gain.

(*d*) All land used as a site for—

(1) A place of worship or place of residence for clergy, or ministers, or order of a religious society;
(2) a public library, institute, or museum;
(3) a show ground;
(4) a public cemetery;
(5) a public garden, recreation ground, or reserve;
(6) a public road;
(7) a fire-brigade station.

(iii.) *Rates.* The rates of taxation are set forth in the Land Tax Act 1910 (No. 21 of 1910) according to the following schedules:—

FIRST SCHEDULE.

Rate of tax when owner is not an absentee.

For so much of the taxable value as does not exceed £75,001 the rate of tax per pound sterling shall be one penny where the taxable value is one pound sterling, and shall increase uniformly with each increase of one pound sterling in the taxable value, in such manner that—

the increment of tax between a taxable value of £15,000 and a taxable value of £15,001 shall be 2d.; the increment of tax between a taxable value of £30,000 and a taxable value of £30,001 shall be 3d.; the increment of tax between a taxable value of £45,000 and a taxable value of £45,001 shall be 4d.; the increment of tax between a taxable value of £60,000 and a taxable value of £60,001 shall be 5d.; and the increment of tax between a taxable value of £75,000 and a taxable value of £75,001 shall be 6d.

For every pound sterling of taxable value in excess of £75,000 the rate of tax shall be 6d.

SECOND SCHEDULE.

Rate of tax when owner is an absentee.

For so much of the taxable value as does not exceed £5000 the rate of tax per pound sterling shall be one penny.

For so much of the taxable value as exceeds £5000 but does not exceed £80,001 the rate of tax per pound sterling shall be 2d. where the excess is one pound sterling, and shall increase uniformly with each increase of one pound sterling in the taxable value in such manner that—

the increment of tax between a taxable value of £20,000 and a taxable value of £20,001 shall be 3d.; the increment of tax between a taxable value of £35,000 and a taxable value of £35,001 shall be 4d.; the increment of tax between a taxable value of £50,000 and a taxable value of £50,001 shall be 5d.; the increment of tax between a taxable value of £65,000 and a taxable value of £65,001 shall be 6d.; and the increment of tax between a taxable value of £80,000 and a taxable value of £80,001 shall be 7d.

For every pound sterling of taxable value in excess of £80,000 the rate of tax shall be 7d.

14. **Postal Revenue.**—Besides the Department of Trade and Customs the only large revenue-earning Commonwealth department is that under the control of the Postmaster-General, comprising the three branches of Post, Telegraph, and Telephone. This department was taken over by the Commonwealth on 1st March, 1901, and consequently contributed only four months' revenue to the Commonwealth total for the financial period ended 30th June, 1901. Particulars relative to the postal revenue collected in respect of the several States since the federalisation of the department are given hereunder:—

COMMONWEALTH POSTAL REVENUE, 1901 to 1909-10.

1905-6	1,065,633	735,563	359,752	291,929	252,741	118,730	2,824,348
1906-7	1,191,489	797,972	422,346	327,269	259,688	129,810	3,128,574
1907-8	1,278,107	834,367	451,075	338,193	266,510	131,844	3,300,096
1908-9	1,319,755	856,632	476,335	345,282	272,952	138,470	3,409,426
1909-10	1,437,748	937,820	531,593	381,013	293,680	149,887	3,731,741

A comparison of the figures for 1909-10 with those for 1901-2 indicates a substantial increase in the postal revenue of all the States, ranging from 70 per cent. in the case of Queensland to 30 per cent. in that of Western Australia for the period of eight years, and representing for the whole Commonwealth an increase of about 57 per cent.

15. **Postal Revenue per Head.**—The postal revenue per head of population varies considerably in the several States, being highest in the case of Western Australia and lowest in that of Victoria. Particulars for the nine complete financial years since Federation are as follows:—

COMMONWEALTH POSTAL REVENUE PER HEAD, 1901-2 to 1909-10.

Year.	Postal Revenue per Head of Population Collected in respect of—						Per head of Population of Commonwealth.
	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1901-2 ...	0 12 8	0 9 9	0 12 4	0 15 2	1 3 3	0 10 6	0 12 5

1907-8 ...	0 16 4	0 13 4	0 16 8	0 17 3	1 0 5	0 14 4	0 15 9
1908-9 ...	0 16 7	0 13 6	0 17 3	0 16 11	1 0 5	0 14 11	0 15 11
1909-10 ...	0 17 9	0 14 5	0 18 7	0 18 4	1 1 5	0 16 0	0 17 1

From 1903-4 onwards there has been a practically continuous increase in the postal revenue per head both in the Commonwealth and in all the States.

16. **Details of Postal Revenue, 1909-10.**—Particulars relative to postal revenue are, in the Treasury statements, now classified under six heads:—(i.) private boxes and bags; (ii.) commission on money orders and postal notes; (iii.) telegraphs; (iv.) telephones; (v.) postage, and (vi.) miscellaneous. Details under these heads concerning

the revenue collected in respect of the several States for the year ended 30th June, 1910, are given hereunder :—

COMMONWEALTH POSTAL REVENUE, 1909-10.

Particulars.	Postal Revenue Collected in respect of—						Total for Commonwealth.
	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	
	£	£	£	£	£	£	£
Private boxes and bags ...	7,852	3,399	3,697	1,464	1,816	850	19,078

Total	1,437,748	937,820	531,593	381,013	293,680	149,887	3,731,741

17. **Details of Postal Revenue, 1905-6 to 1909-10.**—Particulars concerning the postal revenue of the Commonwealth for each of the financial years from 1905-6 to 1909-10 are contained in the following table :—

COMMONWEALTH POSTAL REVENUE, 1905-6 to 1909-10.

Particulars.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
Private boxes and bags ...	14,975	15,933	15,868	17,548	19,078
Commission—					
Money orders & postal notes	88,868	92,240	94,624	100,034	104,457
Telegraphs	565,422	588,167	650,426	642,548	681,038
Telephones	352,214	388,226	410,741	441,551	509,623
Postage	1,754,790	1,968,950	2,043,777	2,111,333	2,253,500
Miscellaneous	48,079	75,058	84,660	96,412	164,045
Total	2,824,348	3,128,574	3,300,096	3,409,426	3,731,741

18. **Revenue from Patents.**—Under the Commonwealth Patents Act 1903, which was assented to on 22nd October, 1903, and came into force on 1st June, 1904, the complete control of the Patents administration of Australia passed from the several State Governments to that of the Commonwealth, which, under section 19 (*a*) of the Act mentioned, was authorised to collect for each State the fees to which it was entitled under the State Act in respect of proceedings then pending.

The revenue collected in respect of each of the States since the Act came into force is shewn in the following table :—

COMMONWEALTH PATENTS REVENUE, 1903-4 to 1909-10.

Year.	Patents Revenue Credited to—						Total for Commonwealth.
	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	
	£	£	£	£	£	£	£
1903-4 (June only) ...	436	432	226	170	120	134	1,518
1904-5	2,035	2,899	1,621	1,244	1,129	1,631	10,559
1905-6	6,532	6,609	3,303	2,407	2,318	2,767	23,936
1906-7	4,976	4,702	2,908	1,772	1,997	1,662	18,017
1907-8	5,424	4,631	2,590	1,607	1,755	1,414	17,421
1908-9	5,101	4,433	2,240	1,521	1,221	851	15,367
1909-10	5,493	4,707	2,400	1,577	1,339	1,128	16,644

It may be noted that, in their financial statement for 1903-4, the Commonwealth Treasury have credited the patents revenue for that year partly to "Miscellaneous Receipts" and partly to "New Revenue."

19. **Revenue from Trade Marks, etc.**—Under the several Acts of the Commonwealth Legislature relating to trade marks, copyrights, and designs, the Commonwealth Government has assumed the exclusive administration of such matters, and now collects all revenue accruing therefrom. The following table gives particulars of the amount credited to the several States since this item first appeared in the Commonwealth accounts:—

COMMONWEALTH TRADE MARKS, COPYRIGHTS, AND DESIGNS REVENUE, 1906-7 TO 1909-10.

Year.	Trade Marks, etc., Revenue credited to—						Total for Commonwealth.
	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	
	£	£	£	£	£	£	£
1906-7	2,305	1,896	855	594	437	303	6,390
1907-8	3,242	2,568	1,112	807	546	382	8,657
1908-9	2,279	1,815	786	579	384	267	6,110
1909-10	1,774	1,428	626	455	303	204	4,790

20. **Defence Revenue.**—The revenue appearing under the head of "Defence" comprises the receipts derived from the sale of stores and clothing, from fines, etc., and for 1909-10 amounted to £21,847.

21. **New Revenue.**—Under this head are included receipts in connection with exemption certificates under the Immigration Restriction Act, High Court fees, industrial fees, examination fees, forfeited electoral deposits, etc. The Surplus Revenue Act passed in 1908 defines the term "New Revenue," and authorises the Treasurer to decide what items of revenue should be carried to this head. Under the "book-keeping" system this revenue was divided amongst the States *per capita*. The total revenue of this nature collected during 1909-10 was £63,076.

(c) Expenditure.

1. **Nature of Commonwealth Expenditure.**—The disbursements by the Commonwealth Government of the revenue collected by it fell naturally, under the "book-keeping" system, into three classes, viz.:—

(*a*) Expenditure on transferred services.
(*b*) Expenditure on new services.
(*c*) Payment to States of surplus revenue.

Of these three, only the two first are actual expenditure, the last being merely a transfer, the actual expenditure being incurred by the States. In accordance with the provisions of the Constitution the expenditure on transferred services was, under the "book-keeping" system, debited to the several States in respect of which such expenditure was incurred, while the expenditure on new services was distributed *per capita*. Surplus Commonwealth revenue was paid to the States monthly. During the earlier years of Federation, viz., until the end of the year 1903-4, new works, etc., for transferred departments were treated as transferred expenditure, and were charged to the States on whose behalf the expenditure had been incurred. In subsequent years all such expenditure was regarded as expenditure on new services and was distributed amongst the States *per capita*.

2. **Expenditure Debited to the Several States.** — The total expenditure by the Commonwealth Government during the period 1905-6 to 1909-10 and the amounts debited to the several States are shewn in the following table :—

COMMONWEALTH EXPENDITURE, 1905-6 to 1909-10.

State to which Debited.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
New South Wales	1,572,901	1,756,986	2,199,283	2,295,682	2,704,115
Victoria	1,198,382	1,336,589	1,686,028	1,762,726	2,079,850
Queensland	691,898	768,201	929,350	962,493	1,104,236
South Australia	425,792	468,886	564,088	590,664	682,963
Western Australia	415,143	441,533	518,997	538,193	613,118
Tasmania	193,426	215,122	264,383	270,640	315,234
Commonwealth ...	4,497,542	4,987,317	6,162,129	6,420,398	7,499,516

In all the States the expenditure for 1909-10 was higher than that for any preceding year, and was considerably higher than the expenditure for 1905-6. New South Wales, with an advance of £1,131,214, for the period, exhibited the largest numerical increase, the proportional increase amounting to 72 per cent. Victoria, whose expenditure increased by £881,468, had the highest proportional increase, viz., 73½ per cent.

3. **Expenditure per Head.**—Particulars concerning the Commonwealth expenditure per head in the several States are furnished hereunder :—

COMMONWEALTH EXPENDITURE PER HEAD, 1905-6 to 1909-10.

State.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
New South Wales ...	1 1 1	1 3 0	1 8 0	1 8 10	1 13 4
Victoria	0 19 8	1 1 8	1 7 0	1 7 9	1 11 11
Queensland	1 6 2	1 8 8	1 14 4	1 14 10	1 18 7
South Australia ...	1 2 6	1 4 5	1 8 9	1 9 0	1 12 9
Western Australia ...	1 12 7	1 13 9	1 19 8	2 0 4	2 4 10
Tasmania	1 1 4	1 3 11	1 8 9	1 9 2	1 13 9
Commonwealth ...	1 2 2	1 4 3	1 9 4	1 10 0	1 14 3

It may be noted that in all the States except South Australia the Commonwealth expenditure per head for 1909-10 is slightly more than 12s. above that for 1905-6, the excess in South Australia being 10s. 3d.

4. **Details of Expenditure.**—Details of the expenditure of the Commonwealth Government from 1905-6 onwards are given hereunder :—

COMMONWEALTH EXPENDITURE, 1905-6 to 1909-10.

Heads of Expenditure.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
Transferred expenditure (including new works, etc.)—					
Trade and Customs	262,058	263,625	286,114	297,490	276,796
Defence	949,595	1,010,013	1,306,597	1,018,028	1,148,484
Postal	2,776,940	2,948,785	3,313,565	3,567,131	3,201,554
Quarantine	...	...	...	...	21,329
Sundry departments	...	...	52	4,339	...
Refunds and Advances	25	778	15,689	484	...
"Other" expenditure (excluding new works, etc.)	508,924	764,116	1,240,112	1,532,926	2,851,353
Total	4,497,542	4,987,317	6,162,129	6,420,398	7,499,516

During the four years between 1905-6 and 1909-10 the total cost of the several departments increased from £4,497,542 to £7,499,516, an increase of £3,001,974, or about 67 per cent. The expenditure in the Department of Trade and Customs increased during the period by £14,737, or about 5½ per cent., and in the case of Defence by £198,889, or 21 per cent. Advances under other heads amounted to £424,614, or 15 per cent., in that of the Postal Department, and no less than £2,342,429, or 460 per cent., in the case of "other" expenditure, exclusive of new works, etc. It should be noted in this connection, however, that the increase of £424,614 in the postal expenditure was accompanied by an increase of £907,393 in the postal revenue, and that a very considerable portion of the increase in "other" expenditure was due to the payment of sugar bounties, which amounted to £407,779 in 1909-10, as against £154,709 in 1905-6, and to the provision of £841,181 towards the Old Age Pension scheme, payments in connection with which commenced on 1st July, 1909.

5. **New Works, etc.**—As previously mentioned, the Commonwealth expenditure on new works, etc., for transferred departments was, prior to 1904-5, included under the head of "transferred" expenditure, but in that and subsequent years has been treated as "other" expenditure and debited to the States *per capita*. For convenience of comparison with returns for previous years this expenditure has, in the foregoing table, been shewn in each case under the department for which it was incurred. Particulars of the expenditure on new works, etc., during the last five years are given in the following table:—

COMMONWEALTH EXPENDITURE ON NEW WORKS, ETC., 1905-6 to 1909-10.

Departments.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
Trade and Customs ...	1,814	1,162	8,972	20,019	5,124
Defence	171,633	195,159	440,918	101,020	337,961
Postal	146,575	275,737	427,006	541,809	555,557
Sundry departments ...	...	...	52	4,339	2,526
Total	320,022	472,058	876,948	667,187	901,168

It will be seen that the Commonwealth expenditure under this head has increased considerably in recent years, the total for 1909-10 being nearly three times as great as that for 1905-6.

6. **"Other" Expenditure.**—In accordance with sections 89 and 93 of the Constitution, all expenditure of the Commonwealth other than that incurred solely for the maintenance or continuance as at the time of transfer of any department transferred from the States to the Commonwealth, was, under the "book-keeping" system, required to be apportioned to the several States, each being debited "according to the number of its people." In consequence of this provision all expenditure in connection with transferred departments on account of central office staffs was charged as "other" or new expenditure, and not as "transferred" expenditure. The effect of this is that the ordinary statement in which division is made into "transferred" and "other" expenditure does not, for the purpose of comparison, furnish such complete information as could be desired. It has therefore been deemed expedient to rearrange the items so as to obtain a more accurate statement of the cost of the several branches of the Commonwealth service. This rearrangement is given in the succeeding paragraphs.

7. **Cost of Departments, etc.**—Arranged in such a manner as to shew under each Department the expenditure on behalf of that Department, the cost of the several branches of the Commonwealth service for the years 1905-6 to 1909-10 was as follows:—

COST OF COMMONWEALTH DEPARTMENTS, ETC., 1905-6 to 1909-10.

Departments, etc.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
Governor-General	23,759	18,612	18,927	22,554	21,908
Parliament	132,528	177,061	153,414	163,991	220,233
External Affairs	39,484	67,241	55,061	53,513	80,469
Attorney-General	20,882	27,609	32,216	32,027	32,349
Home Affairs	35,643	41,385	61,580	110,291	88,122
Treasury	17,528	17,768	20,413	34,473	74,098
Trade and Customs	442,614	634,328	914,973	837,741	754,433
Defence	970,345	1,035,795	1,334,744	1,050,590	1,534,881
Postmaster-General	2,784,664	2,966,098	3,359,290	3,625,402	3,786,755
All other Expenditure ...	30,094	1,420	211,511	489,816	906,268
Total	4,497,541	4,987,317	6,162,129	6,420,398	7,499,516

The largeness of the expenditure under the head of Parliament in the years 1906-7 and 1909-10 was in great measure due to the fact that the general elections were held in those years, while the expenditure in connection with the sugar bounties is mainly responsible for the variations which have taken place in the cost of the Department of Trade and Customs. More detailed reference to the items included under the above general heads is furnished in the succeeding paragraphs.

8. **Governor-General.**—In section 3 of the Constitution it is enacted that, until the Commonwealth Parliament otherwise provides, there shall be payable out of the Consolidated Revenue Fund for the salary of the Governor-General an annual sum of ten thousand pounds, and a proviso is made that the salary of the Governor-General shall not be altered during his continuance in office. The total expenditure in connection with the Governor-General and his establishment for the five years 1905-6 to 1909-10 is as follows:—

EXPENDITURE, GOVERNOR-GENERAL AND ESTABLISHMENT, 1905-6 to 1909-10.

Details.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
Salary	10,000	10,000	10,000	10,000	10,000
Repairs, etc., Government Houses	5,625	6,232	7,034	8,941	7,754
Contingencies	8,134	2,380	1,893	3,613	4,154
Total	23,759	18,612	18,927	22,554	21,908

The heavy charge under the head of Contingencies in 1905-6 was to some extent due to payment of arrears of travelling expenses.

9. **Parliament.**—Under this head have been grouped all the items of expenditure connected with the Parliamentary Government of the Commonwealth, including the salaries of the Ministers and the allowances to senators and members of the House of Representatives. Details for the five years 1905-6 to 1909-10 are furnished in the table given hereunder:—

EXPENDITURE, COMMONWEALTH PARLIAMENT, 1905-6 to 1909-10.

Details.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.

In section 66 of the Constitution provision is made that there shall be payable out of the Consolidated Revenue Fund of the Commonwealth, for the salaries of Ministers of State, an annual sum which, until Parliament otherwise provides, shall not exceed £12,000. This provision is still in force. Allowances to senators and members of the House of Representatives are also provided for in the Constitution, section 48 of which specifies that until Parliament otherwise provides each such allowance shall consist of £400 a year, reckoned from the day on which the member takes his seat. During the second session of the Commonwealth Parliament in 1907 the question of allowances to members was under consideration, and an Act was passed raising the annual allowance from £400 to £600, such increase to date from 1st July, 1907.

10. **External Affairs.**—Under the control of the department of External Affairs is placed the expenditure in connection with the Executive Council, the London Office, and Papua. Particulars for the five years 1905-6 to 1909-10 are as follows :—

EXPENDITURE, EXTERNAL AFFAIRS DEPARTMENT, 1905-6 to 1909-10.

Details.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.

11. **Papua.**—The sums shewn in the above table as expenditure in connection with Papua represent the Commonwealth grants towards the cost of administering that territory, as well as certain additional amounts. The ordinary revenue and expenditure

of Papua are kept distinct from those of the Commonwealth. Apart from the Commonwealth contribution the principal source of revenue is the Custom House. Details for the five years 1905-6 to 1909-10 are as follows :—

PAPUAN REVENUE, 1905-6 to 1909-10.

Details.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.

Total	40,236	41,813	51,019	50,706	61,918

One of the largest items of Papuan expenditure is the maintenance, etc., of vessels and boats, including the steam yacht "Merrie England," the total outlay under this head for 1909-10 being no less than £9017. The expenditure on public justice for 1909-10 totalled £13,729, comprising "magistrates, etc.," £6246 ; "armed native constabulary," £5180, and "gaols," £2303 ; on public works, £8057 ; and on the Department of Agriculture, £2129. The total expenditure for each of the five years 1905-6 to 1909-10 was as follows :—

PAPUAN EXPENDITURE, 1905-6 to 1909-10.

Total expenditure	41,804	45,336	48,525	51,036	64,874

12. **Attorney-General's Department.**—The rapid growth in the expenditure connected with this Department during 1906-7 and 1907-8 was brought about in large measure by the extension of the Federal High Court, the total cost of which, including the Court of Conciliation and Arbitration, for the year 1909-10 amounted to £23,677. Details for the five years 1905-6 to 1909-10 are furnished hereunder :—

EXPENDITURE, ATTORNEY-GENERAL'S DEPARTMENT, 1905-6 to 1909-10.

13. **Home Affairs Department.**—The creation of new departments such as the Bureau of Census and Statistics, and the Meteorological Bureau, and the extension of

the field of operations of the Public Works branch, all of which are grouped for general administrative purposes under the Department of Home Affairs, have led to a considerable increase in the expenditure. The heaviness of the expenditure of this department for 1908-9 was, in a large measure, due to the cost incurred by the Commonwealth in connection with the reception of the American fleet. Particulars for the five years 1905-6 to 1909-10 are as follows :—

EXPENDITURE, HOME AFFAIRS DEPARTMENT, 1905-6 to 1909-10.

Details.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.

14. **Treasurer's Department.**— The sub-departments under the control of the Commonwealth Treasurer are the Treasury, the Audit Office, the Old Age Pensions Department, and the newly-formed Land Tax Office. During the financial year 1908-9 the expenditure under this department was swelled by a donation of £10,000 to the Sicily Earthquake Relief Fund, and in 1909-10 by the increased expenditure on salaries, etc., in the Old Age Pensions Department. Details of the expenditure of this department for each of the five years 1905-6 to 1909-10 are furnished hereunder :—

EXPENDITURE, TREASURER'S DEPARTMENT, 1905-6 to 1909-10.

Total	17,528	17,768	20,413	34,473	74,098

15. **Trade and Customs.**—Under this head have been included the expenditure of all the sub-departments under the control of the Minister of Trade and Customs, as well as the amounts payable as sugar bounties and the expenses in connection therewith. The large divergencies in the total expenditure which these figures exhibit for recent years have been mainly due to variations in the amount payable in respect of sugar bounties. Particulars for the five years 1905-6 to 1909-10 are given in the following table :—

EXPENDITURE, TRADE AND CUSTOMS, 1905-6 to 1909-10.

Details.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.

Total	442,614	634,328	914,973	837,741	754,433

16. **Cost of Collection.**—Excluding from the above the expenditure incurred in connection with Patents, Trade Marks, Copyrights, Quarantine, Fisheries, Analyst, and Sugar and other Bounties, the balance may be considered as representing approximately the cost entailed by the collection of the Customs and Excise revenue of the Commonwealth. Details for the five years 1905-6 to 1909-10 are as follows:—

COST OF CUSTOMS AND EXCISE COLLECTION, 1905-6 to 1909-10.

Particulars.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
Gross Customs and Excise revenue	8,999,485	9,648,556	11,645,352	10,844,067	11,593,164
Cost of collection	277,589	284,397	312,207	329,583	313,887
Net revenue	8,721,896	9,364,159	11,333,145	10,514,484	11,279,277
Percentage of cost of collection on gross revenue	3.08%	2.95%	2.68%	3.04%	2.71%

It will be seen that throughout the period the cost of collecting the Customs and Excise revenue has been rather less than 3 per cent. of the revenue collected, varying only between 2.68 per cent. in 1907-8 and 3.08 per cent. in 1905-6.

17. **Defence.**—The Commonwealth expenditure in connection with Defence, which in 1901-2 amounted to £861,218, had by 1907-8 grown to £1,334,744, but there was a decrease in 1908-9 of nearly £300,000 on the previous year which was more than counterbalanced by a large rise in 1909-10. The largeness of the expenditure for 1907-8 was due mainly to the provision made in that year for new works. Particulars for the five years 1905-6 to 1909-10 are as follows:—

EXPENDITURE, DEFENCE, 1905-6 to 1909-10.

Details.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.

Total	970,345	1,035,795	1,334,744	1,050,590	1,534,881

18. **Postal.**—From a total of £2,784,664 in 1905-6 the cost of the department under the control of the Postmaster-General advanced to £3,786,755 in 1909-10, an increase of £1,002,091. Of this increase the ordinary cost of working the department was responsible for £549,147, while the expenditure on new works, etc., advanced by £408,982. Details for the five years 1905-6 to 1909-10 are furnished hereunder:—

EXPENDITURE, POSTAL DEPARTMENT, 1905-6 to 1909-10.

Total	2,784,664	2,966,098	3,359,290	3,625,402	3,786,755

19. **Miscellaneous.**—In addition to the foregoing there are certain items which do not come under any of the heads enumerated. For 1909-10 the total expenditure under this heading was £906,268, the principal items being £2319 for machinery and plant for the printing office; £2881 towards survey of transcontinental railway route; a provision of £841,181 towards the payment of old-age pensions; and £32,579 on account of the Manufactures Encouragement Act.

(D) Surplus Revenue Paid to States.

1. **Net Revenue.**—As mentioned in sub-section 1 of this section, the Constitution provided under sections 87, 93 and 95 for the payment to the States of all surplus revenue of the Commonwealth, such payment to amount in the aggregate during the continuation of the Braddon clause to not less than three-fourths of the net revenue from Customs and Excise. The expression "net revenue" used in section 87 has been taken to mean the gross revenue less drawbacks and refunds, and in addition cost of collection. This view,

adopted by the Commonwealth Government, is that indicated by Quick and Garran in their "Annotated Constitution of the Australian Commonwealth," in which they say: "The net revenue from duties of Customs and Excise is the total receipts from these sources after deducting the cost of collection. No attempt is made in the Constitution to define the deductions which may be made in order to arrive at the net revenue; this is a matter of book-keeping, which is left wholly to the Executive Government." In actual practice the statutory three-fourths of net Customs and Excise revenue is ascertained by the Commonwealth Treasury by deducting from the total Customs and Excise revenue (less drawbacks and refunds) the "transferred" expenditure of the Department of Trade and Customs and the expenditure on new works for that department, and taking three-fourths of the result.

2. **Actual Payments of Surplus.**—In the following table a comparison is made between the amounts actually paid to the several States since the inauguration of Federation, and the minimum which, in accordance with the preceding paragraph, the Commonwealth was constitutionally bound to pay. It should be noted that the payments here shewn for any year are those made on account of that year although actually paid after its close.

PAYMENTS OF SURPLUS REVENUE, 1901 to 1909-10.

Year.	Payment on Account of Period.	Three-fourths of Net Customs and Excise Revenue.	Amount Paid to States out of the one-fourth retainable by Commonwealth.
	£	£	£
Half-year to 30th June, 1901 ...	3,599,702	3,021,857	577,845
1901-2	7,364,239	6,475,495	888,744
1902-3	8,204,566	7,059,329	1,145,237
1903-4	7,378,479	6,633,147	745,332
1904-5	7,142,769	6,407,483	735,286
1905-6	7,384,383	6,554,473	829,910
1906-7	7,845,574	7,039,573	806,001
1907-8	8,856,905	8,526,165	330,740
1908-9	7,930,395	7,930,395	...
1909-10	8,492,436	8,492,436	...
Total	74,199,448	68,140,353	6,059,095

It will be seen from the foregoing table that during the nine and a-half years which elapsed since the foundation of the Commonwealth the surplus revenue returned to the States exceeded the statutory minimum by no less a sum than £6,059,095; in other words, the Commonwealth, during the period, returned to the States surplus revenue to the extent of about 81½ per cent. of the net revenue from Customs and Excise instead of the 75 per cent. minimum required under the Constitution.

3. **Payments to the Several States.**—In the following table are furnished particulars relative to the amounts actually paid to the several States on account of each of the financial years 1905-6 to 1909-10:—

SURPLUS COMMONWEALTH REVENUE PAID TO STATES, 1905-6 to 1909-10.

State.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
New South Wales ...	2,741,929	3,025,137	3,617,472	3,326,276	3,480,314
Victoria	2,094,503	2,201,013	2,377,708	1,987,435	2,109,379
Queensland	858,462	938,935	1,038,267	1,027,047	1,099,383
South Australia ...	562,000	644,564	791,664	716,957	842,508
Western Australia ...	871,960	774,882	751,735	627,933	707,672
Tasmania	255,529	261,043	280,059	244,747	253,180
Total	7,384,383	7,845,574	8,856,905	7,930,395	8,492,436

Taking the States as a whole the surplus Commonwealth revenue paid on account of the year 1907-8 was higher than that paid on account of any other financial year. As regards the individual States the maximum payment took place in New South Wales and Victoria in 1907-8, in Queensland and South Australia in 1909-10, in Western Australia in 1902-3, and in Tasmania in 1901-2. The largeness of the amount returned by the Commonwealth to the States in respect of 1907-8 was in great measure due to the increased Customs and Excise revenue collected under the new tariff of that year. For 1908-9 the surplus revenue paid to the States was lower in all cases than that for 1907-8. This was due in part to the fact that the 1907-8 payments were somewhat abnormal, and in part to the retention by the Commonwealth in 1908-9 of all revenue in excess of the statutory three-fourths of net Customs and Excise Revenue. In 1909-10 the surplus revenue returned to the States was higher in every case than in 1908-9.

4. **Surplus Commonwealth Revenue per head of Population.**—The following table furnishes particulars concerning the amount of surplus Commonwealth revenue per head of population which the several States received during the financial years 1905-6 to 1909-10, and is of interest in connection with the new financial agreement, under which the Commonwealth is to pay 25s. per head of population, to all the States, for a period of ten years subject to a special arrangement in favour of Western Australia. (See pp. 800 and 801.)

SURPLUS COMMONWEALTH REVENUE PER HEAD OF POPULATION PAID TO STATES, 1905-6 to 1909-10.

5. **The Commonwealth Fourth of Net Customs and Excise Revenue.**—As noted in paragraph number two above, the Commonwealth has in each financial year except 1908-9 and 1909-10 paid to the States a considerable portion of the one-fourth of net Customs and Excise revenue which it was entitled under the Constitution to spend for its own purposes. The manner in which this extra payment was distributed amongst the several States from 1905-6 to 1909-10 is exhibited in the following table:—

PAYMENT TO STATES FROM COMMONWEALTH FOURTH OF NET CUSTOMS AND EXCISE REVENUE, 1905-6 to 1909-10.

Total	829,910	806,001	330,740	...	...

*Amount retained by Commonwealth in addition to one-fourth of the State's net revenue from Customs and Excise.

Although the States as a whole received in each year not less than three-fourths of the net revenue from Customs and Excise, there were six occasions, viz., in 1901-2, 1903-4, 1904-5, 1907-8, 1908-9, and 1909-10, on which the amount returned to Queensland fell short of three-fourths of that State's net revenue from Customs and Excise; three, viz., in 1907-8, 1908-9, and 1909-10, on which the amount returned to Tasmania exhibited a shortage; and two, viz., in 1908-9 and 1909-10, in which Victoria and Western Australia also received less than three-fourths of their respective net revenues from Customs and Excise. For the whole period of nine and a-half years, however, each State except Queensland received more than three-fourths of its net revenue from Customs and Excise, the largest aggregate excess being £3,009,398 in the case of New South Wales. In the case of Queensland the aggregate amount received for the period fell short of three-fourths of the net Customs and Excise revenue by £94,726.

6. **Proportion Actually Paid.**—For the period of nine and a-half years from the 1st January, 1901, to 30th June, 1910, the percentage of net revenue from Customs and Excise duties paid to the several States was as follows:—New South Wales, 84 per cent.; Victoria, 80 per cent.; Queensland, 74 per cent.; South Australia, 84 per cent.; Western Australia, 86 per cent.; Tasmania, 78 per cent.

(E) Interstate Customs and Excise Adjustments.

1. **Reason for Adjustments.**—In order that the duties of Customs and Excise should, during the continuance of the "book-keeping system" of Commonwealth and State finance, be credited to that State in which the goods subject to such duties have been consumed, provision was made in section 93 of the Constitution that "during the first five years after the imposition of uniform duties of Customs, and thereafter until the Parliament otherwise provides, the duties of Customs chargeable on goods imported into a State and afterwards passing into another State for consumption, and the duties of Excise paid on goods produced or manufactured in a State and afterwards passing into another State for consumption, shall be taken to have been collected not in the former but in the latter State." In the ordinary course duties collected in any State were credited to that State, and compliance with the above provisions necessitated the debiting of the State with the duty collected when the goods paying such duty passed for consumption into another State, the latter being credited with the amount. Returns shewing such credits and debits thus furnished an indication of the relative positions of the several States as distributors of dutiable goods. States in which the adjustment resulted in a net debit might be looked upon as distributing States, while those in which the result was a net credit were consuming States.

2. **Interstate Adjustments for 1909-10.**—Particulars for each of the States for the year ended 30th June, 1910, are furnished hereunder:—

INTERSTATE ADJUSTMENTS, 1909-10.

State.	Customs.		Excise.		Total Customs and Excise.		
	Credits.	Debits.	Credits.	Debits.	Credits.	Debits.	Net Results.
	£	£	£	£	£	£	£
New South Wales	325,489	472,523	72,136	168,057	397,625	640,580	Dr. 242,955
Victoria	179,078	618,183	51,003	176,644	230,081	794,827	Dr. 564,746
Queensland ...	288,869	34,446	118,510	16,409	407,379	50,855	Cr. 356,524
South Australia ...	186,072	111,638	56,228	20,054	242,300	131,692	Cr. 110,608
Western Australia	142,398	9,539	65,792	253	208,190	9,792	Cr. 198,398
Tasmania ...	137,348	12,925	29,094	11,346	166,442	24,271	Cr. 142,171
Total ...	1,259,254	1,259,254	392,763	392,763	1,652,017	1,652,017	...

3. **Net Results, 1905-6 to 1909-10.**—The net results of the interstate Customs and Excise adjustments for each of the five years 1905-6 to 1909-10 are given in the following table:—

It will be seen that Victoria and New South Wales were the principal distributing States, Victoria occupying the leading position, while Queensland, Western Australia, and Tasmania were the principal consuming States. South Australia occupied what might be considered as a middle position, being both a distributor and a consumer on a large scale, though considerably more of the latter than the former. The growth of Victoria as a distributing centre for the Commonwealth was both continuous and rapid.

INTERSTATE ADJUSTMENTS, 1905-6 to 1909-10.

State.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.

Papua	433		
Officers' Assurance	643	Total	903,904

2. **Distribution.**—The amounts to credit of Trust Fund in the several States on 30th June, 1910, were as follows :—New South Wales, £104,830; Victoria, £730,181; Queensland, £25,659; South Australia, £16,067; Western Australia, £14,851; and Tasmania, £12,316.

SECTION XX.

STATE FINANCE.

§ 1. General.

1. **Functions of State Governments.**—In any comparison of the finances of the several States due recognition must be made of the actual functions assumed by the respective Governments, and also of the local conditions and requirements in each case. Direct comparisons of public expenditure are thus rendered difficult, owing to the fact that functions which in one State are assumed by the Central Government are in another State relegated to local governing bodies, and further by the fact that costly developmental work may, under certain conditions, be not only economically justifiable, but may be an essential of progress, whilst parsimonious expenditure may be a serious economic blunder. A large expenditure may, therefore, be an indication either of gross extravagance and bad economy on the one hand or healthy and vigorous progress and good economy on the other, and an accurate appreciation of the relative positions of the several States requires a careful survey of their respective local circumstances and conditions.

Similarly as regards revenue, imposts which in some States are levied by the Central Government are in others considered as matters to be dealt with locally. Under these circumstances care is needed in instituting comparisons between the several States, and the particulars contained in this section should be read in connection with those contained in the section dealing with Local Government. It should also be noted that in many ways the budgets of the Australian Governments differ materially from those of most European countries, owing to the inclusion therein of the revenue and expenditure of departments concerned in rendering public services, such for instance as railways, tramways, water supply, etc., which, in the other countries referred to, are often left to private enterprise.

2. **Accounts of State Governments.**—The various financial transactions of the States are in each case concerned with one or other of three Funds—the "Consolidated Revenue Fund," the "Trust Funds," and the "Loan Funds." All revenue collected by the State is placed to the credit of its Consolidated Revenue Fund, from which payments are made under the authority of an Annual Appropriation Act passed by the Legislature, or by a permanent appropriation under a special Act. The hypothecation of the revenue from a specific tax to the payment for some special service is not practised in Australia, all statutory appropriations ranking on an equality as charges on the Consolidated Revenue Fund. The Trust Funds comprise all moneys held in trust by the Government, and include such items as savings bank funds, sinking funds, insurance companies' deposits, etc. The Loan Funds are credited with all loan moneys raised by the State, and debited with the expenditure therefrom for public works or other purposes.

3. **Inter-relation of Commonwealth and State Finance.**—The principal alteration in State finance, brought about by Federation, has been that the States have transferred to the Commonwealth the large revenue received by the Customs and Postal Departments,

and have been relieved of the expenditure connected with these and the Defence Departments, while, on the other hand, a new item of State revenue has been introduced, viz., the payment to the States of the surplus revenue of the Commonwealth. Provision for the taking over by the Commonwealth of certain of the public debts of the States is made in section 105 of the Constitution, and a proposed law extending this provision to the whole of the State indebtedness, which passed both Houses of the Federal Legislature by the statutory majority, was submitted to a referendum at the election in April, 1910, and received the requisite endorsement by the electorate.

§ 2. State Consolidated Revenue Funds.

(A) Receipts.

1. **Sources of Revenue.**—The principal sources of State revenue are:—
   (*a*) Taxation.
   (*b*) The public works and services controlled by the State Governments.
   (*c*) Sale of and rental from Crown lands.
   (*d*) The surplus Commonwealth revenue returned to the States.
   (*e*) Miscellaneous sources, comprising fines, fees, interest, etc.

Of these sources that yielding the largest revenue for the States as a whole is the group of public works and services, the principal contributor being the Government railways and tramways. Next in magnitude comes the payment of surplus revenue by the Commonwealth, followed in order by Taxation and Land Revenue.

2. **Amount Collected.**—The following table furnishes particulars of the total amount of consolidated revenue received by the several States during the nine years 1901-2 to 1909-10:—

STATE REVENUES, 1901-2 to 1909-10.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
	£	£	£	£	£	£	£
1901-2 ...	11,007,356	6,997,792	3,535,062	2,477,431	3,354,123	826,163	28,197,927
1902-3 ...	11,296,069	6,954,619	3,526,465	2,530,568	3,630,238	734,663	28,672,622
1903-4 ...	11,248,328	7,319,949	3,595,440	2,568,100	3,550,016	857,668	29,139,501
1904-5 ...	11,336,918	7,515,742	3,595,399	2,798,849	3,615,340	852,681	29,714,929
1905-6 ...	12,283,082	7,811,475	3,853,523	2,866,308	3,558,939	900,657	31,273,984
1906-7 ...	13,392,435	8,345,534	4,307,912	3,252,705	3,401,354	970,843	33,670,783
1907-8 ...	13,960,763	8,314,480	4,488,398	3,722,090	3,376,641	1,005,274	34,867,646
1908-9 ...	13,646,126	8,247,684	4,769,172	3,591,260	3,268,993	934,405	34,457,640
1909-10	14,540,073	8,597,992	5,119,254	4,032,891	3,657,670	1,008,932	36,956,812

The figures given in this table relate in each instance to the financial year ended 30th June, except in the case of Tasmania, where the figures shewn for 1901-2, 1902-3, and 1903-4 relate respectively to the years ended 31st December, 1901, 1902, and 1903.

During the eight years from 1901-2 to 1909-10 the aggregate revenues of the States increased by no less a sum than £8,758,885, or a little over 31 per cent. Increases were in evidence in all the States, the largest increase being that of £3,532,717 in New South Wales.

It will be noticed that in all of the States, except Queensland, the revenue for 1908-9 was lower than that of the preceding year, largely owing to the fact that the revenue for 1907-8 was swelled by the payment of Customs duties in anticipation of, or in consequence of, the new tariff imposed on 8th August, 1907. In all the States the revenue for 1909-10 was the maximum for the nine years under review.

3. **Revenue per Head.**—Details concerning the revenue per head of population, collected in the several States of the Commonwealth during the nine years 1901-2 to

1909-10, are furnished in the table given hereunder. It will be seen that throughout the period Western Australia has collected by far the largest amount per head, and that Tasmania has collected the least.

STATE REVENUE PER HEAD OF POPULATION, 1901-2 to 1909-10.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	All States.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1901-2 ...	8 0 1	5 15 7	6 19 9	6 15 6	17 5 7	4 16 3	7 7 5
1902-3 ...	8 1 0	5 14 10	6 18 1	6 18 0	17 0 4	4 5 0	7 8 6
1903-4 ...	7 17 7	6 1 1	6 19 6	6 19 3	15 12 10	4 16 11	7 8 5
1904-5 ...	7 15 7	6 4 2	6 17 10	7 10 2	14 18 5	4 14 8	7 9 2
1905-6 ...	8 4 8	6 8 2	7 5 11	7 11 4	13 19 4	4 19 6	7 14 4
1906-7 ...	8 15 5	6 15 6	8 1 0	8 9 6	12 19 11	5 7 9	8 3 6
1907-8 ...	8 18 0	6 13 3	8 5 8	9 9 7	12 18 2	5 9 3	8 6 2
1908-9 ...	8 11 6	6 9 9	8 12 8	8 16 5	12 4 9	5 0 7	8 1 2
1909-10 ...	8 19 4	6 11 11	8 18 9	9 13 10	13 7 5	5 8 0	8 9 0

In all the States, except Western Australia, the last four years have witnessed a marked increase in the State revenue collections per head, the most noticeable advances being £2 2s. 6d. in the case of South Australia and £1 12s. 10d. in that of Queensland. The Western Australian decline was continuous until 1908-9, though recovering in 1909-10, and for 1909-10 the revenue per head in that State exceeded the Commonwealth average by more than 50 per cent. Four States, viz., Western Australia, South Australia, Queensland, and New South Wales, exceeded the Commonwealth average for 1909-10, while the other two States fell short of it.

4. **Details for 1909-10.**—Classifying the revenue of the several States in the manner indicated in § 2 (A) 1 above, particulars for the year 1909-10 are as follows:—

DETAILS OF STATE REVENUE, 1909-10.

Particulars.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	All States.
	£	£	£	£	£	£	£
Taxation	1,223,521	1,088,353	584,997	481,003	336,396	303,390	4,017,660
Public Works & Services	7,909,961	4,687,849	2,409,507	2,226,022	2,076,739	335,828	19,645,906
Land	1,729,740	352,076	756,400	377,331	317,560	100,284	3,633,391
Surplus C'wlth Revenue	3,347,616	1,922,278	1,071,261	803,057	703,723	239,816	8,087,751
Miscellaneous	329,235	547,436	297,089	145,478	223,252	29,614	1,572,104
Total	14,540,073	8,597,992	5,119,254	4,032,891	3,657,670	1,008,932	36,956,812

It will be noted that the amounts returned under the heading "Surplus Commonwealth Revenue" do not quite agree with those given in the chapter on Commonwealth Finance, page 821. This arises from the fact that the State figures shew the amount for which credit was taken by the State during the financial year 1909-10, whilst the Commonwealth figures shew the amounts paid to State Treasurers on account of that financial year.

5. **Revenue per Head, 1909-10.**—Particulars concerning the revenue per head of population in each State derived from the several sources enumerated in the preceding paragraph are given hereunder:—

STATE REVENUE PER HEAD, 1909-10.

Particulars.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tas.	All States.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Taxation	0 15 1	0 16 8	1 0 5	1 3 1	1 4 7	1 12 6	0 18 4
Public Works & Services	4 17 7	3 12 0	4 4 2	5 7 0	7 11 10	1 15 11	4 9 10
Land	1 1 4	0 5 4	1 6 5	0 18 2	1 3 3	0 10 9	0 16 7
Surplus C'wlth. Revenue	2 1 3	1 9 6	1 17 5	1 18 7	2 11 5	1 5 8	1 17 0
Miscellaneous	0 4 1	0 8 5	0 10 4	0 7 0	0 16 4	0 3 2	0 7 3
Total	8 19 4	6 11 11	8 18 9	9 13 10	13 7 5	5 8 0	8 9 0

The largeness of the revenue per head from public works and services in the case of Western Australia is mainly due to the fact that the number of miles of railway in that State is large compared with the population, and that the revenue-earning power of the railways is also high.

6. **Relative Importance of Sources of Revenue.**—The following table furnishes an indication of the relative importance of the different sources of revenue in the several States, the figures given being the percentage which each item of revenue bore to the total for the State for the year 1909-10:—

PERCENTAGE ON TOTAL STATE REVENUE, 1909-10.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	%	%	%	%	%	%	%
Taxation	8.41	12.66	11.42	11.93	9.20	30.07	10.87
Public Works and Services ...	54.40	54.52	47.07	55.20	56.78	33.29	53.16
Land	11.90	4.09	14.78	9.36	8.68	9.94	9.83
Surplus C'wealth Revenue ...	23.02	22.36	20.93	19.91	19.24	23.77	21.89
Miscellaneous	2.27	6.37	5.80	3.60	6.10	2.93	4.25
Total	100.00	100.00	100.00	100.00	100.00	100.00	100.00

One of the most noticeable features of the figures here given is the comparatively low percentage for "public works and services" and the high percentage for "taxation" in the case of Tasmania. In New South Wales and Queensland land revenue is an important item, while in Queensland the revenue from "public works and services" falls considerably below the Commonwealth average.

7. **State Taxation.**—(*a*) *Details, 1909-10.* Prior to the inauguration of Federation the principal source of revenue from taxation was the imposition of duties of Customs and Excise. At the present time the most productive forms of State taxation are the income tax, which is now imposed in all the States (Western Australia, the last of the States to adopt this method of taxation, having passed the necessary legislation during the Parliamentary session of 1907), and probate and succession duties. For 1909-10 stamp duties occupied third place. In addition to these a land tax is now collected in all the States except Queensland, and license fees of various kinds are collected in all the States, while a dividend tax is collected in Western Australia, and an "ability" tax[1] in Tasmania. The total revenue from taxation collected by the States during the year 1909-10 was £4,017,660, details of which are set forth in the table given hereunder:—

STATE REVENUE FROM TAXATION, 1909-10.

Taxation.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.A.	Tas.	All States.
	£	£	£	£	£	£	£
Probate and succession duties	650,202	358,173	61,133	84,651	57,416	44,267	1,255,902
Other stamp duties	222,720	250,358	145,556	97,877	62,714	54,741	833,966
Land tax	9,066	114,357	...	94,126	34,344	79,021	330,914
Income tax	219,977	338,585	304,693	180,923	43,865	68,330	1,156,373
Dividend tax	...	...	...	...	88,315	...	88,315
Ability tax	...	...	...	...	...	41,928	41,928
Licenses	121,556	20,927	60,753	23,426	42,589	13,442	282,693
Other taxation	...	5,953	12,802	...	7,153	1,661	27,569
Total	1,223,521	1,088,353	584,997	481,003	336,396	303,390	4,017,660

The most productive forms of taxation in the several States during the year 1909-10 were as follows:—New South Wales and Victoria, probate and succession duties; Queens-

1. The "ability" tax is based upon the annual value of the house occupied by the taxpayer, or upon the amount payable by him for board and lodging.

land and South Australia, income tax; Western Australia, dividend tax; and Tasmania, land tax.

(*b*) *Summary, 1901-2 to 1909-10.* The total amount raised by means of taxation by the several State Governments during the nine years 1901-2 to 1909-10 is given in the following table:—

STATE REVENUE FROM TAXATION, 1901-2 to 1909-10.

Year.	New South Wales.	Victoria.	Queensland.	S. Australia.	W. Aust.	Tasmania.	All States.
	£	£	£	£	£	£	£
1901-2	1,108,770	748,216	276,771	267,791	173,582	111,515	2,686,645
1902-3	1,108,781	878,591	415,688	398,941	221,247	105,402	3,128,650
1903-4	1,100,193	938,147	475,184	353,432	235,114	150,091	3,252,161

1907-8	1,077,534	977,620	525,540	477,637	277,463	265,656	3,601,450
1908-9	907,249	1,072,228	535,194	450,250	296,599	250,835	3,512,355
1909-10	1,223,521	1,088,353	584,997	481,003	336,396	303,390	4,017,660

During the eight years between 1901-2 and 1909-10 the aggregate State revenue from taxation increased by nearly 50 per cent., the increase varying considerably in the several States. Thus while New South Wales shewed an increase of only 10 per cent., and Victoria of only 45 per cent., the Queensland revenue advanced by 111 per cent., and that of Tasmania by no less than 172 per cent. The total increase in State taxation for the year amounted to £505,305.

The revenue from State taxation per head of population, collected in the several States during each of the years 1901-2 to 1909-10, was as follows:—

STATE TAXATION PER HEAD, 1901-2 to 1909-10.

Year.	New South Wales.	Victoria.	Queensland.	S. Australia.	W. Aust.	Tasmania.	All States.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1901-2	0 16 1	0 12 4	0 10 11	0 14 8	0 17 11	0 13 0	0 14 1
1902-3	0 15 10	0 14 6	0 16 3	1 1 9	1 0 9	0 12 2	0 16 1
1903-4	0 15 5	0 15 6	0 18 5	0 19 2	1 0 9	0 17 0	0 16 7
1904-5	0 15 4	0 14 10	0 17 5	1 3 9	0 18 4	1 4 1	0 16 10
1905-6	0 17 5	0 16 3	0 18 9	0 19 7	1 0 5	1 7 6	0 18 1
1906-7	0 18 1	0 18 0	1 0 2	1 1 6	1 0 4	1 10 9	0 19 4
1907-8	0 13 9	0 15 8	0 19 5	1 4 4	1 1 3	1 8 10	0 17 2
1908-9	0 11 5	0 16 11	0 19 4	1 2 1	1 2 2	1 7 0	0 16 5
1909-10	0 15 1	0 16 8	1 0 5	1 3 1	1 4 7	1 12 6	0 18 4

Taking the States as a whole the State taxation increased by four shillings and threepence per head during the eight years from 1901-2 to 1909-10, the most marked increase being that of nineteen shillings and sixpence per head in the case of Tasmania. In Queensland the increase amounted to nine shillings and sixpence, in South Australia to eight shillings and fivepence, in Western Australia to six shillings and eightpence, in Victoria to four shillings and fourpence, while in New South Wales a decline of one shilling took place, owing in large measure to the reductions made in that State in the imposition of income tax and stamp duties and the loss of revenue consequent on the transfer of land tax receipts to local bodies. State taxation per head is at present highest in Tasmania and lowest in New South Wales.

8. **Commonwealth and State Taxation.**—For the purpose of obtaining an accurate view of the extent of taxation imposed on the people of the Commonwealth by the central

governing authorities it is necessary to add together the Commonwealth and State collections. This has been done in the table given hereunder, which contains particulars concerning the total taxation for each of the years 1905-6 to 1909-10, as well as the amount per head of population:—

COMMONWEALTH AND STATE TAXATION, 1905-6 to 1909-10.

Particulars.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
C'wealth taxation	8,999,485	9,648,556	11,645,352	10,844,067	11,593,164
State taxation	3,661,840	3,986,922	3,601,450	3,512,355	4,017,660
Total	12,661,325	13,635,478	15,246,802	14,356,422	15,610,824
Taxation per head	£3 2 6	£3 6 2	£3 12 8	£3 7 2	£3 11 2

Whilst the Commonwealth taxation increased during the period by £2,593,679, the State taxation advanced by £355,820, the aggregate increase being £2,949,499. The amount has, however, fluctuated somewhat during the period, and has ranged between a minimum of £3 2s. 6d. per head in 1905-6 and a maximum of £3 12s. 8d. per head in 1907-8.

9. **Public Works and Services.**—A very large proportion of the revenue of all the States of the Commonwealth is made up of the receipts from the various public works and services under the control of the several Governments. The principal of these are railways and tramways, harbour works, and water supply and sewerage, while in addition, State batteries for the treatment of auriferous ores exist in Western Australia, and various minor revenue-producing services are rendered by the Governments of all the States. For the year 1909-10 the aggregate revenue from this source totalled £19,645,906, or more than 50 per cent. of the revenue from all sources. Details of revenue from public works and services for the year 1909-10 are as follows:—

STATE REVENUE FROM PUBLIC WORKS AND SERVICES, 1909-10.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£
Railways and Tramways ...	6,664,236	4,450,782	2,318,623	1,831,993	1,649,397	282,365	17,197,396

Other Public Services ...	222,568	23,093	65,546	162,831	107,203	53,463	634,704
Total	7,909,961	4,687,849	2,409,507	2,226,022	2,076,739	335,828	19,645,906

* Water Supply only.

10. **Land Revenue.**—The revenue derived by the States from the sale and rental of Crown lands has, with few exceptions, been treated from the earliest times as forming part of their respective Consolidated Revenue Funds, and has been applied to meet ordinary current expenses. Where the rentals received are for lands held for pastoral or for residential purposes, such application of the revenue appears perfectly justifiable. On the other hand, where the rentals are those of mineral and timber lands, and in all cases of sales of lands, such a proceeding is essentially a disposal of capital in order to defray current expenses. As a matter of financial procedure such a course is open to a very obvious criticism. In the following table particulars of revenue derived from sales and rental of Crown lands are given for the year 1909-10:—

STATE LAND REVENUE, 1909-10.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	All States.
	£	£	£	£	£	£	£
Sales ...	944,164	216,902	222,566	224,884	194,875	61,575	1,864,966
Rentals ...	785,576	135,174	533,834	152,447	122,685	38,709	1,768,425
Total ...	1,729,740	352,076	756,400	377,331	317,560	100,284	3,633,391

11. **Surplus Commonwealth Revenue.**—The payments to the States of surplus Commonwealth revenue represent in each instance a considerable proportion of the State's revenue, and for the year 1909-10 aggregated £8,087,751. The percentage which the surplus revenue received by each State for 1909-10 was of the total collected by the Commonwealth in respect of that State is shewn in the following table:—

SURPLUS COMMONWEALTH REVENUE PAID TO STATES DURING 1909-10.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£
Surplus Commonwealth revenue received by each State	3,347,616	1,922,278	1,071,261	803,057	703,723	239,816	8,087,751
Total Commonwealth revenue in respect of each State	6,017,118	4,054,761	2,144,538	1,482,547	1,292,568	549,137	15,540,669
Percentage of surplus on total Commonwealth revenue in respect of State	% 55.63	% 47.41	% 49.95	% 54.17	% 54.44	% 43.67	% 52.04

The surplus revenue here shewn is that for which the several States took credit during the year 1909-10. (See also page 827.)

It will be seen from the foregoing table that the surplus Commonwealth revenue which the States received for 1909-10 represented 52 per cent. of the total Commonwealth collections for that year, the balance, 48 per cent., being absorbed in defraying the expenses of the various transferred and new departments under the control of the Commonwealth Government. The largest percentage returned was 56 per cent., in the case of New South Wales, and the smallest 44 per cent., in the case of Tasmania.

12. **Miscellaneous Items of Revenue.**—In addition to the foregoing sources of revenue there are in each State several miscellaneous ones, including such items as interest, fines, fees, etc., which for the year 1909-10 aggregated £1,572,104.

(B) Disbursements.

1. **Heads of Expenditure.**—The principal heads of State expenditure from Consolidated Revenue Funds are:—

(*a*) Interest and sinking funds in connection with public debt.
(*b*) Working expenses of railways and tramways.
(*c*) Justice.
(*d*) Police.
(*e*) Penal establishments.
(*f*) Education.
(*g*) Medical and charitable.
(*h*) All other expenditure.

Of these items that of working expenses of railways and tramways was the most important, and for the year 1909-10 represented about 30 per cent. of the aggregate expenditure from the Consolidated Revenue Fund. Next in order for that year was the

item of interest and sinking fund in connection with the public debt, then education, medical and charitable, police, justice, and penal establishments in the order named.

2. **Total Expenditure.**—The total expenditure from Consolidated Revenue Funds in the several States during each of the years 1901-2 to 1909-10 is furnished in the table given hereunder :—

STATE EXPENDITURE FROM CONSOLIDATED REVENUE FUNDS, 1901-2 to 1909-10.

Year.	N.S. Wales.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£
1901-2 ...	11,020,105	7,398,832	3,967,001	2,823,578	3,151,427	870,442	29,231,385
1902-3 ...	11,467,235	6,759,960	3,717,806	2,641,789	3,521,763	850,685	28,959,238
1903-4 ...	11,319,888	7,339,608	3,607,864	2,707,254	3,698,312	879,356	29,552,282
1904-5 ...	11,195,075	7,343,742	3,581,403	2,860,894	3,745,224	840,184	29,566,522
1905-6 ...	11,386,864	7,261,475	3,725,712	3,004,974	3,632,318	853,147	29,864,490
1906-7 ...	11,876,657	7,679,143	3,911,797	3,394,999	3,490,182	913,762	31,266,540
1907-8 ...	12,095,593	7,862,246	4,373,097	3,862,336	3,379,006	929,885	32,502,163
1908-9 ...	12,893,662	8,240,177	4,759,231	3,760,005	3,370,530	960,237	33,983,842
1909-10 ...	13,038,150	8,579,980	5,113,578	4,196,493	3,447,732	997,321	35,373,254

As in the case of the table previously given for revenue, the above figures relate to the year ended 30th June, except in the cases of 1901-2, 1902-3, 1903-4, which contain Tasmanian figures for the years ended 31st December, 1901, 1902, and 1903 respectively.

3. **Expenditure per Head.**—Owing to the varying conditions of the several States and the extent to which the different functions of Government are distributed therein between central and local governing authorities, the expenditure per head from Consolidated Revenue Funds differs materially in the several States, being highest in the case of Western Australia and lowest in that of Tasmania. Three of the States, viz., Western Australia, South Australia and Queensland are above the Commonwealth average per head, and the other three States below. The expenditure per head of population for each State for the years 1901-2 to 1909-10 is as follows:—

STATE EXPENDITURE PER HEAD, 1901-2 to 1909-10.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1901-2 ...	8 0 3	6 2 2	7 16 10	7 14 5	16 4 8	5 1 5	7 12 10
1902-3 ...	8 3 5	5 11 7	7 5 7	7 4 1	16 10 2	4 18 5	7 9 2
1903-4 ...	7 18 7	6 1 5	7 0 0	7 6 10	16 5 11	4 19 5	7 10 6
1904-5 ...	7 13 8	6 1 4	6 17 4	7 13 6	15 9 2	4 13 3	7 8 5
1905-6 ...	7 12 8	5 19 2	7 1 1	7 18 11	14 5 1	4 14 3	7 7 5
1906-7 ...	7 15 7	6 4 8	7 6 2	8 16 11	13 6 8	5 1 5	7 11 10
1907-8 ...	7 14 2	6 6 0	8 1 5	9 16 9	12 18 4	5 1 1	7 14 11
1908-9 ...	8 2 0	6 9 8	8 12 4	9 4 8	12 12 4	5 3 4	7 19 0
1909-10 ...	8 0 9	6 11 8	8 18 7	10 1 9	12 12 1	5 6 9	8 1 9

In all the States with the exception of Western Australia and New South Wales increases in the expenditure per head took place during the year 1909-10, ranging from 17s. 1d. per head in the case of South Australia, to 2s. per head in that of Victoria. In Western Australia a decrease of 3d. per head was experienced, and in the case of New South Wales a decrease of 1s. 3d. per head.

4. **Details of Expenditure for 1909-10.**—The following table furnishes for the year 1909-10 particulars as to the expenditure of the several States under each of the principal heads :—

DETAILS OF STATE EXPENDITURE, 1909-10.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£
Public debt (int., sinking fund, &c.)	3,562,021	2,154,547	1,635,270	1,667,732	1,006,306	422,930	10,448,806

5. **Expenditure per Head, 1909-10.**—The expenditure per head of population of the several States for the year 1909-10, under each of the principal items, is given hereunder :—

STATE EXPENDITURE PER HEAD, 1909-10.

Particulars	N.S.W	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Public debt, (interest, sinking fund, &c.)	2 3 10	1 13 1	2 17 2	4 0 2	3 13 7	2 5 3	2 7 10
Railways and tramways (working expenses) ...	2 13 0	2 2 10	2 9 4	2 13 6	4 1 3	1 2 8	2 10 0
Justice	0 3 6	0 2 6	0 2 9	0 1 7	0 4 0	0 1 3	0 2 11
Police	0 5 7	0 4 6	0 6 11	0 4 8	0 8 4	0 4 3	0 5 4
Penal establishments ...	0 1 0	0 0 9	0 0 10	0 0 11	0 2 1	0 0 7	0 0 11
Education	0 14 1	0 14 8	0 14 2	0 10 3	0 14 7	0 9 2	0 13 9
Medical and charitable ...	0 7 11	0 6 10	0 8 1	0 6 0	0 12 4	0 5 8	0 7 7
All other expenditure ...	1 11 10	1 6 6	1 19 4	2 4 8	2 15 11	0 17 11	1 13 5
Total	8 0 9	6 11 8	8 18 7	10 1 9	12 12 1	5 6 9	8 1 9

In three of the States, viz., Western Australia, South Australia, and Queensland, the average State expenditure per head exceeded that for the Commonwealth as a whole, falling short of it in the other three States.

6. **Relative Importance.**—The relative importance of the items of expenditure enumerated above varies considerably in the several States. This will readily be seen from the following table, giving for each State the percentage of the expenditure under the various items, on the total expenditure for the State :—

PERCENTAGE ON TOTAL STATE EXPENDITURE, 1909-10.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	%	%	%	%	%	%	%
Public debt (interest, sinking fund, &c.)	27.32	25.11	31.98	39.75	29.19	42.41	29.54
Railways and tramways (working expenses) ...	32.92	32.50	27.61	26.51	32.25	21.22	30.90
Justice	2.19	1.94	1.54	0.78	1.59	1.17	1.78
Police	3.45	3.42	3.88	2.32	3.30	3.99	3.37
Penal establishments ...	0.61	0.58	0.47	0.43	0.82	0.57	0.58
Education	8.76	11.15	7.97	5.09	5.79	8.57	8.49
Medical and charitable ...	4.93	5.18	4.53	2.96	4.87	5.28	4.71
All other expenditure... ...	19.82	20 12	22.02	22.16	22.19	16.79	20.63
Total	100.00	100.00	100.00	100.00	100.00	100.00	100.00

Taken together, the interest and sinking fund on the public debt, and the working expenses of the railways and tramways, represented for the year 1909-10 about 60 per cent. of the aggregate State expenditure.

(c) Balances.

1. **Position on 30th June, 1910.**—On various occasions in each of the States the revenue collected for a financial year has failed to provide the funds requisite for defraying the expenditure incurred during that year, the consequence being a deficit which is usually liquidated either by cash obtained from trust funds, or by the issue of Treasury bills. In some of the States a number of such deficits has occurred, interspersed with occasional surpluses, the result being an accumulating overdraft, which in certain instances assumed very large proportions. Thus during the period of financial stress resultant upon the crisis of 1893 and the drought conditions of succeeding years, the accumulated overdrafts of several of the States grew very rapidly. The very favourable financial conditions of recent years have enabled the various Treasurers to considerably reduce such liabilities from time to time, and at 30th June, 1910, the position of the balances of the several Consolidated Revenue Funds were as set forth in the table hereunder :—

STATE CONSOLIDATED REVENUE FUND BALANCES, 30th JUNE, 1910.

State.	Cash Credit Balances.	Debit Balance.		Net Result.
		Cash Overdraft.	Overdraft liquidated by Treasury Bills	
	£	£	£	£

(d) Principal State Taxes.

(a) Probate and Succession Duties.

1. **General.**—Probate duties have been levied for a considerable time in all the States of the Commonwealth. From the provisions of the several State Acts governing the payment of duty which are outlined hereunder, it will be seen that both the ordinary rates and those which apply to special beneficiaries differ widely in several cases. In the following table the amount under which the estates of deceased persons were sworn, is shewn for the years 1905 to 1909 :—

VALUE OF ESTATES OF DECEASED PERSONS, 1905 to 1909.

State.	1905.	1906.	1907.	1908.	1909.
	£	£	£	£	£
New South Wales ...	7,714,416	7,529,437	7,563,499	7,838,572	11,142,068

* Approximate.

2. **New South Wales.**—(i.) *Legislation.* The Acts relative to probate and succession duties at present in force in New South Wales are, in chronological order, as follows:—

(*a*) Wills, Probate and Administration Act 1898.
(*b*) Stamp Duties Act 1898, and Amendment of, 1904.
(*c*) Probate Duties (Amendment) Act 1899.
(*d*) Administration (Validating) Act 1900.
(*e*) Companies (Death Duties) Act 1901.
(*f*) Administration Amending Act 1906.

The first-named Act, assented to on 27th July, 1898, repealed, amongst others, the Probate Act of 1890 (two sections excepted), and also the Probate Amendment Act of the same year. On the same day, 27th July, assent was also given to the Stamp Duties Act, the rates of duty contained in which were in force until the passing of the Probate Duties (Amendment) Act on 22nd December, 1899, when its schedule was repealed and a new rate of duty was imposed.

The Administration (Validating) Act of 1900 was passed in order to validate certain orders of the Supreme Court giving power or leave to sell, mortgage or lease, the real estate of deceased persons.

The Companies (Death Duties) Act of 1901 relates to the registration of any company incorporated according to the laws of some country other than New South Wales carrying on the business (*a*) of mining for any minerals in New South Wales, or (*b*) of pastoral or agricultural production or timber getting in New South Wales, and to the imposition of duties on the death of shareholders of those companies.

(ii.) *Rates of Duty.* In lieu of the duties payable on probate and letters of administration as provided for by the Stamp Duties Act of 1898, the following rates are now payable on the total value of the estate of a deceased person after the deduction of all debts, as enacted by the Amending Act of 1899, viz.—Up to £1000, nil; above £1000 and up to £5000, 2 per cent.; then up to £6000, 3 per cent.; then increasing ½ per cent. for each £1000 up to £10,000, for each £2000 up to £40,000, and for each £4000 up to £100,000, the last group, £96,000 to £100,000, being subject to 9⅘ per cent. Above £100,000 the duty is 10 per cent. Property left by the deceased to his widow or children is subject to half the foregoing rates, if the total value of the estate, after the deduction of all debts, does not exceed £50,000.

3. **Victoria.**—(i.) *Legislation.* The Acts contained in the subjoined list regulate the probate and succession duties of Victoria:—

(*a*) No. 1060, Administration and Probate Act 1890, with its amendments of 1891, 1892, 1898, 1903, and 1907.
(*b*) No. 1419, Intestate Estates Act 1896.
(*c*) No. 1827, Probate Charges Act 1903, and its amendment No. 1970 of 1905.
(*d*) No. 1862, Administration and Probate Duties Act 1903, with its amendments of 1904, 1905, 1906, 1907, 1908, and 1909.

The principal Act, the Administration and Probate Act 1890, was assented to on 10th July, 1890, and came into force on 1st August of the same year. It repealed Acts Nos. 338, 403, 427, 523, 900, 928, 1035 and 1053, and enacted a scale of duties which was enforced until 1st January, 1903, when the Administration and Probate Act of 1903 came into force.

(ii.) *Rates of Duty.* The last-mentioned Act provides for the following scale of duties on the estate, real and personal, of deceased persons, after the deduction of all debts, viz. :—Less than £200, nil ; above £200 and up to £300, 1½ per cent. ; then increasing ½ per cent. for each £100 up to £600 ; then increasing ⅓ per cent. for each £200 up to £1000 ; above £1000 and up to £1500, 4 per cent. ; then increasing ¼ per cent. for each £500 up to £6000 ; then increasing ⅕ per cent. for each £1000 up to £19,000; with the exception of the two stages £10,000 to £11,000 and £14,000 to £15,000, which involve an increase of ⅖ per cent. and whose rates are respectively 7⅕ and 8⅕ per cent. ; over £19,000 and up to £20,000, 9½ per cent. ; and over £20,000, 10 per cent. is charged.

The rates of duty as shewn above also apply to all settlements of property, both real and personal, where the person taking the property is a brother or sister, or descendant of a brother or sister, or by any other person in any other degree of collateral consanguinity to the settlor, but duty at the rate of 10 per cent. is payable on the value of property taken by a stranger in blood to the settlor or donor.

(iii.) *Special Rates.* Property left by the deceased to his widow, children or grandchildren, is subject to the following rates, except that in cases where the total value of the estate after payment of all debts does not exceed £2000 half these rates only are charged :—Up to £500, nil ; over £500 and up to £1000, 1 per cent. ; over £1000 and up to £2000, 3 per cent. ; then increasing by ½ per cent. for each £1000 up to £5000, and by ¼ per cent. for each £1000 up to £8000 ; over £8000 and up to £10,000, 5 per cent. ; increasing thence by ½ per cent. for each £2000 up to £24,000, for each £4000 up to £80,000, and for each £5000 up to £100,000, the last group £95,000 to £100,000 being subject to 9⅘ per cent. ; over £100,000, the amount payable is 10 per cent.

4. **Queensland.**—(i.) *Legislation.* The collection of probate and succession duties in Queensland is governed by the following Acts :—

(*a*) The Succession and Probate Duties Act 1892.
(*b*) The Succession Act Amendment Act 1895.
(*c*) The Succession and Probate Duties Amendment Act 1895.
(*d*) The Succession and Probate Duties Act 1904.
(*e*) The Succession Act 1906.
(*f*) The Succession and Probate Amendment Act 1906.

The principal Act, the Succession and Probate Duties Act of 1892, which was assented to on 4th October, 1892, and taken as coming into force on 7th September previous, repealed the Succession Duties Act of 1886, and enacted a scale of duties which is still levied.

(ii.) *Rates of Succession Duty.* If the whole succession or successions derived from the same predecessor, and passing upon death to any person, amount in money or principal value to less than £200, no duty is payable; where the value is £200 and less than £1000, 2 per cent. is due; £1000 and less than £2500, 3 per cent.; £2500 and less than £5000, 4 per cent.; £5000 and less than £10,000, 6 per cent.; £10,000 and less than £20,000, 8 per cent.; and when the value is £20,000 or upwards, 10 per cent. is charged.

(iii.) *Special Rates.* Duty at one-half of the above rates is payable when the successor is the wife or husband, or the lineal issue of the predecessor ; and at double the rates if the successor is a stranger in blood to the settlor.

(iv.) *Probate and Administration.* In addition to the foregoing succession duties a probate duty of 1 per cent. is payable on all estates having a net value of £300 or over. When the net value of the property of a deceased person does not amount to £300 it is exempt from duty.

(v.) *Exemptions.* Bequests for educational and charitable purposes in Queensland are exempt from taxation.

5. **South Australia.**—(i.) *Legislation.* Under the four Acts given hereunder the probate and succession duties are collected in South Australia :—

(*a*) No. 537, The Administration and Probate Act 1891.
(*b*) No. 567, The Succession Duties Act 1893.
(*c*) No. 819, The Administration and Probate Act 1903.
(*d*) No. 854, The Administration and Probate Amendment Act 1904.

On 25th October, 1893, the Succession Duties Act was assented to, and by it the Probate and Succession Duty Act of 1876, and its two amendments, Nos. 225 of 1881 and 361 of 1885, were repealed.

(ii.) *Rates of Duty.* On the property derived by any beneficiary the duties are assessed on the net value, and the following scale applies where the person taking the property is the widow, widower, descendant or ancestor of the deceased; and likewise where the property is given or accrues to any of the above-mentioned persons under a settlement or deed of gift:—Under £500, *nil;* over £500 and up to £700, 1½ per cent.; over £700 and up to £1000, 2 per cent.; over £1000 and up to £2000, 3 per cent.; over £2000 and up to £3000, 3½ per cent.; increasing thence by ½ per cent. for each £2000 up to £7000; over £7000 and up to £10,000, 5 per cent.; increasing thence by ½ per cent. for each £5000 up to £20,000, for each £10,000 up to £40,000, for each £20,000 up to £100,000, and for each £50,000 up to £200,000, the duty from £150,000 to £200,000 being 9½ per cent.; above £200,000 the duty is 10 per cent.

Where the person taking the property is a brother, sister, descendant of a brother or sister, or any person in any other degree of collateral consanguinity to the deceased person, or where the property is given or accrues to any of the aforesaid persons under a settlement or deed of gift, the duty is reckoned on the net present value of such property, and is payable at the rates shewn hereunder:—Under £200, 1 per cent.; up to £300, 1½ per cent.; up to £400, 2 per cent.; up to £700, 3 per cent.; up to £1000, 3½ per cent.; up to £2000, 4 per cent.; thence increasing 1 per cent. up to each of the following amounts:—£3000, £5000, £10,000, £15,000, and £20,000; above £20,000 10 per cent. is payable.

If the person taking the property, either by will or under a settlement or deed of gift, is a stranger in blood to the deceased or the settlor or donor, as the case may be, duty is charged at the rate of 10 per cent. on the net present value of the property.

(iii.) *Special Rates.* Duty at one-half the rates shewn above is levied when the person who takes is the child under twenty-one years of age or the widow of the deceased or the settlor or donor, provided that the net value of the whole estate be under £2000.

6. **Western Australia.**—(i.) *Legislation.* The only Acts relating to probate and succession duties at present in force in Western Australia are the Administration Act of 1903, which was assented to on 31st December, 1903, and the Administration Act Amendment Act 1909. The former repealed a number of Acts, including the Real Estates Administration Act 1893 and the Duties on Deceased Persons' Estates Act 1895. The latter levied the following scale of duties:—

(ii.) *Rates of Duty.* When the total value of the estate, real or personal, of a deceased person, or of the property given or accruing to any person under a settlement or deed of gift, does not, after the deduction of all debts, exceed £500, duty is payable at

the rate of 1 per cent.; where the value exceeds £500, but does not exceed £1000, 2 per cent. is charged; £1000 and under £2500, 3 per cent.; £2500 and under £4500, 4 per cent.; £4500 and under £6000, 5 per cent.; £6000 and under £7000, 6 per cent.; £7000 and under £8000, 6⅖ per cent.; £8000 and under £9000, 6⅗ per cent.; £9000 and under £10,000, 6⅘ per cent.; £10,000 and under £11,000, 7½ per cent.; £11,000 and under £12,000, 7⅖ per cent.; £12,000 and under £13,000, 7⅗ per cent.; £13,000 and under £14,000, 7⅘ per cent.; £14,000 and under £15,000, 8½ per cent.; £15,000 and under £16,000, 8⅖ per cent.; £16,000 and under £17,000, 8⅗ per cent.; £17,000 and under £18,000, 8⅘ per cent.; £18,000 and under £19,000, 9 per cent.; £19,000 and under £20,000, 9½ per cent.; £20,000 and above, 10 per cent.

(iii.) *Special Rates.* Half the above rates are charged the parent, issue, husband, wife, and issue of husband or wife, who are *bonâ-fide* residents of, and domiciled in, Western Australia.

7. **Tasmania.**—(i.) *Legislation.* The duties imposed in connection with probates and letters of administration in Tasmania are provided for by the following Acts:—

(*a*) The Deceased Persons' Estates Act of 1874 and 1881.
(*b*) The Probate (Foreign) Act 1893.
(*c*) The Probate Act 1893, with amendment in 1906.
(*d*) The Deceased Persons' Estate Management Act 1903.
(*e*) The Deceased Persons' Estates Duties Act 1904.
(*f*) The Death Duties (Deductions) Act 1909.

The Probate Duties Act of 1868 levied a scale of rates which remained in force until the passing of the Deceased Persons' Estates Duties Act in 1904, when the former Act was repealed and a new schedule came into operation. The Death Duties (Deductions) Act provides for the deduction from death duties of the amount of duty payable in the United Kingdom in respect of property situated therein.

(ii.) *Rates of Duty.* Duty at the rates given below is payable on the property derived from a deceased person, or comprised in a settlement or deed of gift in so far as it includes, or is a portion of—

(*a*) His real and personal property in Tasmania, including that over which he had a general power of appointment, exercised by his will, or by the settlement or deed of gift, if the deceased was, at the time of his death, domiciled in Tasmania.
(*b*) His personal property, as above, including all debts, money, etc., recoverable in action by the executor in Tasmania, if the deceased was, at time of death, domiciled elsewhere than in Tasmania; and
(*c*) Property accruing to any husband by virtue of his right as husband on the decease of his wife.

When the value of the property of the deceased person, settlor, or donor, as the case may be, at the time of his death exceeds £500, and does not exceed £1000, 2 per cent. is payable; exceeding £1000 and not exceeding £2000, 2½ per cent.; £2000 and not over £5000, 3 per cent.; £5000 and not over £20,000, 4 per cent.; £20,000 and not over £100,000, 5 per cent.; and over £100,000, 10 per cent.

(iii.) *Special Rates.* Double the above rates are charged when the property is derived by, or given or accrues to a brother or sister, or the child of a brother or sister of the deceased person, settlor, or donor, but in no case is a duty of more than 10 per cent. payable. When the property is derived by a stranger in blood to the deceased person, settlor, or donor, or accrues to any collateral relation beyond the third degree, the duty is 10 per cent. on the value of the property of any value whatever. No duty is payable in respect of any money which is payable to any person by a friendly society upon the death of a member or his wife or child.

(*b*) Stamp Duties.

1. **Legislation in the Several States.**—The principal Acts at present in force in the several States relating to stamp duties are as follows:—

(*a*) *New South Wales.* Stamp Duties Act 1898, with amendments in 1900, 1904, and 1907.
(*b*) *Victoria.* Stamps Act 1890, with amendments in 1892, 1900, 1904, and 1908.
(*c*) *Queensland.* Stamp Act 1894, with amendment in 1904.
(*d*) *South Australia.* Stamp Act 1886, with amendment in 1902.
(*e*) *Western Australia.* Stamp Act 1882, with amendments in 1905 and 1906.
(*f*) *Tasmania.* Stamp Duties Act 1882, with amendments in 1886, 1888, 1892, 1900 and 1904.

These Acts provide for the payment of duty on bank notes, bills of exchange, and promissory notes, deeds, leases, policies, receipts, transfers, and so forth, all of which with the exception of bank notes are required to be stamped either by an impressed or adhesive stamp, as the case may be.

The revenue derived by the several States of the Commonwealth from the imposition of stamp duties for the years 1905-6 to 1909-10 is shewn in the accompanying table :—

STAMP REVENUE (EXCLUSIVE OF PROBATE AND SUCCESSION DUTIES),
1905-6 TO 1909-10.

State.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
New South Wales	299,165	343,666	254,538	205,022	222,720
Victoria	222,697	240,373	240,535	237,681	250,358
Queensland	99,631	119,397	142,573	132,073	145,556
South Australia	66,480	75,034	79,547	89,160	97,877
Western Australia	59,200	63,634	59,617	58,065	62,714
Tasmania	54,080	57,198	58,832	53,713	54,741
Commonwealth ...	801,253	899,302	835,642	775,714	833,966

2. **Bank Notes.**—Promissory notes issued by any bank are not required to bear a duty stamp either impressed or adhesive, and may be reissued as often as thought fit. An annual composition has, however, to be paid in lieu of stamp duty. This composition is payable quarterly, and is the same in all States, being at the rate of £2 per annum on every £100 or part thereof of the average annual amount of bank notes in circulation. On 2nd June, 1893, the Treasury Notes Act of Queensland was assented to, by which the issue of Treasury notes payable on demand was authorised. These notes were used exclusively by the banks in that State, but their issue has been prohibited by the Federal Bank Note Tax Act. (See Section xxi., Private Finance.)

The issue of bank notes by any bank is likely to be seriously restricted in the future by this Act, which passed the Federal Parliament in the session of 1910, and was assented to on 10th October, 1910. Further reference is made to the Act in the section dealing with Private Finance. It is enough to say here that it imposes a tax of 10 per cent. per annum on all bank notes issued or re-issued by any bank in the Commonwealth after the commencement of the Act and not redeemed.

3. **Bills of Exchange and Promissory Notes.**—(i.) *Rates.* In all the States except New South Wales, when a bill of exchange or promissory note is payable on demand, the rate charged is one penny. When the bill was not payable on demand the duty levied in New South Wales, until the Amendment Act of 1907 came into force on 1st January, 1908, was sixpence for every £25 or part thereof, but under this Act no duty is now payable on bills of exchange or promissory notes in that State. The rate in Victoria for all bills of exchange was sixpence for every £25* up to £100, and one shilling for every £50 over £100, but under the Act of 1908 these rates only apply to those bills both drawn in, and payable in Victoria, all others being free from duty. One shilling is charged in Queensland for every £50. For every £25 the duty in South Australia is sixpence if the bill is

* "Or fractional part thereof" is to be understood after all amounts mentioned.

negotiable in the Commonwealth, but when a bill is drawn in South Australia and payable in any place beyond the Commonwealth, one shilling is charged for every £100, in which case an adhesive stamp only is to be used. In Western Australia, when the amount of the bill does not exceed £25 the duty payable is sixpence, when it exceeds £25 the duty is increased by sixpence for every £25 up to £100, and when it exceeds £100, one shilling for every £50 is charged. An amount of threepence is levied in Tasmania for a bill not exceeding £5 ; sixpence for one exceeding £5 and under £25 ; and an additional sixpence for every succeeding £25.

(ii.) *Exemptions.* The chief classes of bills which are exempt from taxation are Government debentures, Treasury notes, drafts on account of Public Service, drafts by banker on banker, letters of credit in the State, etc.

4. **Bills of Lading.**—(i.) *Rates.* The charge made for a bill of lading or copy thereof is sixpence in four of the States, viz., New South Wales, Victoria, South Australia, and Tasmania. In Queensland the rate is one shilling, and for a receipt of a bill of lading sixpence, whilst in Western Australia the duty is threepence if the goods do not exceed half a ton in weight or measurement, and sixpence if the goods exceed that quantity. The Acts provide that no bill of lading is to be stamped after its execution.

5. **Receipts.**—(i.) *Rates.* The duty payable on receipts given on payment of the amount of £2 or upwards in the States of Victoria, South Australia and Western Australia is one penny. Under the provisions of the Stamp Duties Act of 1898 the rate in New South Wales was twopence for £2 or over, but this was repealed by the Stamp Duties Amendment Act of 1907, and no duty is now payable on receipts in that State. Acknowledgments for payment of £1 or upwards were taxed one penny in Queensland under the 1894 Act, but by Amendment Acts of 1901, 1903 and 1904, the first two of which have since been repealed, it was provided that amounts of £1 and less than £2 were to be taxed one penny ; £2 and less than £50, twopence; £50 and less than £100, threepence ; and £100 or over, sixpence for every £100 or part thereof. By the 1904 Amendment Act of Tasmania, receipts for sums amounting to £2 and not over £5 are subject to a duty of one penny, and when the amount exceeds £5, one penny is charged for every additional £10 or part thereof, provided that the maximum duty on any receipt is fourpence.

(ii.) *Exemptions.* The exemptions from payment of duty on receipts vary considerably in the several States, and amongst others may be mentioned the following :—On His Majesty's Service, banker's receipt for bill of exchange or promissory note, current accounts, savings bank accounts, municipal rates, money orders and postal notes, wages received by labourers, workmen, menial servants, etc.

(c) Land Tax.

1. **General.**—Queensland is the only State in the Commonwealth in which a land tax is not levied, although it was not until as recently as 1907 that the first tax on land was imposed in Western Australia. In all of the other States the tax dates back to a much earlier period.

The following table shews the amount collected by means of such taxes during the financial years 1905-6 to 1909-10 in the States in which a land tax was imposed :—

LAND TAX COLLECTIONS, 1905-6 to 1909-10.

State.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
New South Wales	336,785	345,497	178,889	80,794	9,066
Victoria	103,536	92,438	89,496	85,559	114,357
South Australia	94,601	90,200	93,762	92,158	94,126
Western Australia	...	...	11,140	33,120	34,344
Tasmania	54,776	56,065	57,742	59,651	79,021
Commonwealth	589,698	584,200	431,029	351,282	330,914

2. **New South Wales.**—(i.) *Legislation.* The following Acts relating to the levying, assessment, and collection of land tax are at present in force in New South Wales:—

(*a*) Land and Income Tax Assessment Act 1895, with amendments in 1896, 1897, 1898, and 1904.
(*b*) Land Tax Act 1895, with amendments in 1899, 1900, and 1902.
(*c*) Local Government Act 1906.

The principal Act, the Land and Income Tax Assessment Act of 1895, which was enacted for the purpose of establishing a system of direct taxation by means of a tax on land, as well as for other objects, was assented to on 12th December of that year. The Land Tax Act of 1895, assented to on the same day as the above-mentioned Act, provided for a tax which was amended in respect of certain leased lands by the amending Act of 1902, and suspended in cases, which will hereinafter be referred to, by the Local Government Act of 1906.

(ii.) *Rates.* Under the provisions of the principal Act a tax is levied on the unimproved value of all land after the deduction of £240, which deduction is only made once in the case of an owner of more estates than one. Land that is subject to mortgage is liable to a deduction each year from the tax on the unimproved value of a sum equal to the income tax leviable for that year on the interest derivable from the whole mortgage on the land, improvements included. A tax of one penny in the £ of the unimproved value was declared by the Land Tax Act of 1895. The Act of 1902, which only applies to land while it is subject to a lease from the owner which was current at the end of the year 1902, and of which not less than thirty years were at such time unexpired, and land that is subject to a lease from the owner made after the commencement of the Act for a term of not less than thirty years, provided for a similar tax to be paid conjointly by owners and lessees, according to an adjustment made by the Commissioners. Under the Local Government Act of 1906 the operation of the land tax is suspended in the case where a shire or municipality has levied a tax on the unimproved capital value of the ratable land within its boundaries.

(iii.) *Exemptions.* Some of the principal lands on which no taxation is payable are as follows:—

(*a*) Crown lands which are not liable to right of purchase, and lands held by way of conditional or special lease and homestead selections under any Crown Lands Act.
(*b*) Lands vested in His Majesty or in any person for or on behalf of His Majesty.
(*c*) Lands vested in the Railway Commissioners.
(*d*) Public roads and thoroughfares; reserves for health, recreation or enjoyment, parks, cemeteries, etc.
(*e*) Lands occupied or used exclusively for public hospitals, benevolent and charitable institutions, churches, universities, affiliated colleges, mechanics' institutes, etc., and lands on which are erected public markets, town halls, etc., and land vested in any council, municipality, hospital, or affiliated college.
(*f*) Land vested in trustees for the use of agricultural, horticultural, pastoral or zoological show purposes.
(*g*) Land used exclusively for the site of a residence of a minister of religion ministering at some place of public worship, and land used as a site for a school attached to, or connected with, any place of public worship.

3. **Victoria.**—(i.) *Legislation.* The Land Tax Act of 1910, which repealed the Act of 1890, now governs the taxation of land in Victoria. Under this Act a tax is levied on all land whose unimproved value exceeds £250. As the unimproved value rises above £250 the exemption diminishes at the rate of £1 for every £1 of excess, so as to leave no exemption at £500. There is a uniform rate of ½d. per £ of unimproved value, and no amount less than two shillings and sixpence is collected.

The subjoined is a list of the principal lands that are free from taxation :—

(*a*) Land, the property of His Majesty the King.

(*b*) Land used for public worship, recreation, or educational purposes ; all parks, show-grounds, etc. ; the University and its affiliated Colleges.

(*c*) Land, vested in a municipality or a church.

(*d*) Land vested in Railway Commissioners, Commissioner of Savings Banks, Melbourne and Geelong Harbour Trusts, Melbourne and Metropolitan Board of Works, etc.

4. **South Australia.**—(i.) *Legislation.* The administration of the land tax in South Australia is governed by the following Acts:—

(*a*) Taxation Act 1884, with amendments in 1885, 1887, 1894, 1900, 1902, 1903, 1904, and 1905.

(*b*) Increase of Taxes Act 1902.

On 14th November, 1884, the principal Act, viz., the Taxation Act, was assented to. It provided for a tax to be paid on the unimproved value of any land in the State of South Australia, but the rate was increased by subsequent Acts, as will be shewn below.

(ii.) *Rates.* The principal Act declared a tax of one half-penny for every £1 sterling in the amount of the taxable value, and the amending Act of 1894 imposed an additional tax of one half-penny for every £1 exceeding the amount of £5000 of the total assessed unimproved value owned by any party. Under the provisions of the Increase of Taxes Act of 1902 the general rate was augmented by one farthing in the £1 for the year 1903 only. This was repeated in 1904 for the year 1905 only. The last-mentioned Act also increased by one farthing the tax payable on land valued over £5000, as provided in the Act of 1894 for the one year only, the present rate payable on property exceeding £5000 in value being, therefore, one penny for every £1 of the total assessed unimproved value over that amount. In the case of absentees an addition of 20 per cent. to these rates is provided for under the Amending Act of 1894. Under this Act absenteeism consisted of absence from the State of South Australia for the period of two years prior to the date on which the tax became due, but the duration of absence was reduced to twelve months by the amendment Act of 1904.

(iii.) *Exemptions.* The subjoined is a list of lands that are free from taxation:—

(*a*) Land of the Crown which, for the time being, is not subject to any agreement for sale or right of purchase.

(*b*) Park lands, public roads, cemeteries, and reserves.

(*c*) Land used solely for religious or charitable purposes, or by any public institute.

5. **Western Australia.**—(i.) *Legislation.* The Land and Income Tax Assessment Act of 1907—the first Act relating to the payment of a tax on land in Western Australia—was assented to on 20th December, and came into force on 1st January following. A tax on the unimproved value of land was imposed by the Land Tax and Income Tax Act, which received assent and came into force on the same day as the above-mentioned Act.

(ii.) *Rates.* A tax at the rate of one penny for every pound sterling of the unimproved value of land is charged, provided that the aggregate value of the land held exceeds £50. A rebate of one half of the tax levied is allowed to every owner of improved land.

(iii.) *Exemptions.* The lands specified below are exempt from assessment for taxation:—

(*a*) All lands held by or on behalf of His Majesty.

(*b*) Public roads and thoroughfares, public reserves for health, recreation, or enjoyment, and public parks, university endowments, cemeteries and commons.

(*c*) Land used in connection with any public hospital, benevolent, charitable or religious institution, mechanics' institute, school of arts, etc., and land on which is erected any State market, town hall, or municipal chambers.

(*d*) All lands held as mining tenements, and lands dedicated to, or vested in trustees, and used for zoological, agricultural, pastoral, or horticultural show purposes, or other public scientific purposes.

(*e*) Land, the unimproved value of which does not exceed £50.

6. **Tasmania.**—(i.) *Legislation.* The Land Tax and Income Tax Act of 1910 governs this form of taxation in Tasmania. According to it a land-owner pays in respect of every pound sterling of unimproved value according to the following scale.

(ii.) *Rates.* When the total unimproved value is less than £2500, 1d. in the pound is payable; £2500 and under £5000, 1¼d.; £5000 and under £15,000, 1½d.; £15,000 and under £30,000, 1¾d.; £30,000 and under £50,000, 2d.; £50,000 and under £80,000, 2¼d.; £80,000 and above, 2½d.

(iii.) *Exemptions.* The number of exemptions as contained in the principal Act is too lengthy to be given in detail, and a few of the most important only are herewith appended:—

(*a*) Lands of the Crown which, for the time being, are not subject to lease, sale etc., and land the property of and occupied by or on behalf of His Majesty.

(*b*) Botanical gardens at Hobart and Launceston.

(*c*) Public roads, cemeteries, reserves, and recreation grounds.

(*d*) Land on which is built any public library, museum, hospital or any building used solely for charitable or religious purposes, or State Schools.

(*e*) Any land owned by any local authority, or any local governing or statutory public body.

(*d*) Income Tax.

1. **General.**—A duty on the income of persons, whether it be derived from personal exertion or from the produce of property, is now imposed in all the States of the Commonwealth. As will be seen in dealing with the different States, the rates, exemptions, etc., are widely divergent, but the general principle of the several Acts is strikingly consistent. The Dividend Duties Acts of Queensland and Western Australia—the former of which is now repealed—supplied to a certain extent the place of an income tax in those States in former years, but, with the increasing demands upon the State Treasury, the levying of a direct income tax has been resorted to.

In the following table particulars are furnished concerning the total amount collected in the several States during the years 1905-6 to 1909-10. In the case of Queensland and Western Australia the amount of dividend duty collected is included, as is also the amount of ability tax in Tasmania, these taxes being closely allied to the income-tax.

INCOME, DIVIDEND, AND ABILITY TAXES, 1905-6 to 1909-10.

(STATES.)

State.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
New South Wales	276,299	283,422	215,283	202,369	219,977
Victoria	318,233	355,148	317,354	304,464	338,585
Queensland	264,957	284,476	271,299	273,091	304,693
South Australia	128,756	166,582	212,643	160,777	180,923
Western Australia	137,485	116,916	113,967	134,164	132,180
Tasmania	98,321	116,949	101,433	94,015	110,258
Commonwealth	1,224,051	1,323,493	1,231,979	1,168,880	1,286,616

2. **New South Wales.**—(i.) *Legislation.* The Acts under which the administration of the income tax is carried out in New South Wales are as follows:—

(*a*) Land and Income Tax Assessment Act 1895, with amendments in 1896, 1897, 1898, and 1904.
(*b*) Income Tax Act 1895, with amendment in 1907.
(*c*) Taxation Amending Acts 1905 and 1906.

The Land and Income Tax Assessment Act, which was assented to on 12th December, 1895, and came into force on the first day of the following year, is the principal Act. Under this Act the amount of taxable income from all sources for the year immediately preceding the year of assessment is the amount on which tax is payable, except in the case of income earned outside the State of New South Wales, which is not subject to taxation. The 1898 Act declared that for the purposes of taxation, the extracting from the soil, winning, producing, or manufacturing in the State of any product, commodity or substance and its export, is part of the carrying on of such trade in New South Wales, and the value of such product, etc., when exported, is income earned in the said State.

(ii.) *Rates.* Under the Income Tax Act of 1895 the rate payable in New South Wales is sixpence in the pound on the amount of all incomes which exceed £200 per annum.

(iii.) *Exemptions.* The subjoined is a list of incomes, revenues, and funds which are exempt from the payment of income tax:—

(*a*) Income not exceeding £200 per annum.
(*b*) Revenues of municipal corporations or other local authorities.
(*c*) Incomes of mutual life assurance societies, and of other companies or societies not carrying on business for purposes of profit or gain.
(*d*) Dividends and profits of the Savings Bank of New South Wales, the Post-office Savings Bank, and the income of registered friendly societies.
(*e*) Incomes and revenues of all ecclesiastical, charitable, and educational institutions of a public character.
(*f*) Income derived from the ownership, use, or cultivation of land subject to land tax.

The exemptions declared in sub-sections (*b*) to (*e*) above do not extend to the salaries and wages of persons employed by such corporations, companies, etc.

(iv.) *Deductions.* In the case of a company the person liable to taxation in respect of an income exceeding £200 was, under the principal Act, entitled to a deduction of £200 in the assessment of such income, but by the Amendment Act of 1907, which came into force on 1st January, 1908, it has been provided that the deduction is in the first place to be made from so much of the income as is derived from personal exertion. The latter Act also provides—(*a*) that where the income derived from personal exertion is less than £200 the deduction is to be made to the extent of such income, and any part of the £200

not applied in such deduction is to be taken from the income derived from the produce of property; and (*b*) when the income of any person, not being a company, which is obtained by personal exertion, exceeds £200, he is entitled to a further deduction of the amount by which such income exceeds £200, provided that the total deductions do not, in any case, exceed £1000.

In addition to the above, deductions are allowed on account of losses, repairs, cost of earning incomes, etc., and also on account of expenditure not exceeding £50 per annum on life insurance.

3. **Victoria.**—(i.) *Legislation.* The principal Act in Victoria, the Income Tax Act of 1895, was assented to on 29th January of that year. On the 24th December following the Income Tax Rate Act received assent, and since then, with one exception, an Act has been passed each year declaring rates for the year ending 31st December following the date on which the Act came into force. The first scale of taxation was provided for by the Income Tax Rate Act 1895, and remained in force until 1st January, 1903, when the first amendment of 1903 came into force. The rates contained in the latter Act were superseded when the second amendment of 1903 came into operation, and were further altered by the 1904 Act, the rates of which are in force at present.

(ii.) *Rates.* Under the provisions of the last-mentioned Act a person, not being a company, is subject to the following rates of duty on the amount of his income from personal exertion, viz.—For every £1 up to £500, threepence; over £500 and up to £1000, fourpence; £1000 and up to £1500, fivepence; and over £1500, sixpence; with double these rates if the income be derived from property. Incomes not exceeding £156 were exempt from taxation under this Act, and this exemption was, under the 1906 Act, increased to £200, at which sum it still stands. The minimum income subject to tax is thus £201. Incomes between £201 and £500 are allowed an exemption of £150, while those above £500 pay tax on the full amount. The Act of 1908 provided that the amount of income tax, computed on the above basis, to be payable by a person, not being a company, for the year ending 31st December, 1909, should be reduced by 20 per cent., but this reduction was repealed in 1910. Land used as a residence by the owner is deemed to return 4 per cent. on its actual capital value.

(iii.) *Special Rates.* (*a*) A tax of sevenpence is levied on the income of any company liable to tax, not being a life assurance company, for every pound sterling of the taxable amount thereof, and a similar tax of eightpence on a company which carries on in Victoria the business of life assurance; and (*b*) a tax assessed on five pounds in every £100 of the amount payable to him for the carriage of passengers, live stock, mails, or goods shipped in Victoria, is imposed on every owner or charterer of a ship whose principal place of business is out of Victoria.

(iv.) *Exemptions.* Some of the most important exemptions from taxation are as follows:—

(*a*) Persons whose income does not exceed £200.

(*b*) Income of the Governor, a Minister of the Crown as such, Board of Land and Works, Railway Commissioners, Harbour Trust, Board of Works, Fire Brigades, Savings Bank, University, Working Men's College, or any Public College affiliated to the University.

(*c*) Income of religious bodies, registered friendly, provident, building and trade union societies.

(*d*) Trust societies, associations, etc., not carrying on business for purposes of gain to members; mutual fire insurance companies and fire or marine insurance companies, licensed under the Stamps Acts, whose head office is in Australia, and mining companies.

(*e*) Interest accruing to any person not resident in Victoria from stock, debentures or Treasury bonds of the Government of Victoria, or issued by any public or municipal trust, body or corporation.

(v.) *Deductions.* Expenditure incurred in Victoria by any taxpayer in the production of his income, and all taxes payable by him (income tax excepted) are allowed to be deducted from the gross amount of his income, as is also the amount of all premiums not exceeding £50 paid by a taxpayer in respect of life assurance policies; but no deduction by way of exemption from income tax is permitted to a person who has been out of the State for six consecutive months in the year during which the income was received, or for any sum expended on repairs of premises, implements, etc., used for the purpose of trade, or for bad debts and the maintenance of the families of taxpayers.

4. **Queensland.**—(i.) *Legislation.* The laws under which the income tax of Queensland is regulated are contained in the Income Tax Act of 1902, and its amendments of 1902, 1904, 1905, 1906, and 1907. The first-named, which is the principal Act, was assented to on 1st December, 1902. The Dividend Duty Act of 1890, which imposed a tax on the dividends declared by public companies having their head office or place of business in Queensland, was repealed by the Income Tax Amendment Act of 1904, and in lieu thereof the rates that are shewn in (*c*) below are enforced.

(ii.) *Rates.* The present rates of duty as laid down in the Amendment Acts of 1906 and 1907 are as follows, provided that the total income of a person, not being a company or an absentee, exceeds £200:—

(*a*) On the income derived from personal exertion:—Where the total income does not exceed £500 the tax levied is sixpence for every pound; where it exceeds £500 and does not exceed £1000, sixpence for every pound of the first £500 and sevenpence for every pound over £500; where it exceeds £1000 and does not exceed £1500, sevenpence for every pound of the first £1000 and eightpence for every pound over £1000; and when the income exceeds £1500, eightpence for every pound is payable.

(*b*) On the income derived from the produce of property the rate is ninepence for every pound.

(*c*) On the income of all companies, or of an absentee, that is, a person not domiciled in Australia, one shilling in the pound is charged, provided that in the case of a company whose head office is in Queensland, the income is assessed at not less than the amount of dividends declared during the year, and if the profits remain undistributed amongst the shareholders, only sixpence in the pound is payable upon such undistributed profits. In the case of foreign companies, that is, companies whose head office is outside Queensland, special rules are given in the Act for determining the taxable amount of income.

(iii.) *Exemptions.* Included in the list of exemptions are the following incomes which are free from taxation:—

(*a*) Income of a person, not being a company, which does not exceed £200.

(*b*) Income of the Governor of Queensland, and the revenues of local bodies derived for purposes of local self-government.

(*c*) Incomes of societies and institutions not carrying on business for purposes of profit or gain, and of any registered friendly societies.

(*d*) Incomes and revenues of religious, charitable, and educational institutions of a public character.

(*e*) Incomes arising or accruing from debentures, stock or Treasury bills issued by the Government of Queensland, or derived as dividends from any company which has paid in Queensland income tax on the profits from which such dividends are paid.

(iv.) *Deductions.* When the income of a person, not being a company or an absentee, exceeds £200 per annum, the deduction of £200 is, in the first place, made from the

income, if any, derived from personal exertion. The amount of all premiums not exceeding £50 paid by a taxpayer in respect of life assurance policies, or into any superannuation fund, etc., and all losses and outgoings actually incurred in Queensland by him in production of his income, are also amongst the deductions which are allowed.

5. **South Australia.**—(i.) *Legislation.* Under the Acts given herewith the income tax of South Australia is collected :—

(*a*) Taxation Act 1884, with amendments in 1885, 1887, 1894, 1900, 1902, 1903, 1904, 1905, and 1908.
(*b*) Additional Income Tax Act 1893.
(*c*) Income Tax Continuance Act 1893, with amendments in 1897 and 1898.
(*d*) Increase of Taxes Act 1902.

On the 14th November, 1884, the principal Act, the Taxation Act, was assented to. The rates of duty enforced thereby were superseded in order by the Additional Income Tax Act of 1893, the Amendment Act of 1894, the Increase of Taxes Act of 1902, and the Amendment Act of 1903, the scale enacted by the latter Act still remaining in operation.

(ii.) *Rates.* Under the last-mentioned Act the income of every person of the value of £150 or over is subject to a tax of fourpence half-penny for every pound up to and inclusive of £800, and sevenpence for every pound above that amount if the income be derived from personal exertion ; but if the income consist of the produce of property, the rate is ninepence for every pound up to and inclusive of £800, and thirteenpence half-penny for every pound above the sum of £800. A tax of £5 on every £100 received by foreign shipping companies is imposed under the Act of 1908.

(iii.) *Exemptions.* The following incomes are not subject to the payment of income tax :—

(*a*) Income of every person under the value of £200.
(*b*) Income of municipal corporations and district councils.
(*c*) Income of companies, public bodies and societies, not carrying on business for the purpose of gain to be divided among the shareholders, and the income of all friendly societies.
(*d*) Income derived from land on which land tax is payable, provided that such income does not exceed 5 per cent. of the actual value thereof.
(*e*) Income derived from land and produced by personal exertion where the land does not exceed £1000 in unimproved value.

(iv.) *Deductions.* All expenses, etc., actually incurred by a taxpayer in the production of his income are deducted from the gross amount of his income. If he has been out of South Australia for twelve consecutive months prior to the date on which the tax falls due, or if his net income from all sources exceeds £400, no deduction of any kind is allowed. In the case of an income which exceeds £200, that sum is deducted from the net amount of income derived from the produce of property, but if such income does not amount to £200, the difference is taken from that derived from personal exertion. No deductions are allowed for (*a*) cost of maintenance of a taxpayer and his family or establishment ; (*b*) cost of implements, etc., for purposes of the trade, except renewals for wear and tear ; or (*c*) domestic and private expenses.

6. **Western Australia.**—(i.) *Legislation.* On the 20th December, 1907, the first Income Tax Act of Western Australia received assent under the title of the Land and Income Tax Assessment Act 1907, and on the same day the Land Tax and Income Tax Act was passed, declaring rates for the year ending 30th June, 1908. A similar Land Tax and Income Tax Act is passed each year declaring the rates to be levied for the current financial year.

(ii.) *Rates.* A tax of fourpence in the pound is levied on the annual amount of all incomes exceeding £200 per annum. An additional 50 per cent. is payable on the income of any person who has not been resident in the Commonwealth of Australia during any part of the year preceding the year of assessment, provided that he has not been absent on public service.

(iii.) *Exemptions.* The following are the most important cases of incomes, revenues, and funds exempt from income tax:—

(*a*) Incomes not exceeding £200 per annum.
(*b*) Revenues of municipal corporations, road boards, or other statutory public bodies.
(*c*) Incomes of life assurance companies and of companies or societies not carrying on business for the purpose of profit or gain.
(*d*) Dividends and profits of companies subject to duty under the Dividend Duties Act, and of the Government Savings Bank and Agricultural Bank.
(*e*) Income of the Governor of Western Australia, and of all ecclesiastical, charitable and educational institutions of a public character.
(*f*) Incomes arising or accruing to any person from Western Australian Government debentures, inscribed stock, and Treasury Bills.
(*g*) Income derived from land on which land tax is payable.

(iv.) *Deductions.* Sums expended by a taxpayer for repairs of premises, and expenses, etc., incurred in the production of his income are deducted from the amount on which duty is payable; as are also sums not exceeding £50 in the aggregate which are paid as life assurance premiums or in connection with fidelity guarantees or bonds. The amount paid to a taxpayer's sons and daughters, over the age of sixteen years, employed in his trade or occupation, and a sum representing ten pounds for each child under the age of sixteen residing with, and dependent on him, are also allowed to be deducted from his income.

(v.) *Dividend Duties Act in Western Australia.* This Act was passed in order to impose a tax on the dividends or profits of incorporated companies, and repealed the Company Duties Act passed in 1899. The Dividend Duties Act was passed on 20th December, 1902, and an amendment was assented to on 14th December, 1906. The principal Act provides that within seven days after the declaration of a dividend by a company carrying on business in Western Australia such company shall pay to the Colonial Treasurer a duty equal to one shilling for every pound of the amount or value of such dividend. A company that carries on in the State any insurance or assurance business exclusively (not being a life assurance company is required to pay, on or before 1st March in each year, a sum equal to twenty shillings for every £100 of premiums, and a proportionate sum for every fraction of £100 of such premiums. The rates payable by shipping companies are 5 per cent. of 5 per cent. on all inward or outward traffic, including passenger fares, cent. of the profits on sales of coal or other goods, or of the profits of vessels trading exclusively within the State.

7. **Tasmania.**—(i.) *Legislation.* The Land Tax and Income Tax Act of 1910, which repealed the Income Tax Act of 1902 and its amendment, governs this form of taxation in Tasmania. The tax is levied according to the following scale:—

(ii.) *Rates.* In the case of income derived from personal exertion the scale is as follows:—Under £125, 4d.; between £125 and £150, 4¼d.; between £150 and £250, 4¾d.; between £250 and £350, 5½d.; between £350 and £400, 5¾d.; between 400 and £700, 6d. on first £400 and 7d. on the remainder; between £700 and £900, 6d. on first £400, 7d. on next £200, and 8d. on remainder; between £900 and £1000, 6d. on first £400, 7d. on next £200, 8d. on next £200, and 10d. on remainder; above £1000, 6d. on first £400, 7d. on next £200, 8d. on next £200, 10d. on next £200, 1s. on next £500, 1s. 2d. on next £500, and 1s. 4d. on remainder.

The duty levied by the principal Act is one shilling for every pound sterling of the taxable amount derived from the produce of property, provided that the income is £100 or over per annum. The same scale also applies to the income of any company except those that are specially mentioned below, and to dividends.

(iii.) *Exemptions.* The exemptions from taxation in this State comprise the following:—

(*a*) Income of any person, not being a company, under £100 per annum, provided that such income is not received as a prize in any lottery authorised by law in Tasmania.
(*b*) Revenues of Municipal Corporations, Road Trusts, Town and Marine Boards, Water Trusts and other local government bodies.
(*c*) Incomes of companies, societies, etc., not carrying on business for the purposes of gain to the shareholders, and registered friendly societies.
(*d*) Income of the Governor of Tasmania.
(*e*) Income derived as rent for the use and occupation of land that is subject to land tax.
(*f*) Income of every person arriving in Tasmania for a period of six months after his arrival.

(iv.) *Deductions.* Incomes under £80 are exempt in cases of unmarried persons, or under £100 in cases of married persons, widowers, and widows maintaining at least one child under the age of sixteen years. For incomes between £80 and £400 the following deductions are allowed:—Between £80 and £110, £70; between £110 and £125, £60; between £125 and £150, £50; between £150 and £250, £40; between £250 and £350, £30; between £350 and £400, £20. Also every tax-payer, the taxable amount of whose income is less than £150, can claim a rebate of two shillings and sixpence for every child under the age of sixteen.

v.) *Ability Tax in Tasmania.* The Taxation Act of 1904 provides for the levying of a tax upon persons in proportion to their means or ability. It was assented to on 1st November, 1904, and an amending Act was passed on 30th November, 1906. The assessment of the taxable amount is determined according to the annual value of the property occupied or the amount paid for board and lodging, as the case may be, and varies in the case of property from one penny to sixpence in the pound of annual value, with a minimum of two shillings and sixpence, and in the case of board and lodging from three halfpence to sixpence in the pound on the amount payable annually for board and lodging.

8. **Taxation of Commonwealth Salaries and Allowances.**—On 8th October, 1907, the Commonwealth Salaries Act, passed by the Federal Parliament, received the Governor-General's assent. By this Act it is declared that salaries and allowances paid by the Commonwealth are liable to taxation by the States. The tax is payable in the State in which the officer resides and the salary is earned, and in the case of a member of the Parliament of the Commonwealth, in the State in which he was elected. The only exemption from taxation is the salary of the Governor-General. This Act was the outcome of considerable litigation, brought about by the refusal of persons in receipt of Federal salaries and allowances to pay income tax in respect thereof.

§ 3. Trust Funds.

1. **Nature.**—In addition to the moneys received by the several State Governments as revenue, and paid to the credit of their respective Consolidated Revenue Funds, considerable sums are held by the Governments in trust for various purposes. One of the chief sources of these trust funds is the State Savings Bank, which exists in each State, either as a Government department or under the control of a Board acting under Government supervision or Government guarantee. In most of the States also, sinking funds

for the redemption of public debt are provided, and the moneys accruing thereto are paid to the credit of the appropriate trust funds. A similar course is followed in the case of municipal sinking funds placed in the hands of the Government. In all the States except New South Wales, life assurance companies carrying on business are required to deposit a substantial sum in cash or approved securities with the Government, and these deposits go to further swell the trust funds. Various other deposit accounts, superannuation funds, suspense accounts, etc., find a place in these funds. The trust funds have at various times enabled the several State Treasurers to tide over awkward financial positions, but the propriety of allowing deficits to be frequently liquidated in this manner is worthy of very serious consideration.

2. **Extent of Funds.**—The amount of such funds held by the several State Governments on 30th June, 1910, was as follows:—

TRUST FUNDS ON 30th JUNE, 1910.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	All States.
	£	£	£	£	£	£	£
Amount of trust funds	2,743,155	7,276,179	5,328,729	805,080	7,425,275	506,358	24,084,776

§ 4. Loan Funds.

1. **Nature.**—As early in the history of Australia as 1842 it was deemed expedient to supplement the revenue collections by means of borrowed moneys, the earliest of the loans so raised being obtained by New South Wales for the purpose of assisting immigration, at rates of interest varying from 2¾d. to 5¼d. per £100 per diem, or approximately from 4½ per cent. to 8 per cent. per annum. The principal reason for Australian public borrowing, however, has been the fact that the Governments of the several States have, in addition to ordinary administrative duties, undertaken the performance of many functions which, in other countries, are usually entrusted to local authorities, or left to the initiative of private enterprise. Principal amongst these have been the construction of railways and the control of the railway systems of the several States, while the assumption by the State Governments of responsibilities in connection with improvements to harbours and rivers, and the erection of lighthouses, as well as the construction of works for the purposes of water supply and sewerage, have materially swelled the amounts which it has been considered expedient to obtain by means of loans. The Australian loan expenditure and public debt thus differ very materially from those of most European countries, where such expenditure is very largely incurred for purposes of defence, or absorbed in the prosecution of war. The debt of Australia, on the other hand, consists in the main of moneys raised and expended with the object of assisting the development of the resources of the Commonwealth, and is, to a very large extent, represented by tangible assets such as railways, tramways, waterworks, etc.

2. **Loan Expenditure, 1909-10.**—During the year ended 30th June, 1910, the actual expenditure of the Australian States from loan funds amounted to £8,384,542, New South Wales with a total of £3,246,640 being the principal contributor to this amount, while Queensland, whose expenditure amounted to £1,486,216, ranked second. The chief item of expenditure for the year was that of railways and tramways, which represented a total of £5,403,756, water supply and sewerage works to the amount of £1,204,095; the expenditure on harbours, rivers, etc., and roads and bridges totalling £544,173, and land purchases for settlement, £486,501, were the most important of the remaining items. Details for the year for each State are given in the following table:—

AUSTRALIAN LOAN EXPENDITURE, 1909-10.

Heads of Expenditure.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.

* Credit.

3. **Aggregate Loan Expenditure.**—The total loan expenditure of the Australian States from the initiation of the borrowing system to the 30th June, 1910, has amounted to no less a sum than £249,305,568. The manner in which this sum has been spent in the several States is furnished in the following table :—

AGGREGATE AUSTRALIAN LOAN EXPENDITURE to 30th JUNE, 1910.

Heads of Expenditure.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas	All States.

Other pub. works and purposes	49,855	1,550,819	1,572,233	2,239,660	476,298	277,371	6,166,236
Total	91,347,723	57,118,293 *	39,431,676	30,373,493	20,511,192	10,523,191	249,305,568

* Exclusive of £1,866,168 for "Loans in aid of Revenue."

It must be noted that the figures furnished in this table represent the amounts actually spent, and consequently differ somewhat from those given later in the statements relating to the public debt, which represent amount of loans still unpaid at a given date. The loan expenditure statement includes all such expenditure, whether the loans by means of which the necessary funds were raised have been repaid or are still in existence. On the other hand, in the public debt statement loans repaid are excluded, but in the case of loans still outstanding each is shewn according to the amount repayable at maturity, not according to the amount originally available for expenditure.

4. **Relative Importance of Loan Items.**—The relative importance of the different items of loan expenditure given in the foregoing table varies considerably in the several States, but in each instance the expenditure on railways and tramways predominates, the percentage of this item on total expenditure ranging between the limits of 41 per cent. in the case of Tasmania and 71 per cent. in that of Victoria. The following table gives for the several States the percentage of each item on the total loan expenditure of that State to 30th June, 1910 :—

PERCENTAGE OF EACH ITEM ON TOTAL LOAN EXPENDITURE OF THE STATES to 30th JUNE, 1910.

1906-7 ...	1,058,553	595,658	683,570	499,132	900,964	156,945	3,894,822
1907-8 ...	1,965,329	783,538	1,033,676	495,928	733,745	224,954	5,237,170
1908-9 ...	2,906,507	1,098,360	1,247,821	832,114	1,012,452	334,200	7,431,454
1909-10 ...	3,246,640	1,209,505	1,486,216	978,082	1,028,995	435,104	8,384,542

Throughout the nine years under review the loan expenditure of New South Wales exceeded that of any other of the States, and for the years 1901-2 and 1902-3 represented more than half of the aggregate loan expenditure of Australia. The amount so spent in New South Wales, however, continuously declined from £4,939,241 in 1901-2 to £1,058,553 in 1906-7, but rose again in 1907-8 to £1,965,329, in 1908-9 to £2,906,507, and in 1909-10 to £3,246,640. In South Australia the annual loan expenditure during the six years, 1902-3 to 1907-8, varied but little from £450,000, but in 1908-9 an increase to £832,114 took place, and in 1909-10 to £978,082. In Tasmania the loan expenditure continuously declined from £341,994 in 1901-2 to £136,971 in 1905-6, but advanced again in each of the years 1906-7, 1907-8, 1908-9, and 1909-10, reaching £435,104 in the last-mentioned year. In the three remaining States marked fluctuations have been in evidence; thus, Victoria had a minimum loan expenditure for the period in 1904-5 and a maximum in 1909-10, the figures being, respectively, £373,191 and £1,209,505 ; Queensland had a minimum of £225,466 in 1904-5 and a maximum of £1,486,216 in 1909-10 ; while Western Australia had a minimum of £372,442 in 1905-6 and a maximum of

£1,665,901 in 1902-3. The large loan expenditure of New South Wales in 1901-2, 1902-3, 1908-9, and 1909-10 was incurred chiefly in connection with railway construction and the resumption of the foreshores and adjoining properties of Darling Harbour. In Victoria the large expenditure of 1901-2 was in great part due to railway construction, that of 1905-6 resulted in large measure from the purchase of lands for closer settlement, while the construction of railways, and water supply and sewerage works was mainly responsible for the high expenditure of 1908-9 and 1909-10. In the case of the large loan expenditure of Queensland in 1901-2 and 1902-3, as well as that of 1906-7, 1907-8, 1908-9, and 1909-10, railway construction was the principal contributing item. In Western Australia the heavy loan expenditure of 1901-2, 1902-3, and 1908-9 was principally in connection with railway construction and water supply.

6. **Loan Expenditure per Head.**—The loan expenditure per head of population varies materially in the different States and in different years, reaching its highest point for the nine years under review in Western Australia in 1901-2 with £7 19s. 3d. per head, and its lowest in Victoria in 1904-5 with 6s. 2d. per head. Particulars concerning the loan expenditure per head for the nine years 1901-2 to 1909-10 are given hereunder:—

LOAN EXPENDITURE PER HEAD, 1901-2 to 1909-10.

§ 5. Public Debt.

1. **The Initiation of Public Borrowing.**—The earliest of the loans raised in Australia for Government purposes was that obtained by New South Wales in 1842. This and nine other loans raised prior to 1855 were all procured locally. In the last-mentioned year Australia's first appearance on the London market occurred, the occasion being the placing of the first instalment of the New South Wales 5 per cent. loan for £683,300. Victoria first appeared as a borrower in 1854, and made its first appearance on the London market in 1859. In the remaining States the first public loans were raised in the following years:—Queensland 1861, South Australia 1854, Western Australia 1845, and Tasmania 1867.

2. **Nature of Securities.**—All the earlier loans raised by the Australian States were obtained by the issue of debentures, some of which were repayable at fixed dates, and others by annual or other periodical drawings. In more recent years, however, the issue of debentures has given place to a great extent to that of inscribed stock, the inscription in the case of local issues being carried out by the State Treasuries, and in the cases of loans floated in London being mainly performed by the Bank of England and the London and Westminster Bank. The issue of debentures has not, however, been entirely discontinued, for within the last seven years debentures to the amount of upwards of £2,000,000 were placed on the market by the Government of New South Wales. In other States also, recent issues of debentures have taken place, the occasions usually being those in which the term of the loan is less than that ordinarily attaching to issues of

inscribed stock. Another form of security is that variously known as the Treasury bill or Treasury bond. This is usually neither more nor less than a short term debenture having a currency in most instances of from three to five years. These are issued in certain cases to liquidate deficiencies in revenue, and in others to obtain moneys for the purpose of carrying on public works at a time when it is deemed inexpedient to place a permanent loan on the market. The amount of the public debt of the several States held in each of these forms of security is furnished in the table hereunder :—

PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1910.

State.	Debentures.	Inscribed Stock.	Treasury Bills.		Total Amount Outstanding.
			For Public Works and Services.	In aid of Revenue.	
	£	£	£	£	£

„ 1910 ...	29,765,929	213,599,894	12,393,503	1,864,337	257,623,663

During the nine years between 30th June, 1901, and 30th June, 1910, the public debt of the States increased by £54,105,388, or at the rate of about £6,000,000 per annum. The amount of debentures comprised in the total debt diminished by £14,294,391 during the period, while the amount held as inscribed stock increased by £62,459,523, and as Treasury bills by £5,940,256.

3. **Increase in Indebtedness of the Several States.**—The table given hereunder furnishes particulars of the increase which has taken place during the past nine years in the public debts of the several States :—

PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1901 to 1910.

* On 31st December, 1900, 1901, and 1902 respectively.

The States in which the greatest increase in indebtedness was experienced during the period are New South Wales and Western Australia, the former advancing by £25,163,849, the latter by £10,578,023. On the other hand the public debt of Tasmania increased by little more than £2,000,000.

4. **Indebtedness per Head.**—The indebtedness per head of population varies considerably in the several States, being highest in the case of Western Australia, and lowest in that of Victoria. Details for the period from 30th June, 1901, to 30th June, 1910, are as follows :—

AUSTRALIAN INDEBTEDNESS PER HEAD, 30th JUNE, 1901 to 1910.

* On 31st December, 1900, 1901, and 1902 respectively.

5. **Flotation of Loans.**—The early loans of the Australian States, usually for comparatively small amounts, were raised locally, but, with the increasing demand for loan funds and the more favourable terms offering in the London than in the local money market, the practice of placing Australian public loans in London came into vogue, and for many years local flotations, except for short terms or small amounts, were comparatively infrequent. In more recent years, however, the accumulating stocks of money in Australia seeking investment have led to the placing of various redemption and other loans locally, with very satisfactory results. In the following table are given particulars of loans of the several States outstanding on 30th June, 1910, which had been floated in London and Australia respectively :—

PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1910.

State.	Floated in London		Floated in Australia.		Total Public Debt.
	Amount.	Percentage on Total Debt.	Amount.	Percentage on Total Debt.

* Including Northern Territory debt, £2,662,678.

The following table, giving corresponding particulars for the aggregate indebtedness of the Australian States at the end of each of the financial years 1900-1 to 1909-10, furnishes an indication of the rapidity with which the local holdings of Australian securities have grown in recent years:—

PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1901 to 1910.

Date.	Floated in London.		Floated in Australia.		Total Public Debt.
	Amount.	Percentage on Total Debt.	Amount.	Percentage on Total Debt.	
	£	%	£	%	£
30th June, 1901 ...	174,810,377	85.89	28,707,898	14.11	203,518,275
„ 1902 ...	181,493,170	84.71	32,762,039	15.29	214,255,209
„ 1903 ...	186,507,721	83.68	36,364,044	16.32	222,871,765
„ 1904 ...	188,165,495	82.62	39,582,117	17.38	227,747,612
„ 1905 ...	188,918,820	81.88	41,819,851	18.12	230,738,671
„ 1906 ...	190,887,001	80.06	47,540,819	19.94	238,427,820
„ 1907 ...	185,579,389	77.28	54,570,338	22.72	240,149,727
„ 1908 ...	183,321,256	75.18	60,514,233	24.82	243,835,489
„ 1909 ...	189,410,036	75.23	62,363,497	24.77	251,773,533
„ 1910 ...	191,972,479	74.52	65,651,184	25.48	257,623,663

It will be seen that in the course of nine years the London indebtedness of the States has increased by £17,162,102, while the local indebtedness has increased by no less than £36,943,286. In other words, whilst on 30th June, 1901, the Australian portion of the debt represented only about 14 per cent. of the total, the proportion had on 30th June, 1910, grown to 25 per cent.

6. **Rates of Interest.**—As mentioned above, the rate of interest paid in connection with the earliest Australian public loan was fivepence farthing per £100 per diem or, approximately, 8 per cent. per annum. At the present time the three principal rates of interest payable on Australian public securities are 4 per cent., 3½ per cent., and 3 per cent., most of the loans raised during recent years bearing interest at the rate of 3½ per cent. The average rate payable on the aggregate indebtedness of the Australian States is slightly less than 3⅝ per cent. For the separate States the average rate payable varies considerably, being lowest in the case of Western Australia and highest in that of Queensland; the difference between these two average rates is ¼ per cent. In the table given hereunder particulars are furnished of the rates of interest payable on the public debt of the several States of the Commonwealth on 30th June, 1910:—

RATES OF INTEREST PAYABLE ON AUSTRALIAN PUBLIC DEBT, 30th JUNE, 1910.

* Including Northern Territory debt, £2,662,678.

The rapid increase which has taken place in recent years in the amount of Australian Government securities, bearing interest at 3½ per cent., is clearly shewn in the table hereunder, which gives particulars concerning the aggregate amount of the Australian indebtedness, at the several rates of interest, on 30th June in each of the years 1905 to 1910 :—

RATES OF INTEREST PAYABLE ON AUSTRALIAN PUBLIC DEBT, 30th JUNE, 1905 to 1910.

Rate of Interest.	30th June, 1905.	30th June, 1906.	30th June, 1907.	30th June, 1908.	30th June, 1909.	30th June, 1910.

Not bearing interest	10,250	11,650	61,900	12,750	15,250	13,837
Total public debt	230,738,671	238,427,820	240,149,727	243,835,489	251,773,533	257,623,663
Average rate % payable	£3 12 6	£3 12 5	£3 12 1	£3 11 9	£3 11 6	£3 11 5

During the five years between 30th June, 1905, and 30th June, 1910, the Australian Government 4 per cent. securities decreased by £26,961,635, and the 3 per cent. securities by £2,019,633, while the 3½ per cents. advanced by £47,193,316, and the 3¾ per cents. by £9,071,757. During the same period the total amount at all other rates than the four here mentioned declined by about 40 per cent. from £992,650 to £593,837.

7. **Interest Payable per Head.**—The relative burden of the debts of the several States in respect of interest payments will be seen from the following table, which gives for the 30th June, 1910, the amount of interest payable annually on the debt of each State as outstanding at that date, and also the corresponding amount per head of population :—

ANNUAL INTEREST PAYABLE ON PUBLIC DEBT OUTSTANDING AT 30th JUNE, 1910.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£
Total annual interest payable ...	3,117,472	1,957,710	1,635,270	1,094,358	759,443	377,217	8,941,470
Annual interest payable per head	£1 17 11	£1 9 11	£2 15 6	£2 12 5	£2 14 4	£2 1 2	£2 0 5

8. **Dates of Maturity.**—An important point in which the securities of the Australian Governments, whether in the form of inscribed stock, debentures, or Treasury bills, differ from such a well-known form of security as British consols, consists in the fact that whereas the latter are interminable, the Australian Government securities have in almost all cases a fixed date for repayment, the exceptions being the State of New South Wales, which includes in its public debt an amount representing interminable securities totalling on 30th June, 1910, £532,889; the State of Victoria, which includes £4,080,997 payable at the option of the Government at any time after 29th September, 1917; and the State of South Australia, which includes £5,122,845, similarly repayable after 1st January, 1916. The terms of the loans raised by the issue of debentures and inscribed stock have varied considerably in the different States, ranging between fifteen and fifty years, while loans obtained by means of Treasury bills have usually been for such short terms as from six months to five years. In the case of the majority

of the loans the arrival of the date of maturity means that arrangements for renewal are necessary in respect of the greater portion of the loan, as it is only in exceptional cases that due provision for redemption has been made. The condition of the money market at the date of maturity has an important bearing on the success or otherwise with which the renewal arrangements can be effected, and consequently, in order to obviate the necessity for making an application to the market at an unfavourable time, several of the States have now adopted the practice of specifying a period of from ten to twenty years prior to the date of maturity within which the Government, on giving twelve, or in some cases six, months' notice, has the option of redeeming the loan. By such means advantage may be taken by the Government during the period of opportunities that may offer for favourable renewals. Particulars concerning the due dates of the loans of the several States outstanding on 30th June, 1910, are given in the following table:—

DUE DATES OF THE PUBLIC DEBTS OF THE SEVERAL STATES OF THE COMMONWEALTH OUTSTANDING ON 30th JUNE, 1910.

Indefinite... ...	...	4,080,997	...	5,122,845	...	...	9,203,842
Total ...	92,525,095	55,576,725	44,276,067	31,387,870	23,287,453	10,570,453	257,623,663

In the above table those loans, in the case of which the Government has the option of redemption during a specified period, have been in each instance classified according to the latest date of maturity. During the fifteen years from 1910 to 1924 inclusive, the amount falling due represents a total of no less than £146,624,118, or nearly 57 per cent. of the total outstanding at 30th June, 1910.

9. **Sinking Funds.**—The practice of providing for the ultimate extinction of the public debt by means of the creation of sinking funds, receiving definite annual contributions from Consolidated Revenue, and accumulating at compound interest, has only been consistently adopted in the case of Western Australia. This State has established, in connection with each of its loans, sinking funds varying from 1 per cent. to 3 per cent. per annum of the nominal amount of the loan. These funds are placed in the hands of trustees in London, by whom they are invested in the securities of the British, Indian, and Colonial Governments, and applied from time to time in the redemption of loans falling due. In the remaining States the sinking fund provision made is varied, consisting in certain instances of the revenues from specified sources, in others of the Consolidated Revenue Fund surplus, and in others again of fixed annual amounts. In the following table are given particulars of the sinking funds of each State, and the net indebtedness of each after allowance for sinking fund has been made, the details given being those for 30th June, 1910 :—

STATES SINKING FUNDS AND NET INDEBTEDNESS, 30th JUNE, 1910.

* Including Northern Territory debt, £2,662,678

10. **London Prices of Australian Stocks.**—In examining the prices quoted for Australian Government securities, particularly if the examination is made with the object of comparing the prices at a given time of different stocks, or the prices at different times of the same stock, several points in connection with the securities need to be kept in view; the principal of these are—(*a*) the rate of interest payable, (*b*) the date of maturity, and (*c*) the date at which interest is payable.

In the following table particulars are given of the London prices of some of the principal 3½ per cent. stocks of the several States during 1910. The quotations given are the middle prices, taken from the *Economist*, and are for the last Friday in each quarter :—

LONDON QUOTATIONS FOR AUSTRALIAN 3½ PER CENT. STOCKS DURING 1910.

State.	Rate of Interest Payable.	Year of Maturity.	Months in which Interest is Payable.	London Prices (cum dividend) on			
				26th Mar. 1910.	25th June 1910.	24th Sept. 1910.	31st Dec. 1910.
	%						
New South Wales	3½	1918	Mar.—Sept.	98½	99½	98	98

Tasmania ...	3½	1920-40	Jan.—July	97½	98½	99	97½

Throughout the year the prices of Australian 3½ per cent. stocks on the London market were, on the average, about the same as those for the corresponding periods of the preceding year.

SECTION XXI.

PRIVATE FINANCE.

§ 1. Currency.

1. **The Three Australian Mints.**—Soon after the discovery of gold in Australia steps were taken for the establishment of a branch of the Royal Mint in Sydney. The formal opening took place on the 14th May, 1855, the mint being located in the southern part of the building once known as the "rum hospital," where it has remained up to the present. It is now proposed, however, to erect more suitable buildings for its accommodation in some other part of the city. The Melbourne branch of the Royal Mint was opened on the 12th June, 1872, and the Perth branch on the 20th June, 1899. The States of New South Wales, Victoria, and Western Australia provide an annual endowment, in return for which the mint receipts are paid into the respective State Treasuries, and it may be said that, apart from expenditure on buildings, new machinery, etc., the amounts paid into the Treasuries fairly balance the mint annuities.

2. **Receipts and Issues in 1909.**—(i.) *Assay of Deposits Received.* The number of deposits received during 1909 at the Sydney Mint was 1701, of a gross weight of 628,871 ozs.; at the Melbourne Mint, 4462, of a gross weight of 904,694 ozs.; and at the Perth Mint, 6509, of a gross weight of 1,458,270 ozs. The average composition of these deposits in Sydney was, gold 859.2, silver 95.2, base 45.6 in every 1000 parts; Melbourne, gold 921.0, silver 39.0, base 40.0 in every 1000 parts; and Perth, gold 830.9, silver 107.0, base 62.1 in every 1000 parts. As many parcels have, however, undergone some sort of refining process before being received at the mint, the average assay for gold shews higher in these figures than for gold as it naturally occurs.

(ii.) *Receipts.* Practically all the gold coined at the Australian mints is the produce of either the Commonwealth or of the Dominion of New Zealand. The Sydney Mint, however, receives small parcels from Papua, and some gold produced in Rhodesia was, in 1909, sent to Perth for coinage. The following table shews the origin of the gold received at the three mints during 1909:—

ORIGIN OF GOLD RECEIVED AT MINTS DURING 1909.

Origin of Gold.	Sydney Mint.	Melbourne Mint.	Perth Mint.
	ozs.	ozs.	ozs.
New South Wales	152,711.56	2,991.68	...
Victoria	1,440.51	704,583.91	...
Queensland...	328,914.91	1,886.24	...
South Australia	1,653.04	8,881.94	247
Western Australia	568.55	21,181.47	1,457,387
Tasmania	481.04	25,852.43	...
New Zealand	126,454.83	95,545.98	...
Other countries, origin not stated, and light gold coin	16,646.59	43,770.42	636
Total	628,871.03	904,694.07	1,458,270

It will be seen that practically all gold produced in New South Wales and Queensland, nearly three-fifths of that produced in New Zealand, and about one-sixth of the South Australian produce, found its way to the Sydney Mint, while the Melbourne Mint received all Victorian and about five-sixths of the South Australian gold, together with all of the Tasmanian and over two-fifths of the New Zealand production, and the Perth Mint coined practically all Western Australian gold with the exception of a small portion sent to Sydney and Melbourne.

(iii.) *Issues.* The Australian mints, besides issuing gold coin in the shape of sovereigns and half-sovereigns, also issue gold bullion, partly for the use of local manufacturers (jewellers and dentists), and partly for export, India taking annually a considerable quantity of gold cast into 10-oz. bars. The issues during 1909 are shewn in the table below:—

ISSUES OF GOLD FROM MINTS DURING 1909.

Mint.	Coin.			Bullion.	Total.
	Sovereigns.	Half-sovereigns.	Total.		
	£	£	£	£	£
Sydney ...	2,057,000	...	2,057,000	241,796	2,298,796
Melbourne ...	3,029,538	93,047	3,122,585	417,909	3,540,494
Perth	4,524,241	22,011	4,546,252	601,919	5,148,171
Total ...	9,610,779	115,058	9,725,837	1,261,624	10,987,461

In addition to the issue of gold the Mints are also charged with the issue of silver and bronze coin struck in London. The total value of silver coin issued in 1909 was £40,800, viz.—£9800 in half-crowns, £6400 in florins, £9200 in shillings, £8000 in sixpences, and £7400 in threepences. The value of bronze coin issued was £9620, viz., £6320 in pence, and £3300 in halfpence.

(iv.) *Withdrawals of Worn Coin.* The mints receive light and worn coin for recoinage, gold being coined locally, while silver is forwarded to London. The value of gold coin so received in 1909 amounted to £191,377, viz.—Sydney, £51,257; and Melbourne, £140,120. The value of worn silver coins received during 1909 was £12,639, viz.—Sydney, £7076; Melbourne, £5563.

3. **Total Receipts and Issues.** (i.) *Receipts.* The total quantities of gold received at the three mints since their establishment are stated in the gross as follows:—Sydney, 33,704,622 ozs.; Melbourne, 32,789,922 ozs.; and Perth, 13,292,977 ozs. As the mints pay for standard gold (22 carats) at the rate of £3 17s. 10½d. per oz., which corresponds to a value of £4 4s. $11\frac{5}{11}$d. per oz. fine (24 carats), it is possible to arrive at the number of fine ounces received from the amounts paid for the gold received. These amounts were:—Sydney, £124,246,681; Melbourne, £129,182,162; Perth, £47,101,041; corresponding to—Sydney, 29,250,155 ozs. fine; Melbourne, 30,412,066 ozs. fine; and Perth, 11,088,528 ozs. fine. Silver found in assaying is paid for if it exceeds 8 per cent.; in Sydney it has been paid for at the rate of one shilling and sixpence per oz. fine since 12th May, 1902; in Melbourne the price is fixed monthly by the Deputy-master of the Mint; and in the Perth accounts it has been taken at one shilling per oz.

(ii.) *Issues.* The total values of gold coin and bullion issued by the three mints were as shewn in the table on page 862. It may be said that about one-half of the total gold production of Australasia has passed through the three Australian mints, the

production of the Commonwealth States to the end of 1909 being valued at £514,091,517, and that of New Zealand at £74,398,318, or a total of £588,489,835 :—

TOTAL ISSUES OF GOLD FROM MINTS TO END OF 1909.

Mint.	Coin.			Bullion.	Total.
	Sovereigns.	Half-sovereigns.	Total.		
	£	£	£	£	£
Sydney	114,476,500	3,448,000	117,924,500	6,332,873	124,257,373
Melbourne ...	118,257,085	883,948	119,141,033	10,041,588	129,182,621
Perth	43,015,232	124,048	43,139,280	3,953,758	47,093,038
Total ...	275,748,817	4,455,996	280,204,813	20,328,219	300,533,032

The total issues of silver coins to the end of 1909 were £2,398,800, viz. :—Crowns, £3500; double florins, £4585; half-crowns, £716,600; florins, £528,215; shillings, £605,400; sixpences, £247,820; and threepences, £292,680.

Bronze coins to the value of £161,270 were issued, viz. :—Pence, £112,100; halfpence, £48,970; and farthings, £200.

(iii.) *Withdrawals of Worn Coin.* Complete figures as to the withdrawal of gold coin can only be given for the Sydney Mint, where they amounted to £1,026,569; at the Melbourne Mint the coins withdrawn since 1890 were worth £420,251, and no figures are given for Perth.

Withdrawals of worn silver coin amounted to £264,360 in Sydney, and to £333,366 in Melbourne.

4. **Standard Weight and Fineness of Coinage.**—The coinage of the Commonwealth is the same as that of the United Kingdom, and the same provisions as to legal tender hold good, viz., while gold coins are legal tender to any amount, silver coins are only so for an amount not exceeding forty shillings, and bronze coins up to one shilling. As will be seen from the table below, the standard weights of the sovereign and half-sovereign are respectively 123.27447 grains and 61.63723 grains, but these coins will pass current if they do not fall below 122.5 grains and 61.125 grains respectively.

STANDARD WEIGHT AND FINENESS OF COMMONWEALTH COINAGE.

Denomination.	Standard Weight.	Standard Fineness.

Half-penny ...	87.50000	
Farthing	43.75000	

5. **Prices of Silver and Australian Coinage.**—(i.) *Prices of Silver.* The value of silver has greatly decreased since its demonetisation and restricted coinage in almost the whole of Europe. Its average price in the London market is shewn in the subjoined table:—

AVERAGE PRICE OF SILVER IN LONDON MARKET, 1873 to 1909.

Year.	Price per Standard Oz.	Year.	Price per Standard Oz.	Year.	Price per Standard Oz.
	d.		d.		d.
1873 ...	59.2500	1886 ...	45.3750	1899 ...	27.5000
1874 ...	58.3125	1887 ...	44.6250	1900 ...	28.3125
1875 ...	56.8125	1888 ...	42.8750	1901 ...	27.2500
1876 ...	53.0000	1889 ...	42.6875	1902 ...	24.1250
1877 ...	54.7500	1890 ...	47.7500	1903 ...	24.7500
1878 ...	52.5625	1891 ...	45.0625	1904 ...	26.3750
1879 ...	51.1875	1892 ...	39.8125	1905 ...	27.8125
1880 ...	52.2500	1893 ...	35.6250	1906 ...	30.8750
1881 ...	51.7500	1894 ...	29.0000	1907 ...	30.1875
1882 ...	51.8125	1895 ...	29.8750	1908 ...	24.3750
1883 ...	50.5625	1896 ...	30.7500	1909 ...	23.6875
1884 ...	50.6875	1897 ...	27.5625		
1885 ...	48.6250	1893 ...	26.9375		

The monthly fluctuations during the year 1909 were as follows:—

AVERAGE PRICE OF SILVER IN LONDON MARKET, 1909.

Month.	Price per Standard Oz.	Month.	Price per Standard Oz.	Month.	Price per Standard Oz.
	d.		d.		d.
January ...	23.8125	May ...	24.3125	September ...	23.7500
February ...	23.6875	June ...	24.1875	October ...	23.5000
March ...	23.2500	July ...	23.5000	November ...	23.3750
April ...	23.6875	August ...	23.5625	December ...	24.0000

(ii.) *Profits on Coinage of Silver.* As sixty-six shillings are coined out of one pound troy of standard silver, the silver required to produce £3 6s. of coin was only worth £1 3s. 9d. during 1909; the difference of £2 2s. 3d. represents, therefore, the gross profit or seigniorage made on the coinage of every £3 6s. This gross profit is equivalent to over 64 per cent., but from it the expenses of coining (including interest on cost of machinery) and of withdrawals of worn coin must be deducted. Still, given a large annual demand for new silver coin, even the net profit amounts to a considerable sum. Negotiations, therefore, took place for a number of years between the Imperial authorities and the Governments of New South Wales and Victoria, which in 1898 resulted in permission being granted to the two Governments named to coin silver and bronze coin at the Sydney and Melbourne Mints for circulation in Australia. No steps were, however, taken in the matter, and as section 51 of the Commonwealth Constitution makes legislation concerning "currency, coinage, and legal tender" a federal matter, the question remained in abeyance until the latter part of 1908, when the Commonwealth Treasurer announced his intention of initiating the coinage of silver in the near future.

(iii.) *Coinage Bill.* In 1909 a coinage bill was introduced in the Commonwealth Parliament, which provides that the future Australian coinage shall consist of the

following coins:—In gold, £5, £2, £1, and 10s.; in silver, 2s., 1s., 6d., and 3d.; and in bronze, 1d. and ½d. Gold is to be legal tender up to any amount, silver up to 40s., and bronze up to 1s. Ultimately the coinage will be undertaken in Australia, but for the present an agreement has been made with the authorities of the Royal Mint in London, under the terms of which the coinage is to be done in London on account of the Commonwealth Government. Orders were given for the immediate coinage of £200,000 worth of silver, viz., one million florins, one million shillings, one million sixpences, and two million threepences. The coins bear on the obverse H.M. the King's head, with the Latin inscription which appears on the British coins, and on the reverse the Australian coat-of-arms, with the denomination and the date. The Imperial authorities have undertaken to withdraw £100,000 worth of the present silver coinage per annum at its face value. The first consignment of the new coinage arrived in Australia early in 1910, and by the 30th June, 1910, all the silver coins contracted for, except half a million florins, had been supplied to the Royal mints, Australia. Copper coins of the value of £10,000, viz., 1,560,000 pennies and 1,680,000 half-pennies of a design similar to that of the silver coins, have also been ordered. It is not, however, intended to withdraw any of the present copper coins, but merely to make good the "leakage," which is considerable. Possibly the time is not far distant when the copper coinage will be replaced by a nickel coinage.

6. **Decimal Coinage.**—Considered apart from the cognate subject of decimal weights and measures, the introduction of a decimal coinage would present no great difficulties. Of the various systems that have been advocated from time to time, the one that appears to meet with most favour and presents the maximum advantage, would retain the sovereign as the unit, but would divide it into a thousand parts instead of the present 960 farthings. In such a system there would be the following coins (adopting the name of "cent" for the hundredth part of the sovereign):—Sovereign=100c. (gold); half-sovereign=50c. (gold), 20c.=4s. (gold or silver); 10c.=2s. (silver); 5c.=1s. (silver); 2c.=4.8d. (silver); 1c.=2.4d. (silver or nickel); 0.5c. or 5 mils.=1.2d. (nickel or bronze); 0.2c. or 2 mils.=0.48d. (nickel or bronze); 0.1c. or 1 mil.=0.24d. (bronze). As only the subdivisions of the present shilling would be altered, such a system could be introduced with less disturbing effects on the arrangements of trade than other proposals, *e.g.*, one which would make the present farthing its unit. It will be seen from the terms of the Coinage Act, as quoted in the preceding paragraph, that no provision has been made for the introduction of a decimal coinage, apart from the omission of the half-crown.

7. **Circulation of Specie.**—Many conflicting estimates have from time to time been made as to the amount of coin in private hands. In 1892 the general manager of one of the Sydney banks estimated the coin in private hands in New South Wales at only £725,000, while the estimate of the Deputy-master of the Mint for the same period was £4,416,000, the truth lying, no doubt, somewhere between those two estimates. In 1906 the Deputy-master of the Perth Mint conducted an enquiry with the object of obtaining information on the condition of the currency in Australia. His estimate was—sovereigns, £2,500,000; half-sovereigns, £500,000; silver and bronze coin, £1,200,000. This estimate appears, however, very low, amounting only to a little over £1 per head of population. The coin in private hands amounts, however, only to a comparatively small part of the total coin in the country, the value of coin held by the banks during the quarter ended 30th June, 1910, being £28,826,729. To the active currency must be added the notes in circulation, which for the same period amounted to £3,748,482, exclusive of Queensland Treasury notes. For particulars relative to Australian notes, see page 866.

8. **Imports and Exports of Coin and Bullion.**—A table is appended shewing the imports into, and exports from, the Commonwealth of coin and bullion during the year 1909, distinguishing the countries of import and export:—

IMPORTS AND EXPORTS OF COIN AND BULLION, 1909.

§ 2. Banking.

1. **Banking Facilities.**—(i.) *Head Offices of Banks.* Of the twenty-one banks trading in the Commonwealth, four have their head offices in London, viz., the Bank of Australasia; the Union Bank of Australia Limited; the English, Scottish, and Australian Bank Limited; and the London Bank of Australia Limited. The head offices of the following four banks are in Sydney—The Bank of New South Wales; the Commercial Banking Company of Sydney Limited; the Australian Joint Stock Bank Limited (now the Australian Bank of Commerce Limited); and the City Bank of Sydney. Five banks have their head offices in Melbourne, viz., the National Bank of Australasia Limited; the Commercial Bank of Australia Limited; the Bank of Victoria Limited; the Colonial Bank of Australasia Limited; and the Royal Bank of Australia Limited. Brisbane is the headquarters of three banks, viz., the Queensland National Bank Limited; the Royal Bank of Queensland Limited; and the Bank of North Queensland Limited. Only one bank has at present its head office in Adelaide, viz., the Bank of Adelaide; and one in Perth, viz., the Western Australian Bank. Of the two Tasmanian banks the Commercial Bank of Tasmania Limited has its head office in Hobart, and the National Bank of Tasmania Limited in Launceston. The remaining bank, the Bank of New Zealand, has its headquarters in Wellington. It is proposed, in the few instances where the banks are referred to by name, to arrange them in the order just given.

(ii.) *Establishments in Different States.* Only three of the banks have establishments in all six States of the Commonwealth, the total number of their branches and sub-branches being 526. One bank with a total of 228 branches is trading in five States, and two with 321 branches are established in four States. One bank has 59 branches distributed over three States, but has now also opened a branch in a fourth State, while six banks with a total of 357 branches, confine their operations to two States. The remaining eight banks, with 433 branches, trade only within the State where their head offices are located. Of this total of 1924 banking establishments, New South Wales contains 572; Victoria, 645; Queensland, 254; South Australia, 232; Western Australia, 167; and Tasmania, 54. In addition to the branches in the Commonwealth, four of the banks have a total of 261 establishments in New Zealand, while sixteen have each an office in London. Only two of the banks are established in the Pacific Islands, with a total of four branches. The total for the Commonwealth amounts to about one bank to every 2300 inhabitants, which does not appear out of proportion when the general sparseness of the Australian population is taken into consideration. There is, however, a difference between the various States which is not easy of explanation, but which seems to be due chiefly to the desire of a few of the banks to open up branches wherever there is a prospect of a small amount of business, while other banks are more conservative in this respect. Thus the proportion in New South Wales is about 2873 inhabitants per bank, while in Victoria it is only 2029. In Western Australia, where the proportion is lowest and amounts to one in 1673, there are, of course, exceptional circumstances which explain this apparent disproportion.

2. **Banking Legislation.**—Under section 51 of the Commonwealth Constitution Act the Commonwealth Parliament has power to legislate with respect to "Banking, other than State banking; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money." Until quite recently the only Commonwealth banking legislation passed was Act No. 27 of 1909, "An Act relating to Bills of Exchange, Cheques, and Promissory Notes," which came into force on the 1st February, 1910. In the session of 1910, however, two Acts relating to banking were passed by the Federal Parliament. The first was the Australian Notes Act No. 11 of 1910, assented to on 16th September, 1910, and proclaimed 1st November, 1910; and the second the Bank Notes Tax Act No. 14 of 1910, assented to on 10th October, 1910, and to be proclaimed 1st July, 1911. Under the first of these Acts the Commonwealth Treasurer is empowered to issue notes which shall be legal tender throughout the Commonwealth, and redeemable at the seat of Federal Government. The notes are issued in denominations of 10s., £1, £5, £10, or any multiple of £10. The Act directs the Treasurer to hold the following reserve of gold coin:—

(*a*) An amount not less than one-fourth of the amount of Australian notes issued up to seven million pounds;

(*b*) An amount equal to the amount of Australian notes issued in excess of seven million pounds.

For the purposes of estimating the reserve, notes which have been redeemed are not included amongst those issued.

The Australian Notes Act prohibits the circulation of notes issued by a State six months after the commencement of the Act, and such notes will then cease to be legal tender. In addition the Bank Notes Act imposes a tax of 10 per cent. per annum in respect of all bank notes issued or re-issued by any bank in the Commonwealth after the commencement of this Act and not redeemed.

Under the existing laws banks are required to furnish quarterly statements of their average assets and liabilities, but these statements are not equally complete in all the States. Until the close of 1907 these quarterly statements, together with the periodical balance-sheets of the banks (generally half-yearly, but in a few cases yearly), were the only information available in regard to banking business. During the year 1908 the Commonwealth Statistician, under the provisions of the Census and Statistics Act, asked the banks for quarterly returns giving slightly more detailed information than had previously been obtained. As, however, a few of the banks have found it

impossible up to the present to give all the particulars required, while promising to do so in future, the returns for the years 1908, 1909 and 1910 have been practically left in the same condition as those for 1907 and previous years.

The Acts under which the various banks are incorporated are not all of the same nature, but it may be stated that while most of the older banks were incorporated by special Acts, *e.g.*, the Bank of New South Wales, by Act of Council 1817; the Bank of Australasia, by Royal Charter; the Bank of Adelaide, by Act of the South Australian Parliament; and the Bank of New Zealand, by Act of the General Assembly of New Zealand, the newer banks are generally registered under a "Companies Act," or some equivalent Act. This is also the case with those banks which, after the crisis of 1893, were reconstructed.

3. **Capital Resources of Banks.**—The paid-up capital of the twenty-one banks, together with their reserve funds, and the rate per cent. and the amount of their last dividends, is shewn in the table hereunder. The information relates to the balance-sheet last preceding the 30th June, 1910. In regard to the reserve funds it must be stated that in the case of some of the banks these are invested in Government securities, while in other cases they are used in the ordinary business of the banks, and in a few instances they are partly invested and partly used in business.

For 12 months.

4. **Liabilities and Assets of Banks.**—(i.) *Liabilities of Banks for Quarter ended 30th June, 1910.* As already stated, the banks transacting business in any State are obliged, under the existing State laws, to furnish a quarterly statement of their assets and liabilities, which contains the averages of the weekly statements prepared by the bank for that purpose, and have, during the years 1908, 1909 and 1910, furnished quarterly statements to the Commonwealth Statistician. As all other financial returns in this work embrace, so far as possible, a period ended 30th June, 1910, it seems advisable to give the banking figures for the quarter ended on that date, and, where they are shewn for a series of years, similarly to use the figures for the June quarter of each year. The

liabilities are those to the general public, and are exclusive of the banks' liabilities to their shareholders, which are shewn in the preceding table:—

AVERAGE LIABILITIES OF BANKS IN EACH STATE OF THE COMMONWEALTH FOR THE QUARTER ENDED 30th JUNE, 1910.

1910	28,826,729	1,322,899	4,919,991	973,161	1,343,669	100,611,111‡	138,758,266§

* Including £3,454,715 Government and municipal securities. † Including £3,085,058 Government and municipal securities. ‡ Including £3,530,890 Government municipal securities. § Including £760,706 Queensland Treasury notes.

The figures do not call for much comment. As the table shews, the increase in the total amount of assets is mainly due to an increase in the amount of specie held by the banks against liabilities at call and advances.

5. **Percentage of Coin and Bullion to Liabilities at Call.**—(i.) *Commonwealth.* Although it is not strictly correct to assume that the division of deposits into those bearing interest and not bearing interest would in every case coincide with a division into fixed deposits and current accounts, the division, in default of a better one, must be adopted, and in the following table "liabilities at call" are therefore understood to include the note circulation of the banks and the deposits not bearing interest:—

PERCENTAGE OF COIN AND BULLION TO LIABILITIES AT CALL, COMMONWEALTH, 1901 TO 1910.

Year.	Liabilities at Call.			Coin and Bullion.			Percentage of Coin and Bullion to Liabilities at Call.
	Notes in Circulation.	Deposits not Bearing Interest.	Total.	Coin.	Bullion.	Total.	
	£	£	£	£	£	£	%
1901 ...	3,399,462	37,457,960	40,857,422	18,581,224	1,199,304	19,780,528	48.41
1902 ...	3,305,135	37,727,861	41,032,996	19,744,914	1,330,304	21,075,218	51.36
1903 ...	3,315,747	37,056,187	40,371,934	18,513,784	1,507,825	20,021,609	49.59
1904 ...	3,133,747	35,630,255	38,764,002	17,910,771	1,447,698	19,358,469	49.94
1905 ...	3,036,879	36,847,610	39,884,489	19,988,465	1,501,890	21,490,355	53.88
1906 ...	3,244,256	41,036,116	44,280,372	21,268,679	1,412,763	22,681,442	51.22
1907 ...	3,563,181	46,781,234	50,344,415	22,420,395	1,291,033	23,711,428	47.10
1908 ...	3,536,227	46,015,448	49,551,675	23,578,293	1,353,267	24,931,560	50.31
1909 ...	3,510,629	46,812,632	50,323,261	24,943,910	1,353,933	26,297,843	52.26
1910 ...	3,748,482	55,233,862	58,982,344	28,826,729	1,322,899	30,149,628	51.12

It would appear from the figures just given that the banks generally consider it advisable to hold about half the amount of liabilities at call in coin and bullion. The drop to 47.10 per cent. in 1907 was due to the very large increase in the amount of deposits during the year, with which the increase in the coin and bullion held, considerable though it was, did not keep pace.

(ii.) *Queensland Treasury Notes.* No bank-notes are issued by any of the banks in Queensland, where a Treasury note has taken the place of bank-notes since 1893. These Treasury notes are disregarded in the quarterly statements of the banks; according to Treasury returns the amount outstanding on 30th June, 1910, was £1,579,568, of which £815.425 was in circulation, while the balance of £764,143 was held by the banks.

(iii.) *States.* The proportion of coin and bullion to liabilities at call varies considerably in the different States, and is generally highest in Western Australia, and lowest in Queensland and Tasmania. A table is appended shewing the percentages for each State for the quarter ended 30th June, in each of the years 1901 to 1910:—

PERCENTAGE OF COIN AND BULLION TO LIABILITIES AT CALL, STATES AND COMMONWEALTH, 1901 to 1910.

6. **Deposits and Advances.**—(i.) *Total Deposits.* The total amount of deposits held by the banks shews a steady advance during the period under review, although the totals for 1903 and 1904, when the country was slowly recovering from the effects of the drought, were slightly below those for 1902:—

TOTAL DEPOSITS IN BANKS, STATES AND COMMONWEALTH, 1901 to 1910.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.

(ii.) *Deposits per Head of Population.* To shew the extent to which the population makes use of the banking facilities afforded to it, a table is given hereunder shewing the amount of total deposits per head of mean population for each of the years 1901 to 1910. The figures must not be taken to shew part of the savings of the people, as a large

proportion of the deposits is non-interest-bearing and therefore presumably used in the business of the banks' customers, together with a small part of the interest-bearing deposits.

(iii.) *Total Advances.* In the quarterly statements furnished by the banks the column headed "all other debts due to the banks," which usually averages from 75 to 80 per cent. of the total assets, is made up of such miscellaneous items as bills discounted, promissory notes discounted, overdrafts on personal security, overdrafts secured by deposit of deeds or by mortgage, etc. The quarterly returns furnished to the Commonwealth Statistician in 1908 and 1909 provided for a division of the amounts contained under this heading into a number of sub-headings, but all the banks were not in a position to make the necessary division, so that under present circumstances it is impossible to separate these items, and the total amounts contained in the column must, therefore, be treated as advances. The following table shews the totals for each State during the years 1901 to 1910:—

ADVANCES BY BANKS, STATES AND COMMONWEALTH, 1901 to 1910.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.

(iv.) *Proportion of Advances to Deposits.* The percentage borne by advances to total deposits shews to what extent the needs of one State have to be supplied by the resources of another State, and where the percentage for the Commonwealth as a whole exceeds 100, as it did in 1901, 1902, and 1903, the banks must have supplied the deficiency from their own resources, or from deposits obtained outside the Commonwealth. The following figures shew, however, that the banking business of the Commonwealth has been practically self-contained during the period under review:—

PERCENTAGE OF ADVANCES TO TOTAL DEPOSITS, STATES AND COMMONWEALTH, 1901 TO 1910.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	%	%	%	%	%	%	%
1901	118.34	99.89	100.32	69.10	70.82	79.85	102.43
1902	115.75	98.72	98.82	71.37	69.08	69.23	100.59
1903	116.06	97.35	111.36	67.07	76.97	68.81	101.68
1904	100.54	94.35	110.68	69.05	83.69	75.85	95.80
1905	88.86	84.99	104.64	69.56	83.47	72.64	87.39
1906	81.99	80.78	101.36	67.25	82.11	67.75	82.51

1908	87.00	88.59	99.46	67.16	114.00	81.93	88.70
1909	78.10	81.47	89.84	58.59	107.95	74.08	80.34
1910	69.59	79.08	81.33	59.60	96.07	72.99	74.74

7. **Clearing Houses.**—The Sydney Banks' Exchange Settlement and the Melbourne Clearing House, at which two institutions settlements are effected daily between the banks doing business in New South Wales and Victoria respectively, publish figures of the weekly clearances effected. From these figures it appears that in 1910 the total clearances in Sydney amounted to £274,344,000, and in Melbourne to £261,383,000. These figures represent in both cases an increase on those for 1909, the increase in Sydney amounting to £33,698,000, and in Melbourne to £21,719,000. Owing to the different distribution of the banking business in the two cities these figures do not, however, afford a fair comparison of the volume of banking business transacted in Sydney and Melbourne.

§ 3. Companies.

1. **General.**—Returns in regard to registered companies are defective, and, with few exceptions, are not available for Tasmania. They embrace (*a*) Returns relating to Trustees, Executors, and Agency Companies; (*b*) Returns relating to Registered Building and Investment Societies; and (*c*) Returns relating to Registered Co-operative Societies.

2. **Trustees, Executors, and Agency Companies.**—Returns are available of seven Victorian, two New South Wales, one Queensland, one South Australian, one Western Australian, and two Tasmanian companies. The paid-up capital of these fourteen companies amounted to £404,422; reserve funds and undivided profits to £290,555; other liabilities, £112,176; total liabilities, £807,153. Among the assets are included:—Deposits with Governments, £140,100; other investments in public securities, fixed deposits, etc., £185,515; loans on mortgage, £136,360; property owned, £202,260; other assets, £152,928. The net profits for the year were £65,453, and the amount of dividends and bonus £33,365. Returns as to the amount at credit of estates represented by assets are only available for six companies, viz.:—Two Victorian, one New South Wales, one Queensland, one South Australian, and one Western Australian, the total shewn being £23,423,172.

Probably nearly £20,000,000 would at the least have to be added to this amount for the remaining eight companies, so that the total amount is probably not far short of £44,000,000. None of these companies receive deposits, and advances are only made under exceptional circumstances, and to a very limited extent, the total so shewn in the last balance-sheets being only £75,754.

3. **Registered Building and Investment Societies.**—Returns have been received of a total of 155 societies, viz., 73 in New South Wales, 27 in Victoria, 15 in Queensland, 24

in South Australia, 12 in Western Australia, and 4 in Tasmania. The balance-sheets cover various periods ended during the second half of 1909 and the first half of 1910, so that the returns may be assumed to roughly correspond to the financial year 1909-10. The liabilities of the societies are stated as follows:—

LIABILITIES OF REGISTERED BUILDING AND INVESTMENT SOCIETIES, 1909-10.

State.	Paid-up Capital or Subscriptions.	Reserve Funds.	Deposits.	Bank Overdrafts and other Liabilities.	Total Liabilities.

§ 4. Savings Banks.

1. **General.**—The total number of savings banks, with their branches and agencies, in the Commonwealth, closely approximates to that of banks of issue, and was at the middle of 1910, 1838, distributed as follows:—New South Wales, 653; Victoria, 416; Queensland, 233; South Australia, 250 (exclusive of 149 school penny savings banks); Western Australia, 149 (exclusive of 138 school penny savings banks); and Tasmania, 137.

In the following tables the figures for Victoria, Queensland, South Australia and Western Australia refer to financial years ended 30th June, and those of New South Wales to calendar years ended 31st December next preceding. In the case of Tasmania figures for the two joint-stock savings banks are made up to the last day of February in each year, and those for the Government Savings Bank to the 31st December, except in 1906-7, 1907-8, 1908-9, and 1909-10 where they relate to the year ended 30th June.

2. **Depositors.**—The total number of depositors, *i.e.*, of persons having accounts open, not of those making deposits, in each of the last ten years is shewn in the following table:—

NUMBER OF DEPOSITORS IN SAVINGS BANKS, 1900-1 to 1909-10.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.

* Inclusive of 2011 depositors in school penny savings banks.
† " 2645 " " " " in 1909 and 6881 in 1910.
‡ " 4607 " " " "
§ " 4590 " " " " " 6781 "

The subjoined table shews the above figures in relation to the population of the States; it must, of course, be borne in mind that savings bank accounts are not restricted to the adult population, but that it is, on the contrary, a very usual practice to open accounts in the name of children. Even so, the proportion is a large one, amounting to more than three-tenths of the total population of the Commonwealth, and rising both in Victoria and in South Australia to considerably more than two-fifths.

DEPOSITORS IN SAVINGS BANKS PER THOUSAND OF POPULATION,
1900-1 TO 1909-10.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.

1909-10	281	429	196	482	310	329	336

3. **Deposits.**—The total amount of deposits in the savings banks of the six States reaches the large sum of fifty-three million pounds, and would no doubt be even larger if the banks did not restrict interest-bearing deposits to certain limits. It must be remembered that though not granting him facilities to draw cheques, the Australian savings banks practically afford the small tradesman all the advantages of a current account, in addition to which they also allow him interest on his minimum monthly balance, instead of charging him a small fee for keeping his account, as the banks of issue do. The rates of interest allowed, and the limits of interest-bearing deposits, are as follows:—New South Wales, Government Savings Bank, 3 per cent. up to £500; Savings Bank of New South Wales, 3½ per cent. up to £200; Victoria, 3½ per cent. on first £100, and 3 per cent. on excess from £101 to £250; Queensland, 3 per cent. up to £200; South Australia, 2½ per cent. on accounts closed during the year, and 3¼ per cent. up to £250 on accounts remaining open; Western Australia, 3 per cent. up to £1000; Tasmania, Government Savings Bank, 3 per cent. up to £250; Hobart Trustees' Savings Bank, 3½ per cent. up to £150; Launceston Trustees' Savings Bank, 3½ per cent. up to £150. The savings banks of four of the States—New South Wales (Government Savings Bank), Victoria, South Australia, and Western Australia—have, for the further benefit of depositors, entered into a reciprocity arrangement, under which money deposited in one State may be drawn out in another State, and even by telegraph.

The table below shews the total amounts at credit of depositors in each of the last ten years:—

DEPOSITS IN SAVINGS BANKS, 1900-1 to 1909-10.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£

1907-8	17,530,157	13,428,676	4,921,881	5,820,344	2,885,463	1,560,951	46,147,472
1908-9	18,805,082	14,101,710	5,158,219	6,347,271	3,059,738	1,605,919	49,077,939
1909-10	20,150,574	15,417,888	5,622,986	6,791,320	3,481,764	1,652,966	53,117,498

A comparison between the tables shewing the number of depositors and the amount of deposits reveals the fact that the average amounts to the credit of each depositor are considerably larger in one State than in another; in other words, that in one State a comparatively larger proportion of the population makes use of the savings banks, and that the natural result is a smaller amount to the credit of the individual depositor. Within the same State there is little variation in the figures from year to year.

AVERAGE AMOUNTS PER DEPOSITOR IN AUSTRALIAN SAVINGS BANKS,

1900-1 TO 1909-10.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1900-1	38 11 5	24 11 8	48 1 9	30 2 4	41 3 3	23 14 9	32 0 4

1908-9	43 11 2	26 9 9	48 7 6	33 17 1	39 7 1	27 12 5	35 4 1
1909-10	43 15 8	27 10 1	49 0 4	33 14 10	40 8 2	27 5 1	35 16 1

The average amount deposited per head of population shews a satisfactory increase during the period under review. In 1900-1 it ranged from £10 10s. in South Australia to £5 16s. 9d. in Tasmania, while in 1909-10 the amount in South Australia had risen to £16 5s., and in Tasmania to £8 19s. 3d. Tasmania's average in 1906-7 was higher than that of Queensland, which, nevertheless, rose from £7 15s. 2d. to £8 7s. 6d. during the seven years. The following table gives the figures for each year:—

SAVINGS BANKS DEPOSITS PER HEAD OF POPULATION, 1900-1 to 1909-10.

4. **Annual Business.**—The annual volume of business transacted by the Australian savings banks is very large when compared with the total amount of deposits. This is mainly due to the fact already pointed out of many accounts being used as convenient current accounts. Thus, during the last year of the period under review, the total amount deposited and withdrawn (exclusive of interest added) amounted to about 140 per cent. of the total amount of deposits at the end of the previous year, while the amount at credit of depositors (inclusive of interest added) increased by only 8½ per cent. during the same year. The following table shews the business transacted during the year 1909-10:—

SAVINGS BANKS TRANSACTIONS DURING THE YEAR 1909-10.

State.	Total Deposits at End of Year 1908-9.	Amounts Deposited during Year 1909-10.	Interest Added during Year 1909-10.	Total	Amounts Withdrawn during Year 1909-10.	Total Deposits at End of Year 1909-10.

§ 5. Life Assurance.

1. **General.**—Under section 51 of the Commonwealth Constitution Act, the Commonwealth Parliament is empowered to legislate in regard to "insurance, other than State insurance; also State insurance extending beyond the limits of the State concerned." With the exception of Act No. 12 of 1905, "an Act relating to assurance on the lives of children by life assurance companies or societies," no legislation relating to life

insurance has been passed by the Commonwealth Parliament, and life assurance companies carry on their business under State laws where such laws are in existence, or otherwise under the provisions of various companies or special Acts. A Royal Commission consisting of the Honourable J. H. Hood, one of the judges of the Supreme Court of Victoria, and G. H. Knibbs, Esquire, Commonwealth Statistician, was, however, appointed in 1908, "to inquire into and report upon the law relating to and the methods of operating Fire, Life, Industrial, and other Insurance in Australia." The Commission was originally required to report the result of its inquiry before the 30th June, 1909. A progress report was issued before that date, and the time for the final report extended to the 30th June, 1910. The report relating to Life Assurance was published on 15th March, 1910, and that relating to Fire Insurance on 15th October, 1910. On the conclusions contained in these reports future Commonwealth legislation will probably be based. In addition to these a report on Social Insurance was prepared by the Commonwealth Statistician and issued on 9th September, 1910.

Returns for the year 1909 have been directly collected from life assurance societies by the Commonwealth Statistician, with results which are in the main satisfactory. Figures for 1909 refer to business in the Commonwealth only, and do not include New Zealand business.

2. **Companies Transacting Business in the Commonwealth.**—The total number of companies at present established in the Commonwealth is seventeen, of which the following six have their head offices in New South Wales:—The Australian Mutual Provident Society, the Mutual Life and Citizens' Assurance Company Limited, the City Mutual Life Assurance Society Limited, the Standard Life Association Limited, the Australian Metropolitan Life Assurance Company Limited, and the People's Prudential Assurance Company Limited. The Mutual Life and Citizens' Assurance Company Limited was formed in 1908 by the amalgamation of the Mutual Life Association of Australasia and the Citizens' Life Assurance Company Limited. During 1910 it increased in size by amalgamating with the Australian Widows' Fund Life Assurance Society Limited, but separate accounts and statements were issued for the year 1909-10. Six companies have their head offices in Victoria, viz.—The Australian Alliance Assurance Company, the National Mutual Life Association of Australasia Limited, the Australian Widows' Fund Life Assurance Society Limited, the Victoria Life and General Insurance Company, the Colonial Mutual Life Assurance Society Limited, and the Australasian Temperance and General Mutual Life Assurance Society Limited. The head office of the Provident Life Assurance Company is in New Zealand, and that of the Liverpool and London and Globe Insurance Company in England. The remaining three societies belong to the United States, viz.—The Equitable Life Insurance Society of the United States, the Mutual Life Insurance Company of New York, and the New York Life Insurance Company.

Most of the Australian companies are purely mutual; the Victoria Life and General (which takes no new life business), the Mutual Life and Citizens', the Standard, the Metropolitan, and the Prudential, are the only companies which are partly proprietary, the shareholders' capital amounting to £40,000, £56,788, £12,500, £11,740 and £4791 respectively. Of foreign companies transacting business in the Commonwealth, the Liverpool and London and Globe, the Provident, and the Equitable are partly proprietary, the shareholders' capital amounting to £245,640, £10,000 and £20,550 respectively.

3. **Ordinary and Industrial Business.**—Of the societies enumerated in the preceding paragraph the following five in 1909 transacted both ordinary and industrial business:—The Australian Mutual Provident Society, the Mutual Life and Citizens' Assurance Company Limited, the Australasian Temperance and General Mutual Life Assurance Society Limited, the Standard Life Association Limited, the Australian Metropolitan Life Assurance Company Limited, and the Colonial Mutual Life Assurance Society.

The People's Prudential Assurance Company Limited and the Provident Life Assurance Company formerly restricted their operations to industrial business, but have now established an ordinary department.

The remaining nine societies transacted ordinary life assurance business only, with the exception of those companies which have fire and accident branches, etc.

It has been attempted in this section to keep returns relating to ordinary and to industrial business apart, so far as it is possible to do so, and figures relating to companies whose head offices are in New Zealand or in Europe or America refer to the Australian business only of those companies.

4. **Ordinary Business: Australian Business in Force, 1909.**—The subjoined table shews the ordinary life business in force at the latest dates available in the seventeen societies conducting operations in the Commonwealth :—

ORDINARY LIFE ASSURANCE.—AUSTRALIAN BUSINESS IN FORCE, 1909.

7. **Expenses of Management of Insurance Societies, 1909.**—(i.) *Ordinary Business.* In the following table the expenses of management (including commission, expenses of management, license fees, and taxes) of the several societies transacting ordinary life

business are shewn, together with the proportion these expenses bear to premium income and to gross receipts. The People's Prudential Company is included amongst the industrial companies in a subsequent table, as that company transacts mainly industrial business, and as its returns include both ordinary and industrial business.

New York Life Insurance Society	6,881	8.45	7.89

* Not available.

(ii.) *Industrial Business.* The Australasian assurance societies have, in common with assurance societies elsewhere, made the experience that industrial business is much more expensive than ordinary business. This is, of course, principally due to the great expenses in connection with collection and commission. The subjoined table shews particulars in regard to this business, the figures again including commission, expenses of management, license fees, and taxes:—

INDUSTRIAL LIFE ASSURANCE.—EXPENSES OF MANAGEMENT IN AUSTRALIA, 1909.

Society.	Expenses of Management.	Proportion to Premium Receipts.	Proportion to Gross Receipts.
	£	%	%
Australian Mutual Provident Society	34,281	56.59	55.09

Provident Life Assurance Company	2,587	94.94	93.66

* Including ordinary business.

8. **Liabilities and Assets of Insurance Societies, 1909.**—The liabilities of the Australasian societies consist mainly of their assurance funds; as already mentioned, only six of the societies are partly proprietary, viz., the Mutual Life and Citizens', with a paid-up capital of £56,788; the Standard, with a paid-up capital of £12,500; the Metropolitan, with a paid-up capital of £11,740; the Prudential, with a paid-up capital of £4791; the Victoria Life and General, with a paid-up capital of £40,000; and the Provident, with a paid-up capital of £10,000. With the exception of the Victoria Life and General, this paid-up capital belongs in every case to the industrial branch of the respective societies. The capital of the Provident (£10,000) is held in New Zealand, that of the Liverpool and London and Globe (£245,640) in England, and that of the Equitable Life (£20,550) in the United States. Neither of these three amounts appears, therefore, in the two subjoined tables where the capital of the Australian societies is included with the assurance funds. The assets consist mainly in loans on mortgage and policies, in Government, municipal, and similar securities, shares, freehold property, etc. Loans on personal security are only granted by very few of the Australian societies.

(i.) *Ordinary Business.* The following table shews the liabilities and assets of the societies transacting ordinary life business:—

ORDINARY LIFE ASSURANCE.—AUSTRALIAN LIABILITIES AND ASSETS, 1909.

* Including industrial business. As the business of these two societies is mainly ordinary life business they have been included in this table. † Not available.

(ii.) *Industrial Business.* As stated in the footnote to the preceding table, the Australian Mutual Provident Society and the Australasian Temperance and General Mutual Life Assurance Society, which transact a certain amount of industrial business, but whose business is mainly ordinary life business, have been included with those societies doing only ordinary life business. On the other hand, the People's Prudential Assurance Company, in whose case industrial business greatly predominates over ordinary life business, has been included in the following table. Incomplete as the table is, it shews that the funds appropriated to industrial business are very insignificant in comparison with those pertaining to ordinary life business. Taking the table in conjunction with the statements of revenue and expenditure, the question may well be asked whether in the case of some of the societies industrial business is worth catering for at all.

* Including ordinary business.

(iii.) *Total Liabilities and Assets.* It has been thought advisable to confine the figures relating to life assurance to business in the Commonwealth. Several of the companies whose head offices are in Australia transact, however, a large amount of business elsewhere, viz., in New Zealand, in South Africa, and in the United Kingdom, while in the case of the foreign companies, the Australian business is insignificant compared with that done elsewhere. Particulars as to this foreign business of both Australian and foreign companies will be found in "Finance Bulletin, No. 4," and a short table only is inserted here, shewing the total liabilities and assets (which balance in every case) of the various companies, so that the deficiencies in the Australian assets shewn in the previous tables for those companies doing business elsewhere may not be misunderstood:—

§ 6. Fire Insurance.

1. **General.**—Returns as to fire insurance are very defective, and only for Sydney and Melbourne and the country districts of Victoria have some figures been given which are worth reproducing. The Royal Commission mentioned above under "Life Assurance" is inquiring into fire insurance matters, and Commonwealth legislation may, therefore, be expected at an early date.

2. **Sydney.**—Under the Fire Brigades Act 1902 the cost of the Metropolitan Fire Brigade is defrayed by equal payments on the part of the Colonial Treasurer, the municipal councils within the area under the jurisdiction of the Fire Brigades Board, and the insurance companies represented in Sydney. The companies divide their share proportionately to the amount held at risk. Under this arrangement the amount payable by the companies for the year 1909 was £19,100, divided amongst sixty-five companies, of which not more than six had their head office in Sydney. The amounts thus held at

risk at the close of the last four years for which returns are available were, in 1905, £78,108,749; in 1906, £81,364,129; in 1907, £86,563,304; and in 1908, £89,971,992. A new Act, coming into force on the 1st January, 1910, was passed in 1909. This Act substitutes a Board of Fire Commissioners for New South Wales for the present Metropolitan Fire Brigades Board, and divides the whole State into eight fire districts for the greater facilitation of working.

3. **Melbourne.**—In Melbourne the Metropolitan Fire Brigades Board assesses the amount payable by the insurance companies on the amount of premiums returned. These premiums for the last four years averaged about £300,000 per annum, while the contributions paid by the companies amounted to about £13,000, or about £4 6s. 8d. for every £100 of premiums. It may be said, therefore, that the companies have to devote about 4⅓ per cent. of their premium income from metropolitan insurances to the maintenance of the fire brigade.

The annual value of ratable property is nearly £5,000,000, and the amounts contributed by the municipalities—as in the case of the insurance companies, one-third of the amount required by the Fire Brigades Board, the remaining one-third being contributed by the State Treasurer—are equal to about ¾d. per £1 of ratable value. In addition to this contribution insurance companies doing business in Victoria have to take out an annual license at a cost of 1½ per cent. of their gross premium income, which is probably equal to about 1⅞ per cent. on net income.

4. **Country Districts of Victoria.**—The country districts are divided into nine areas for fire insurance purposes, and the contributions to be paid vary in these areas according to the actual requirements of the Country Fire Brigades Board. The annual values of ratable property for the last four years were slightly under £1,500,000. The premium income of the insurance companies from country business during the same period averaged about £150,000, and the contributions of the companies £3700, equal to nearly 2½ per cent. of the premium income.

5. **Brisbane.**—A similar arrangement holds good in Brisbane, under which the cost of the Fire Brigade Board, amounting to about £6000 per annum, is paid in equal shares by the Government, the Brisbane City Council, and the insurance companies.

6. **Adelaide.**—The Fire Brigades' Board of South Australia is incorporated under "The Fire Brigades Act 1904"; "The Fire Brigades Act Amendment Act 1905"; and "The Fire Brigades Act Further Amendment Act 1910." The cost is distributed as follows:—Three-ninths to the Government; four-ninths to the insurance companies; and two-ninths to the municipalities and districts which come under the operations of the board. The insurance companies are assessed in proportion to that portion of their premium incomes derived from the insurance of property (re-insurance within the State excepted) situated within the limits of the municipalities and districts coming under the operations of the board. The respective contributions for 1910 were as follows:—The Government, £6012; the companies, £8016; the municipalities, £4008.

7. **Perth.**—A District Fire Brigades' Bill was reported on by a committee of the Legislative Assembly during 1909, and it was recommended that all brigades should in future be controlled by one board, and that the expense should be met by contributions at the following rate:—By Government, two eighths; by the municipalities, three eighths; and by the Insurance companies, three eighths. These provisions were incorporated in an Act, "The District Fire Brigades Act 1909," which was assented to on 21st December, 1909, and came into force on the 1st day of January, 1909. This Act, however, does not apply to Perth or the other districts in which the Fire Brigades Act 1898 is still operative. According to the provisions of the latter Act the expenditure is allocated as follows:—One-ninth to the Government; four-ninths to the insurance companies; and four-ninths to the municipalities. It is provided that the Governor may, at any time, on the petition of the council of any municipality, declare by proclamation that the provisions of the Act of 1898 shall cease to be in force in that municipal district.

8. **Australian Insurance Business.**—Returns are available shewing the revenue and expenditure, assets and liabilities, and investments of sixteen insurance companies

having their head offices either in the Commonwealth or in New Zealand. These companies are:—(*a*) with head-office in Sydney—the Australian Mutual Fire Insurance Company, the City Mutual Fire Insurance Company, the Mercantile Mutual Fire Insurance Company, the Queensland Insurance Company Limited, and the United Insurance Company; (*b*) with head office in Melbourne—the Australian Alliance Assurance Company, the Colonial Mutual Fire Insurance Company, the Commonwealth Insurance Company Limited, the Victoria Insurance Company, and the Victoria General Insurance and Guarantee Company Limited; (*c*) with head-office in Hobart—the Derwent and Tamar Fire and Marine Assurance Company Limited; (*d*) with head-office in Launceston—the Mutual Fire Insurance Company of Tasmania; (*e*) with head-office in Auckland—the New Zealand Insurance Company, and the South British Fire and Marine Insurance Company of New Zealand; and (*f*) with head-office in Dunedin—the National Fire and Marine Insurance Company of New Zealand, and the Standard Fire and Marine Insurance Company of New Zealand. As their names imply, the majority of these companies transact marine insurance and in some cases guarantee and other business in addition to fire insurance business, and the returns relating to the latter cannot be separated from the former.

The accounts cover two periods of one year, the second year ending at various dates from 30th June, 1909, to 31st March, 1910. The figures for the first year are put in brackets.

The premiums, less reinsurances and returns, amounted to £1,799,303 (£1,795,366); losses were £1,064,464 (£1,044,154). Expenses and commission came to £603,572 (£590,689), and there was, therefore, a profit on trade operations of £131,267 (£160,523). As, however, interest, rent, fees, etc., amounted to £147,803 (£137,323), the total profit was £279,070 (£297,846). Dividends and bonuses came to £175,179 (£179,191). The ratio to premium income of losses was, therefore, 59.16 per cent. (58.16 per cent.), ranging from 26 per cent. to 88.59 per cent.; and of expenses and commissions, 33.54 per cent. (32.90 per cent.). The resulting ratio of trade surplus to premium income was 7.30 per cent. (8.94 per cent.)

The paid-up capital of the sixteen companies was £1,295,347 (£1,295,347); reserve and reinsurance funds, £2,041,435 (£2,000,262); undivided profits, £150,346 (£143,470). The total paid-up capital and reserves were, therefore, £3,487,128 (£3,439,079). In addition to these liabilities there were others, viz.:—Unsettled losses, £183,940 (£229,818); sundry creditors, £126,853 (£110,626); dividend to pay, £115,672 (£127,371); and, in the case of one company, a life assurance fund, £181,741 (£199,551), thus bringing the total liabilities to shareholders and to the general public up to £4,095,334 (£4,106,445).

The corresponding amount of assets is made up of investments, £3,556,645 (£3,553,959), viz.:—Loans on mortgage, £1,097,196 (£939,932); Government securities, debentures, shares, etc., £1,016,244 (£1,015,440); landed and other property, including furniture, £763,931 (£760,267); fixed deposits, £577,751 (£578,984); in the case of one company doing a mixed business—loans on its own life policies, etc., £15,338 (£17,730); other investments, £86,185 (£241,606). The balance of assets consisted of cash in bank, on hand, and bills receivable, £171,082 (£186,906); and sundry debtors, etc., £367,607 (£365,580).

The financial position of the companies is undoubtedly a strong one, owing to the steady accumulation of reserves, and the high ratio borne by capital and reserves to premium income must be a cause of satisfaction to policyholders.

7. Marine Insurance.

No returns are available in regard to Marine Insurance. It may, however, be stated that the Commonwealth Parliament in 1909 passed an Act (No. 11 of 1909, An Act relating to Marine Insurance), which was assented to on the 11th November, 1909. This Act materially alters some of the conditions under which marine policies have heretofore been issued.

§ 8. Friendly Societies.

1. **General.**—Friendly societies are an important factor in the social life of the community, as probably nearly one-third of the total population of the Commonwealth comes either directly or indirectly under their influence. Their total membership is nearly 380,000, but as certain benefits, such as medical attendance and free medicine and in many cases funeral expenses, are granted to members' families as well as to members themselves, this figure must, even when due allowance is made for young and unmarried members, be multiplied by four at the least to arrive at the total number of persons more or less connected with these societies. Legislation has conferred certain privileges on friendly societies, but, on the other hand, it insists on their registration, and it is the duty of the Registrars in the various States, prior to registering a new society, to see that its rules are conformable to the law, and that the scale of contributions is sufficiently high to enable the promised benefits to be conferred on members. Societies are obliged to forward annual returns as to their membership and their finances to the Registrar, and elaborate reports are published in most of the States dealing with the returns thus received.

In the following tables the figures refer to the year 1909, except those for South Australia, which refer to 1906.

2. **Number of Societies, Lodges, and Members.**—The total number of societies registered in New South Wales is 67; in Victoria, 48; in Queensland, 17; in South Australia, 16; in Western Australia, 17; and in Tasmania, 11. No total is given of these figures for the Commonwealth, as the societies shewn in one State are in most cases represented in all the other States. The number of different lodges, the total number of benefit members at the end of the year, and their average number during the year are shewn in the following table:—

FRIENDLY SOCIETIES.—LODGES AND MEMBERS, 31st DECEMBER, 1909.*

State.	Number of Lodges.	Benefit Members at End of Year.	Average No. of Benefit Members during Year.
New South Wales	1,492	113,216	109,039
Victoria	1,441	136,340	133,194
Queensland	464	39,871	38,796
South Australia	506	52,165	51,226
Western Australia	260	16,044	16,071
Tasmania	168	20,141	19,548
Commonwealth	4,331	377,777	367,874

* See, however, paragraph 1, above.

3. **Sickness and Death.**—Sick pay is generally granted for a number of months at full rates, then for a period at half rates, and in some societies is finally reduced to quarter rates. The following table shews the total number of members who received sick pay during the year, the number of weeks for which they received pay in the

aggregate, and the average per member sick, and further the number of benefit members who died during the year, together with the proportion of deaths per thousand average members:—

FRIENDLY SOCIETIES.—SICKNESS AND DEATH, 1909.*

State.	Number of Members who received Sick Pay.	Total Number of weeks Sick Pay granted.	Average No. of weeks per Member sick.	Deaths of Benefit Members and Wives.	Proportion of Deaths to 1000 average Benefit Members.
New South Wales	21,701	135,869	6.26	838	7.69
Victoria	24,158	199,150	8.24	1,634	12.27
Queensland ...	6,500	38,101	5.86	258	6.65
South Australia ...	8,851	84,707	9.57	698	13.63
Western Australia	2,321	12,347	5.32	120	7.47
Tasmania ...	3,935	20,962	5.33	128	6.70
Commonwealth	67,466	491,136	7.28	3,676	9.99

* See, however, paragraph 1.

4. **Revenue and Expenditure.**—The financial returns are not made up in the same way in each State, but an attempt has been made in the subjoined table to group the revenue under the main headings:—

FRIENDLY SOCIETIES.—REVENUE, 1909.*

State.	Entrance Fees.	Members' Contributions.	Levies.	Interest, Dividends, and Rents.	All other Income.	Total Revenue.
	£	£	£	£	£	£
New South Wales	2,985	349,487	...	50,500	52,552	455,524
Victoria ...	2,854	385,251	†	77,037	58,729	523,871
Queensland ...	†	129,484	†	17,756	†	147,240
South Australia ...	1,535	122,643	§	29,464	‡59,227	212,869
Western Australia	1,273	44,470	957	7,017	35,875	89,592
Tasmania ...	1,144	61,660	†	5,842	8,523	77,169
Commonwealth		1,103,743		187,616	214,906	1,506,265

* See, however, paragraph 1. † Included under "Members' contributions." ‡ Including Levies. § Included under "All other income."

The returns relating to expenditure are more complete than those relating to revenue, and can be shewn in full for every State. The figures shew that the excess of revenue, amounting in the aggregate to £290,935, was divided amongst the six States as follows:—New South Wales, £77,356; Victoria, £124,526; Queensland, £42,445; South Australia, £23,101; Western Australia, £12,829; and Tasmania, £10,678. The revenue exceeded the expenditure by about sixteen shillings per average benefit member, a margin which cannot be called very large.

FRIENDLY SOCIETIES: EXPENDITURE, 1909.*

State.	Sick Pay.	Medical Attendance and Medicine.	Sums Paid at Death of Members & Members' Wives.	Administration.	All other Expenditure.	Total Expenditure.
	£	£	£	£	£	£
New South Wales	105,832	122,327	25,706	49,831	74,472	378,168
Victoria ...	134,078	137,455	29,105	66,680	32,027	399,345
Queensland ...	28,577	44,552	10,273	21,393	†	104,795
South Australia ...	49,370	27,130	24,325	33,545	55,398	189,768
Western Australia	10,331	18,266	1,732	11,572	34,862	76,763
Tasmania ...	17,535	17,402	8,463	8,393	14,698	66,491
Commonwealth	345,723	367,132	99,604	191,414	211,457	1,215,330

* See, however, paragraph 1. † Included in "Administration."

It appears from the above figures that sick pay averaged about fourteen shillings and twopence per week, but, as the returns include pay at half and quarter rates, and as the proportion of these to full rates is not stated, the average given must be taken for what it is worth. Medical attendance and medicine came to twenty shillings per average benefit member, or to nearly £5 10s. per member who received sick pay during the year. Funeral expenses averaged £27 1s. 11d. per death of a member or wife of a member during the year, but this average also must be taken for what it is worth, as the funeral expenses allowed in the case of the death of a member are generally much higher than those allowed in the case of the death of a member's wife.

5. **Funds.**—The two foregoing tables shew that the surplus of revenue over expenditure amounted to £290,935 for the year, and a small surplus must, of course, result annually in every society which levies adequate contributions to enable it to meet all possible claims. These accumulations of profits are generally invested, and the subjoined table shews for all of the six States the division into invested and uninvested funds :—

FRIENDLY SOCIETIES: FUNDS, 31st DECEMBER, 1909.*

State.	Invested Funds.	Uninvested Funds.	Total Funds.
	£	£	£
New South Wales	1,273,464	61,915	1,335,379
Victoria	1,922,824	89,593	2,012,417
Queensland	478,947	24,865	503,812
South Australia	714,719	29,076	743,795
Western Australia	132,782	14,404	147,186
Tasmania...	178,061	10,448	188,509
Commonwealth	4,700,797	230,301	4,931,098

* See, however, paragraph 1.

The total funds amounted, therefore, to £13 1s. per member at the close of the year under review.

§ 9. Probates.

1. **Number of Probates and Letters of Administration and Value of Estates.**—The value of the estates left by deceased persons gives a fair view of the distribution of property among the general population. There occurred in 1909 the deaths of 30,542 adult persons, while the total number of probates and letters of administration granted during the same period was 9822. It would therefore appear that about one in every three adults who died during the year was possessed of sufficient property to necessitate the taking out of probate. The details for each State are shewn in the table hereunder:—

PROBATES AND LETTERS OF ADMINISTRATION, 1909.

State.	Number of Estates.			Value of Estates.		
	Probates.	Letters of Administration.	Total.	Probate.	Letters of Administration.	Total.
				£	£	£
New South Wales	2,104	1,081	3,185	10,295,793	846,275	11,142,068
Victoria ...	2,859	1,210	4,069	6,480,376	*	6,480,376
Queensland ...	467	212	679	1,176,076	332,807	1,508,883
South Australia ...	913	202	1,115	1,863,480	76,029	1,939,509
Western Australia	231	182	413	833,423	105,895	939,318
Tasmania ...	278	83	361	613,153	108,858	722,011
Commonwealth	6,852	2,970	9,822	21,262,301	1,469,864	22,732,165

* Included with Probates.

In addition to the foregoing, intestate estates to the value of £115,526 were placed under the control of the curator during the year, and £24,591 unclaimed money paid into Consolidated revenue. The details for each State are shewn hereunder:—

INTESTATE ESTATES, 1909.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wlth.
Intestate estates placed under control of curator during 1909							
Number	598	253	572	149	275	95	1,942
Value ... £	49,895	16,350	18,500	18,937	11,844	...	115,526
Unclaimed money paid into consolidated revenue by curator during 1909 ... £	11,289	6,539	4,842	655	1,101	165	24,591

This would make the average value of each estate £2314, and the average value of property left by each adult who died in 1909, £744.

2. **Private Wealth.**—The probate figures have sometimes been used as a means for estimating the private wealth of a country. There are, however, many reasons why no reliance can be placed on such estimates. Generally, estates under a certain minimum value do not require to pass through the probate office. Settlements and deeds of gift, although liable to probate duty, occasionally evade detection. The falling in of several, or even of one very large estate, may vitiate the figures not only of one year but of a series of years. All these errors can, however, be more or less guarded against, while the assumption that each adult living is possessed of the same average amount of property as each adult who died during the year or during a series of years, an assumption on which the whole calculation is based, remains. But as it is certain that the accumulated wealth of an individual generally advances with age, and is probably in most cases greater at death than at any previous period, it will be seen that the results obtained by such a calculation must be unduly inflated. If the calculation were made for the Commonwealth and based on the figures of 1909 it would shew the average property of each adult to be £744, and of the 2,320,000 adults, which were approximately included in the population of the Commonwealth at the end of 1909, about £1,725,000,000, an estimate probably considerably in excess of the truth.

SECTION XXII.

PUBLIC INSTRUCTION.

§ 1. Evolution of Primary Education in Australia.

1. **Primary Systems of the States.**—(i.) *Place of New South Wales in Australian Education.* The first settlement in Australia being in New South Wales, it is but natural that Australian education should have had its beginnings in that State. In the evolution of educational method and system in Australia, New South Wales also has played a leading part, and has had practically a dominating influence. For that reason an account of the evolution of education in this State contains, as it were, the key to the understanding of the Australian attitude to this question. The subject is dealt with in some detail in No. I. and No. II. issues of the Commonwealth Official Year Book, but it is not proposed to repeat it in the present volume.

(ii.) *Primary Systems of other Commonwealth States.* A more or less detailed account of the origin and development of the primary educational systems of the other States also appears in No. I. and No. II. issues of the Year Book.

(iii.) *Present Position of Primary Education in Australia.* Throughout Australia primary education is compulsory and free, while there exists in most of the States a liberal provision of scholarships and bursaries to the higher State Schools, to the Secondary Schools, and to the Universities.[1] Generally speaking, the primary system is fairly well developed. Considerable interest is taken in educational matters by the people of the Commonwealth, and within the last few years the States of New South Wales and Victoria have sent qualified representatives to inspect and report on the methods adopted in the chief countries of Europe and America. The reports of these Commissioners have been widely studied, and various improvements have been made in accordance with their recommendations. The orientation, lighting, and ventilation of school buildings are being modernised. In all of the States periodical medical inspection of the children is in force. (A detailed statement of the work being done in this direction will be found in the chapter dealing with Public Hygiene.) Methods of training teachers are being developed on up-to-date lines, although the "pupil teacher" is still in existence in all the States. Instruction generally has been greatly improved. There has been a wider employment of kindergarten principles in the early stages, and the more or less purely abstract teaching of the older days has been largely replaced by concrete methods. Such subjects as nature study, manual training, and drawing have received a general impetus. Lastly, the system of inspection has been considerably remodelled. Under the old system, the inspector was little more than an examining officer, but, under the present régime the primary duty of these officers consists in guiding and directing the teaching in accordance with approved methods.

(iv.) *Co-ordination of Educational Activities.* Although as pointed out in (iii.) the primary systems may be considered as fairly well organised, there is still need for a

1. Universities have been in existence for some time in New South Wales, Victoria, South Australia, and Tasmania. The University of Queensland was opened in March, 1911, and a University will shortly be founded in Western Australia.

more effective co-ordination of the entire educational activities of the States. At the present time, the brighter pupils from the State Schools may, through the medium of an excellent scheme of scholarships and bursaries, gain entrance to the secondary schools and to the Universities, but the average boy or girl simply leaves the State School at the age of fourteen or thereabouts, and the State apparently no longer concerns itself with them. A small proportion attends evening schools or technical classes, others persevere in private study, but it is to be feared that many make no further attempt at progress. This condition of affairs has been recognised, and efforts have been made to meet it by providing additional evening schools, extending the facilities for technical instruction, arranging for University extension lectures, etc. It may be noted further, that, while the bulk of the primary education, and the whole of the University education is under the control of the State, intermediate secondary education is largely in private hands. There are, of course, some excellent State higher schools, together with semi-private subsidised grammar schools, but a fully co-ordinated scheme of public education has yet to be created. The various Departments of Public Instruction are virtually departments controlling primary education, though they are associated more or less with the Universities and with technical education.

§ 2. State Schools.

1. **Introductory.**—The State schools, or, as they are sometimes termed, the "public" schools, of the Commonwealth comprise all schools directly under State control, in contradistinction to the so-called "private" schools, the bulk of which, though privately managed, nevertheless cater for all classes of the community.

2. **Enrolment and Attendance.**—The following table shews the number of State Schools, together with the teachers employed and the enrolment and "average attendance" in each State during the year 1909:—

STATE SCHOOLS, TEACHERS, AND SCHOLARS, 1909.

(COMMONWEALTH.)

State.	Schools.	Teachers.*	Enrolment.	Average Attendance.
New South Wales	3,075	5,431	218,248	160,080
Victoria	2,035	4,868	205,278	146,106
Queensland	1,141	2,521	88,865	69,755
South Australia	722	1,294	53,748	38,255
Western Australia	434	954	31,341	26,673
Tasmania	380	720	26,756	17,391
Commonwealth	7,787	15,788	624,236	458,260

* Exclusive of sewing mistresses.

Unfortunately, the schemes of enrolment and of the computation of "average attendance" are not identical in each State, so that the comparisons are imperfect. That the educational statistics of each State of the Commonwealth should be made up in the same way is much to be desired.

The enrolment and average attendance at the State Schools in the Commonwealth are given below for the year 1891, and for each year of the period 1899 to 1909:—

ENROLMENT AND ATTENDANCE AT STATE SCHOOLS, 1891 to 1909.

(COMMONWEALTH.)

Year.	Total Population.[1]	Enrolment.	Average Attendance.	Year.	Total Population.[1]	Enrolment.	Average Attendance.
1891	3,240	561,153	350,773	1904	3,984	625,594	445,709
1899	3,716	608,431	424,214	1905	4,052	621,534	442,808
1900	3,765	623,707	441,924	1906	4,119	609,592	442,440
1901	3,826	638,478	450,246	1907	4,197	611,990	444,001
1902	3,883	636,888	455,482	1908	4,275	618,836	446,146
1903	3,927	629,269	446,539	1909	4,374	624,236	458,260

1. In thousands.

It will be seen from the above table that, despite the increase of population, the official figures of enrolment and average attendance at the State Schools of the Commonwealth shew unsatisfactory results although an upward tendency is evident in the figures for 1909. An examination of the graphs on pages 230 to 232, shewing birth-rate, will make it apparent that this is at least in part due to the diminished birth-rate of past years.

3. **Births and School Attendance.**—The table below gives the total births in each State and in the Commonwealth during each of the eight-year periods 1890-97, 1891-98, 1892-99, 1893-1900, 1894-1901, 1895-1902, 1896-1903, and the average attendance at State Schools for each year from 1903 to 1909:—

COMPARISON OF BIRTHS AND SCHOOL ATTENDANCE.

(COMMONWEALTH.)

Year.	New South Wales.	Victoria.	Q'land.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
			TOTAL BIRTHS.				
1890-97 ...	310,279	281,918	116,600	83,038	18,606	38,894	849,365
1891-98	307,541	274,512	115,126	81,674	22,013	38,661	839,527
1892-99 ...	304,544	267,015	114,310	80,344	25,401	38,364	829,978
1893-1900	301,649	259,963	114,208	78,951	29,007	38,263	822,041
1894-1901	299,182	254,419	114,117	77,356	32,613	37,977	815,664
1895-1902	298,066	250,622	114,356	75,804	36,722	38,210	813,780
1896-1903	295,258	246,485	112,103	73,745	41,048	38,500	807,139
			ATTENDANCE AT STATE SCHOOLS.				
1903 ...	154,382	145,500	69,759	42,752	20,283	13,863	446,539
1904 ...	153,260	145,122	68,661	42,234	22,111	14,321	445,709
1905 ...	151,033	143,362	68,780	41,807	23,703	14,123	442,808
1906 ...	151,261	142,216	69,771	40,489	24,973	13,730	442,440
1907 ...	152,607	147,270	66,849	37,861	24,950	14,464	444,001
1908 ...	156,000	143,551	67,309	38,193	25,141	15,952	446,146
1909 ...	160,080	146,106	69,755	38,255	26,673	17,391	458,260

4. **Centralisation of Schools.**—The question of centralisation of schools adopted so successfully in America is receiving some attention in the Commonwealth, and particularly in New South Wales. It is recognised that a single adequately-staffed and well-equipped central institution can give more efficient teaching than a congeries of small scattered schools in the hands of less highly-trained teachers, and the small schools in

some districts were therefore closed and the children conveyed to the central institution. The principle was first adopted in New South Wales in 1904, when the conveyance of pupils was authorised in the case of twelve schools.

5. **Education in Sparsely-settled Districts.**—It has always been the aim of the State to carry the benefits of education into the remotest and most sparsely-settled districts. This is effected in various ways. (i.) By the establishment of provisional schools, *i.e.*, small schools in which the attendance does not amount to more than about a dozen pupils, these institutions merging into the ordinary public school list when the attendance exceeds the minimum. (ii.) When there are not enough children to form a provisional school what are known as half-time schools are formed, the teacher visiting them on alternate days. In still more sparsely-peopled districts an itinerant teacher goes from house to house within a certain radius. In New South Wales parents in the thinly-peopled areas are also allowed to club together and build a school, which receives aid from the Government in the form of a yearly subsidy and grant of school material. An experiment on the part of New South Wales, the result of which will be watched with some interest, is the establishment of a "travelling" school. A van has been built, in which the teacher will travel and carry with him a tent for himself and one to be used as a school, together with such books and apparatus as are required in a primary school. The school has been in operation since August, 1908, and has so far given very satisfactory results.

6. **Evening Schools.**—Evening public schools have been in existence for many years in some of the States, but their progress has been uncertain. In New South Wales, at latest available date, there were 33 schools with an enrolment of 1099 and average attendance of 561; Victoria had nine schools with enrolment of 1194 and average attendance of 357; Queensland had evening continuation classes attended by 54 pupils; and Western Australia had two schools with an enrolment of 103 district students.

7. **Higher State Schools.**—(i.) In *New South Wales* public schools, in which the subjects taught embrace, in addition to the ordinary course, such others as will enable the pupils to compete at the Senior or Junior University Examinations, are classed as *Superior Schools*. There were 145 of these schools in existence at the end of 1909, with an enrolment of about 93,000 scholars. There are also five *High Schools* in the State—two for boys, two for girls, and one for boys and girls. These had an enrolment in 1909 of 1035 pupils, with an average attendance of 786. In twenty-five country centres the superior puplic schools practically correspond to the high schools, and the educational standards and instructional staff have been so arranged as to prepare for the University matriculation. It is intended also to adapt the teaching in these institutions to the special needs of the districts in which they are situated. Further, these high schools and district schools will be used as preparatory schools for the training of young persons who wish to become teachers. In order to provide teachers of agriculture, provision is made for ten teacher-students annually to attend the second year's training at the Hawkesbury Agricultural College.

The Sydney Grammar School (not a "State" school in the ordinary acceptation of the term), which receives a State endowment of £1500 a year, had in 1909 a quarterly enrolment of 604 pupils and an average attendance of 574.

(ii.) In *Victoria*, what are termed "*Continuation Schools*" have been established at Melbourne, Ballarat, and Bendigo for the purpose of giving preliminary training to young people who propose to join the ranks of the teaching service, and it is hoped that ere long the supply from this source will preclude the necessity for the employment of inexperienced pupil teachers. It is expected that these schools will shortly be able to supply the 300 junior teachers annually needed by the Department. Agricultural High Schools to which teacher students are also admitted, are referred to in (8) hereafter. The enrolment of these High State Schools in 1909 was 1002, of whom 517 were girls.

(iii.) *Queensland* does not possess any distinctly secondary schools under State control, although it is proposed to establish high schools in the more important centres at an early date. There are, however, ten Grammar Schools—six for boys, and four for girls, each of which is subsidised by the State to the extent of £750 per annum, and in addition receives a payment of £250 per annum for providing district scholarships. These scholarships, fifty in number, are granted to State School pupils. The enrolment at the Grammar Schools in 1909 was 1218, and the average attendance 1079. From 1909 onwards the schools will be regularly examined by the Inspector-General of the Education Department.

(iv.) *South Australia.* The Adelaide High School was opened on the 24th September, 1908, and the Advanced School for girls, which had been carried on with much success since its opening in 1879, was merged into it, as was also the Pupil Teachers' School, which had been successfully carried on for eight years. Pupils in attendance at the combined school in 1909 numbered 511. Of these 91 were student teachers, 135 were improving their general education prior to beginning work, 240 were studying for University examinations, and 45 were taking a commercial course. District High Schools were carried on in 1909 at twelve centres with a total attendance of 708 pupils.

(v.) *Western Australia.* With the exception of the technical schools and the normal school referred to elsewhere, there is no distinctly secondary school under the control of the State in Western Australia. During 1909 the upper classes of schools in the largest centres of population were brought together into central schools, in order to secure more economical and effective teaching, and it is intended that these central institutions shall form the nucleus of future high schools. A new secondary school with provision for science teaching is now being built in Perth. Evening Schools are held in various parts of the State, but the work carried on is mainly primary. The Perth High School for Boys is subsidised by the State to the extent of £1000 annually.

(vi.) *Tasmania.* No direct provision has hitherto been made by Tasmania for public education of a standard intermediate between that of the State School and the University, but a few pupils are prepared in the ordinary State Schools for the Junior Public Examination of the University. It is intended to encourage this work in future, and the scheme of scholarships, which was discontinued for many years, has recently been revived. For a period of thirty years, from 1860 to 1890, there was in force in Tasmania a system under which the State, without actually providing educational agencies, did much to foster education within the range of the generally accepted high school curriculum, for the Council of Education during this period conducted public examinations of various grades, at which scholarships for juniors to "superior" schools were awarded, as well as exhibitions to British Universities. The Council also granted the degree of "Associate of Arts" in imitation of the similar Oxford title. Later on the Council of Education evolved and expanded into the University of Tasmania.

8. **Agricultural Training in State Schools.**—The question of agricultural training in ordinary schools has received considerable attention in *New South Wales*. In 1905 a teacher of school agriculture was appointed to visit schools and districts for the purpose of giving instruction to teachers and scholars in the subject, the officer selected possessing the dual qualifications of a thorough acquaintance with agricultural work and school methods. Under the direction of a capable head master, a college has also been opened at Hurlstone, near Sydney, at which practical lessons are given in elementary agriculture, and the institution also serves as a stepping-stone to the Hawkesbury Agricultural College. In 1909, ninety-four teachers attended a summer school at the Hawkesbury Agricultural College for training in agriculture and nature study.

The subject of agricultural colleges and experimental farms is dealt with in the section relating to Agriculture. (See page 419.)

In addition to the regular courses of instruction given in the schools, the practice of carrying on "rural camps," where city school boys may gain some insight into the conditions of country life, has for some time been in successful operation. Within the last two years 129 city boys have gone on the land or joined Agricultural Colleges. Nine training school students were attached to the Hawkesbury Agricultural College during their second year's training, and are now being employed at principal schools in agricultural districts.

In *Victoria* what are termed Agricultural High Schools have been established at Warrnambool, Sale, Shepparton, Wangaratta, and Ballarat. Pupils must be at least fourteen years of age, and have obtained a certificate of merit from the local school, or else be able to afford satisfactory proof that they are qualified to profit by the instruction offered. A local council is to be appointed for each school, and will exercise a general oversight over its operations. The experimental plots at these schools have aroused much interest among the farmers from the surrounding districts. A Supervisor of agriculture reports and gives advice on the teaching of agriculture in the State Schools.

Although *Queensland* possesses an Agricultural College and several experimental farms, there is no agricultural institution directly connected with the Education Department. The Government, however, provides a small grant to encourage the study of agriculture, horticulture, and kindred subjects in the State Schools, while a departmental teacher of agriculture visits the schools and gives assistance in agricultural, horticultural, and nature study work. Short courses of instruction for teachers have been instituted at the Gatton College. A large number of teachers have gained a practical knowledge of milk and cream testing, and the subject is now added to the programme of instruction in several of the dairying districts.

In *South Australia* the Public Schools' Floral and Industrial Society, founded in 1880, holds annual exhibitions of school work from all parts of the State. In addition, it has for some years undertaken the distribution of flower seeds among school children at a very cheap rate, and has thus fostered the love of horticulture with remarkable success. A special instructor has been appointed to give assistance to teachers desirous of making their school gardens aid in nature study work.

Beyond encouragement in the direction of making gardens in the school grounds little has been done in the way of practical agricultural training in the schools of *Western Australia* and *Tasmania*. During the Christmas vacation in 1909 a training camp for teachers was held at the State experimental farm at Brunswick, in Western Australia, when some valuable work was done in nature study and agriculture. At some of the schools in this State there are experimental plots for elementary agricultural work.

9. **Teachers in State Schools.**—The distribution of the teaching staff in the State schools during the year 1909 was as follows:—

TEACHING STAFF IN STATE SCHOOLS, 1909.

(COMMONWEALTH.)

State.	Principal Teachers.		Assistants.		Pupil or Junior Teachers.		Sewing Mistresses.	Total.		
	Males.	Fem.	Males.	Fem.	Males.	Fem.		Males.	Fem.	Total.
New South Wales	2,196	550	833	1,641	59	152	105	3,088	2,448	5,536
Victoria	1,498	655	260	835	344	1,276	424	2,102	3,190	5,292
Queensland ...	689	445	288	569	189	341	—	1,166	1,355	2,521
South Australia ...	309	368	65	334	58	160	117	432	979	1,411
Western Australia	265	187	89	293	29	91	62	383	633	1,016
Tasmania ...	177	203	20	140	16	164	—	213	507	720
Commonwealth	5,134	2,408	1,555	3,812	695	2,184	708	7,384	9,112	16,496

It will be observed that there is a fairly large number of junior teachers, or pupil-teachers, as they are called in most of the States. The pupil-teachers will, however, in time disappear, and their places will be filled by young people who have undergone a course of training in schools specially provided for the purpose. Allusion to the methods of training will be found in the next paragraph.

10. **Training Colleges and their Development.**—(i.) *New South Wales.* Up to the year 1905 the teachers in New South Wales State schools, generally speaking, commenced their career between the ages of fourteen and sixteen years, when they were known as "pupil-teachers." As such, they were held responsible for the instruction of a certain number of children, and, in return for their services, received payment partly in the form of a small salary, and partly in teaching and advice from the principals of the schools wherein they were employed. After serving about our years, and subject to passing various examinations designed to test progress in pædagogics and ordinary book learning, a limited number of the pupil teachers was admitted to a course of training in a training college if successful in passing the qualifying examination. On emerging from this institution, after a course of from one to three years, the teacher became known as an "assistant," and later on became master or mistress of a school. Pupil-teachers who did not enter the Training College were placed in charge of small country schools or appointed "assistants," and later on were allowed to compete in the examinations with the trained teachers; in fact, it was found temporarily to the advantage of teachers not to enter the college. Such was the career of the "trained" teacher; but there was in addition a considerable body of untrained teachers who had commenced teaching in small country schools, and many of whom by perseverance and natural aptitude had gained positions of considerable importance in the Department.

Within the last few years, however, it has come to be recognised that the logical place of a scheme of training is antecedent to employment as a teacher, and with this end in view it has been decided to abolish the so-called pupil-teacher, and to establish continuation schools from which, as well as from the high schools, the future supply of young teachers is to be drawn. At the end of 1909 there were 204 probationary students in their first year and 181 in their second year at the various district schools. It is hoped that the pupil-teacher, as such, will be extinct in a few years. In the meantime there were still as many as 211 employed at the end of 1909. Unfortunately, many of the smaller country schools will still have to be supplied by appointments of untrained persons, but it is hoped that under the new system of inspection the inspectors themselves will be able to devote a fair amount of time to instructing the teachers in correct methods. During vacations the country teachers will also have some opportunities of forming aquaintance with up-to-date ideas by attending Summer Schools, Rural Camp-schools, etc.

The old Fort-street Training College for males and the Hurlstone College for females were closed in 1905, and pending the erection of a properly-equipped institution in the University grounds the teachers are being trained at the Blackfriars Public School, Redfern. During 1909 there were 156 men and 142 women students in the institution.

(ii.) *Victoria.* The teachers in this State are trained by means of what is known as the "junior-teacher" system, *i.e.*, training of junior-teachers in the State schools by the head masters, or by a two years' course in a junior training college—otherwise known as a Continuation school—supplemented by a course of training for two years in the Senior Training College at Melbourne. There are seven Continuation schools now in operation, of which four give training in agriculture also. At the Melbourne, Ballarat, and Bendigo schools students are admitted for training as junior teachers, while the students at Sale, Warrnambool, Shepparton, Wangaratta, and Ballarat are taught in addition the theory and practice of farming. The junior teacher is, of course, not sensibly different from the

pupil-teacher of New South Wales. At the expiration of two years in the Continuation schools they may qualify for entrance to the Senior Training College for a further period of two years, at the end of which time they will be appointed to sixth-class positions as State school teachers at an annual salary of £120 16s. for men, and £90 to £100 for women. It is anticipated that there will shortly be a sufficient number of students in the Continuation schools alone to meet the demands of the teaching service. The present junior-teaching system will then be modified to the extent that all candidates for the teaching profession will be required to graduate in one of these schools. The present Training College dates back to 1874, but during the retrenchment period, viz., from 1893 to 1900, it was closed. The institution was re-opened in February, 1900, with an enrolment of fifty-seven students. By the 30th June, 1909, the number had increased to 120. Since its reopening the college has also given attention to the training of kindergarten teachers, and the course of study prescribed for infant teachers has received the sanction of the Education Department and also of the Kindergarten Association. The College receives students for training from private schools. Of the students in 1909, 95 were departmental, 16 non-departmental students being trained in kindergarten methods, and 9 were non-departmental students being trained as primary teachers.

(iii.) *Queensland.* There is no training college in Queensland at the present time, but it is hoped ere long to establish one at Brisbane in affiliation with the University of Queensland. Young people of both sexes are admitted to the service as pupil-teachers at the age of fourteen years, the only training received being that given by the principals of the schools to which they are appointed. The school for infants at Kangaroo Point is, however, being specially staffed and equipped for training Kindergarten teachers. It is proposed to establish similar institutions at Rockhampton and Townsville.

(iv.) *South Australia.* Up to the year 1908 the system of training candidates for the teaching staff in South Australian State schools was, briefly, as follows:—(*a*) Two years of general education in the High School; (*b*) two years as junior teachers in the primary schools, (*c*) two years general study at the University, without special professional training, and with a limited amount of practical teaching. At the present time three institutions are mainly concerned with the work of training teachers. The Adelaide Observation School has a special class to assist young people desirous of becoming provisional teachers. Those who pass the prescribed examination receive practical training at the Model Provisional School attached to the Observation School. The Adelaide High School gives a three years course of educational and professional training. Those who complete the course may enter the Training College or take appointments as unclassified teachers. At the Training College those who enter for one year take a course of study leading to the infant teachers' or the primary teachers' certificate. Those who remain two years take the primary course in the first year, and in the second prepare for the diploma of education. Sixty-one students were in attendance at the Training College in 1909. Schools of instruction are also held at which provisional school teachers have opportunities of observing the latest methods, while an advisory teacher has been appointed to visit and help the teachers of the smaller schools.

(v.) *Western Australia.* A training college for teachers was opened at Claremont in 1902. The original building provided accommodation for sixty students, but extensions were opened in 1908, and the number in training during 1909 was 88, including 23 teachers for special courses. The course in the training college lasts two years. Central classes for "monitors" (*i.e.*, pupil-teachers) were established at Perth in 1903, and monitors outside the metropolitan area are instructed by correspondence. A normal school was established in Perth in 1907 for the purpose of providing a two years' course of higher instruction for a limited number of children who had completed the State school course

and intended to become teachers. The pupils in attendance during 1909 numbered 60, of whom 38 were girls. It may be observed that the normal school does not aim at giving instruction in the principles and practice of pædagogics, this being left to the teachers to whose schools the students are drafted. To assist teachers of small schools to gain some experience of the best method of school management, a model school has been established at Gosnell's, and arrangements have been made for intending teachers, as well as those actually in charge of small schools, to spend a portion of their time at this institution.

(vi.) *Tasmania.* The system of training adopted in Tasmania is as follows:—(*a*) The candidate is selected at fourteen years of age by a head teacher, and assists as a "monitor" for about a year, during which period he must give proof of suitableness for training. (*b*) At the end of this period there is a two years' course of training in the training college. (*c*) The candidate then returns to his own school and teaches there for two years, the head teacher being responsible for his training in practical work, while the training college authorities give lessons by correspondence. (*d*) The last stage is a final year in the training college as a senior student. Some of the more advanced are granted a second year's training, and it is proposed to allow at least one each year to qualify for the Diploma of Education at the Melbourne Training College.

11. **School Savings Banks.**—Returns shew that these institutions are in existence in three States. In New South Wales, there were 696 banks at the end of 1909, the deposits amounting to £24,208 and withdrawals to £24,811. Since their establishment in 1887, deposits totalled £349,578, and withdrawals £341,670. Of the latter sum £84,641 was placed to children's accounts in Savings Banks. In South Australia, 142 schools had 6075 depositors with £2926 to their credit, and in Western Australia, there were 117 school banks with 5206 depositors and £4041 at credit.

12. **Expenditure on State Schools.**—The net expenditure in each State on primary education during each year of the period 1901 to 1909 is shewn below. The figures do not include expenditure on buildings, which is shewn separately in a subsequent table.

EXPENDITURE ON MAINTENANCE, STATE SCHOOLS, 1901 to 1909.

(COMMONWEALTH.)

Year.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tasmania.	Cwlth.
	£	£	£	£	£	£	£
1901 ...	623,734	656,907	256,245	152,006	89,694	37,710	1,816,296
1902 ...	652,860	681,282	261,317	151,462	103,898	48,161	1,898,980
1903 ...	677,683	669,376	256,325	147,297	122,016	48,300	1,920,997
1904 ...	693,954	670,182	261,583	147,842	134,064	50,018	1,957,643
1905 ...	699,789	663,580	278,972	151,242	139,043	44,974	1,977,600
1906 ...	727,471	663,302	286,629	152,713	153,010	45,683	2,028,808
1907 ...	816,249	677,701	297,210	152,400	159,122	52,830	2,155,512
1908 ...	934,603	692,410	299,227	152,950	164,456	60,407	2,304,053
1909 ...	940,534	726,020	309,704	164,863	166,103	73,532	2,380,756

The expenditure per head of average attendance for each of the years given above will be found in the succeeding table. As the figures shew, Western Australia has the highest average, followed by New South Wales and Victoria, the lowest rate being in Tasmania.

COST PER HEAD OF AVERAGE ATTENDANCE, STATE SCHOOLS, 1901 to 1909.

(COMMONWEALTH.)

Year.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tasmania.	Cwlth.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1901 ...	4 0 10	4 7 0	3 12 9	3 9 5	5 9 3	2 12 11	4 0 8
1902 ...	4 3 9	4 10 8	3 11 9	3 9 8	5 12 8	3 6 3	4 3 5

1909 ...	5 17 6	4 19 5	4 8 0	4 6 2	6 4 6	4 4 7	5 3 11

Expenditure on school buildings in each of the years quoted was as follows:—

EXPENDITURE ON STATE SCHOOL BUILDINGS, 1901 to 1909.

(COMMONWEALTH.)

Year.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tasmania.	Cwlth.
	£	£	£	£	£	£	£
1901 ...	57,663	36,040	33,421	13,656	49,073	7,762	197,615
1902 ...	76,793	81,946	9,443	11,250	32,669	11,931	224,032
1903 ...	100,955	39,369	9,006	11,805	35,953	6,710	203,798
1904 ...	72,051	19,502	14,489	9,056	32,892	4,427	152,417
1905 ...	58,820	32,041	14,187	9,094	35,925	4,809	154,876
1906 ...	89,975	39,184	24,896	13,340	39,390	3,456	210,241
1907 ...	103,348	68,416	30,840	15,839	38,928	7,216	264,587
1908 ...	146,715	106,983	44,333	22,726	34,299	8,659	363,715
1909 ...	149,767	162,932	57,349	31,512	31,099	8,442	441,101

The total net cost and the net cost per scholar in average attendance during the year 1909 were as follows:—

NET TOTAL COST PRIMARY EDUCATION, 1909.

(COMMONWEALTH.)

Item.	N.S.W.	Vic.	Q'land.	S. Aust.	W. A.	Tas.	C'wlth.
			£				
Net cost of primary education, including buildings	£ 1,090,301	£ 888,952	367,053	£ 196,375	£ 197,202	£ 81,974	£ 2,821,857
Per scholar in average attendance ...	£6 16/3	£6 1/8	£5 5/3	£5 2/8	£7 7/10	£4 14/3	£6 3/2

The average for the Commonwealth in 1901 was £4 9s. 3d. per scholar in average attendance.

§ 3. Private Schools.*

1. School Teachers, etc., in 1909.—The following table shews the number of private schools, together with the teachers engaged therein, and the enrolment and average attendance in 1909:—

* Private Schools include all schools not wholly under State control. The term "private" though popularly applied is, of course, a misnomer.

PRIVATE SCHOOLS, 1909.

(COMMONWEALTH.)

State.	Schools.	Teachers.	Scholars Enrolled.	Average Attendance
New South Wales	789	3,633	67,982	48,792
Victoria	678	2,178	53,821	43,000*
Queensland	168	777	15,963	13,658
South Australia	186	688	11,643	9,200
Western Australia	121	414	8,506	7,209
Tasmania	140	420	6,513	5,210*
Commonwealth	2,082	8,110	164,428	127,069

* Estimated.

The figures for Queensland include the returns from Grammar Schools, of which there are ten—six for boys and four for girls. These schools are governed by boards of trustees, partly nominated by Government, and partly by the subscribers to the funds. The trustees make regulations regarding the fees of scholars, the salaries of teachers, and generally for the management of the schools. Each school is endowed by the Government at the rate of £750 per annum together with an additional £250 to provide district scholarships, of which five were allotted to each school from 1st January, 1909.

2. **Growth of Private Schools.**—The enrolment and average attendance at private schools during 1891 and in each year of the period 1899 to 1909 are shewn below:—

ENROLMENT AND ATTENDANCE AT PRIVATE SCHOOLS, 1891 to 1909.

(COMMONWEALTH.)

Year.	Enrolment.	Average Attendance.	Year.	Enrolment.	Average Attendance.
1891 ...	124,485	99,588	1904 ...	146,339	119,915
1899 ...	151,803	122,188	1905 ...	145,143	118,627
1900 ...	153,433	124,313	1906 ...	152,058	124,510
1901 ...	148,659	120,742	1907 ...	152,037	122,878
1902 ...	144,437	117,293	1908 ...	152,399	125,530
1903 ...	147,135	120,193	1909 ...	164,428	127,069

In view of the growth in population during the period covered by the table the increase in enrolment and attendance does not afford room for much satisfaction. The returns will no doubt in future be to some extent adversely affected by the development of the higher State schools alluded to in a preceding paragraph.

3. **Defects in Returns of Private Schools.**—Throughout Australia, until quite recently, no administrative machinery existed by means of which supervision could be exercised over the course of education carried out under other ægis than that of the Departments of Education themselves. These departments were without authority over the qualifications of the teaching staff, the equipments, the curricula, or general circumstances of private or denominational schools. With the exception of Western Australia, Victoria, and Tasmania, this state of things continues to the present time.

Without a thorough system of registration of all schools (public or private) the certainty of the operation of the compulsory clause of Public Instruction Acts must

necessarily be insecure. Proper statistical information, moreover, cannot be obtained without imposing upon all schools the duty of rendering complete and prompt returns in regard to enrolment, attendance, teaching staff, equipment, etc.

Recent educational criticism has led, not only to a better training of teachers in State schools, and, to some extent, in private schools, but also to a better recognition of the importance of accurate information as to the progress of educational events. It is understood that in New South Wales steps will be taken shortly to secure more adequate information as to the condition of schools generally.

In Victoria up to the year 1905 no attempt had been made to bring private schools under general administrative control, but the Registration of Teachers and Schools Act of 1906 established a registration scheme under a special Board. This Board has now registered the private schools and teachers in the State. The prime object of the Act is that after a lapse of a definite period there shall be no school of any kind in the State which does not comply with reasonable demands and requirements concerning the nature of its building, its equipment, and the qualifications of its teachers. The teachers who have registered belong to the following classes :—Sub-primary, 2377 ; primary, 4928 ; secondary, 1705 ; and 3330 teachers of special subjects. Some teachers have registered under two, three or four divisions, and the number of individual teachers is given as about 8382. The teaching staff of the Department of Public Instruction itself is not subject to the Registration Board. Registered private schools of all kinds number 773. The only control which the Government has on the scholars in private schools is provided by the law as to compulsory attendance, "efficient and regular instruction" in a private school being counted as adequate excuse for not attending the requisite number of days at a State school.

In Queensland, with the exception of the grammar schools, which are now examined annually, there is practically no control over the private schools, beyond the fact that they may submit themselves to inspection if so desired, and there is apparently no provision in South Australia for any Government supervision over private school affairs.

In Western Australia, however, non-Government schools must be declared efficient by the Education Department if attendance at them is to be recognised as fulfilling the requirements of the law, and the school registers must be open to the inspection of the compulsory officers of the Department.

In Tasmania the Education Act requires the teachers of other than State schools "to furnish during January of each year returns shewing attendances at such schools." Despite the fact that penalties are prescribed for non-compliance with the law, nevertheless many teachers neglect to return the forms sent out. Provision has been made for registration of private teachers and schools very much on the lines adopted in Victoria. The Act declares that all persons who were employed in a *bonâ fide* manner for at least three months before 25th October, 1906, are entitled to be registered as teachers without submitting proof of professional qualifications. No person can be registered as a private teacher since July, 1907, unless the Board is satisfied as to his fitness for the work.

§ 4. Free Kindergartens.

The following information regarding Free Kindergartens in the Commonwealth has been compiled from particulars supplied by the principals of the chief institutions in each State, except in the case of Victoria, the details for this State being furnished by the honorary secretary of the Free Kindergartens Union.

FREE KINDERGARTENS IN THE COMMONWEALTH, 1909.

State.	No. of Schools.	Teachers.	Average Attendance of Children.	Number of Teachers in Training.
New South Wales (Sydney) ...	8	11	340	43
(Newcastle) ...	3	3	120	8
Victoria (Melbourne)	12	21	525	21
Queensland (Brisbane) ...	2	4	74	6
(Clermont) ...	1	1	27	3
South Australia (Adelaide) ...	4	27	270	21
Total	30	67	1,356	102

At Brisbane, where two more schools are in course of formation, the training of teachers is undertaken by the Queensland Crèche and Kindergarten Association.

In Tasmania, schools were established in Hobart and Launceston at the end of 1910.

There are no free Kindergartens in Western Australia. It must, of course, be distinctly understood that the information given above refers to Kindergartens under private management, and is exclusive of institutions controlled by the Education Department of the various States.

§ 5. Universities.

1. **Origin and Development.**—The history of the foundation and progress of the four then existing Australian Universities was traced at some length in Year Books No. I. and No. II. In the present volume space will permit of only a very brief reference to the subject.

(i.) *University of Sydney.* The Act of Incorporation of the University of Sydney received Royal assent on the 1st October, 1850, and the first Senate was appointed on the 24th December of that year. The first matriculation examination was held in October, 1852, when twenty-four candidates passed the required test, and the formal inauguration ceremony took place on the 11th October of the same year. A Royal Charter was granted to the University on the 27th February, 1858. Women students were admitted in 1881. At the inception of the University there were only three professorships. The present staff consists of sixteen professors, five assistant professors, eighty-one lecturers and demonstrators. There are, in addition, fifty miscellaneous assistants in laboratories and three curators of museums.

(ii.) *University of Melbourne.* This institution was established by Act of Parliament assented to on the 22nd January, 1853, and its first Council was appointed on the 11th April of that year. The foundation stone of the main building was laid on the 3rd July, 1854, and the University was formally inaugurated on the 13th April, 1855. By Royal Letters Patent issued in 1859 its degrees are, like those of the Sydney institution, declared of equal status with those of any other university in the British Empire. Women students attended lectures for the first time in 1881. The University, which began in 1855 with Schools of Arts and Laws, has now a staff of sixteen professors, forty-six lecturers and demonstrators, and thirteen honorary demonstrators. The Conservatorium of Music has a staff numbering twenty-five.

(iii.) *University of Adelaide.* This University was established by Act of Parliament in 1874. Its origin and progress was largely due to the munificence of the late Sir Walter Watson Hughes and Sir Thomas Elder, G.C.M.G., the total gifts of the latter amounting to nearly £100,000. The academical work of the institution was commenced in March, 1876, when eight matriculated and fifty-two non-graduating students attended lectures. The foundation stone of the University buildings was laid on the 30th July, 1879, and the buildings were opened in April, 1882. In 1881, by Royal Letters Patent, the degrees granted by the institution were recognised as of equal distinction with those of any university in the British Empire. The Elder Conservatorium of Music was opened in 1898. Power was given by Act of Parliament in 1880 to grant degrees to women. At first there were only four professorships in the University, whereas the present staff consists of ten professors, twenty-five lecturers and ten assistant lecturers and demonstrators, exclusive of the staff at the Conservatorium, which also numbers ten.

(iv.) *University of Tasmania.* The Act to establish the University of Tasmania (Hobart) was assented to on the 5th December, 1889. At the present time, the institution, which is small, but efficient, possesses a staff of three professors and five lecturers. Under Statute dated 13th April, 1905, the Zeehan School of Mines and Metallurgy was affiliated to the University.

(v.) *University of Queensland.* The Act to establish the University of Queensland was passed in 1909, and the first Senate was appointed on the 14th April, 1910. The University was opened on the 18th and lectures given on the 20th March, 1911, by professors of classics, chemistry, physics and mathematics, and engineering.

(vi.) *University of Western Australia.* The University Commission in this State has recommended the establishment of a university somewhat on the lines of those in the Eastern States but with such amendments as would bring it as far as possible into accord with the most modern requirements. The Act establishing a University was passed on the 18th February, 1911. In addition to lectureships, it is proposed to open the institution with four professorships—modern literature and history, mathematics and physics, chemistry, and engineering and mining—while a chair in agriculture will be endowed by the generosity of Dr. Hackett.

2. **Teachers and Students of Universities.**—The following table shews the number of professors and lecturers and the students in attendance at each of the Commonwealth Universities during the year 1909 :—

UNIVERSITIES—TEACHERS AND STUDENTS, 1909.

University.	Professors.	Lecturers.	Students attending Lectures.		
			Matriculated.	Non-matriculated.	Total.
Sydney	21	81	924	350	1,274*
Melbourne	16	53	...	...	998†
Adelaide	10	45	385	269	654‡
Tasmania (Hobart) ...	3	7	53	62	115‖

* Including 140 females. † Including 161 females, but excluding 8 male and 115 female music students. ‡ Including 128 females, but exclusive of 68 male and 323 female music students. ‖ Including 54 females.

3. **University Revenues.**—The income of the Universities from all sources during the year 1909 was as follows:—

UNIVERSITIES.—REVENUE, 1909.

University.	Government Grants.	Fees.	Other.	Total.
	£	£	£	£
Sydney	15,845	22,459	30,692	68,996
Melbourne	19,250	21,286	973	41,509
Adelaide	7,195	9,776	5,755	22,726
Tasmania (Hobart)	4,150	1,037	125	5,312

The column "Other" includes the receipts from private foundations. The extent to which the Universities have benefited by private munificence will be apparent from the following table :—

PRINCIPAL PRIVATE BENEFACTIONS TO AUSTRALIAN UNIVERSITIES.

University of Sydney.		University of Melbourne.		University of Adelaide.	
Donor.	Amount.	Donor.	Amount.	Donor.	Amount.
	£		£		£
J. H. Challis ...	277,000	Sir Samuel Wilson	30,000	Sir Thos. Elder ...	98,760
Sir P. N. Russell ...	100,000	James Stewart ...	25,624	R. Barr Smith ...	8,000
Thos. Fisher ...	30,000	Sir Fr'ncis Ormond	20,000	Sir W. Hughes ...	20,000
Edwin Dalton ...	8,000	John Hastie ...	19,140	Hon. J. H. Angas	10,000
Hugh Dixson ...	7,050	Robert Dixson ...	10,837	Other donations ...	13,580
Hon. SirW. Macleay	6,000	David Kay ...	5,764		
Mrs. Hovell ...	6,000	Henry Dwight ...	5,000		
Thos. Walker ...	5,700	Wm. Thos. Mollison	5,000		
Other donations ...	52,740	Other donations ...	43,534		
Total £	492,490	Total £	164,899	Total £	150,340

In addition to the above there were various other bequests to Sydney University—e.g., collection of Egyptian antiquities, etc., by Sir Charles Nicholson, and Natural History collection by Mr. Geo. Masters, while the building for the Natural History Museum was given by Sir W. Macleay. Numerous prizes and scholarships have also been given to the various colleges. In Melbourne, Sir Francis Ormond's benefactions to Ormond College amounted to about £108,000. Private benefactions to the University of Tasmania and the newly-established University of Queensland amount to £1445 and £2192 respectively.

4. **University Extension.**—Under a statute of the Senate of Sydney University, approved of in 1892, a Board was appointed, which was empowered from time to time to recommend to the Senate the names of suitable persons for giving courses of lectures, and to hold examinations in the subjects of the lectures. The Board receives and considers applications from country centres, and makes provision for engaging lecturers and managing the entire business connected with the various courses. The project has only met with fair success, no lectures having been given in some years, but lately there appears to be an awakening of interest in the matter. The Board also arranged for courses of lectures in Queensland and Western Australia. In 1909 the average attendance at extension lectures in New South Wales was 479.

University extension lectures in Victoria date from the year 1891, when a Board was appointed by the Melbourne University for the purpose of appointing lecturers and holding classes and examinations at such places and in such subjects as it might think fit. Interest in University extension is apparently on the wane in Victoria, as lectures were delivered in four centres only in 1907 and 1908, as against eight centres in 1904.

The Adelaide University has also instituted short courses of extension lectures in Arts and Science, to which students are admitted on payment of a nominal fee. Public intimation of these lectures is made from time to time during the session. For 1909 a course of twelve lectures was provided. The University of Tasmania provides for courses of lectures at Launceston, which are being delivered weekly by members of the University teaching staff.

§ 6. Technical Education.

1. **General.**—Although provision has been made in some of the States in respect to many necessary branches of technical education, the total provision made would imply that this branch of education has not been regarded as of great importance. As will be seen later on, the expenditure on technical education for the whole of Australasia is comparatively insignificant.

2. **New South Wales.**—The present organisation of technical education in this State dates from the year 1883, when a Technical Education Board was appointed as a result of suggestions made at the Technological Conference held in 1879. This Board continued its function till November, 1889, when it was dissolved. and the work has thenceforward been carried on as a branch of the Public Instruction Department. The chief centre of activity is, of course, in Sydney, where the Technical College and Technological Museum are situated, the college having been opened for the reception of students early in 1892. Colleges have also been erected in some of the chief country towns—at Maitland in 1890; Newcastle 1896; Bathurst 1898; Broken Hill 1898; Albury 1899; and Goulburn 1902.

The enrolment in 1909 at technical classes throughout the State was as follows:—

TECHNICAL CLASSES, NEW SOUTH WALES, 1909.

Classes.	Enrolments.				
	Sydney.	Suburban.	Country.	Public Schools.	Total.
Agriculture	204	65	48	...	317
Sheep and wool	166	...	184	...	350
Chemistry	422	92	284	202	1,000
Biology	107	130	45	...	282
Art	1,353	587	1,030	90	3,060
Architecture	1,309	185	705	...	2,199
Printing, etc.	139	...	...	...	139
Engineering — Mechanical	1,118	179	687	...	1,984
Engineering — Electrical	458	...	177	...	635
Engineering — Sanitary	971	65	140	...	1,176
Engineering — Mining	381	65	482	...	928
Mathematics	728	325	268	...	1,321
Commercial	314	231	396	480	1,421
Women's work	947	327	2,161	1,086	4,521
Miscellaneous	235	384	112	1,178	1,909

Classes in various subjects are also held at other country centres and at a large number of public schools. Technical Day Schools have been established at the Central College in Sydney, and at Newcastle and Goulburn. The course of instruction covers two years and is designed to prepare young students for admission to the Engineering, Mining, or Architecture classes at the College. As mentioned elsewhere, higher technical training is afforded at the Schools of Mines and Engineering in connection with the University. References to the agricultural colleges will be found in the section dealing with Agriculture. (See page 419.)

3. **Victoria.**—Technical instruction in mining has for many years received considerable attention in Victoria, the Ballarat School of Mines, which was established as far back as 1870, having achieved an Australasian reputation. The general scheme of instruction, however, lacked cohesion, and it was not until after the publication of the Report of the Royal Commission on Technical Education, which was appointed in 1899, that many defects were remedied. The largest technical institution in Melbourne is the Working Men's College, founded in 1887. The College, in addition to giving instruction to a large number of technical subjects, is also a School of Mines. Science and Art classes have been established at some of the larger State schools. At the 30th June, 1909, there were seventeen technical schools receiving aid from the State. These were as follows:—

TECHNICAL EDUCATION, VICTORIA, 1909.

Institution.	Receipts.	Enrolment.
	£	
Melbourne Working Men's College	10,000	2050
Ballarat School of Mines	4,000	1256
Bendigo School of Mines	2,300	679
*Geelong Gordon Technical College	1,000	451
Bairnsdale School of Mines	750	159
Maryborough Technical College	750	308
Stawell School of Mines	750	175
Castlemaine Technical School	550	188
Daylesford Technical School	350	128
Melbourne College of Domestic Economy	340	105
Sale Technical School	400	119
Horsham Working Men's College	350	133
*Eastern Suburbs Technical College	300	222
Echuca School of Arts	300	124
Kyneton Technical School	250	97
Nhill School of Arts	200	63
Warrnambool School of Arts	150	24

* January to June.

Of the above schools, seven afford instruction in Science, Art, and Trade subjects; two in Art and Science; four in Art and Trade; three in Art; and one in Trade.

4. **Queensland.**—Previous to 1902 technical colleges were carried on in connection with Schools of Art in many of the towns, under the control of local committees, by whom regulations were framed and the colleges administered. The aid granted by the State was £1 for every £1 raised locally, but no grant was to exceed the amount voted annually by Parliament. In 1902 a Board of Technical Education was formed, and held office from September of that year till the 27th May, 1905, and during this time devoted much energy towards the improvement of technical education in Queensland. The control, however, was removed from the Board in July, 1905, and vested in the Minister of Education, who appointed an officer of his Department to the position of Inspector of Technical Colleges. This officer reports on technical education generally, inspects the

colleges, sees that the grants to the various colleges are spent to the best advantage, and so on. Under "The Technical Instruction Act of 1908" the State may contribute four-fifths of the cost of construction and equipment of technical colleges, and the provision has already been availed of in several instances. Efforts are being made to bring the country technical colleges into closer relationship with the State schools, by providing for the instruction of selected pupils in various technical subjects. The sixteen colleges open in 1909 were situated at Bowen, Central (with branches at South Brisbane and West End), Bundaberg, Cairns, Charters Towers, Gympie, Herberton, Ipswich, Mackay, Maryborough, Mount Morgan, Rockhampton, Sandgate, Toowoomba, Townsville, and Warwick.

A technical day-school has been established at Brisbane for the purpose of preparing students for the college courses in the commercial, wool, engineering, mining, and domestic departments.

It is proposed to affiliate the Central Technical College with the University. The average enrolment per term in the various departments of Queensland technical colleges is given hereunder for the year 1909 :—

TECHNICAL CLASSES, QUEENSLAND, 1909.

Department.	Enrolment.	Department.	Enrolment.
Art	516	Geology, Mineralogy, Mining	36
Commerce	882	Mechanical Engineering ...	436
Trades	192	Agriculture	55
Mathematics	319	Health and Sanitary Science	127
Physics	67	Domestic Science and Art ...	910
Chemistry and Metallurgy ...	162	Revisal	166
Electricity	70		

5. **South Australia.**—A considerable amount of attention has been given to technical education in South Australia, particularly in connection with the mining industry. The School of Mines and Industries in Adelaide was founded in 1889. There are in addition Schools of Mines at Moonta, Port Pirie, Kapunda, and Gawler. A School of Design, Painting, and Technical Arts has been established in Adelaide, with branches at Port Adelaide and Gawler.

The enrolment at the larger classes was as follows :—

TECHNICAL CLASSES, SOUTH AUSTRALIA, 1909.

Department.	Enrolment.	Department.	Enrolment.
Applied Mechanics... ...	146	Fitting and Turning ...	284
Carpentry	313	Mathematics	330
Chemistry and Physics ...	330	Metallurgy, Mining, etc. ...	100
Domestic Sciences	728	Wool Classing	205
Electrical Engineering ...	107		

6. **Western Australia.**—A technical school was established at Perth in 1900, and since its opening has progressed rapidly. Extensive additions to the buildings were made in 1909. The institution is affiliated with the Adelaide University, and it is hoped that the students will shortly be allowed to take the degree of B.Sc. without leaving the school. There are branch institutions at Midland Junction, Fremantle, Claremont, Coolgardie, Kalgoorlie, Boulder, Menzies and Murchison. The schools are all under the control of the Education Department, the officer entrusted with their supervision being

styled Director of Technical Education. The Director also supervises the School of Mines at Kalgoorlie, which is controlled by the Mines Department. The number of individual students at each college during the last term of 1909 was as follows:—

TECHNICAL CLASSES, WESTERN AUSTRALIA, 1909.

College.	Students.	College.	Students.
Perth	431	Coolgardie	62
Boulder	203	Kalgoorlie	76
Menzies	15	Fremantle	232
Claremont	23	Midland Junction	54
Murchison	28		

7. **Tasmania.**—In this State provision for technical education dates from the year 1888. At the present time the most important technical institution is the School of Mines and Metallurgy at Zeehan. Courses of instruction are given in metal mining and in metallurgical chemistry and assaying, the diploma in metal mining entitling the holder to the Government certificate of competency as a mine manager. The institution is affiliated to the University of Tasmania. There are also two other schools under the control of the Education Department, each managed by a committee appointed by the Governor-in-Council. Tasmanian technical schools naturally devote their chief attention to mining and mineralogy.

Particulars regarding the schools are given hereunder:—

TECHNICAL CLASSES, TASMANIA, 1909.

Schools.	Government Aid.	Classes.	Enrolment.	Attendance.
	£	No.	No.	No.
Hobart	850	23	263	65
Launceston	850	12	322	42
Beaconsfield	250	11	89	67
Zeehan	700	21	120	24

The table hereunder shews the enrolment and attendance at technical schools and classes in the Commonwealth during 1909:—

ENROLMENT AND ATTENDANCE AT TECHNICAL SCHOOLS, 1909.

(COMMONWEALTH.)

State.	Enrolment	Average Attendance	Technical Classes at State Schools.	
			Enrolment	Av. Attend.
New South Wales	18,206	10,125	3,036	1,341
Victoria	7,599	3,963	285	...
Queensland	5,608	3,115	...	...
South Australia	4,179	1,381	306	...
Western Australia	1,574	*	...	...
Tasmania	794	248	...	...

* Not available.

8. **Expenditure on Technical Education.**—The expenditure on technical education in each State during the period 1905 to 1909 is shewn below:—

EXPENDITURE ON TECHNICAL EDUCATION, 1905 to 1909.

(COMMONWEALTH.)

Year.	N.S.W.	Victoria.	Queensland.	South Aust.	West. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£
1905 ...	25,262	17,117	5,055	7,481	7,205	2,650	64,770
1906 ...	26,764	21,444	6,803	7,663	7,931	2,650	73,255
1907 ...	33,568	22,322	9,610	8,006	7,940	2,418	83,864
1908 ...	51,814	26,839	10,720	7,856	9,264	2,215	108,708
1909 ...	61,452	27,039	13,589	12,742	9,422	3,209	127,453

The figures in the preceding table represent an expenditure of about 7d. per head of the population of the Commonwealth, as compared with over 11s. per head spent on maintenance for primary education, and clearly shew that technical education has not attained its proper place in the educational organisation of Australia.

§ 7. Diffusion of Education.

1. **General Education.**—A rough indication of the state of education of the people is obtained at each Census under the three headings, "read and write," "read only," and "cannot read." The grouping of the whole population, exclusive of aborigines, in these three divisions is given for each Census since 1861:—

EDUCATION AT CENSUS PERIODS, 1861 to 1901.

(COMMONWEALTH.)

State.		1861.	1871.	1881.	1891.	1901.
N.S. Wales ...	Read & write	188,543	296,741	507,067	835,562	1,071,935

West. Australia	Read & write	7,683	14,166	19,684	34,254	150,099
	Read only...	1,301	2,717	2,430	2,061	3,107
	Cannot read	5,853	7,902	7,594	13,467	30,918
Tasmania ...	Read & write	48,282	55,941	74,966	103,138	133,579
	Read only...	13,136	13,946	9,606	6,287	3,907
	Cannot read	28,559	29,441	31,133	37,242	34,989
Commonwealth	Read & write	662,212	1,037,601	1,591,556	2,394,339	3,020,665
	Read only...	140,027	177,596	138,282	108,870	78,614
	Cannot read	348,952	447,842	520,356	671,183	674,522

The proportion in the Commonwealth of the various classes per 10,000 of the population is shewn below for each Census period :—

PROPORTION OF EDUCATED AND ILLITERATE PER 10,000 PERSONS, 1861 to 1901.

(COMMONWEALTH.)

Division.	1861.	1871.	1881.	1891.	1901.
Read and write	5,752	6,239	7,073	7,543	8,004
Read only	1,217	1,068	615	343	208
Cannot read	3,031	2,693	2,312	2,114	1,788

2. **Education of Children.**—The figures in the preceding tables refer to the entire population of the Commonwealth, and as the age constitution of those dwelling in the various portions of Australia underwent considerable modifications during the period dealt with, a far more reliable test of the diffusion of education will be obtained by a comparison of the Census returns in regard to children of school age. For comparative purposes this has been taken to include all children in the group over five and under fifteen years of age, and the degree of education of these at each Census will be found below :—

EDUCATION OF CHILDREN AT CENSUS PERIODS, 1861 to 1901.

(COMMONWEALTH.)

State.		1861.	1871.	1881.	1891.	1901.

In the case of Tasmania full details for the years 1861 and 1871 are not available, and the figures for those years are approximate. The variation in degree of education will be more readily seen by reducing the foregoing figures to the basis of proportion per 10,000, and the results so obtained are embodied in the following table, a glance at which is sufficient to demonstrate the remarkable strides that at least the lower branches of education have made since 1861. In that year, only 47 per cent. of the children of school

age could read and write, while 26 per cent. were illiterate. The returns for 1901 shew that the proportion of those who could read and write had increased to nearly 80 per cent., while the totally ignorant had declined by nearly one-half.

EDUCATION OF CHILDREN (AGES 5 to 15) PER 10,000 AT CENSUS PERIODS, 1861 to 1901.

(COMMONWEALTH.)

State.		1861.	1871.	1881.	1891.	1901.

	Cannot read	2,368	2,368	2,368	2,466	1,964
Commonwealth	Read & write	4,757	5,910	7,061	7,588	7,984
	Read only...	2,628	2,078	1,266	734	481
	Cannot read	2,615	2,012	1,673	1,678	1,535

3. **Education as shewn by Marriage Registers.**—Another common method of testing the spread of education is to compare the number of mark signatures with the total number of persons married during each year of a series. The percentage of males and females signing with a mark to the total persons married in the Census years 1861 to 1901, and during each of the last seven years, was as follows. The figures refer to marriages in the Commonwealth in respect of which information was obtainable.

ILLITERACY AS SHEWN BY MARRIAGE SIGNATURES, 1861 to 1909.

(COMMONWEALTH).

Year.	Proportion Signing with Marks of Total Persons Married.						
	Males.	Females.	Total.	Year.	Males.	Females.	Total.
	per cent.	per cent.	per cent.		per cent.	per cent.	per cent.
1861	18.50	30.69	24.60	1904 ...	0.95	0.91	0.93
1871	10.55	16.40	13.49	1905 ...	0.91	0.93	0.92
1881	4.34	6.78	5.56	1906 ...	0.92	0.86	0.89
1891	2.27	2.40	2.34	1907 ...	0.81	0.70	0.76
1901	1.35	1.29	1.32	1908 ...	0.71	0.73	0.72
1903	1.17	1.02	1.10	1909 ...	0.65	0.62	0.64

The table shews that there has been a large diminution in illiteracy, and judging from the figures for the last few years the proportion bids fair to practically disappear. Up to 1891 there was a higher proportion of illiteracy amongst females, but from 1901 onwards, generally speaking, the opposite condition prevailed.

§ 8. Miscellaneous.

1. **Scientific Societies.**—(*a*) *Royal Societies.* Despite the trials and struggles incidental to the earlier years of the history of Australia, higher education and scientific advancement were not lost sight of. Thus the origin of the Royal Society of New South Wales dates as far back as 1821, when it was founded under the name of the Philosophical Society of Australasia, Sir Thomas Brisbane being its first president. Scientific work was fitfully carried on by means of a society whose name varied as the years rolled on. It was called the Australian Philosophical Society in 1850. In 1856 the old Australian Society merged into a resuscitated Philosophical Society of New South Wales, and its papers were published up to 1859 in the Sydney Magazine of Science and Art (2 vols. 1858-9). Its present title dates from 1866. Some of the papers of the old Philosophical Society were published in 1825 under the title of "Geographical Memoirs of New South Wales," (Barron Field) and contain much that is interesting in regard to the early history of Australia. One volume containing the Transactions of the Philosophical Society of New South Wales (1862-65) was published in 1866. The journal of the Society did not begin to bear a serial number, however (vol. 1), until the year 1867. Transactions of the Royal Society of New South Wales was issued in 1867, the title of the series being altered to Journal in 1876. Up to the end of 1909 forty-three volumes had been published. The exchange list comprises 434 kindred societies. At the present time the library contains about 20,000 volumes and pamphlets, valued at £7500. Since 1874 the receipts from subscriptions reached over £35,000. Government grants since 1877 totalled about £13,250.

The Royal Society of Victoria dates from 1854, in which year the Victorian Institute for the Advancement of Science and the Philosophical Society of Victoria were founded. These were amalgamated in the following year under the title of the Philosophical Institute of Victoria, while the society received its present title in 1860. The first volume of its publications dates from 1855. The earlier publications dealt largely with Physics, later on Biology became prominent, while at present a large number of papers deal with Geology. Up to 1910 fifty-two volumes of publications had been issued. The Society exchanges with 328 kindred bodies. The constitution of the society states that it was founded "for the promotion of art, literature, and science," but for many years past science has monopolised its energies. The library contains about 8000 volumes. Since its inception the society has received about £14,000 in annual subscriptions, while Government aid has been given to the amount of about £9800.

The inaugural meeting of the Royal Society of Queensland was held on the 8th January, 1884, under the presidency of the late Sir A. C. Gregory. The society was formed "for the furtherance of the natural and applied sciences, especially by means of original research." Shortly after its formation it received an addition to its ranks by the amalgamation with it of the Queensland Philosophical Society, which was started at the time when Queensland became a separate colony. At latest date the members numbered 106; publications issued, 23 volumes; library, 3700 volumes; societies on exchange list, 105. Up to 1909 the total subscriptions reached about £1700.

The present Royal Society of South Australia grew out of the Adelaide Philosophical Society, which was founded in 1853, its object being the discussion of all subjects connected with science, literature and art. Despite this programme, the tendency of the papers was distinctly scientific, or of a practical or industrial nature. With the advent of the late Professor Tate the sphere of activity of the society was considerably enlarged. Permission to assume the title of "Royal" was obtained in 1879, the society thenceforward being known as "The Royal Society of South Australia." In 1903 the society was incorporated. Receipts in 1909 were £433, the Government endowment being £229. Up to 1909 the society had issued thirty-three volumes of proceedings and three volumes of memoirs. The exchange list numbers about 160.

The Royal Society of Tasmania, for horticulture, botany, and the advancement of science, dates from 14th October, 1843, although Sir John Franklin had started a scientific society as early as 1838. The names of Captains Ross and Crozier, of H.M.S. *Erebus* and *Terror*, appear in the list of the first corresponding members. The society, which, since 1844, has published annual volumes of proceedings, possesses 140 members, exchanges with 75 kindred bodies, and has a library containing about 3000 volumes.

(*b*) *Other Scientific Societies.* The Australasian Association for the Advancement of Science, founded in 1888, has its headquarters in Sydney. Its receipts to date were about £11,000, including Government aid to the amount of £3000. The library contains 4000 volumes, valued at £400. Up to date eleven volumes of proceedings have been issued. The exchange list numbers 286. The Linnean Society of New South Wales, with headquarters in Sydney, founded in 1875, possesses a library of 9000 volumes, valued at £5000. Up to date thirty-four volumes of proceedings have been issued. Exchanges number 177. This society maintains four investigators engaged in research work, and owes its development almost entirely to the benefactions of Sir William Macleay. The British Astronomical Association has a branch in Sydney, and in some of the States the British Medical Association has branches.

The principal scientific society in Western Australia is the Natural History and Science Society of Western Australia. This society has grown out of the Mueller Botanic Society, founded in July, 1897. The objects of the society are the study of natural history and pure science, promoted by periodical meetings and field excursions, the maintenance of a library, and the issue of reports of proceedings. It numbers at present 110 members whose subscriptions form its main source of revenue. Government aid in the past has ranged from £7 to £75 per annum, the subsidy paid in 1910 being £12 10s. Since its establishment the society has issued eighteen journals of proceedings. Its publications are exchanged with numerous institutions at home and abroad.

In addition to the societies enumerated above, there are various others in each State devoted to branches of scientific investigation, particulars respecting which are not at present available.

2. **Libraries.**—As far as can be ascertained the total number of libraries in the Commonwealth at the latest available date was about 1500, and the number of books contained therein is estimated at nearly three millions. In each of the capital cities there is a well-equipped Public Library, the Melbourne institution especially comparing very favourably with similar institutions in other parts of the world. The following statement gives the number of volumes in the Public Library of each city :—

METROPOLITAN PUBLIC LIBRARIES.

City.	Number of Volumes in—			Total.
	Reference Branch.	Ordinary Lending Branch.	Country Lending Branch.	
Sydney	208,682	...	9,791	218,473
Melbourne ...	188,695	26,825	...	215,520
Brisbane ...	35,573	...	...	35,573
Adelaide ...	71,534	25,476	...	97,010
Perth	78,380	6,228	...	84,608
Hobart	16,363	...	...	16,363

The maintenance and control of the lending branch of the Public Library at Sydney were transferred in 1909 to the Municipal Council. At the end of December the books numbered 26,313.

The Mitchell Library in Sydney consists of 60,000 volumes and pamphlets, principally relating to Australasia, bequeathed by Mr. D. S. Mitchell, together with an endowment

of £70,000. The testator stipulated that the regulations of the British Museum were to be adopted as far as practicable. Hence the library is the resort of specialists.

The Launceston Institute in Tasmania possesses a library of 27,000 volumes.

The number of libraries in receipt of State or municipal aid, together with the estimated number of books contained therein, is given below for each State:—

SUBSIDISED LIBRARIES AND NUMBER OF BOOKS THEREIN.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust	Tas.
Number of libraries ...	435	436	202	195	225	27
Estimated number of books	628,000	994,000	296,000	448,000	191,000	117,000

The figures in the above table can be taken only as approximations, as in many instances returns were not received from various institutions.

3. **Museums.**—The Australian Museum in Sydney, founded in 1836, is the oldest institution of its kind in Australia. In addition to possessing a fine collection of the usual objects to be met with in kindred institutions, the Museum contains a very valuable and complete set of specimens of Australian fauna. The cost of construction of the building was £59,000. The number of visitors to the institution last year was 214,068, and the average attendance on week-days 623, and on Sundays 1000. The expenditure for 1909 amounted to £11,310, of which £5931 was absorbed by salaries and allowances, and £5379 by purchases and miscellaneous. A valuable library containing nearly 16,000 volumes is attached to the Museum. Representative collections, illustrative of the natural wealth of the country, are to be found in the Agricultural and Forestry Museum, and the Mining and Geological Museum. The latter institution prepares collections of specimens to be used as teaching aids in country schools. The "Nicholson" Museum of Antiquities, the "Macleay" Museum of Natural History, and the Museum of Normal and Morbid Anatomy, connected with the University, and the National Herbarium and Botanical Museum at the Sydney Botanic Gardens, are also accessible to the public. There is a fine Technological Museum in Sydney, with branches in five country centres, the metropolitan institution containing over 100,000 specimens. Valuable research work has been undertaken by the scientific staff in connection with oil and other products of the eucalyptus. The average attendance of the public at the Technological Museums during 1909 was over 220,000.

The National Museum at Melbourne, devoted to Natural History, Geology, and Ethnology, is located in the Public Library building. The expenditure for specimens, furniture, etc., in 1909 was £1000, and salaries and wages £2456. The Industrial and Technological Museum, opened in 1870, contains upwards of 55,000 specimens. There is a fine Museum of Botany and Plant Products in the Melbourne Botanic Gardens. Well equipped museums of mining and geological specimens are established in connection with the Schools of Mines in the chief mining districts.

The Queensland Museum dates from the year 1871, but the present building was opened in January, 1901. Since its inauguration the Government has expended on the institution a sum of £69,589, of which buildings absorbed £16,615, purchases £21,969, and salaries £31,005. The number of visitors during the year was 73,205, of whom 27,626 visited the institution on Sundays. The Queensland Geological Survey Museum has branches in Townsville, opened in 1886, and Brisbane, opened in 1892. The total expenditure on the institution up to the end of 1909 was £6054, of which £2847 was spent on buildings.

Under the Public Library Act of 1884 the South Australian Institute ceased to exist, and the books contained therein were divided amongst the Museum, Public Library, and

Art Gallery of South Australia, and the Adelaide Circulating Library. The Museum was attended by 75,740 visitors in 1909.

The latest available returns shew that the Western Australian Museum contains altogether 47,000 specimens of an estimated value of £57,000. The Museum is housed in the same building as the Art Gallery, and the visitors to the combined institutions during the year numbered 56,000. The expenditure totalled £3556, of which salaries absorbed £1944.

There are two museums in Tasmania—The Tasmanian Museum at Hobart, and the Victoria Museum and Art Gallery at Launceston, both of which contain valuable collections of botanical and mineral products. The Tasmanian Museum received aid from the Government during last year to the extent of £500.

4. **Art Galleries.**—Information regarding the State collections of objects of art in the various capitals is in some cases very meagre, while the method of presentation does not admit of any detailed comparisons being made. The Art Gallery of New South Wales originated in the Academy of Art founded in 1871. Up to July, 1909, the cost of construction of the present building was £94,000. The contents, which are valued at £136,000, comprise 360 oil paintings, 369 water colours, 511 black and white, 150 statuary and bronzes, and 314 ceramics, works in metal and miscellaneous. During 1909 the average attendance on week days was 557, and on Sundays 1918. The expenditure in 1909 amounted to £3123.

The National Gallery at Melbourne at the end of 1909 contained 518 oil paintings, 3565 objects of statuary, bronzes and ceramics, and 13,870 water-colour drawings, engravings, and photographs. The Gallery is situated in the same building as the Museum and Public Library, the total cost of construction being £229,000. At the end of 1909 the Ballarat Art Gallery contained 217 oil paintings and 155 water colors, etc., while there are some valuable works of art in the smaller galleries at Bendigo, Geelong, and Warrnambool.

The Art Gallery at Adelaide dates from 1880, when the Government expended £2000 in the purchase of pictures, which were exhibited in the Public Library building in 1882. The liberality of private citizens caused the Gallery to rapidly outgrow the accommodation provided for it in 1889, at the Exhibition Building, and on the receipt of a bequest of £25,000 from the late Sir T. Elder, the Government erected the present building, which was opened in April, 1900. The Gallery also received a bequest of £16,500 in 1903 from the estate of Dr. Morgan Thomas, and of £3000 in 1907 from Mr. David Murray. At the latest available date there were in the Gallery 209 oil paintings, 124 water colours, 162 black and white, 103 engravings and etchings, 22 statuary, and 541 miscellaneous works in metal, etc., the whole being valued at upwards of £47,000. Building and site are valued at upwards of £31,000. Visitors during the year 1909 numbered 93,984.

The foundation stone of the present Art Gallery at Perth in Western Australia was laid in 1901, the building and site being valued at £60,000. The collection comprises 88 oil paintings, 32 water colours, 217 engravings and black and white, 283 statuary, and miscellaneous metal works, etc., of a total value of £15,000.

In Tasmania the Art Gallery at Hobart was opened in 1887. Its present contents consist of 96 paintings and 81 etchings and black and white drawings. Buildings and site are valued at £30,000. The number of visitors during the year on week days averages 62,000, and on Sundays 30,000.

The Art Gallery at Launceston was erected in 1888 at a cost of £5000, and opened on the 2nd April, 1901. Only a small proportion of the contents belongs to the Gallery, the bulk of the pictures being obtained on loan. At latest date there were on view 80 oil

paintings and 44 water colours valued at £5000. The total value of buildings and site is estimated at £12,100. The average annual attendance is 36,000, and for Sundays 10,000.

5. **State Expenditure on all Forms of Educational Effort.**—The expenditure from the Consolidated Revenue in each State on all forms of educational and scientific activity during each of the last five financial years was as follows:—

EXPENDITURE ON EDUCATION, SCIENCE, AND ART, 1905-6 to 1909-10.

State.		1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
		£	£	£	£	£
New South Wales	Total £	934,634	941,654	1,055,197	1,104,077	1,149,422
	Per head	12/5	12/2	13/4	13/9	13/11
Victoria	Total £	810,850	842,071	872,655	925,368	953,499
	Per head	13/3	13/7	13/10	14/5	14/7
Queensland ...	Total £	338,426	366,635	399,291	423,080	510,388
	Per head	12/8	13/7	14/6	14/11	17/4
South Australia...	Total £	199,628	193,346	210,712	238,376	231,584
	Per head	10/6	10/4	10/7	11/7	11/1
Western Australia	Total £	230,573	217,036	219,176	221,377	222,861
	Per head	17/9	16/6	16/6	16/4	16/-
Tasmania ...	Total £	68,163	68,777	73,242	81,182	87,603
	Per head	7/7	7/8	8/1	8/10	9/7
Commonwealth	Total £	2,582,274	2,629,519	2,830,273	2,993,460	3,155,357
	Per head	12/8	12/8	13/4	13/10	14/3

The comparatively heavy expenditure in Queensland for 1909-10 is due to the inclusion of an expenditure of £70,000 in connection with the establishment of the University.

SECTION XXIII.

PUBLIC JUSTICE.

§ 1. Police.

1. **Introductory.**—The following brief notes refer to the evolution of the force in Australia up to the passing of the Police Act of 1862 (25 Vic. No. 16) in New South Wales:—

The first Act of Parliament specially mentioning the establishment of a police force in Australia was passed in 1833 (4 Wm. IV. No. 7), the settlement from 1788 to that year having been under military rule. The Act provided for the appointment of two or more magistrates for the town and port of Sydney, empowered to select a certain number of suitable men for a police force. This force was at first restricted to the capital and its environs, but in 1838 a further Act was passed (2 Vic. No. 2) providing for the establishment and control of police in the chief country districts. About nine years later the prevalence of cases of horse and cattle stealing led to the formation of mounted patrols along the Great Western, Southern, and Northern roads, a central detachment being located in Sydney. The mounted police consisted principally of old soldiers. With the discovery of the goldfields in the early fifties, another branch of the force known as "gold police," also chiefly old soldiers, was established, and the various divisions were commanded by military officers styled "gold commissioners." While a large number of the members of the early force were actuated with the desire to carry out their duties honestly and efficiently, there were others who were totally unfitted for the service, and the general lack of cohesion and co-operation was reflected in the high criminal returns. A complete reorganisation was, however, effected by the Police Act of 1862 (25 Vic. No. 16), which placed the entire control in the hands of an Inspector-General, who, through the Chief Secretary, was made responsible to Parliament for the general efficiency of the system.

At the present time the police forces of Australia may be said to be satisfactory both in regard to physique and general intelligence, while as regards methods of prevention and detection of crime it is believed that the system in vogue here compares very favourably with those of the older-settled countries of the world.

2. **Strength of Police Force.**—The strength of the police force in each State during the five years ended 1909 was as follows. It may be mentioned that the police forces are entirely under State control, but, by arrangement, the Commonwealth Government utilises their services in various directions, such as the collection of Commonwealth electoral rolls, etc.

POLICE FORCES IN THE COMMONWEALTH, 1905 to 1909.

State.	Area of State in Sq. Miles.	1905.	1906.	1907.	1908.	1909.
New South Wales ...	310,372	2,342	2,342	2,381	2,417	2,435
Victoria...	87,884	1,495	1,518	1,546	1,552	1,598
Queensland	670,500	859	883	923	960	966
South Australia	903,690	420	422	444	429	442
Western Australia ...	975,920	492	507	488	492	475
Tasmania	26,215	234	229	226	232	234
Commonwealth ...	2,974,581	5,842	5,901	6,008	6,082	6,150

The figures for New South Wales for 1909 are exclusive of sixty-six "black trackers," *i.e.*, natives employed in detection of offenders in outlying districts, and five female searchers. In Queensland there were eighty-seven native police, including four engaged in the Water Police branch. The South Australian returns for 1909 are exclusive of forty "black trackers." There are also fifty-four "black trackers" in Western Australia and three female searchers not included in the table.

(i.) *Average Number of Inhabitants to each Police Officer.* The average number of inhabitants to each officer in each State during the same period is shewn below. In considering these figures allowance must, of course, be made for the unequal area and unequal distribution of the population of the various States.

INHABITANTS TO EACH POLICE OFFICER, 1905 to 1909.

(COMMONWEALTH.)

State.	No. of Persons per Sq. Mile, 1901 Census.	Inhabitants to each Police Officer.				
		1905.	1906.	1907.	1908.	1909.
New South Wales ...	4.37	637	633	659	659	659
Victoria	13.67	815	812	807	819	804
Queensland	0.74	615	606	587	575	585
South Australia	0.40	900	910	884	949	929
Western Australia ...	0.19	518	516	536	543	571
Tasmania	6.58	774	787	814	801	787
Commonwealth ...	1.27	693	698	698	703	703

The above figures naturally shew a great disparity in the relative numbers of the population protected by each police officer in the various States, and also in the relative area of territory to each officer. Western Australia and South Australia exhibit the largest figures in the latter respect, this, of course, being due to the fact that extensive areas in each State are as yet unpeopled by white settlers.

3. **Duties of the Police.**—In addition to the ordinary employment attaching to their office, the police are called upon to perform many duties which in other countries are carried out by other functionaries. As far as the Statistician is concerned, it is found that the expert local knowledge possessed by the police renders their services in the collection of such returns as those relating to the agricultural, pastoral, and manufacturing industries, private schools, etc., more than ordinarily valuable. Then, again, the fact that their services are enlisted by such widely different departments as those dealing with mines, stock, agriculture, elections, registrations of births, deaths, and marriages, forestry, fisheries, explosives, old-age pensions, lunacy, public works, labour, etc., greatly enhances their general alertness by widening the range of their experience. Occasionally the objection is heard in some quarters that these special tasks involve some degree of sacrifice of ordinary routine duties, but that the general intelligence of the Australian police is adequate to the obligation to perform these tasks, besides being most creditable, results in a great saving of the public money.

4. **Cost of Police Forces.**—The expenditure from Consolidated Revenue on the police forces in each State during the five years 1905 to 1909 is shewn in the following table. Cost of buildings has been excluded from the return.

COST OF POLICE FORCES IN THE COMMONWEALTH, 1905 to 1909.

State.	1905.	1906.	1907.	1908.	1909.
	£	£	£	£	£
New South Wales	435,577	434,934	462,804	466,994	472,718
Victoria	313,649	312,941	306,130	306,263	320,331
Queensland	159,464	176,086	202,184	207,043	220,344
South Australia	82,419	85,016	87,374	96,979	98,214
Western Australia	126,661	126,276	125,440	124,518	119,111
Tasmania	36,537	35,086	37,152	39,105	39,740
Commonwealth ...	1,154,307	1,170,339	1,221,084	1,240,902	1,270,958

The total for New South Wales includes £23,000 payment to Police Superannuation Fund; similar payments are included also in Victoria and Queensland. The cost per head of the population in each State for the period 1905 to 1909 was as follows:—

COST OF POLICE PER INHABITANT, 1905 to 1909.

(COMMONWEALTH.)

State.	1905.	1906.	1907.	1908.	1909.
	s. d.	s. d.	s. d.	s. d.	s. d.
New South Wales	5 11	5 9	5 11	5 11	5 11
Victoria	5 2	5 1	4 11	4 10	5 0
Queensland	6 1	6 7	7 5	7 6	7 8
South Australia	4 5	4 6	4 6	4 11	4 9
Western Australia	10 1	9 9	9 7	9 5	8 10
Tasmania	4 1	3 11	4 2	4 4	4 4
Commonwealth ...	5 9	5 9	5 11	5 11	5 11

The relatively high cost per head in Queensland and Western Australia is due to the fact that there are in those States extensive areas of sparsely settled country, in which mounted patrols have to be maintained.

§ 2. Lower (Magistrates') Courts.

1. **Introductory.**—In considering the criminal returns of the various States due allowance must be made on account of several factors, such as the relative powers of the courts, both lower and higher, etc. In the case of lower courts, the actual number of laws in each State, the breach of which renders a person liable to fine or imprisonment, must be taken into account. Again, the attitude of the magistracy and police towards certain classes of offences is a factor, for in the case of liquor laws, or laws connected with vagrancy or gaming, the views of magistrates, and instructions issued to the police, may be responsible for considerable variations in the returns. The strength and distribution of the police forces, and the age constitution and distribution of the State's population, also influence the results. In any consideration of criminal returns, due weight should also be given to the prevalence of undetected crime, but information on this point can only be obtained for the State of Victoria. It may be mentioned that each State has its own separate judicial system, the Commonwealth jurisdiction being confined to the High Court of Australia, which is largely a Court of Appeal intermediate

to the Privy Council, although it has also original jurisdiction, and the Commonwealth Court of Arbitration and Conciliation. Full particulars regarding the judical power of the Commonwealth will be found in Chapter III. of the Commonwealth Constitution.

2. **Powers of the Magistrates.**—In New South Wales there is no general limit to the powers of the magistrates in regard to offences punished summarily, their authority depending in each case on the statute which creates the offence and gives them jurisdiction. Except in the case of a very few statutes, and excluding cumulative sentences, the power of sentence is limited to six months. Imprisonment in default of payment of fine is regulated by a scale limiting the maximum period according to the sum ordered to be paid, but in no case exceeding twelve months. Actions for debt and damage within certain limits also come within magisterial jurisdiction. In cases of debts, liquidated or unliquidated, the amount recoverable is not exceeding £50 before a court constituted of a stipendiary or police magistrate at certain authorised places, and not exceeding £30 at any other place before a court constituted of a stipendiary or police magistrate or two or more justices of the peace. The amount in actions of damage is limited to £10, but may extend to £30 by consent of parties.

In Victoria the civil jurisdiction of magistrates is restricted to what may be designated ordinary debts, damages for assault, restitution of goods, etc., where the amount in dispute does not exceed £50. No definite limit is fixed to the powers of the magistrates on the criminal side, and for some offences sentences up to two years may be imposed. The proportion of long sentences is, however, comparatively small, the total punishments of one year and upwards in 1908 comprising only 101 out of 18,775 sentenced.

In Queensland, generally speaking, the maximum term of imprisonment which justices can inflict is six months, but in certain exceptional cases, such as offences against sections 233 and 445 of the criminal code (betting-houses and illegally using animals), sentences of twelve months may be imposed. No limit exists as to the extent to which cumulative sentences may be applied, but in practice the term is never very lengthy.

In South Australia, under the Minor Offences Act, magistrates can impose sentences up to six months, and under the Summary Convictions Act, up to three months. The Police Act of 1869 gives power to sentence up to one year, with hard labour, in the case of incorrigible rogues, while under the Quarantine Act of 1877, and the Lottery and Gaming Act of 1875, sentences of two years may be imposed.

Under the Petty Sessions Act of 1867, in Tasmania, any person charged with having committed, or with having aided or abetted in the commission of an offence in regard to property of a value not exceeding £10, may, on conviction, for a first offence, before two or more justices in Petty Sessions, be imprisoned for any term not exceeding one year, and for a term not exceeding two years for a second or subsequent offence.

3. **Persons Charged at Magistrates' Courts.**— The total number of persons who were charged before magistrates in each State is given below for the five years 1905 to 1909 :—

PERSONS CHARGED BEFORE MAGISTRATES IN THE COMMONWEALTH, 1905 to 1909.

State.	1905.	1906.	1907.	1908.	1909.
New South Wales	61,127	65,197	67,183	66,233	64,502
Victoria	45,484	48,244	60,687	58,778	52,658
Queensland	17,943	18,849	18,621	19,687	19,824
South Australia	5,974	6,324	6,347	6,589	7,332
Western Australia	14,646	14,478	13,968	12,685	12,961
Tasmania	7,090	6,391	6,258	7,048	6,831
Commonwealth... ...	152,264	159,483	173,064	171,020	164,108

In explanation of the large increase shewn by Victoria for the year 1907 it is stated that the returns of summons were inflated by prosecutions under the new Licensing and Pure Food Acts and the Amending Education Act.

The figures given in the tabulation above include, of course, a number of people who were wrongly charged, and statistically are not of great importance. The actual number of convictions in connection with the persons who appeared before the lower courts in each year of the period 1905 to 1909 is, therefore, given hereunder. A separate line is added shewing the committals to higher courts.

CONVICTIONS AND COMMITTALS AT MAGISTRATES' COURTS, 1905 to 1909.

(COMMONWEALTH.)

State.		1905.	1906.	1907.	1908.	1909.
New South Wales	Convictions	51,638	54,809	58,103	57,630	55,767
	Committals	1,454	1,286	1,130	1,015	1,081

	Committals	652	584	561	577	580
Queensland	Convictions	14,730	15,987	16,056	17,710	17,584
	Committals	495	440	464	417	442
South Australia	Convictions	4,936	5,249	5,352	5,664	6,324
	Committals	152	168	105	89	111
Western Australia	Convictions	12,246	12,181	11,803	10,695	10,910
	Committals	253	182	193	187	177
Tasmania	Convictions	5,932	5,449	5,334	5,903	5,930
	Committals	59	55	46	63	44
All States	Convictions	123,616	131,415	143,379	141,307	135,316
	Committals	3,065	2,715	2,499	2,348	2,435

In connection with the variations in convictions at magistrates' courts, it may be noted that deductions in regard to the prevalence of lawlessness based on the totals alone must be largely qualified by several considerations. For example, as previously stated, the passing of new legislation may result in a sudden addition to the crop of convictions, which would not necessarily imply a corresponding growth in lawlessness. Further, the activity of the police in regard to the strict compliance with certain legislation, such as that dealing with Sunday observance, food standards, liquor trade, etc., may cause considerable variations in the returns. Hence references to the spread or otherwise of crime should more correctly depend on a consideration of the convictions for serious crime at the lower courts, and committals to, and convictions at, superior courts.

4. **Convictions for Serious Crime.**—While the figures given in the preceding table refer to the entire body of convictions, the fact must not be lost sight of that they include a large proportion of offences of a technical nature, many of them unwittingly committed, against various Acts of Parliaments. Cases of drunkenness and minor breaches of good order which, if they can be said to come within the category of crime at all, at least do so in a very different sense to some other offences, also help to swell the list. The following table has, therefore, been prepared for the purpose of shewing the convictions at magistrates' courts for what may be regarded as the more serious offences, *i.e.*, against the person and property, either separately or conjointly, and forgery and offences against the currency:—

CONVICTIONS FOR SERIOUS CRIMES AT MAGISTRATES' COURTS, 1905 to 1909.

(COMMONWEALTH.)

State.	1905.	1906.	1907.	1908.	1909.
New South Wales	4,640	4,971	4,799	4,779	4,764
Victoria	2,944	2,879	2,672	2,794	2,626
Queensland	2,175	2,035	1,334	1,433	1,526
South Australia	441	437	499	540	513
Western Australia	1,256	1,215	1,301	1,143	1,074
Tasmania	660	522	438	575	548
Commonwealth ...	12,116	12,059	11,043	11,264	11,051

Owing to a reclassification adopted by Queensland in 1907, a large number of offences have been transferred from the class "Offences against the Person" to "Offences against Good Order," hence the falling-off shewn by that State in the last three years.

Compared with the population the above figures give the following results per 10,000 inhabitants:—

CONVICTIONS FOR SERIOUS CRIME PER 10,000 INHABITANTS, 1905 to 1909.

(COMMONWEALTH.)

State.	1905.	1906.	1907.	1908.	1909.
New South Wales	31.5	32.9	31.0	30.2	29.7
Victoria	24.3	23.5	21.6	22.2	20.4
Queensland	41.4	38.2	24.8	26.1	27.0
South Australia	11.8	11.5	12.9	13.6	12.5
Western Australia	50.2	46.7	49.6	43.1	39.6
Tasmania	36.5	29.2	24.4	31.6	29.8
Commonwealth ...	30.1	29.5	26.6	26.6	25.6

5. **Decrease in Crime.**—The figures quoted in the preceding table show that there has been a considerable decrease in crime during the last few years, while if the comparison be carried back to 1881 the position is seen to be still more satisfactory. The rate of convictions at magistrates' courts per 10,000 of the population is given below for each of the years 1881, 1891, 1901, and 1909. Only the more serious offences, particularised in the preceding paragraph, have been taken into consideration.

RATE OF CONVICTIONS FOR SERIOUS CRIME IN THE COMMONWEALTH.

Year.	Convictions per 10,000 Persons.
1881	69.3
1891	44.8
1901	29.1
1909	25.6

6. **Need of Statistic of Distinct Persons.**—The figures already quoted refer to total convictions, and in respect of individuals necessarily involve a considerable amount of duplication, especially in minor offences, such as drunkenness, petty larcenies, etc., in which the same offender appears before the court many times in the course of the year. In a

few of the States it is possible to obtain the number of distinct persons arrested, but there are no means of arriving at the total distinct persons convicted before the magistrates in any State. The forms submitted to and adopted by the Conference of Statisticians in 1906 provide for information as to separate persons convicted, irrespective of whether they were arrested or summoned, and thus the statistical tabulations will, it is hoped, possess in future greater comparative value. At present, however, the information is not sufficiently complete to be of value for statistical comparisons.

7. **Causes of Decrease in Crime.**—The statistics given shew that there has been a considerable decrease in crime throughout Australia. The results so far quoted are restricted entirely to the lower or magistrates' courts. There has also been a gratifying decrease in regard to offences tried at the higher courts, as will be seen later.

Attempts have been made to account for this decline: *e.g.*, advance in education, enlightened penological methods, etc. Much depends upon what is meant by education. Many classed in census statistics as "educated" can barely read and write. In this connection, moreover, it ought not to be forgotten that collaterally with the introduction of ordinary intellectual education certain people have departed from their pristine virtues. The deterrent effect of punishment, in respect of many offences, notably drunkenness, vagrancy, petty larcenies, etc., appears to be almost negligible. In general, punishment has declined in brutality and severity, and has improved in respect of being based to a greater extent upon a scientific penological system, though in this latter respect there is yet much to be desired. Recent advances in penological methods will be referred to in a subsequent section. Here it will be sufficient to remark that under the old régime, a prisoner on completion of a sentence in gaol was simply turned adrift on society, and in many cases sought his criminal friends, and speedily qualified for readmission to the penitentiary. Frequently he was goaded to this by mistaken zeal on the part of the police, who took pains to inform employers of the fact of a man having served a sentence in gaol. For a long time any assistance to discharged prisoners was in the hands of private organisations, such as the Salvation Army Prison Gate Brigade, but in some of the States, and notably in New South Wales, the authorities themselves look after the welfare of discharged prisoners in the way of finding work, providing tools, etc.

Improvements in the means of communication and identification have been responsible for some of the falling-off noticeable in the criminal returns, the introduction of the Bertillon system having contributed to certainty of identification. Part of the improvement may no doubt be referred also to the general amelioration in social condition that has taken place during the last fifty years.

8. **Drunkenness.**—The number of cases of drunkenness and the convictions recorded in connection therewith during the period 1905 to 1909 will be found in the following table:—

CASES AND CONVICTIONS—DRUNKENNESS, 1905 to 1909.

(COMMONWEALTH.)

State.	1905.		1906.		1907.		1908.		1909.	
	Cases.	Convictions.	Cases.	Convictions.	Cases.	Convictions.	Cases.	Convictions.	Cases.	Convictions.
New South Wales ...	24,135	24,003	25,399	25,253	28,255	28,109	27,976	27,817	27,495	27,363
Victoria	14,458	9,360	14,029	9,529	14,783	9,151	13,102	6,596	12,432	7,025
Queensland	6,638	6,592	7,493	7,473	9,066	9,002	9,203	9,185	9,109	9,102
South Australia ...	2,362	2,332	2,483	2,460	2,838	2,735	3,063	3,024	3,481	3,455
Western Australia ...	3,509	3,425	3,588	3,505	3,591	3,535	3,506	3,441	4,007	3,955
Tasmania	539	528	459	454	535	531	543	527	709	690
Commonwealth ...	51,641	46,240	53,451	48,674	59,068	53,063	57,393	50,590	57,233	51,590

The number of convictions is, as might naturally be expected, almost identical with the number of cases. Victoria, however, is an exception, but in this State it is explained that offenders are generally discharged on a first appearance, and no conviction is recorded, a similar procedure being also adopted in the case of those arrested on Saturday and detained in custody till Monday. The logic of excluding these cases from the list of convictions is certainly open to doubt.

The convictions for drunkenness per 10,000 of the population during each of the years from 1905 to 1909 are given hereunder :—

CONVICTIONS FOR DRUNKENNESS PER 10,000 INHABITANTS, 1905 to 1909.

(COMMONWEALTH.)

State.	1905.	1906.	1907.	1908.	1909.
New South Wales	162.8	167.3	181.3	175.9	170.4
Victoria	77.2	77.9	73.9	52.4	54.7
Queensland	125.4	140.3	167.0	167.1	161.1
South Australia	62.2	64.7	70.9	76.0	84.1
Western Australia	136.8	134.8	134.8	129.8	146.0
Tasmania	29.5	25.4	29.6	29.0	37.5
Commonwealth ...	115.1	119.1	127.7	119.5	119.4

As the figures shew, there has been a remarkable fall in the convictions for drunkenness in Victoria. This is in part due to increasing leniency in dealing with the offence.

The convictions for drunkenness taken by themselves are not an altogether satisfactory test of the relative sobriety of the inhabitants of each State, inasmuch as several important factors must be taken into consideration. The age constitution, for example, of the people is by no means identical in each State, Western Australia having by far the largest proportion of adult males. The avocations of the people affect the result, since persons engaged in strenuous callings are, on the whole, more likely to indulge in alcoholic stimulants than those employed in less arduous ones. The distribution of the population is also a factor, the likelihood of arrest or summons for drunkenness obviously being greater in the more densely populated regions, and lastly, allowance must be made for the attitude of the police and public generally in regard to the offence.

It is not unusual to supplement statistics of drunkenness by furnishing also the relative consumption of alcoholic beverages. Deductions drawn therefrom will be very misleading if they fail to take into account also the consumption of non-intoxicating beverages such as tea and coffee, and the general habit of the people. Throughout the greater part of Europe, tea and coffee are consumed but sparingly, while Australia, as is well known, is one of the greatest tea-drinking countries of the world.

The following table shewing the consumption of spirits, wine, and beer per head of the population has, with the exception of the figures relating to the States of the Commonwealth, been compiled from returns prepared by the British Board of Trade. For New Zealand, Cape of Good Hope, and Canada the figures refer to the year 1908, and for foreign countries to the five years ended 1906. The figures quoted for the Commonwealth States in respect of spirits and beer refer to the year 1909. It is believed that the returns hitherto given by the Board of Trade regarding the consumption of wine in Australia do not in all cases furnish satisfactory results since figures based on a combination of returns of production and net export cannot be regarded as giving

a true statement of the consumption. Further the production of wine in any year does not necessarily enter into consumption in the same year, while allowance must also be made for the conversion of portion of it into brandy or vinegar. Satisfactory results cannot be obtained for the separate States, but the consumption for the Commonwealth as a whole may be set down as 0.5 gallon per head.

CONSUMPTION OF ALCOHOLIC BEVERAGES IN VARIOUS COUNTRIES.

9. **Treatment of Drunkenness as Crime.**—Though the problem of the correct method of dealing with dipsomania is by no means an easy one, it seems fairly clear that the present plan of bringing offenders before magistrates, and subjecting them to the penalty of imprisonment or fine, has little deterrent effect, as the same offenders are constantly reappearing before the courts. Further, the casting of an inebriate into prison, and placing him in his weakened mental state in the company of professional malefactors, doubtless tends to swell the ranks of criminals and certainly tends to lower his self-respect, while examination of the prison records in New South Wales some years ago disclosed the fact that over 40 per cent. of the gaol population had commenced their criminal career with a charge of drunkenness. During the last few years the dangers of moral contamination in this way have been more accurately appreciated, and a system of classification of prisoners has been adopted whereby the petty offender is as far as possible kept from association with the more evil-disposed. With regard to drunkards, however. the Comptroller of Prisons in New South Wales advocates the entire abandonment of the system of repeated fine or imprisonment in favour of a course of hospital treatment. The Comptroller-General of Prisons in Queensland states in his report for the year 1907 that "the drunken habit in many cases is merely one of many symptoms which jointly indicate the existence of a graver condition than simple habitual drunkenness."

10. **Remedial Treatment of Inebriates.**—Legislation has been passed in each State providing for the commitment of inebriates to special Government institutions, but so far New South Wales and Victoria are the only States in which such institutions have been established. The laws in the various States are as follows:—New South Wales, Inebriates Act 1900; Victoria, Inebriates Act 1904; Queensland, Inebriate Institutions Act of 1896; South Australia, Inebriates Act of 1881; Western Australia, Lunacy Act 1903, Pt. iv., Habitual Drunkards; Tasmania, Inebriates Act 1885, Inebriate Hospitals Act 1892. Curative work was first undertaken by the Government of New South Wales in 1907. The institutes are connected with the gaols, and, naturally, custodial measures are still a strong feature in their management; nevertheless the results so far have been encouraging. In Victoria an institute purporting to be wholly remedial was founded in

1907, but up to the end of December, 1909, only males had been admitted. It may be mentioned that there are private retreats in each State, but these are not officially subsidised or inspected.

11. **Treatment of Habitual Offenders.**—In New South Wales the Habitual Criminal Act of 1905 gives judges the power of declaring a prisoner, after a certain number of sentences, to be an habitual criminal, and as such to be detained until, in the opinion of the authorities, he is fit to be at large. At the end of 1909 there were thirty-five persons in prison under this Act. The Indeterminate Sentences Act came into force in Victoria in July, 1908. Somewhat similar Acts are in force in South Australia and Tasmania. The provisions of the Habitual Criminals Amendment Act of 1907 were put into force in South Australia in 1909, and four criminals have been sentenced in accordance with them. Legislation of this character has not yet been adopted in Queensland, where the Comptroller-General states that the class of offenders suitable for its operation is very limited. Naturally it will be some time before the effect of these measures on the prevalence of crime can be estimated. The Comptroller-General of Prisons in New South Wales states, however, that the system has exercised a wholesome deterrent effect on the criminal who is not a prisoner.

In illustration of the need for a Habitual Offenders Act to deal with professional criminals, the following statement culled from the report for 1909 of the Inspector-General of Police in New South Wales will be found of interest. In cases of breaking and entering, thirty-three persons committed 165 offences, or an average of five each. Of the total number, one man committed thirty-two offences, another thirteen, and another twelve. In simple larcenies, 139 persons committed 528 offences, one man being responsible for fifty-two charges, another fifty-six, and another seventeen. Under "burglaries" one man committed five offences; under "false pretences" one man committed nineteen, and another fifteen offences.

12. **Treatment of First Offenders.**—In all the States and New Zealand statutes dealing with first offenders have been in force for some years, the dates of passing the Acts being as follows:—New South Wales, 1894; Victoria, 1890; Queensland and South Australia, 1887; Western Australia, 1892; Tasmania and New Zealand, 1886. The method of procedure is practically the same in all cases, *i.e.*, with regard to most first offenders the magistrate or judge is empowered to allow the offender to go free on recognisances being entered into for his good behaviour for a certain period. In practice, this humane law has been found to work excellently, very few of those to whom its provisions have been extended having been found to relapse into crime.

13. **Children's Courts.**—Special courts for the trial of juvenile offenders have been established in New South Wales, Victoria, Western Australia, and New Zealand within the last few years, while Children's Courts, although not under that name, are practically provided for by the State Children's Acts of 1895 and 1900 in South Australia. The object of these courts is to avoid, as far as possible, the unpleasant surroundings of the ordinary police court. This subject is dealt with in detail in the section dealing with Public Hygiene. (See Section xxx.)

14. **Committals to Superior Courts.**—In a previous section it has been pointed out that comparisons of criminality based on a consideration of the total returns from magistrates' courts are somewhat inadequate, seeing that the figures include numbers of cases which are merely technical breaches of laws having in some instances a purely local significance. The committals to higher courts give a better basis of comparison, although even in this connection allowance must be made for the want of uniformity in jurisdiction. The table below gives the number of committals in each year from 1905 to 1909, with the proportion of such committals per 10,000 of the population. The rates are shewn on a separate line.

COMMITTALS TO SUPERIOR COURTS (COMMONWEALTH), 1905 to 1909.

State.		1905.	1906.	1907.	1908.	1909.
New South Wales	No.	1,486	1,334	1,172	1,060	1,135
	Rate	10.1	8.8	7.2	6.7	7.1
Victoria	No.	652	584	561	577	580
	Rate	5.4	4.8	4.5	4.6	4.5
Queensland	No.	495	440	464	417	442
	Rate	9.4	8.3	8.6	7.6	7.8
South Australia	No.	152	168	105	89	111
	Rate	4.1	4.4	2.7	2.2	2.7
Western Australia	No.	235	182	193	187	177
	Rate	9.4	7.0	7.4	7.0	6.5
Tasmania	No.	59	55	51	63	44
	Rate	3.3	3.1	2.8	3.5	2.4
Commonwealth	No.	3,079	2,763	2,546	2,393	2,489
	Rate	7.7	6.8	6.0	5.7	5.8

The above figures shew that there has been a decrease in serious crime, and, if the comparison be carried farther back, it will be found that the improvement has been considerable. This will be evident from an examination of the following figures, which shew the rate of committals per 10,000 persons in Australia at various periods since 1861:—

RATE OF COMMITTALS IN AUSTRALIA, 1861 to 1909.

Year	1861.	1871.	1881.	1891.	1901.	1909.
Committals per 10,000 inhabitants ...	22	14	12	11	8	6

The decline in proportion to population since 1861 has therefore been about 73 per cent.

§ 3. Superior Courts.

1. **Convictions at Superior Courts.**—The total number of convictions at superior courts, together with the rate per 10,000 of the population, is shewn below for each of the years 1905 to 1909:—

CONVICTIONS AT SUPERIOR COURTS (COMMONWEALTH), 1905 to 1909.

State		1905.	1906.	1907.	1908.	1909.
New South Wales	No.	819	707	629	614	619
	Rate	5.6	4.7	4.0	3.9	3.9
Victoria	No.	382	339	368	365	352
	Rate	3.2	2.8	3.0	2.9	2.7
Queensland	No.	288	249	268	292	345
	Rate	5.5	4.7	4.6	4.8	6.1
South Australia	No.	85	92	74	68	86
	Rate	2.3	2.4	1.9	1.7	2.1
Western Australia	No.	161	150	176	106	87
	Rate	6.4	5.8	6.7	4.0	3.2
Tasmania	No.	24	32	39	29	24
	Rate	1.3	1.8	2.2	1.6	1.3
Commonwealth	No.	1,759	1,569	1,554	1,474	1,513
	Rate	4.4	3.8	3.7	3.5	3.5

In considering the above figures allowance must be made for the various factors enumerated in a preceding paragraph. Only when this is done will the comparatively unenviable pre-eminence of Western Australia in regard to serious crime be explained. Tasmania, it will be noted, shews by far the smallest proportion of serious crime, while a reference to a preceding table discloses the fact that the island State is relatively the smallest consumer of alcoholic beverages. That a definite causal relation exists between the figures shewn by the respective tables is not, however, obvious.

2. **Offences for which Convictions were Recorded at Superior Courts.**—In the following table will be found a classification of the principal offences for which persons were convicted at the higher courts during each year of the period 1905 to 1908. Owing to lack of uniformity in the presentation of the returns for the several States the information is confined to the chief offences against the person only. The figures quoted refer to convictions in the Commonwealth during the period dealt with.

CONVICTIONS FOR SERIOUS CRIME, SUPERIOR COURTS, 1905 to 1908.
(COMMONWEALTH.)

Offences.	1905.	1906.	1907.	1908.
Murder and attempts at	32	35	26	26
Manslaughter	14	21	19	20
Rape and crimes of lust	96	70	90	60
Other offences against the person	256	239	255	278

The comparison necessarily closes with the year 1908, owing to non-receipt of returns from Tasmania for 1909.

While the convictions for manslaughter and crimes of lust are identical in the opening and closing years of the period dealt with, those for murder declined by about 19 per cent. The general total of convictions for all offences against the person shews a decline since 1901 of about 10 per cent.

3. **Capital Punishment.**—The table below gives the number of executions in each State during the period 1905 to 1909:—

EXECUTIONS (COMMONWEALTH), 1905 to 1909.

State.	1905.	1906.	1907	1908.	1909.
New South Wales	...	1	3	...	...
Victoria	...	...	...	1	...
Queensland	2	3	1	...	2
South Australia	1	1	...	1	...
Western Australia	3	1	1	2	1
Tasmania	...	...	...	...	...
Commonwealth	6	6	5	4	3

In the early days of the history of Australia the penalty of death was attached to a large number of offences, many of which at the present time would be dealt with in the lower or magistrates' courts. With the growth of settlement, and the general amelioration in social and moral conditions, the list was, however, considerably curtailed, and the existing tendency is practically to restrict death sentences to cases of murder. It may be remarked that in cases of rape, which is a capital offence in some of the Australian

States, the penalty has been but sparingly inflicted during the last few years. Juries are reputed to be loth to convict on this charge, owing to the uncertainty whether sentence of death will be pronounced.

During the period 1861 to 1880 the average number of executions in the Commonwealth was nine, from 1881 to 1900 the average was six, while for the period 1901 to 1909 the figure stood at five.

§ 4. Prisons.

1. **Prison Accommodation and Prisoners in Gaol.**—The table below shews the number of prisons in each State and the accommodation therein at the end of 1909:—

PRISONS AND PRISON ACCOMMODATION (COMMONWEALTH), 1909.

State.	Number of Prisons.	Accommodation in—		Prisoners at End of Year.
		Separate Cells.	Wards.	
New South Wales	30	2,193	759	1,333
Victoria	18	1,480	729	844
Queensland	12	559	416	516
South Australia	15	812	292	276
Western Australia	27	683	238	*365
Tasmania	2	251	23	81
Commonwealth	104	5,978	2,457	3,415

* Exclusive of 656 aborigines.

The number of prisoners in gaol, exclusive of debtors, at the 31st December in each of the years 1905 to 1909, is given below. A separate line is added in each instance shewing the proportion per 10,000 of the population.

PRISONERS IN GAOLS (COMMONWEALTH), 1905 to 1909.

State.		1905.	1906.	1907.	1908.	1909.
New South Wales ...	Number	1,678	1,519	1,437	1,417	1,333
	Proportion	11.4	10.1	9.3	9.0	8.3
Victoria	Number	990	927	916	875	844
	Proportion	8.2	7.6	7.4	7.0	6.5
Queensland	Number	535	507	501	493	516
	Proportion	10.2	9.5	9.3	9.0	9.1
South Australia	Number	259	237	255	247	276
	Proportion	6.9	6.2	6.6	6.2	6.7
Western Australia ...	Number	465	402	502	351	365
	Proportion	18.6	15.5	19.1	13.2	13.5
Tasmania	Number	92	89	89	96	81
	Proportion	5.1	5.0	5.0	5.3	4.4
Commonwealth	Number	4,019	3,681	3,700	3,479	3,415
	Proportion	10.0	9.0	8.9	8.2	7.9

From the preceding table it will be seen that the proportion to population of prisoners in gaol has fallen considerably during the last five years, while, if the comparison be carried farther back, the position is seen to be still more favourable, the prisoners in gaol in the Commonwealth numbering as much as 16 per 10,000 of the population in 1891.

2. **Improvement of Penological Methods.**—During recent years Australia, in common with most other civilised countries, has introduced considerable modifications and improvements in methods of prison management. Under the old régime punishment partook more or less of the character of reprisal for wrongdoing, and the idea of constituting the prison as a reformative agency was in the background. But of recent years there has been an earnest attempt at effecting a moral reformation in the unfortunates who lapse into crime. This aspect of prison management has been specially prominent in New South Wales. As pointed out by the Comptroller-General of Prisons of that State, there are, however, certain directions in which improvements can be made. The danger and absurdity of sending drunkards to gaol has already been alluded to in a previous section, while present methods of dealing with vagrancy, and particularly with prostitution, have proved quite inadequate. A step in the right direction has however been taken in New South Wales, where, under the Prisoners' Detention Act, prisoners afflicted with certain diseases may be detained until the medical authorities pronounce them to be free from contagion. Unfortunately the Act does not apply to persons imprisoned in default of paying fines.

The general reorganisation of the New South Wales prison system may be said to date from the year 1896. Briefly stated, the chief reforms which have been introduced are as follows:—(*a*) Prevention of contamination consequent on evil association by the adoption of the "restricted association" scheme, under which prisoners are allowed to have as little intercourse with each other as possible, each prisoner having a separate cell, and mingling with other prisoners only at exercise or at work, and then under close supervision. (*b*) Careful classification of prisoners to avoid contact of minor or first offenders with the more hardened. (*c*) Better prison fare. (*d*) Abolition of solitary confinement in dark cells. (*e*) Lighting cells up to a reasonable hour at night and allowing well-conducted prisoners the privilege of reading interesting books. (*f*) Abolition of the practice of sending young children to gaol. (*g*) Attempt at scientific treatment of the habitual offender. (*h*) Special penitentiary for women prisoners. (*i*) Provisions for helping prisoners on leaving gaol to find work through the agency of the Discharged Prisoners' Aid Society. Assistance in this direction is also given by numerous clerical and lay helpers.

In 1902 the system of finger-print identification of criminals was introduced, and by the year 1903 bureaux had been established in the various States for the exchange of records. Very successful results have attended the introduction of the system.

Space will not permit of more than a passing reference to the improvements brought about in prison management in the other States. In Victoria there is an excellent system of classification and allocation of prisoners to different gaols, while at the important penal establishment at Pentridge a careful segregation into no less than five distinct classes is carried out. In common with the other States the latest humane methods of accommodation and prison treatment have for some time been employed.

Queensland prisons have been considerably modernised during the last few years. The prison for females at Brisbane has been built on the radiating plan, and embodies the latest ideas in penological methods. Classification of prisoners has been fully carried out in the male and female divisions of Brisbane prison, and at the Stewart's Creek penal establishment. The construction of the buildings does not, however, permit of the plan being adopted in its entirety in all Queensland prisons. It is stated by the Comptroller-General of Prisons that the classification adopted has already resulted in a decrease in the total number of female prisoners received.

Unusual circumstances have combined to keep crime at a low point in South Australia. In the first place there was never any transportation of criminals to the State,

while in the earlier years of its history South Australian lawbreakers were transported elsewhere. The present system was drafted mainly on English and European lines by the late W. R. Boothby, C.M.G., and under his directions and that of his successor has been found to work admirably.

There is no special information available with regard to the prison systems of Western Australia and Tasmania.

§ 5. Civil Courts.

1. **Lower Courts.**—The transactions of the lower courts on the civil side during each of the last five years are given in the table hereunder. As pointed out previously, the jurisdiction of the courts is by no means uniform in the various States. The figures, however, possess a certain value as indicating that, in comparison with other years, resort to litigation is on the decline in Australia.

LOWER COURTS.—CIVIL CASES, COMMONWEALTH, 1905 to 1909.

State.		1905.	1906.	1907.	1908.	1909.
New South Wales ...	Cases No.	22,497	20,573	26,548	30,472	32,637
	Amt. judg. £	*	*	63,350	83,372	87,432

	Amount £	†267,200	†273,807	331,036	405,207	411,966

* Not available. † Exclusive of New South Wales.

The figures just given represent the returns from Petty Sessions Courts in New South Wales and Victoria, the Petty Debts Cases in Queensland, the Local Courts of South Australia and Western Australia, and the Court of Requests in Tasmania.

2. **Superior Courts.**—In the next table will be found the transactions on the civil side in the Superior Courts during each of the years 1905 to 1909.

The New South Wales returns are to some extent defective, as the figures quoted for amount of judgments include in the case of the Common Law jurisdiction of the Supreme Court the total judgment signed, while in the case of the other States the figures refer to sums actually adjudged after trial. For New South Wales, also, the transactions of district courts refer to the total amounts sued for, and not the sums actually awarded after trial. Statistically the chief importance of the table consists in the fact that it shews a marked decline in litigiousness in Australia.

SUPERIOR COURTS.—CIVIL CASES, 1905 to 1909.

(COMMONWEALTH.)

State.		1905.	1906.	1907.	1908.	1909.

3. **Divorces and Judicial Separations.**—The number of divorces and judicial separations in each State during the period 1905 to 1909 is shewn below :—

DIVORCES AND JUDICIAL SEPARATIONS, 1905 to 1909.

(COMMONWEALTH.

State.	1905.		1906.		1907.		1908		1909.	
	Divorces.	Judicial Separations	Divorces.	Judicial Separation	Divorces.	Judicial Separations	Divorces.	Judicial Separations	Divorces.	Judicial Separations
New South Wales	176	15	175	10	223	14	195	15	275	12
Victoria	136	1	123	2	134	...	151	1	138	1
Queensland	5	1	14	3	12	1	11	2	16	...
South Australia	6	...	3	1	11	...	8	...	12	1
Western Australia	11	1	18	...	16	...	19	...	13	1
Tasmania	2	...	5	...	8	...	7	...	12	1
Commonwealth	336	18	338	16	404	15	391	18	466	16

The average annual number of divorces and judicial separations in the Commonwealth at decennial periods from 1871 to 1900 and for the nine years 1901 to 1909 given hereunder :—

DIVORCES AND JUDICIAL SEPARATIONS, 1871 to 1909.

	1871-1880.	1881-90.	1891-1900.	1901-9
Commonwealth	29	70	358	396

The bulk of the divorces and judicial separations refer, as the table shews, to New South Wales and Victoria, the Acts of 1892 and 1889 in the respective States making the separation of the marriage tie comparatively easy. In some statistical works it is customary to compare the divorces in any year with the marriages in the same year. The comparison is, however, quite valueless, as there is no necessary connection between the figures. Some value would attach to a comparison of the number of divorces with the number of married people living, but the latter information cannot be obtained with accuracy except at Census periods.

4. **Probates.**—The number of probates and letters of administration granted, together with the value of the estates concerned, is shewn below for each State for the period 1905 to 1909:—

PROBATES AND LETTERS OF ADMINISTRATION, COMMONWEALTH, 1905 to 1909.

State.		1905.	1906.	1907.	1908.	1909.
New South Wales	Number	2,804	2,852	3,084	3,094	3,185
	Value £	7,714,416	7,529,437	7,563,499	7,838,572	11,142,068
Victoria	Number	3,853	3,982	4,156	4,345	4,069
	Value £	6,003,478	6,424,738	6,860,143	7,128,085	6,480,376
Queensland	Number	584	602	1,160	706	679
	Value £	1,016,495	1,794,742	1,670,184	1,376,255	1,508,883
South Australia	Number	902	1,020	975	1,025	1,115
	Value £	1,294,968	2,041,280	1,923,954	2,105,351	1,939,509
Western Australia	Number	406	476	433	455	413
	Value £	676,920	544,245	1,154,126	955,995	939,318
Tasmania	Number	270	343	414	346	361
	Value £	504,196	862,222	841,227	1,023,629	722,011
Commonwealth	Number	8,819	9,275	10,222	9,971	9,822
	Value £	17,210,473	19,196,664	20,013,133	20,427,887	22,732,165

As may naturally be expected, the figures in the above table giving the value of property left each year, shew considerable variations.

5. **Bankruptcies.**—The returns in bankruptcy during each of the last five years are given hereunder.

For several reasons comparisons drawn from the figures in the following table are of little value. In the first place, the statements of assets and liabilities are notably unsatisfactory, particularly in regard to the former. Then, again, there is wide dissimilarity in regard to the laws in force in the various States and the method of procedure thereunder in connection with bankruptcy. Further, there are no means of knowing how many persons in each State who were in a bankrupt condition made private arrangements with their creditors either personally or by intervention of a solicitor. The figures quoted in the table exclude the private arrangements in Victoria and South Australia, and the liquidations in Queensland and Tasmania.

BANKRUPTCIES, COMMONWEALTH, 1905 to 1909.

State.		1905.	1906.	1907.	1908.	1909.

6. **High Court of Australia.**—Under the provisions of section 71 of the Commonwealth Constitution Act, the judicial power of the Commonwealth is vested in a Federal Supreme Court, called the High Court of Australia, and in such other courts as the Parliament creates or invests with federal jurisdiction. The Federal High Court possesses both original and appellate jurisdiction, but so far its activities have been confined principally to the latter form. The powers of the court are defined in Chapter III. of the Constitution Act and in the Judiciary Act of 1903. At present the court consists of a Chief Justice and four other judges. Sittings of the court are held in the capitals of the various States as occasion may require. The following statement shews the transactions of the High Court for the quinquennium 1905-9:—

COMMONWEALTH HIGH COURT TRANSACTIONS, 1905 to 1909.

Items.	1905.	1906.	1907.	1908.	1909.
I. ORIGINAL JURISDICTION.					
Number of writs issued	16	23	38	30	27
Number of causes entered for trial	12	5	11	8	4
Verdicts for plaintiffs	11	5	7	4	3
Verdicts for defendants	1	1	4	5	1
Otherwise disposed of	3	6	17	11	17
Amount of judgments	£1,330	£2,395	£1,092	£1,058	£182
II. APPELLATE JURISDICTION.					
Number of appeals set down for hearing	89	93	72	87	76
Number allowed	41	42	34	31	40
Number dismissed	31	34	30	36	29
Otherwise disposed of	17	17	8	20	7
III. AMOUNT OF FEES COLLECTED.					
Amount in each year	£523	£566	£523	£558	£505

§ 6. Cost of Administration of Justice.

The table below shews the expenditure from Consolidated Revenue during each of the last five years in connection with the administration of justice in each of the States. Expenditure on police and prisons has been separately shewn. With regard to the figures quoted for "other" expenditure, a slight allowance has to be made for the fact that some extraneous expenditure has been included which it was found impossible to disentangle from the total, but the amount is in no instance large. Cost of buildings has been excluded from the return.

EXPENDITURE ON JUSTICE, COMMONWEALTH, 1905 to 1909.

State.		1905.	1906.	1907.	1908.	1909.
		£	£	£		£

	Other	29,905	30,423	29,169	30,884	33,662
Western Australia	Police	126,661	126,276	125,440	124,518	119,111
	Gaols	31,610	32,719	32,206	32,638	28,536
	Other	64,746	64,607	61,533	69,761	66,072
Tasmania	Police	36,537	35,086	37,152	39,105	39,740
	Gaols	5,893	5,731	5,465	,795	5,698
	Other	17,267	20,911	18,610	16,901	14,511
Commonwealth	Police	1,154,307	1,1[illegible],339	1,221,084	1,240,902	1,270,958
	Gaols	218,959	[illegible],649	210,592	211,365	204,932
	Other	532,808	525,879	560,889	581,394	606,329

The expenditure shewn in the foregoing table is that expended by the State Governments only, and does not include expenditure in connection with the Federal High Court, which is shewn below for the period 1904-5 to 1909-10 :—

EXPENDITURE OF FEDERAL HIGH COURT, 1905 to 1910.

Year.	Amount.	Year.	Amount.
	£		£
1904-5	13,601	1907-8	23,230
1905-6	15,272	1908-9	24,037
1906-7	20,383	1909-10	23,677

For the purposes of comparison the figures in the first table above have been reduced to a population basis, and the results are given in the table hereunder:—

EXPENDITURE ON JUSTICE PER INHABITANT, COMMONWEALTH, 1905 to 1909.

State.		1905.	1906.	1907.	1908.	1909.
		s. d.	s. d.	s. d.	s. d.	s. d.
New South Wales	Police	5 11	5 9	5 9	5 11	5 11
	Gaols	1 3	1 2	1 1	1 1	1 0
	Other	3 1	2 10	3 1	3 1	3 1
Victoria	Police	5 2	5 1	4 11	4 10	4 11
	Gaols	0 10	0 10	0 9	0 9	0 9
	Other	2 1	2 0	2 0	2 2	2 3
Queensland	Police	6 1	6 7	7 6	7 6	7 10
	Gaols	0 10	0 10	0 10	0 10	0 10
	Other	2 7	2 7	3 2	3 1	3 6
South Australia	Police	4 5	4 6	4 6	4 11	4 9
	Gaols	0 11	0 11	0 10	0 10	0 10
	Other	1 7	1 7	1 6	1 7	1 8
Western Australia	Police	10 1	9 9	9 7	9 5	8 10
	Gaols	2 6	2 6	2 6	2 6	2 2
	Other	5 2	5 0	4 8	5 3	4 10
Tasmania	Police	4 1	3 11	4 2	4 4	4 4
	Gaols	0 8	0 8	0 7	0 8	0 7
	Other	1 11	2 4	2 1	1 10	1 7
Commonwealth	Police	5 9	5 9	5 9	5 10	5 11
	Gaols	1 1	1 0	1 0	1 0	0 11
	Other	2 8	2 7	2 8	2 9	2 10

The total expenditure in the Commonwealth in connection with the administration of justice has fallen from ten shillings per inhabitant in 1901 to nine shillings and eightpence in 1909. Police expenditure has increased by about twopence per head, the average for gaols is about twopence per head less, while the expenditure on courts and the remaining machinery of justice has fallen by fourpence per head, during the same period.

SECTION XXIV.

PUBLIC BENEVOLENCE.

§ 1. Introductory.

1. **General.**—Charity and charitable effort in Australia may be classified under three headings, viz.:—(*a*) State; (*b*) public; (*c*) private. To the first belong all institutions wholly provided for by the State, such as the principal lunatic asylums in the various States, the Government hospitals in Western Australia, and the Government asylums for infirm in New South Wales. The second class includes public institutions of two kinds, viz.:—(i.) Institutions partially subsidised by the State or State endowed, but receiving also private aid, and (ii.) those wholly dependent upon private aid. To the former division belong such institutions as the Melbourne and other large metropolitan hospitals. In the latter are included institutions established and endowed by individuals for the benefit of the needy generally. All charitable movements of a private or special character are included in the third group.

A more or less accurate statistical account is possible in classes (*a*) and (*b*), but in regard to (*c*) complete tabulation is, for obvious reasons, impossible. Moreover, public response to special appeals, and summary relief in kind, cannot be statistically recorded. Hospitals, orphanages, homes, benevolent asylums, etc., naturally attract the largest share of charitable aid. There are, nevertheless, numerous other and minor charities which mark the course and measure the amount of a considerable volume of private beneficence. In institutions which receive Government aid, management and finance are usually relegated to executive bodies, ordinarily elected on a democratic basis.

The distribution of wealth in the Australian Commonwealth, and the generally favourable conditions, as regards scope for the exercise of natural ability, operate to prevent the development of a permanent pauper class, and at the same time lessen in a dual way the burden of charity. This latter is brought about by the increase, on the one hand, of the number of people whose prosperity enables them to relieve the indigent and unfortunate, and by the reduction, on the other, of the number who need assistance. Enactments of State Legislatures have decreed short hours and a liberal holiday allowance for large numbers of persons engaged in industrial and other pursuits, and, even in occupations not covered by Act of Parliament, the general conditions of employment often provide a considerable amount of leisure. This, coupled with an equable climate, enables the community to spend much of its time in the open air, with resultant advantages to its physique and general health. No poor-rate is levied in Australia, and Government aid without return is required only for the aged and disabled. Moreover, although Old Age Pensions are paid by the Commonwealth, the payments are looked upon rather in the light of a citizen's right than as a charity. Reference to the Old Age Pensions will be found in § 3, Miscellaneous, chap. xxxi.

To meet temporary conditions, or rather, what ought to be temporary conditions, various relief works have been started from time to time, in which the able-bodied who may be forced to seek official relief are required to make some return for the assistance afforded. In the past, attempts to relieve the unemployed have led to large expenditures, but at the present time the entire scheme of such relief is on an altogether more satisfactory footing.

In each of the States there are Governnent asylums for the care of the insane, and the condition of these unfortunates has been steadily ameliorated by the general advance in psychiatry.

Young children deprived of parental training and control are cared for and educated in "orphanages" and "industrial schools," and those who have been guilty of some specific offence, or who are beyond adequate parental control, are committed to "reformatories."

In common with other civilised communities, relief funds have from time to time been organised for famine-stricken territories (*e.g.*, China, India, etc.), or for places where plague, flood, fire, or earthquake has shewn the need of urgent relief. Statistical information in regard to this form of charity is not, however, available. It may be mentioned that the Daily Press frequently accepts the duties of collectorship in charity appeals.

2. **Charity Reforms.**—The evident overlapping of charitable effort has on various occasions led to discussion regarding methods of collection and distribution of aid, and has, moreover, given rise to a desire for improved administration. In this connection, an important conference of representatives of charitable associations was held in Melbourne in September, 1907, with the object of systematically digesting the experiences of the committees of management of the various hospitals and kindred institutions. These obtain their revenue from State and municipal subsidies, from proceeds of concerts, entertainments, etc., from organised public collection, from private contributions and bequests, and from patients. Some of the institutions also have paid or honorary collectors. As a result of the investigations of this Conference, it was found (*a*) that institutions of a similar character were competing with each other; (*b*) that public aid was not effectively dispensed; (*c*) that public eleemosynary impulse was prejudiced by the circumstance that institutions primarily intended for the poor and needy were being utilised by people who could afford to pay for private relief, particularly in regard to medical or surgical treatment. One important result of this Conference was the formation of societies to prevent overlapping.

Other proposed reforms aim at ascertaining the causes of poverty and crime, and finding the necessary palliative. Increased provision of better houses and workrooms and improved sanitation are advocated, together with more stringent legislative measures to enforce cleanliness and healthy modes of life. In addition, further Factories Legislation, Pure Food and Health Acts, and provisions for safeguarding dangerous machinery and permitting only competent persons to be employed thereon, are also advocated.

3. **Difficulties of General Tabulation.**—Differences in the organisation of charities prevent uniform tabulation of statistics for all the States, but certain of the larger features of the statistics of benevolence have been combined for the whole Commonwealth. Combinations for the whole of Australia for the five years ended 1909 are given for hospitals, benevolent asylums, orphanages, and hospitals for the insane. Satisfactory tabulation for other charities is not yet possible. Where the combination has been for dissimilar periods the nearest years have been taken, and in some cases, where information has not been forthcoming, figures for the previous year have been repeated. As a result of the effort to standardise the information, emendations have been made in the figures published in the preceding Year Books, whereby it is believed a more satisfactory basis of comparison has been established.

§ 2. The Larger Charities of Australia.

1. **Hospitals.**—Most of the State capitals have several large and well-equipped hospitals, and there is at least one in every important town. In large centres there are hospitals for consumptives, women, children, infectious diseases, incurables, etc. The number of hospitals in Australia, with the admissions, patients treated, deaths, and expenditure, are shewn in the following table. The "special" hospitals are included in the returns for 1905 and 1906, but in 1907, 1908, and 1909 only general hospitals are tabulated. In 1909, the figures for assisted hospitals in Western Australia are available for the first time.

HOSPITALS IN THE COMMONWEALTH, 1905 to 1909.

Particulars.	1905.	1906.	1907.	1908.	1909.
Number of institutions	308	313	304	312	337
Number of beds	11,778	12,108	11,463	12,057	11,384
Admissions during year	94,117	99,308	98,031	107,292	89,650
Indoor patients treated	101,200	106,488	104,483	114,668	96,748
Deaths	7,476	7,627	8,005	8,560	6,967
Expenditure ... ... £	602,394	612,628	639,002	758,993	775,811

In addition to those admitted to the institutions there are large numbers of out-patients. The exact number of these cannot be given, but a rough estimate of distinct cases for 1909 places the total at about 280,000.

Fuller details of hospital statistics are given for 1909 in the table below, the States of the Commonwealth being shewn separately :—

* Exclusive of hospitals for convalescents and consumptives, and maternity homes, in 1907; but including homes for consumptives in 1908. † Including rent. ‡ Including administration. § Including buildings, £19,306.

2. **Hospitals for General and Special Cases.**—The tables here given refer to general hospitals. In addition there are hospitals for "specials," (such as women's, children's, and infectious diseases hospitals), and institutions nearly allied to hospitals (such as consumptive sanatoria). In the first and second numbers of the Commonwealth Year Book, these were tabulated with general hospitals. Where the institutions carry on general hospital relief, they are still included with those establishments.

(i.) *New South Wales.* A feature of the last decade has been the establishment of hospitals in many country towns of growing importance. In 1898, there were 13 metropolitan and 97 country hospitals; in 1909 these had increased to 21 and 120. A government hospital is established at Little Bay. There are four women's and one children's hospitals in the metropolis. Other leading institutions are the Thomas Walker Convalescent Hospital, Dental Hospital, Home for Incurables, Hospital for Infants and Asylum for Women and Children, Infants' Home, etc.

(ii.) *Victoria.* Special hospitals, not included in the above tabulation, comprise the Women's Hospital, with infirmary and midwifery departments, the Children's Hospital, the Hospital for Women and Children, two Consumptive Sanatoria (one a Government institution), Inebriates' Institute, Convalescent homes, etc.

(iii.) *Queensland.* There are four lying-in and two children's hospitals in Queensland, and a sanatorium; also two lock hospitals, established under the provisions of the Contagious Diseases Act of 1868.

(iv.) *South Australia.* In connection with the leading general hospital in the metropolis, there is a consumptive home and infectious diseases block; there are also a children's hospital, two lying-in homes, sanatorium, convalescent home, home for incurables, etc.

(v.) *Western Australia.* The leading general hospitals are Government establishments. There is a lying-in establishment in connection with the metropolitan women's home, and in other places, a home for the dying and incurable, homes and rests for sailors, strangers, etc.

(vi.) *Tasmania.* Included in the Tasmanian general hospitals are two which pay particular regard to "special cases"; these are the hospital for contagious diseases (a

Government institution) and the convalescent home. Other important institutions of a general nature are the New Town charitable establishment, and the invalid depôt.

3. **Benevolent and Destitute Asylums.**—A marked increase has taken place in the amount of aid bestowed upon the aged. Two elements, each of them independent of the growth of population, have influenced this increase. One is, that the general age of the community has advanced,—the large flow of immigration of fifty and sixty years ago having been mostly of persons in the prime of life; the other is the increased regard paid in all British communities to the well-being of the helpless. The result in Australia has been that numerous establishments have been founded for the housing and protection of such as are no longer able to care for themselves. The institutions are supported by Government and municipal aid, public subscriptions, charity performances, bequests, etc., and in many cases relatives of indigent and afflicted persons contribute to their maintenance.

The impossibility of an entirely satisfactory statistical tabulation in regard to all forms of charitable aid, is especially marked in the case of benevolent institutions, since the conditions under which they have been established in the different centres in the Commonwealth have caused divergence in their development and in the classes of cases treated by them. For example, in Western Australia the Home for Destitute Women includes a maternity ward, for which the statistics are not separately kept. Since the predominating function of the Institution is aid to the destitute, it has been included among benevolent asylums. In Victoria, nine of the hospitals are also Benevolent asylums, and they are included wholly under the former. In South Australia, the Destitute Asylum includes lying-in and children's departments.

BENEVOLENT INSTITUTIONS.—REVENUE AND EXPENDITURE, 1909.

Particulars.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	Cwlth.

Total...	93,960	63,865	35,751	18,801	22,933	4,805	240,115

(i.) *Government Asylums for the Infirm, New South Wales.* There are six of these institutions in New South Wales, with something over 4000 beds, generally nearly all in use. The average number resident in 1909 was 3606. Deaths in 1909 numbered 875, and the expenditure amounted to £73,131.

(ii.) *Benevolent Asylums, Victoria.* Besides the asylums attached to hospitals, there are eight institutions in Victoria. The daily average number indoors was 2421 for 1908-9, with 1780 distinct cases of outdoor relief. Deaths numbered 448. The total expenditure was £62,865, and receipts £48,704—£30,100 from Government and £18,604 from other sources.

(iii.) *Benevolent Asylums, Queensland.* There are four institutions in Queensland, with 1259 beds. The total number in the asylums during 1909 was 1681, with a daily average of 1144. Deaths numbered 157. Expenditure amounted to £20,997, and receipts to £21,412, of which £20,355 was Government aid.

(iv.) *Destitute Asylum, Adelaide.* Outside of hospitals and lunatic asylums the destitute of South Australia are dealt with and relieved at the Destitute Asylum, Adelaide. The institution includes lying-in and children's departments. In the asylum the average number of inmates in 1908-9 was 401. There were seventy-eight deaths during the year. Expenditure totalled £6631. In addition, £12,394 was dispensed through the institution for outdoor relief of the destitute in both metropolitan and rural districts.

(v.) *Homes for the Destitute, Western Australia.* There are four of these homes in Western Australia supported by public funds. Attached to the Perth Women's Home is a lying-in department. Outdoor relief to the poor and aged is given, the amount expended being included in expenditure in the above table. More than sixteen hundred cases were dealt with during 1908, with a daily average of 656. There were ninety-eight deaths.

(vi.) *Charitable Establishments, Tasmania.* There are two principal Government charitable establishments in Tasmania. Beds numbered 449 in 1909. The total number of persons treated was 690, of whom 112 died. The daily average resident was 329. Total expenditure was £5232, receipts amounting to the same sum, of which £4787 was contributed by the State.

4. **Orphanages, Industrial Schools, etc.**—The organisation of charitable effort varies greatly in regard to orphans and waifs. In many institutions shelter and some form of industrial training is offered to destitute children of all classes, whether orphans or not, while some of those styled orphanages do not confine their relief to orphans strictly so called. The figures in the next table are those for institutions where, it is believed, the principal effort is on behalf of those who are really orphans:—

ORPHANAGES IN COMMONWEALTH, 1905 to 1909.

Particulars.	1905.	1906.	1907.	1908.	1909.
Number of institutions	38	38	38	38	42
Admissions	1,286	1,333	1,465	1,393	1,613
Total number of inmates during year ...	4,887	4,868	5,081	4,078	5,150
Deaths	17	15	17	19	14
Expenditure	60,564	61,098	62,439	65,154	61,088

(i.) *New South Wales.* The care of destitute and neglected children is entrusted to the State Children's Relief Board, whose officers are charged with a strict supervision regarding the welfare of the children and the relation to them by those to whom they are boarded out. Useful trades and profitable occupations are taught, and many of the children become useful members of society. The number of children under the board's supervision in 1909-10 was 4390. The board's expenditure in 1909-10 was £88,845, or £20 5s. per child.

There are also thirteen orphanages, with about 800 persons under care. Deaths are but one or two annually, and the yearly expenditure fluctuates between £7300 and £10,000.

New South Wales has three reformatory institutions—the Carpenterian State Reformatory, and the "Sobraon" State Training Ship for boys, the enrolment for 1909 being 101 and 357 respectively; and the Giri's State Industrial School, where for the same year the enrolment was 135.

The Training Ship has attained very satisfactory results. In forty years more than 5000 boys have been dealt with, and the records shew that 98 per cent. of these have developed into good citizens. Attached to the "Sobraon" is the steam and sailing schooner "Dart," where the boys are taught seamanship. The boys subjected to a course of training are, at the expiration of their term, apprenticed to approved persons. To the Carpenterian Reformatory are sent boys who have been convicted in the courts, whom it is desired to keep apart from other prisoners, and who are taught useful trades.

(ii.) *Victoria.* There are ten orphanages in Victoria, with 1564 beds. The total number under care in 1909 was over 2000. Average annual admissions are about 500. Deaths numbered four in 1909. The annual expenditure is about £23,000.

At the end of 1909 there were three industrial and eleven reformatory schools in the State. Of these, one industrial and one reformatory school are wholly controlled by the Government, being used merely as receiving and distributing depôts. The children are sent thence to foster homes, situations or other institutions dealing with State wards. The other schools are under private management, receiving an allowance for State wards. Many of the reformatory children are placed with friends or licensed out. On 31st December, 1909, the wards of the State numbered 6221—comprising 6007 neglected and 214 reformatory children. There were also 42 children free from legal control, who, being incapacitated, were maintained by the State. The total expenditure for 1909 was £79,182, of which £76,457 was borne by the Government.

A training ship has been purchased and equipped. The beneficial results of the system experienced in New South Wales are expected to follow in Victoria.

(iii.) *Queensland.* There are seven orphanages in Queensland with over 1000 beds. The number under care is about 1500, deaths averaging six per annum. The expenditure in 1909 was £28,637.

There are also six industrial and reformatory schools. The total number of children under State control at the end of 1909 was 2627. The gross cost was £27,881 of which £25,546 was borne by the Government.

(iv.) *South Australia.* The State Children's Department exercises a supervision over the probationary and industrial schools, the reformatories, and the Methodist Home. The total number of admissions into these institutions in 1908-9 was 175. The number of inmates on the 30th June, 1909, was 180, in addition to which 1203 were placed out, or had been adopted or apprenticed. There were four deaths of children in industrial schools, and seven of those placed out and in other institutions. The number of children under State control on 30th June, 1909, was 1511. The expenditure for 1908-9 was £20,305 in gross, of which the Government aid was £18,298.

(v.) *Western Australia.* In Western Australia there were, in 1908, eight orphanages (including industrial orphanage schools). The admissions during the year were 152, and the number in institutions on 31st December was 462. There were three deaths during the year. The State expenditure was £10,512.

In the Government Industrial School there were, at the end of 1908, 23 inmates, 180 having been admitted during the year. Five deaths occurred. At the end of 1909 655 children were under State control. The net cost to the State was £11,014, parents' contributions amounting to £502.

(vi.) *Tasmania.* There were three admissions to the orphanage in 1908 and forty-three inmates during the year. No deaths occurred. Expenditure amounted to £526.

There are three industrial schools under benevolent institutions in the State. Admissions in 1908 numbered seventeen, and total inmates during the year 106. One death occurred. The expenditure was £2387.

Under the boarding-out system an annual average of 140 children are placed out at an annual average expenditure of £1610. The total number of children under State control at the end of 1909 was 285, the gross cost to the State of children's relief being £2788, of which £274 represents parents' contributions.

The following table summarises the number of neglected children under State Departments. In New South Wales a number of children are boarded out with their own mothers. The inclusion of these would make the total number of children in that State 8487.

STATE RELIEF OF NEGLECTED CHILDREN.—TRANSACTIONS OF STATE DEPARTMENTS IN THE COMMONWEALTH (EXCLUSIVE OF TASMANIA), 1909.

* For year ended 5th April following. † For year ended 30th June following.

5. **Lepers.**—Lazarets for the treatment of lepers have been established in New South Wales (Little Bay); Queensland (Stradbroke Island, near Brisbane, and Dayman Island, Torres Straits); and the Northern Territory of South Australia (Mud Island). Quarantine and isolation stations have also been used for the segregation of patients. A great deal of information concerning the beginning and progress of leprosy in Australia has been collected and published by Dr. J. Ashburton Thompson, Chief Government Medical Officer and President of the Board of Health, New South Wales, from whose reports the following table has been compiled:—

CASES OF LEPROSY RECORDED IN THE COMMONWEALTH, 1855 to 1908.

State.	1855 to 1904.	1904.	1905.	1906.	1907.	1908.	Total.
New South Wales	116	8	9	7	4	2	146
Victoria	*26	—	1	—	—	—	*27
Queensland	†136	17	19	14	21	23	†230
South Australia	36	—	1	—	1	—	38
Western Australia	4	—	—	—	—	3	7
Tasmania	—	—	—	1	—	—	1
Total	*†318	25	30	22	26	28	*†449

* In addition, some Chinese. † In addition, many Kanakas.

6. **Hospitals for the Insane.**—The method of compiling insanity statistics has been fairly uniform throughout the States, but the various methods of observing the early stages of the development of insanity introduce an element of uncertainty which considerably reduces the value of comparison. In the summary given below licensed houses (except as regards expenditure) are included for New South Wales throughout, and the number in Victoria is included in 1907, 1908, and 1909, but the figures are exclusive of reception houses and observation wards in gaols :—

HOSPITALS FOR INSANE, COMMONWEALTH, 1905 to 1909.

Particulars.	1905.	1906.	1907.*	1908.*	1909.*
Number of institutions	27	27	30†	30†	31†
Number of beds	13,144	13,507	13,238	14,317	14,546
Admissions	2,593	2,839	2,583	2,638	2,740
Total number under treatment	16,462	16,803	17,000	17,373	17,915
Discharged as recovered, relieved, or improved	1,183	1,258	1,216	1,159	1,200
Deaths	966	1,003	1,018	1,071	1,046
Expenditure ... ... £	387,395	404,354	500,168	511,468	514,531

* Exclusive of receiving wards at two general hospitals, previously included. † Includes five licensed houses for insane in Victoria.

The proportion of insane, as well as the total number returned as under treatment, is gradually rising. In the next table the number of insane under official care in Australia is given, and in the table following the proportion of insane to population.

The number of insane persons in institutions in Australia at the end of each of the past five years was as follows :—

INSANE PERSONS IN THE COMMONWEALTH, 1905 to 1909.

State.	1905.	1906.	1907.	1908.	1909.
New South Wales	5,193	5,422	5,509	5,673	5,902
Victoria	4,768	4,876	4,969	5,014	5,097
Queensland	1,938	2,029	2,069	2,184	2,227
South Australia	983	994	1,019	1,051	1,051
Western Australia	494	546	630	707	782
Tasmania	475	482	502	507	506
Commonwealth	13,851	14,349	14,698	15,136	15,565

For the period embraced in the tables Victoria shews the highest rate of insanity, roughly one in 250 persons. It is stated that this is chiefly owing to the proportionately greater number of old persons in that State. On the other hand, in Western Australia, where the population is much younger, a considerably lower insanity rate has prevailed, being about one in 500 in 1905 and 1906, about one in 400 in 1907 and 1908, and about one in 350 in 1909.

PROPORTION OF INSANE, COMMONWEALTH, 1905 to 1909.

State.	1905.	1906.	1907.	1908.	1909.
	PER 1000 OF THE POPULATION.				
New South Wales	3.49	3.55	3.51	3.56	3.64
Victoria	3.91	3.96	3.98	3.94	3.91
Queensland	3.67	3.79	3.82	3.96	3.89
South Australia	2.60	2.59	2.59	2.58	2.53
Western Australia	1.94	2.08	2.41	2.65	2.86
Tasmania	2.62	2.62	2.73	2.73	2.70
Commonwealth	3.42	3.48	3.50	3.54	3.56

Increase in the number of recorded cases of insanity does not necessarily imply an actual increase, and does not here imply an equivalent increase. Consequent upon the development of a more rational attitude to the treatment of mental cases there is growing up a greater willingness to submit necessary cases to treatment at an earlier stage than formerly. It is important to bear this in mind, because the small progressive increase in the preceding table is probably to be attributed largely, if not solely, to this circumstance. The increase in expenditure is another evidence of the greater care bestowed on the insane.

The leading features in regard to institutions for the care of the insane are given below for 1909:—

HOSPITALS FOR THE INSANE.—NUMBER, STAFFS, AND ACCOMMODATION, COMMONWEALTH, 1909.

* Exclusive of inmates of the Receiving House, Royal Park, and of Receiving Wards attached to the hospitals at Bendigo and Geelong, and of five private licensed houses.

In some of the States it is the practice to allow persons well advanced towards recovery to leave the institutions and reside with their relatives or friends, but they are nevertheless under supervision of the asylum authorities and are kept on the books. These patients are shewn in the above table as inmates. In nearly every case absconders are retaken. They are shewn above as readmitted.

The revenue of Government asylums is small in comparison with their cost, and consists chiefly of patients' fees. The proportion of expenditure borne by the States amounts to about 88 per cent.

HOSPITALS FOR THE INSANE (GOVERNMENT ONLY), REVENUE AND EXPENDITURE, 1909.

* Lunacy patients only. † Including £5869 expenses of Government hospital at Morisset.
‡ Buildings and repairs. § Including £222 for buildings.

(i.) *New South Wales.* The average length of residence in the hospitals of persons who died during the year was 4 years 8 months for males and 5 years 9 months for females; and that of persons who were discharged during the year was 1 year 2 months for males and 1 year 7 months for females.

There are also two State reception houses, where suspected persons are confined for observation, being subsequently either discharged or transferred to lunatic asylums. In two of the gaols observation wards have been instituted, with similar functions.

(ii.) *Victoria.* The average residence in the hospitals of those who died was 6 years 11 months for males, and 9 years 9 months for females; that of those discharged, 1 year 1 month for males, and 1 year 6 months for females.

There are also lunacy wards in two of the general hospitals. On 24th September, 1907, a State receiving house was opened, where persons are placed for observation, and subsequently discharged or transferred to asylums.

(iii.) *Queensland.* The average residence in the institutions of those who died was 6 years 1 month for males and 9 years 4 months for females; and for those who were discharged, 1 year 2 months for males and 2 years 1 month for females.

There are also three reception houses for insane, which act as depôts to which patients are sent to see whether their mental illness is of a merely temporary character, readily to be relieved, or is of such a nature as to need further treatment at the State asylums.

(iv.) *South Australia.* The average residence of those who died was 7 years for males and 6 years 9 months for females; of those discharged, 10 months for males and 8 months for females.

(v.) *Western Australia.* The period of residence of those who died during the year averaged 3 years 9 months for males and 2 years 3 months for females; of those who were discharged, 1 year 1 month for males and 10 months for females.

Particulars of the New Norfolk Asylum, Tasmania, are not available for 1909.

(vi.) *Causes of Insanity.* The proportion of causes of insanity to the total of ascertained causes in Australia in 1907, 1908, and 1909 shows that hereditary influences have been the chief factor, one-fifth of the total ascertained causes coming under this head. Domestic troubles, adverse circumstances, etc., have also been a fruitful source. About one case in eight was due to intemperance in drink.

PROPORTION OF ASCERTAINED CAUSES OF INSANITY, COMMONWEALTH, 1907, 1908, and 1909.

Causes.	1907.	1908.	1909.
	Per cent.	Per cent.	Per cent.
Domestic trouble, adverse circumstances, mental anxiety ...	14.7	14.5	11.5
Intemperance in drink	13.7	12.9	10.1
Hereditary influence, ascertained; congenital influence, ascertained	20.3	18.8	15.0
Pregnancy, lactation, parturition and puerperal state, uterine and ovarian disorders, puberty, change of life	8.2	6.8	6.4
Previous attacks	11.0	13.5	12.0
Accident, including sunstroke	4.3	4.0	3.0
Old age	7.7	8.0	9.7
Other causes ascertained	20.1	21.5	32.3
All ascertained causes	100.0	100.0	100.0

7. **Treatment of Inebriates.**—The treatment of inebriates is referred to in the section dealing with Public Justice hereinbefore. (See page 926.)

8. **Protection of Aborigines.**—For the protection of the aboriginal Australian race there are institutions, under the supervision of Aborigines Boards, where the blacks are housed and encouraged to work, the children receiving elementary education. The work is usually carried on at mission stations, but many of the natives are nomadic in habit of life, and receive food and clothing when they call, whilst others but rarely come under the notice of the boards. The native race is extinct in Tasmania. The average annual expenditure on maintenance, etc., for the last four years was—New South Wales, £14,340; Victoria, £4262; Queensland, £10,160; South Australia, £17,037; Western Australia, £17,400; Commonwealth, £63,199.

9. **Other Charitable Institutions.**—Owing to variety of name and function of other charitable institutions it has been found impracticable to give detailed results. The aid given in kind—food, clothing, tools of trade, etc.—is considerable, whilst the shelter and treatment afforded ranges from a bed for a night for casual callers in establishments ministering minor charity, to indoor treatment over long periods for those that exist for the relief of the aged and infirm. The institutions not so particularised include asylums for the deaf, dumb, and blind, maternity institutions and infant homes, homes for the destitute and aged poor, industrial colonies, night shelters, crèches, homes of hope, rescue homes, free kindergarten and ragged schools, auxiliary medical charities, free dispensaries, benevolent societies and nursing systems, charity organisation, ambulance and health societies, boys' brigades, humane and animals' protection societies, prisoners' aid associations, shipwreck relief societies, bush fires and mining accident relief funds.

10. **State Expenditure on Charities.**—The table below gives the amount expended by Government on charities. In some of the States amounts have been included for minor items, which in other States are charged to other heads. The figures are for financial years in New South Wales, Victoria, and Queensland up to 1907, for calendar years in South Australia and Western Australia, and in Tasmania for the calendar year 1904, and financial years 1905-6 and 1906-7. The last three columns give the amounts in the calendar years 1907, 1908, and 1909.

STATE EXPENDITURE ON CHARITIES, 1904 to 1909.

State.	Year.	Amount.	Year.	Amount.	Year.	Amount.	Amount in 1907.	Amount in 1908.	Amount in 1909.
		£		£		£	£	£	£
N.S.W. ...	1904-5	494,818	1905-6	528,281	1906-7	493,605	440,360	481,887	519,327
Victoria ...	,,	294,483	,,	292,454	,,	304,151	361,498	383,086	378,165
Queensland ...	,,	174,379	,,	169,336	,,	193,721	206,881	216,144	200,141
South Aust. ...	1904	98,635	1905	99,194	1906	101,023	113,345	88,752	88,618
West. Australia	,,	103,891	,,	108,122	,,	112,376	146,685	175,839	149,892
Tasmania ...	,,	46,843	1905-6	44,671	1906-7	48,911	46,100	47,537	36,316

The average annual State expenditure for the first three years given was—New South Wales, £505,568; Victoria, £297,030; Queensland, £179,135; South Australia, £99,617; Western Australia, £108,130; Tasmania, £46,808; Commonwealth, £1,236,288. The total in 1907 was £1,314,869; in 1908, £1,393,245; and in 1909 £1,372,459.

11. **Total Charitable Expenditure.**—The expenditure in the Commonwealth in money on hospitals, charities, and all forms of relief publicly given, comprising the amounts furnished by Government and those raised by public subscription, etc., but excluding old-age pensions, is estimated at £1,700,000 for the year 1909.

SECTION XXV.

GENERAL GOVERNMENT.

§ 1. Scheme of Parliamentary Government.

1. **General.**—The legislative power of the Commonwealth is vested in the Federal Parliament, which consists of the Sovereign, the Senate, and the House of Representatives. The Sovereign is represented throughout the Commonwealth by the Governor-General, who, subject to the Constitution of the Commonwealth, has such powers and functions as the Sovereign is pleased to assign to him. In each State there is a State Governor, who is the representative of the Sovereign for the State, and who exercises such powers within the State as are conferred upon him by the Letters Patent which constitute his office, and by the instructions, which inform him in detail of the manner in which his duties are to be fulfilled. The Legislature in each State is also bi-cameral, and consists of (*a*) a Legislative Council and (*b*) a Legislative Assembly, or House of Assembly, the legislative powers of these chambers being delimited by the Commonwealth and the State Constitutions. The latter chamber, which is the larger, is always elective; the qualification for the franchise varies in character. The former chamber is, in the case of New South Wales and Queensland, nominated by the Governor-in-Council, but in the other States it is also elective, the constituencies being differently arranged and some property qualification for the electorate being required. In the Federal Parliament, however, the qualifications for the franchise are identical for both Houses. A brief account of the constitutional history of each of the States has been given in Section II., § 5, hereof. (See pp. 27 to 32.)

2. **Number of Members of the Legislatures.**—The following table shews the number of members in each of the legislative chambers in the Commonwealth and in each State in March, 1911:—

MEMBERS OF PARLIAMENTS OF AUSTRALIA, 1911.

Members in—	C'wealth.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
Upper House	36	53	34	44	18	30	18	233
Lower House	75	90	65	72	42	50	30	424
Total ...	111	143	99	116	60	80	48	657

The use of the expressions "Upper House" and "Lower House" in the above statement, though not justified constitutionally, is convenient, inasmuch as the legislative chambers are known by different names in the Commonwealth and in some of the States.

In the Commonwealth Parliament the Upper House is known as the Senate, and in the State Parliaments as the Legislative Council. The Lower House is known as

follows:—In the Commonwealth Parliament as the House of Representatives, in the State Parliaments of New South Wales, Victoria, Queensland, and Western Australia as the Legislative Assembly, and in the State Parliaments of South Australia and Tasmania as the House of Assembly.

3. **The Cabinet and Executive Government.**—A précis of the sections of the Commonwealth Constitution Act dealing with the Executive Government is given on page 41 hereinbefore. In both the Commonwealth and the State Legislatures the forms of Government have been founded on their prototype, the Imperial Government, and the relations established between the Ministry and the representatives of the people are in accordance with those prevailing in Great Britain. The executive powers in the Commonwealth and in the State Governments are vested in the Governor-in-Council. The Executive Council in the Commonwealth and in the majority of the States is co-extensive with a group of departmental chiefs who are usually spoken of as the Cabinet, and who change with the rise and fall of party majorities. In Victoria and Tasmania, however, the Cabinet on leaving office remain members of the Executive Council, though they no longer attend its meetings, and it is in fact an essential feature of the Cabinet system of Government that they should not do so, except to assist the Governor in transacting purely formal business, or to advise on non-political questions.

(i.) *The Executive Council.* This body is composed of the Governor and Ministers appointed by the Governor as shewn hereinafter. They are sworn both as Executive Councillors and as Ministers controlling the administrative departments. The meetings are official in character; they are presided over by the Governor-General (or Governor) and are attended by the clerk, who keeps a formal record of its proceedings. At these meetings the decisions of the Cabinet are put into official form and made effective, appointments are confirmed, resignations accepted, proceedings ordered, and notices and regulations published.

In March, 1911, the Executive Council was composed of the following members:—

THE EXECUTIVE COUNCIL OF THE COMMONWEALTH, 1911.

Prime Minister and Treasurer ...	The Hon. ANDREW FISHER.
Attorney-General	The Hon. W. M. HUGHES.
Minister of State for External Affairs ...	The Hon. E. L. BATCHELOR.
Minister of State for Home Affairs ...	The Hon. K. O'MALLEY.
Postmaster-General	The Hon. J. THOMAS.
Minister of State for Defence	The Hon. G. F. PEARCE.
Minister of State for Trade and Customs	The Hon. F. G. TUDOR.
Vice-President of Executive Council ...	The Hon. G. MCGREGOR.
Honorary Minister	The Hon. E. FINDLEY.
„ „	The Hon. C. E. FRAZER.

Particulars of previous Commonwealth Ministries are given on pages 46-8 hereinbefore, and on page 955 following.

(ii.) *The Cabinet.* The meetings of this body are private and deliberative. No one is admitted but the actual Ministry of the day, no records of the meetings transpire, and no official notice is taken of the proceedings. The members of the Cabinet, being the leaders of the party in power in Parliament, control the bent of legislation and must retain the confidence of the people and also of the Governor-General (or Governor), to whom they act as an advising body. They also in effect wield, by virtue of their seats on the Executive Council, the whole executive force of the community. In summoning, proroguing, or dissolving Parliament the Governor-General (or Governor) is usually guided by the advice tendered him by the Cabinet, though legally he is in no way bound to do so. The following statement gives the names of the Ministries of State for the Commonwealth, who have held office since the inauguration of the Commonwealth Government:—

MINISTERS OF STATE FOR THE COMMONWEALTH OF AUSTRALIA FROM 1st JANUARY, 1901, to MARCH, 1911.

Attorney-General—
HON. T. O'SULLIVAN, M.L.C.

Secretary for Agriculture and Stock—
HON. J. TOLMIE.

Minister without Portfolio—
HON. A. H. BARLOW, M.L.C.

SOUTH AUSTRALIA—MINISTRY.

Premier and Minister of Public Works—
HON. J. VERRAN.

Chief Secretary—
HON. F. S. WALLIS, M.L.C.

Minister of Education—
HON. F. W. CONEYBEER.

Treasurer and Commissioner of Crown Lands and Immigration—
HON. C. VAUGHAN.

Attorney-General and Minister Controlling Northern Territory—
HON. W. J. DENNY.

Minister of Industry and Agriculture—
HON. J. P. WILSON, M.L.C.

WESTERN AUSTRALIA—MINISTRY.

Premier and Colonial Treasurer—HON. F. WILSON.

Minister for Lands, Agriculture, and Industries—
HON. J. MITCHELL.

Minister for Mines and Railways—
HON. H. GREGORY.

Attorney-General and Min. for Education—
HON. J. L. NANSON.

Minister for Works—
HON. H. DAGLISH.

Colonial Secretary—
HON. J. D. CONNOLLY, M.L.C.

Ministers without Portfolio—
HON. A. MALE.
HON. R. D. M'KENZIE, M.L.C.

TASMANIA—MINISTRY.

Premier and Treasurer—HON. SIR N. E. LEWIS, K.C.M.G.

Chief Secretary—
HON. G. H. BUTLER, M.L.C.

Attorney-General, Minister for Education, and Minister for Mines—
HON. A. E. SOLOMON.

Min. of Lands, Public Works and Railways—
HON. A. HEAN.

Minister without Portfolio—
HON. C. RUSSEN, M.L.C.

4. **The Appointment of Ministers and of Executive Councillors.**[1]—Although it is technically possible for the Governor to make and unmake cabinets at his pleasure, under all ordinary circumstances his apparent liberty in choosing his Executive Council is virtually restricted by the operation of constitutional machinery. When a Ministry is defeated in Parliament or at the polls the procedure both in the Commonwealth and the State Parliaments generally, though not invariably, follows that prevailing in the

1. See Jenks' "Government of Victoria," pp. 269 *et seq.*

Imperial Parliament. The members of the Ministry tender their resignations to the Governor-General or Governor, whose duty it is to announce his intention of accepting them. The resignations are not actually accepted at once, for in that case the offices would become vacant and business would be at a standstill. The outgoing Premier usually suggests to the Governor the name of the most prominent member of the Opposition, and the Governor thereupon "sends for" the person suggested; and if the latter accepts the responsibility, he endeavours to form a Ministry; if he fails, he informs the Governor, who applies to some other person. The distribution of portfolios is first arranged by the proposed Ministers themselves and is then submitted to the Governor for approval, which is given as a matter of course unless the list contains the name of any person against whom serious objections exist. Before appointing the persons named to the various offices the Governor accepts the resignations of the outgoing Ministers, and also appoints to seats in the Executive Council such members of the new Ministry as do not already hold them. Their seats in Parliament being ordinarily vacated by acceptance of office the new Ministers must go before their constituencies, and the result of these by-elections usually decides the attitude of the Opposition. In the Commonwealth Parliament, however, seats are not vacated by the acceptance of office. It may be seen from what has been stated above that only certain persons can in practice be chosen as members of a Ministry. The Cabinet must be chosen so that the following conditions are fulfilled:—(*a*) The members must belong to one or other of the Legislative Chambers and also to the same political party; (*b*) that party must possess a majority in the House of Representatives or in the Legislative Assembly or House of Assembly as the case may be; (*c*) the Ministers must carry out a concerted policy; (*d*) they must acknowledge the leadership of one chief Minister; and (*e*) must be under a joint responsibility, signified by resignation *en bloc* in the event of Parliamentary censure.

5. **The Resignation of Ministers.**—A Ministry is bound to resign either when it fails to command a majority in the House of Representatives, the Legislative Assembly, or the House of Assembly, as the case may be, or when a want of confidence has been clearly shewn, either (*a*) by a vote of censure, (*b*) by a declaration of want of confidence, or (*c*) by a vote disapproving of some act of the Government. In such cases the Ministry must either resign or must appeal to the country.

6. **Enactments of the Parliament.**—In the Commonwealth, all laws are enacted in the name of the Sovereign, the Senate, and the House of Representatives. The subjects with respect to which the Commonwealth Parliament is empowered to make laws are enumerated in the Constitution Act (see pp. 39-40 hereinbefore). In the States, laws are enacted in the name of the Sovereign by and with the consent of the Legislative Council and Legislative Assembly or House of Assembly. The Governor-General or the State Governor acts as Viceroy as regards giving the Royal Assent to or vetoing Bills passed by the Legislatures, or reserving them for the special consideration of the Sovereign. In the States, the Councils and Assemblies are empowered generally, subject to the Commonwealth Constitution, to make laws in and for their respective States in all cases whatsoever. Subject to certain limitations, they may alter, repeal, or vary their Constitution. Where a law of a State is inconsistent with a law of the Commonwealth the latter prevails, and the former is, to the extent of the inconsistency, invalid.

7. **Powers and Functions of the Governor-General and of the Governors.**—The Governor-General and the State Governors act under the authority of the commissions by which they are appointed and of Letters Patent under the Great Seal of the United Kingdom, and according to instructions issued by the Colonial Office and passed under the Royal Sign Manual and Signet.

(i.) *The Governor-General.* The office of Governor-General and Commander-in-Chief of the Commonwealth was constituted by Letters Patent issued on the 29th October, 1900, in pursuance of the provisions of the Commonwealth Constitution Act. The powers and duties of the Governor-General were further defined by Royal instructions passed on

the same date. The principal and most important of his functions, legislative as well as executive, are expressly conferred upon him by the terms of the Constitution itself. He is the custodian of the Great Seal of the Commonwealth, and has the appointment of political officers to administer Departments of State of the Commonwealth.

(*a*) His legislative functions are exercised with respect to proposed laws as finally passed by the Federal Houses of Parliament. Such Bills are presented to the Governor-General for his assent in the King's name, on receiving which they become law throughout the Commonwealth. The Governor-General may, however, withhold his assent, or may reserve any Bill for the King's pleasure. He may return to the House in which it originated any proposed law with suggested amendments. The King may disallow any law within one year from the date on which it was assented to by the Governor-General.

(*b*) The Governor-General's executive functions are, under ordinary circumstances, exercised on the advice of his responsible Ministers. Various specific powers are vested in him by the Constitution; he may summon or prorogue Parliament and may dissolve the House of Representatives. He is the Commander-in-Chief of the military and naval forces of the Commonwealth, and is invested by the Crown with the prerogative of mercy in case of offences committed against the laws of the Commonwealth.

(*c*) The Governor-General is also invested with authority in certain matters of Imperial interest, such as the control of the naval and military forces of the Commonwealth; the observance of the relations of foreign States to Great Britain, so far as they may be affected by the indirect relations of such States to the Commonwealth; and the treatment of neutral and belligerent ships in Commonwealth waters in time of war.

The Governor-General may not leave the Commonwealth without having first obtained leave from the Imperial Government, to whom he is alone responsible for his official acts. The present Governor-General is the Right Honourable William Humble, Earl of Dudley, P.C., G.C.M.G., G.C.V.O., etc. He assumed office on the 9th September, 1908. (Particulars of previous Governors-General are given on p. 46 hereinbefore.)

(ii.) *The State Governors.* The powers and functions of the State Governors are, within their respective States, very similar to those exercised by the Governor-General for the Commonwealth, and are defined by the terms of their Commissions and by the Royal instructions accompanying the same. A State Governor is the official head of the State Legislature, and assents in the name of the Crown to all Bills passed by the Parliament, reserving for the Royal Assent certain classes of Bills, which are regulated by the Constitution Acts and by the instructions issued by the Imperial Government. The Governors are, under ordinary circumstances, guided by their Executive Councils, the chief matters in which the exercise of discretion is required being the granting or withholding of a dissolution of Parliament when requested by a Premier; the appointment of a new Ministry; or the assenting to, vetoing, or receiving of Bills passed by the legislative chambers. The Governors are authorised, under certain restrictions, to administer the prerogative of mercy by the reprieve or pardon of criminal offenders within their jurisdiction, and to remit fines and penalties due to the Crown. All moneys to be expended for the public service are issued from the Treasury under the Governor's warrant.

The following is a list of the Governors of the various States of the Commonwealth in March, 1911:—

New South Wales	... BARON CHELMSFORD, G.C.B., K.C.M.G.
Victoria	... SIR THOMAS DAVID GIBSON-CARMICHAEL, Bart., LL.D., K.C.M.G.
Queensland	... SIR WILLIAM MACGREGOR, G.C.M.G., C.B.
South Australia	... SIR DAY HORT BOSANQUET, K.C.B., G.C.V.O.
Western Australia	... SIR GERALD STRICKLAND, K.C.M.G.
Tasmania	... Major-General SIR HARRY BARRON, K.C.M.G., R.V.O.

8. **Cost of Parliamentary Government.**—The following statement shews the cost of parliamentary government in the Commonwealth and in each State, as well as in the whole of Australia, for the year ended the 30th June, 1910 :—

§ 2. Parliaments and Elections.

1. **Qualifications for Membership and for Franchise.**—The summary on pages 962-3 gives particulars as to the legislative chambers in the Commonwealth and State Parliaments, and shews concisely the qualifications necessary for membership and for the franchise in each House. Persons who are otherwise eligible, either as members or voters, are generally disqualified on the usual grounds of being of unsound mind or attainted of treason, being convicted of certain offences, and, as regards membership, on the grounds of holding a place of profit under the Crown, being pecuniarily interested in Government contracts, or being an undischarged bankrupt.

PARLIAMENTS AND ELECTORATES.

Particulars.	Commonwealth.	New South Wales.	Victoria.
1. Senate and Legislative Councils.			
Number of Members ...	36	53. May not be less than 21	34
Qualification for Membership	Adult British subjects natural-born or naturalised for 5 years, if (*a*) eligible to vote at the elections for the Senate, and (*b*) resident for at least 3 years within the Commonwealth	Male adult natural-born or naturalised British subjects	Male natural-born or naturalised British subjects of the age of 30 years or upwards, (*a*) if possessed of a freehold property of the annual value of at least £50 for one year previous to the election, and (*b*) in the case of naturalised subjects if a resident of the State for 10 years
Period for which elected or nominated	6 years	For life	6 years
Allowance to Members ...	£600 each per annum	None	None
Qualification for Franchise	Adult British subjects of either sex who have lived in Australia for 6 months continuously. Aboriginal natives of Australia, Asia, Africa, or the islands of the Pacific, except New Zealand, cannot vote at federal elections unless they have acquired a right to vote at elections for the Lower House of a State Parliament	(Nominated)	Adult British subjects of either sex, if either (*a*) the owner of a freehold of the annual value of £10 or of a leasehold of property rated at £15, or (*b*) a graduate of a British university, matriculated students of Melbourne University, qualified legal and medical practitioners, ministers of religion, certificated schoolmasters, and naval and military officers. Naturalised subjects must be of 3 years' standing, and must have resided in the State for 12 months
2. House of Representatives, Legislative Assemblies, etc.			
Number of Members ...	75	90	65
Qualification for Membership	The same as for the Senate	Male adult British subjects if qualified to vote at an election of members of the Legislative Assembly, unless disqualified under the Constitution Acts or the Federal Elections Act 1900	Male adult natural-born British subjects or aliens naturalised for the period of 5 years, if resident in the State for not less than 2 years
Period for which elected ...	Duration of Parliament, which is limited to 3 years	Duration of Parliament, which is limited to 3 years	Duration of Parliament, which is limited to 3 years
Allowance to Members ...	£600 each per annum	£300 each per annum	£300 each per annum
Qualification for Franchise	The same as for the Senate	Adult naturalised subjects of either sex, who have resided in the State continuously for one year after naturalisation, and adult natural-born subjects who have resided in the State for a continuous period of 1 year	Adult natural-born subjects of either sex, or naturalised for 1 year prior to the 1st January or the 1st July in any year, if (*a*) enrolled as ratepayer, or (*b*) if holding an elector's right and enrolled on the general or supplementary roll. (These provisions only remain in force until a day to be notified by proclamation of the Governor-in-Council as the day on which the provisions of the Electoral Act 1910, came into effect)

SUMMARY, MARCH, 1911.

Queensland.	South Australia.	Western Australia.	Tasmania.
44	18	30	18
Male adult natural-born or naturalised British subjects	Male natural-born or naturalised British subjects if (*a*) of the age of 30 years or upwards, and (*b*) if resident in the State for 3 years	Male natural-born or naturalised British subjects of the age of 30 years or upwards, if (*a*) in the case of natural-born subjects, resident in the State for 2 years, and (*b*) in the case of naturalised subjects, if naturalised for 5 years previous to the election and resident in the State during that period	Male natural-born or naturalised British subjects of the age of 30 years or upwards, if qualified to vote at the election for the Legislative Council
For life	6 years	6 years	6 years
None	£200 each per annum	£200 each per annum	£100 each per annum
(Nominated)	Adult British subjects of either sex who are either (*a*) owners of a freehold of the clear value of £50, (*b*) owners of a leasehold of the clear annual value of £20, with at least 3 years to run or containing a right of purchase, (*c*) occupiers of a dwelling-house of the clear annual value of £17, (*d*) registered proprietors of a Crown lease on which there are improvements to the value of at least £50. Voters must have resided in State for 6 months prior to enrolment	Adult British subjects of either sex who have resided in the State for 6 months, and who either (*a*) own a freehold estate to the value of £100, (*b*) occupy a house or own leasehold property rated at £25, (*c*) hold Crown leases or licenses to the value of not less than £10 per annum, or (*d*) are on the electoral list of a municipality or road-board district in respect of property of the annual value of £25. Aboriginal natives may only acquire the franchise in respect of a freehold qualification	Adult British subjects of either sex who have resided in the State for 12 months, if either (*a*) possessing freehold to the annual value of £10 or leasehold to the value of £30, or (*b*) graduates of a British university, qualified legal or medical practitioners, officiating ministers of religion, or retired naval or military officers
72	42	50	30
All persons qualified and registered to vote at the election of members of the Legislative Assembly are eligible as members	Any person qualified for the franchise of the House of Assembly is eligible for membership	Male adult British subjects, if resident in the State for 12 months. Naturalised subjects must have been naturalised for 5 years and have resided in the State for 2 years previous to the election	Adult British subjects of either sex if (*a*) they have resided in the State for 6 months continuously and (*b*) they are enrolled on the electoral lists
Duration of Parliament, which is limited to 3 years	Duration of Parliament, which is limited to 3 years	Duration of Parliament, which is limited to 3 years	Duration of Parliament, which is limited to 3 years
£300 each per annum	£200 each per annum	£200 each per annum	£100 each per annum
Adult British subjects of either sex who either (*a*) have resided in Queensland for 12 months continuously and whose names are on the electoral roll, (*b*) own freehold estate of the value of £100, (*c*) have occupied a house of the annual value of £10 for at least 6 months, or (*d*) have a leasehold estate in possession of the annual value of £20 with not less than 18 months to run.	Adult natural-born or naturalised subjects of either sex who have resided in the State for 6 months continuously. In the Northern Territory only natural-born British subjects and naturalised Europeans or Americans may vote	Adult natural-born or naturalised subjects of either sex who have resided in the State for 6 months continuously and for a continuous period of 1 month in district	Adult natural-born or naturalised subjects of either sex who have resided in Tasmania for 6 months

2. **The Federal Parliament.**—The Senate consists of thirty-six members, six being returned by each of the original federating States. Members of this chamber are elected for a term of six years, but by a provision in the Constitution a certain number retire at the end of every third year, although they are eligible for re-election. In accordance with the Constitution the total number of members of the House of Representatives must be as nearly as possible double that of the Senate. In the House of Representatives the States are represented on a population basis, and the numbers stand at present as follows:—New South Wales, 27; Victoria, 22; Queensland, 9; South Australia, 7; Western Australia, 5; Tasmania, 5—total, 75. The Constitution provides for a minimum of five members in each original State. Members of the House of Representatives are elected for the duration of the Parliament, which is limited to three years. In elections for Senators each State is counted as a single electorate, but an elaborate scheme of subdivision had to be undertaken in order to provide workable electorates in each State for members of the House of Representatives. Members of both Houses are paid at the rate of £600 per annum. Further information regarding the Senate and the House of Representatives is given on page 38 hereinbefore.

(i.) *Particulars of Elections.* There have been three complete Parliaments since the inauguration of Federation. The first Parliament was opened by His Royal Highness, the Duke of Cornwall and York on 9th May, 1901, and was dissolved on 23rd November, 1903. The first session of the fourth Parliament was opened on 1st July, 1910, and was prorogued on 29th November of the same year. Further information as to the Commonwealth Parliaments since their inception is given on page 955 hereinbefore. Since the establishment of the Commonwealth there have been four elections for the Senate and for the House of Representatives. The fourth Federal elections took place on 13th April, 1910, when, in addition to the ordinary voting, electors were called upon to decide the questions on the Financial Agreement and the taking over of the State Debts by the Commonwealth. These matters are referred to in detail on pages 798 and 799 hereinbefore. Particulars regarding the number of electors enrolled and the number of electors to whom ballot-papers were issued at the last three elections may be found in the tables given hereunder :—

* For the House of Representatives the number of electors enrolled in contested divisions only is given.

In the Senate the figures for the year 1906 shew that ballot-papers were issued to 50.21 per cent. of the electors, and are a slight improvement on those for the year 1903, when only about 47 per cent. of the electors visited the polls. There was, however, a substantial increase in the number of electors who voted at the 1910 elections, 62.16 per cent. of the persons on the rolls exercising the franchise. The increase of 11.95 per cent. over the 1906 elections was in a great measure due to the extraordinary amount of party feeling that existed at the 1910 elections. Allowing for the various causes which may have prevented those qualified from recording their votes, it cannot be said that the electors of the Commonwealth have, so far, set a high value on the privilege of the franchise. In the elections for the House of Representatives the figures for the three years shew a slight improvement in percentage of voters as compared with the returns for the Senate; nevertheless they cannot be looked upon as satisfactory. In every instance the percentage of female voters is very far below that of the males.

3. **The Parliament of New South Wales.**—The Legislative Council is in this State a nominee chamber, the Legislative Assembly being an elective body. Theoretically the Legislative Council may contain an unlimited number of members, but in practice the number is restricted to about sixty, the members at the latest available date being fifty-three. Members are appointed by the Governor, acting on the advice of the Executive Council. The tenure of the seat is for life; four-fifths of the members must be persons

not holding any paid office under the Crown, but this is not held to include officers of His Majesty's sea or land forces on full or half pay, or retired officers on pensions. The Legislative Assembly consists of ninety members, who hold their seats during the existence of the Parliament to which they are elected. The duration of any single Parliament is limited to three years.

(i.) *Particulars of Elections.* Since the introduction of responsible government in New South Wales there have been twenty-one complete Parliaments, the first of which opened on the 22nd May, 1856, and was dissolved on the 19th December, 1857, while the twenty-first opened on the 30th September, 1907, and closed on the 14th September, 1910. The average duration of the Parliaments was two years and seven months. The first session of the twenty-second Parliament was opened on the 15th November, 1910.

Particulars of voting at the last seven elections are given below:—

LEGISLATIVE ASSEMBLY ELECTIONS, NEW SOUTH WALES, 1894 to 1910.

Date of Opening of Parliament.	Electors upon the Roll.	Members Returned.	Members Unopposed.	Contested Electorates.			
				Electors upon the Roll.	Votes Recorded.	Percentage of Votes Recorded.	Percentage of Informal Votes.

14th October, 1910 Females	409,069			400,139	261,068	65.24	*

* Not available.

The franchise was extended to women in 1902, and was exercised for the first time at a State election in 1904.

4. **The Parliament of Victoria.**—Both of the Victorian legislative chambers are elective bodies, but there is a considerable difference in the number of members of each House, as well as in the qualifications necessary for members and electors. The number of members in the Upper House in March, 1911, was 34, and in the Lower House, 65. In the Legislative Council the tenure of the seat is for six years, but one member for each province retires every third year, except in the case of a dissolution, when one half of the newly elected members hold their seats for three years only. Members of the Legislative Assembly are elected for the duration of Parliament, which is limited to three years. An elector for the Legislative Assembly may only vote once, plurality of voting having been abolished in 1899; an elector, however, qualified in more than one district, may select that for which he desires to record his vote.

(i.) *Particulars of Elections.* Since the introduction of responsible government in Victoria there have been twenty-one complete Parliaments, the first of which was opened on the 21st November, 1856, and closed on the 9th August, 1859, while the twenty-first opened on the 9th July, 1907, and closed on the 3rd December, 1908. The first session of the twenty-second Parliament opened on the 9th February, 1909.

Statistics regarding the last four elections will be found below:—

PARTICULARS OF VICTORIAN ELECTIONS, 1902 to 1908.

Year.	Legislative Council.				Legislative Assembly.			
	Electors on Roll.	Electors in Contested Districts.	Voters in Contested Districts	Per-centage.	Electors on Roll.	Electors in Contested Districts.	Voters in Contested Districts.	Per-centage.
1902 ...	134,087	*	*	*	290,241	216,063	141,471	65.47
1904 ...	172,495	104,843	61,382	58.54	264,709	223,600	140,127	62.66
1907 ...	180,738	78,512	27,152	34.58	260,787	191,131	117,098	61.26
1908 ...	185,234	*	*	*	263,876	164,919	88,461	53.64

* Not contested.

As the table shews, the proportion of voters for the Legislative Council is considerably less than that for the Legislative Assembly. The number of persons who voted by post at the elections for the Legislative Assembly in 1908 was 3790.

5. **The Parliament of Queensland.**—No limit is set by the Constitution Act to the number of members of the Legislative Council of Queensland, the total at the latest available date being forty-four. Members are appointed by the State Governor, and it is provided that not less than four-fifths of the members must consist of persons not holding any office under the Crown, except officers of His Majesty's sea or land forces on full or half-pay, or retired officers on pensions. The members are nominated for life. The Legislative Assembly is composed of seventy-two members, returned from sixty-one electorates, eleven electorates returning two members each, the others being single electorates.

(i.) *Particulars of Elections.* Since the establishment of responsible government in Queensland there have been seventeen complete Parliaments, the first of which opened on the 29th May, 1860, and dissolved on the 20th May, 1863, while the seventeenth Parliament opened on the 3rd March, 1908, and closed on the 31st August, 1909. The eighteenth Parliament opened on 2nd November, 1909. Statistics regarding the elections of 1902, 1904, 1907, and 1909 are given below:—

ELECTIONS FOR QUEENSLAND LEGISLATIVE ASSEMBLY, 1902 to 1909.

Year.	Number of Seats.	Number of Candidates Nominated.	Candidates sent to the Poll.	Electors Enrolled.			Electors who Voted.			Percentage of Electors Voting in Contested Electorates.		
				Males.	Females	Total.	Males.	Females	Total.	Males.	Females	Total.
1902	72	159	154	108,548	—	108,548	80,076	—	80,076	76.88	—	76.88
1904	72	140	117	103,943	—	103,943	60,265	—	60,265	74.16	—	74.16
1907	72	185	179	125,140	95,049	220,189	—	—	152,049	73.42	68.64	71.61
1909	72	145	133	135,841	106,913	242,754	89,609	66,809	156,418	75.34	69.36	72.67

The election of 1907 was the first State election in Queensland at which women voted, the privilege being conferred under Act 5 Edw. VII., No. 1. Some of the returns did not separate the sexes in the figures respecting the number of electors who voted, and the percentage of males and females was therefore calculated on the total returns where the subdivision was made.

6. **Parliament of South Australia.**—In this State there is a Legislative Council composed of eighteen members and a House of Assembly with forty-two members, both chambers being elective. Under the Constitution Amendment Act, 1908, the State of

South Australia (including the Northern Territory) is divided into four Council Districts, of which one returns six members, and the other three return four members each, to the Legislative Council. For the purpose of electing members of the House of Assembly the State exclusive of the Northern Territory) is divided into twelve electoral districts, and the Northern Territory remains, as before, an electoral district returning two members. One of the electoral districts Torrens) returns five members; two (Adelaide and Alexandra) four members each; and the others return three members each.

(i.) *Particulars of Elections.* Since the inauguration of responsible government in South Australia there have been nineteen complete Parliaments, the first of which was opened on the 22nd April, 1857, and dissolved on the 1st September, 1859, while the nineteenth was opened on the 30th November, 1906, and terminated on the 28th February, 1910. The first session of the twentieth Parliament opened on the 2nd June, 1910. The elections for the last-named Parliament were held on the 2nd April, 1910. Particulars of voting at the elections of 1900, 1902, 1905, and 1910 are given below:—

PARLIAMENTARY ELECTIONS IN SOUTH AUSTRALIA, 1900 to 1910.

Year.	Electors on Rolls.			Electors Who Voted.			Percentage of Electors Voting.	
	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
LEGISLATIVE COUNCIL.								
1900 ...	38,688	9,854	48,542	21,403	3,907	25,310	55.32	39.65
1902 ...	38,413	13,496	51,909	29,978	7,940	37,918	78.04	58.83
1905 ...	39,011	13,873	52,884	28,820	8,328	37,148	73.88	60.03
1910 ...	48,145	16,157	64,302	32,540	9,356	41,896	67.59	57.91
LEGISLATIVE ASSEMBLY.								
1902 ...	77,147	72,030	149,177	53,471	36,545	90,016	62.14	49.22
1905 ...	95,396	92,249	187,645	64,330	50,246	114,576	67.43	54.47
1906 ...	96,724	93,438	190,162	60,109	45,997	106,106	69.31	50.73
1910 ...	94,656	88,762	183,418	73,464	56,830	130,294	77.61	64.03

The proportions of votes recorded to total persons entitled to vote in each of the four years given above were as follows:—Legislative Council, 52.14, 73.05, 70.24, and 77.64 per cent.; and Legislative Assembly, 55.80, 61.06, 60.34, and 71.04 per cent.

It is interesting to note that South Australia was the first of the States to grant women's suffrage (under Act No. 16 of 1894), the franchise being exercised for the first time at the Legislative Assembly election on the 25th April, 1896.

7. **Parliament of Western Australia.**—In this State both chambers are elective. For the Legislative Council there are thirty members, each of the ten electorates returning three members, while the Legislative Assembly is composed of fifty members, one member being returned by each of the fifty electoral divisions. At the expiration of two years from the date of election to a seat in the Legislative Council, and every two years thereafter, the senior member for the time being for each province retires. Seniority is determined (*a*) by date of election, (*b*) if two or more members are elected in the same day, then the senior is the one who polled the least number of votes, (*c*) if the election be uncontested, or in case of an equality of votes, then the seniority is determined by the alphabetical precedence of surnames and, if necessary, Christian names. Members of the Legislative Assembly are elected for three years.

(i.) *Particulars of Elections.* Since the establishment of responsible government in Western Australia there have been five complete Parliaments, the first of which was

opened on the 30th December, 1890, and was dissolved on the 22nd March, 1893, while the sixth Parliament was opened on the 23rd November, 1905, and closed on the 12th August, 1908. The first session of the seventh Parliament commenced on the 10th November, 1908. Particulars relating to the last four parliamentary elections are given in the table below. The figures refer to electors for the Assembly only, no returns being published with regard to voting at Council elections.

ELECTIONS FOR LEGISLATIVE ASSEMBLY, WESTERN AUSTRALIA, 1901 to 1908.

Year.	Electors on the Roll.			In Contested Districts.			Votes Recorded.			Percentage of Electors Voting.		
	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.
1901	74,874	16,648	91,522	67,967	14,775	82,742	29,832	8,255	38,087	44	56	46
1904	108,861	54,965	163,826	88,524	49,791	138,315	43,285	23,500	66,785	49	47	48
1905	79,025	42,697	121,722	65,296	36,706	102,002	33,482	19,435	52,917	51	53	52
1908	83,060	52,919	135,979	69,277	44,804	114,081	46,411	29,412	75,823	67	66	66

8. **Parliament of Tasmania.**—In Tasmania there are two legislative chambers—the Legislative Council and the House of Assembly, both bodies being elective. The Council consists of eighteen members, returned from fifteen districts, Hobart returning three, Launceston two, and the remaining thirteen districts sending one member each. For the Parliament which expired in March, 1909, there were thirty-five House of Assembly districts, each district returning one member, but, in accordance with the Constitution Amendment Act of 1906, upon the expiration of the last Assembly, either by dissolution or by effluxion of time, there are to be five House of Assembly districts, viz., the Commonwealth electoral districts, each district returning six members. This latter system came into force at the 1909 elections.

(i.) *Particulars of Elections.* The first Tasmanian Parliament opened on 2nd December, 1856, and closed on 8th May, 1861. There have been fifteen complete Parliaments since the inauguration of responsible government, the last one opening on 29th May, 1906, and dissolving on 26th March, 1909. The sixteenth Parliament opened on 29th June, 1909. Particulars of the voting at the last four elections are given hereunder:—

ELECTIONS, HOUSE OF ASSEMBLY, TASMANIA, 1900 to 1909.

Year.	Electors on Roll.		Electors in Contested Districts.		Votes Recorded.		Percentage of Electors Voting.

* Manhood suffrage, Act 64 Vic., No. 5. † Universal adult suffrage, Act 3 Edward VII., No. 13.

It is proposed to give, in a future issue of this book, particulars of the systems of preferential voting in force in certain of the States of the Commonwealth.

§ 3. Administrative Government.

In each State, as well as in the Commonwealth, the Government is administered by a number of chief departments, on lines similar to those on which administrative government is carried on in the United Kingdom. Reference has already been made to the creation of the Commonwealth Departments (see pages 795 and 796). In the States the number and functions of the administrative departments vary considerably. This

matter has also been referred to hereinbefore (see page 825). In many cases more than one department is under the control of a single Minister. The tabular statement given on this page and on the following pages shews the sub-departments, branches, etc., of each Ministerial Department in each State and in the Commonwealth, together with the Acts administered and other more important matters dealt with.

COMMONWEALTH ADMINISTRATIVE GOVERNMENT, 1911.

Departments, Sub-departments, Branches, etc.	Acts Administered.	Matters dealt with or under Control.
1. External Affairs— (*a*) Prime Minister's Office (*b*) Immigration.	Contract Immigrants, Extradition, High Commissioner, Immigration Restriction, Naturalisation, Northern Territory Acceptance and Administration, Emigration, Pacific Island Labourers, Papua, Royal Commissions.	Commonwealth Gazette, Communications with the States, Consular appointments, Federal Executive Council, external affairs, extra territorial fisheries, High Commissioner, immigration and emigration, aliens and naturalisation, Northern Territory, officers of Parliament, passports, relations with Pacific Islands, Royal Commissions, and dependencies of the Commonwealth.

Coast Survey, Explosive, Fisheries, Savings Banks, Annuities, Harbour Boards, Harbour Dues, Income Tax, Irrigation, Loans, Local Wks. Loans, Merch'nt Shipping and Seamen's, Navigation, Oyster, Pearlshell and Bêche-de-mer, Port Dues Revision, Firms Registration, Stock Inscription, Sugar Works, Treasury Notes and Bills, Tobacco, Water Authorities, Weights and Measures.	Central sugar mills, dredges, fisheries, finance generally, harbour boards and improvements, navigation, ports and harbours, powder magazines, public debt, savings banks, taxation generally, trade and commerce, wharves and jetties.
6. Attorney-General— (*a*) Crown Solicitor. (*b*) Supreme & District Courts. (*c*) Curator in Intestacy and Insanity. (*d*) Trustees in Insolvency. (*e*) Registry of Friendly Societies. (*f*) Registry of Titles. (*g*) Com. of Stamps. (*h*) Police Magistrates. (*i*) Petty Sessions.	Building Societies, Companies, District Courts, Friendly Societies, Inquests of Death, Inquest on Fires, Insolvency, Intestacy, Jury, Printing, Real Property, Small Debts, Stamp, Succession and Probate, Supreme Court, Totalisator Restriction, Totalisator Tax, Trade Unions.	Administration of justice generally, advising Government on all legal questions, judicial establishments, courts of petty sessions, preparation of all legal instruments and contracts.
7. Mines— (*a*) Geological Survey. (*b*) Mining Registries. (*c*) Mines Inspctrs. (*d*) Gold Wardens.	Gold Mining, Mineral Lands, School of Mines.	Geological survey, mineral fields, regulation of mines, Charters Towers School of Mines.

QUEENSLAND (continued).

Departments, Sub-Departments, Branches, etc.	Acts Administered.	Matters dealt with or under Control.
8. Public Lands— (*a*) District Land Offices. (*b*) District Survey Offices. (*c*) Survey Office.	Agric. Lands Purchase, Crown Lands, Pastl. Leases, Pub. Parks, Pub. Works, Land Resumption. Rabbit, Marsupial-proof Fencing, Trustees of Public Lands.	Destruction, etc., of rabbits, opening and closing roads, reserves, survey, sale, settlement, and occupation of Crown lands, town commonages.
9. Agriculture— (*a*) Agricultural College. (*b*) Inspectors of Stock and Sheep & Registry of Brands. (*c*) Botanic Gardens. (*d*) State Farms and Nurseries. (*e*) Sugar Experiment Stations.	Agric. Bank, Brands, Dairy, Diseases in Plants, Sheep and Stock, Game & Fish Acclimatisation, Grape-vine Diseases, Live Stock and Meat Export, Marsupial Boards, Meat and Dairy Produce Encouragement, Native Birds Protection, Slaughtering, Shearers' and Sugar-workers', Sugar Experiment Stations.	Agric. College, Botanic Gardens, brands (horses, sheep, and cattle), diseases in animals and plants, loans in aid of co-operative agric. production, marsupial destruction, meat and dairy produce encouragement, slaughter of cattle for consumption, State farms and nurseriesl sugar experiment stations.
10. Public Works— (*a*) Government Architect. (*b*) Engineer for Bridges. (*c*) Director of Labour. (*d*) Factories etc. Inspectors. (*e*) Inspector of Machinery.	Brisb. Water Supply, Electric Light and Power, Factories and Shops, Wages Bds., Inspection of Machinery and Scaffolding.	Construction of public buildings, State-school buildings, bridges, hospitals, electric light and power stations.

SOUTH AUSTRALIA.—ADMINISTRATIVE GOVERNMENT, 1911.

1. Chief Secretary— (*a*) Statistical Dept. (*b*) Audit. (*c*) Public Actuary, (*d*) Sheriff. (*e*) Registry-General. (*f*) Government Printer. (*g*) Police. (*h*) Central Board of Health. (*i*) Hospitals. (*j*) Lunatic Asylum. (*k*) Destitute Persons. (*l*) State Children. (*m*) Government Shorthand Writer.	Civil Service, Audit, Friendly Societies, Registration of Births, Deaths, and Marriages, Prison, Police Prisons, Sheriff, Legitimation, Public Hospitals, Lunatics, Destitute Persons, Affiliation Law, State Children's, Health, Vaccination, Sale of Food and Drugs, Places and Public Entertainments, and other Acts dealing with law and order.	Chamber of Manufactures, Civil Service exams., fire brigades, kerosene inspectors, public charities, Royal commissions, prisons, State printing, inspectors of public houses, administration of hospitals, asylums, etc., pub. health, law and order, police prisons, and correspondence with Governor, judges of Supreme Court, Leg. Council, House of Assembly, other Governments, and consuls.
2. Treasury— (*a*) Land and Income Tax Department. (*b*) Stamp Duty Department. (*c*) Agent General in London.	Motor Vehicles, Seed Wheat, Unclaimed Moneys, Oyster Fishery, Pawnbrokers, Appraisers, Auctioneers, Publicans' Licenses Hawkers' Licenses, Taxation, Phylloxera, Stamp Duty.	Banking, finance and taxation generally, Imperial and other Government pensions, Public Service Superannuation Fund.
3. Attorney-General— (*a*) Law Officers. (*b*) Pub. Trustees. (*c*) Curator of Convicts' Estates. (*d*) Supreme Ct. (*e*) Registrars of Industrial Soc., etc., in Admiralty, of Probates, of Companies, and of Building Soc. (*f*) Insolvency Court. (*g*) Police and Local Courts. (*h*) Licensing Benches. (*i*) Coroners. (*j*) Electoral Dept.	Administration and Probate, Public Trustee, Supreme Court, Legal Practitioners, Succession Duties, Companies, Insolvency, Police, Criminal Law, Local Courts, Real Property, Bills of Sale, Preferable Liens, Workmen's Liens, Deposit of Deeds, Coroners,' Electoral Code, Acts in which magistrates have jurisdiction.	Responsible for Government Parliamentary bills and administration of Local Option and Electoral Acts. Deals with issue of summonses and warrants and with preparing informations and plaints, licenses, franchise, appeals from courts.
4. Crown Lands and Immigration, and Mines— (*a*) Crown Lands Office. (*b*) Mines Department. (*c*) Roads Department. (*d*) Govt. Veterinary Surgeon. (*e*) Woods and Forests Dement. (*f*) Tourist Bureau. (*g*) Intelligence Department. (*h*) Survey Department. (*i*) Stock and Brands Department. (*j*) Fisheries Department.	Corporations, District Councils, Dog, Fisheries, Manufacturing Districts, Ornamental Grounds, Blocker's Loan, Fences, Bird Protection, Game, National Park, Noxious Weeds, Wild Dog and Foxes, Reclaimed Swamps and Irrigation, Mining, Gold Dredging, Roads, Main Roads, Woods and Forests, Pastoral, Vermin, Licensed Surveyors, Weights and Measures, Brands, Stock Diseases, Scab, Commerce, Botanic Garden, Advances to Settlers.	Matters affecting municipal corporations respecting the Acts under which they are constituted. Payment of main road grants, subsidies, and license fees. All matters affecting Crown lands or arising under mining Acts, warden's courts, record of assays, roads and bridges, veterinary science, immigration, forest reserves, surveys, botanic gardens, fisheries, issue of monthly bulletins.

SOUTH AUSTRALIA (continued).

Departments, Sub-Departments, Branches, etc.	Acts Administered.	Matters dealt with or under Control.
5. **Public Works**— (*a*) Railways Department. (*b*) Engineer-in-Chief's Department. (*c*) Hydraulic Engineer's Department. (*d*) Works and Buildings and Labour Bureau Department (*e*) Marine Board Department. (*f*) Control of Government Wharves Department. (*g*) Supply and Tender Board Department. (*h*) Aborigines Department.	Railway Commissioners, Railways Service Appeal Board, Refreshment Rooms, South-eastern Drainage, Water Conservation, Waterworks, Sewers, Murray River Works, Adelaide Cemetery and Cremation. Marine Board and Navigation, Renmark Irrigation Trust, Municipal Tramways Trust.	Construction and maintenance of railways, south-eastern drainage works, water conservation works and artesian boring, construction of roads outside districts councils, town and country waterworks, Adelaide, Glenelg, and Port Adelaide sewers, weirs, locks, and other improvements River Murray, State Government buildings and Adelaide cemetery, harbours, jetties, lighthouses, and dredging, ministerial control of Renmark Irrigation Colony and Adelaide Municipal Trust, care of the aborigines.
6. **Education**— (*a*) Education Department (*b*) Adelaide University. (*c*) Adelaide School of Mines. (*d*) Country Schools of Mines. (*e*) Public Library, Museum, and Art Gallery. (*f*) Observatory.	Education, Adelaide University, Degrees in Surgery, University Site, Public Library, Museum and Art Gallery, School of Mines.	Education generally, including primary, secondary, technical, and university, institutes, astronomical (but not meteorological) work.
7. **Department of Industry**—	Conciliation, Factories, Early Closing, Sale of Furniture, Scaffolding, Lifts, Shearers' Accommodation.	Factories, shops, early closing, industrial disputes, etc.
8. **Agriculture**— (*a*) Department of Agriculture. (*b*) Advisory Board of Agriculture. (*c*) Agricultural College. (*d*) Dairy Department. (*e*) Poultry Department. (*f*) Horticultural Department. (*g*) Bacteriology Department. (*h*) Produce Department. (*i*) Irrigation. (*j*) Experimental Farms.	Wine and Brandy, Fertilisers, Vine, Fruit and Vegetable Protection, Commerce, Hay and Chaff, Insecticides, Phylloxera,	Scientific farming, agricultural colleges and experimental farms, agricultural instruction and general development of agriculture, handling and shipping of produce.

WESTERN AUSTRALIA.—ADMINISTRATIVE GOVERNMENT, 1911.

1. **Colonial Secretary**— (*a*) Accountant. (*b*) Aborigines. (*c*) Fisheries. (*d*) Friendly Societies. (*e*) Gaols. (*f*) Government Gardens. (*g*) Harbour and Lights. (*h*) Immigration, Tourist and General Information. (*i*) Inspection of Liquors. (*j*) Lunacy. (*k*) Medical, Public Health and Factories. (*l*) Observatory. (*m*) Police. (*n*) Public Charities, State Children, and Government Labour Bureau. (*o*) Registry and Statistical. (*p*) Rottnest Island.	Aborigines, Bread, Bank Holidays, Building Societies, Bunbury Harbour Board, Bills of Lading, Boulder Turf Club, Boat Licensing, Conspiracy and Protection of Property, Co-operative and Friendly Societies, Coasting Vessels, Dentists, District Fire Brigades, Dog, Early Closing, Employment, Brokers, Fremantle Harbour, Friendly Societies, Fisheries, Factories, Game, Harbours and Rivers, Hospitals, Health, Industrial Conciliation, Jetties, Bridges, etc., Kalgoorlie Turf Club, Lunacy, Licensing of Boats, Municipal Corporations, Merchant Shipping, Marriage, Marine Stores, Medical, Newspaper Libel, Navigation, Oyster Fisheries, Public Institutions, etc., Lands Improvement, Poor House Discipline, Prisons, Pearl Shell Fisheries, Pearl Dealers' Licensing, Police, Police Benefit Fund, Pharmacy and Poisons, Perth High School, Quarantine, Registration of Births, Deaths and Marriages, Royal Commissioners' Powers, Statistical, State Children, Shark Bay Pearl Shell Fishery, Seamen, Shipping, Trespass, Trades Unions, Truck, Toll from Wharves, etc., University Endowment, Vaccination, Workers' Compensation, Workmen's Wages, W.A. Turf Club.	Consuls, municipalities, passports, inspection of fisheries, protection of aborigines, actuarial industrial arbitration, friendly societies, trades unions, prisons, Government gardens, light-houses and signal stations, harbours and rivers, coastal surveys, immigration, tourist and general information, immigration bureau (Fremantle), Immigrants' Home (Perth), inspection of liquors, hospitals, hospitals for insane, early closing, sanitation, factories, astronomical, police, poor relief, labour bureau, births, marriages and deaths, statistics, children's courts, old men's home, old women's home, penal settlement, Government cottages. Rottnest Island.

WESTERN AUSTRALIA (continued).

Departments, Sub-Departments, Branches, etc.	Acts Administered.	Matters dealt with or under Control.
2. Treasury— (*a*) London Agency. (*b*) Printing Dept. (*c*) Savings Bank. (*d*) Lithography. (*e*) Stores. (*f*) Audit. (*g*) Taxation.	Loan, Inscribed Stock, Treasury Bills, Auctioneers, Stamp, Wines, Beer and Spirits Sale, Employment Brokers, Gun Licensing, Gov. Savings Bank, Audit, Land and Income Tax, Dividend and Totalisator Duties.	Finance generally, general stores, taxation generally, audits as provided by special Acts, also under Ministerial authority.
3. Attorney-General— (*a*) Crown Law Offices. (*b*) Supreme Court. (*c*) Stipendiary Magistrates. (*d*) Land Titles Office. (*e*) Electoral Office. (*f*) Official Receiver. (*g*) Curator of Intestates' Estates. (*h*) Sheriff.	Administration of Justice, Association Incorporation, Bankruptcy, Criminal Code, Compensation for Accidents, Crown Suits, Electoral, Firms' Registration, Foreign Companies, Fugitive Offenders, Justice, Libel, Licensing Laws, Magisterial Districts, Workmen's Wages, Penalties Remission, Quarter Sessions, Supreme Court Acts, Truck Act, Transfer of Land, Workers' Compensation, Intestate Estates.	Criminal and civil law, conveyancing, parliamentary drafting, sheriffs, bankruptcy, intestacy, licensing, petty debts, petty sessions and police courts, land titles and registration of deeds and leases, elections.
4. Public Works— (*a*) Engineering Division. (*b*) Architectural Division.	Roads Board, Water Boards, Public Works, Tramways, Electric Light, Drainage.	Public buildings and works generally, metropolitan waterworks, Fremantle and Claremont water supply, railway and tramway construction.
5. Agricultural— (*a*) Stock and Brands. (*b*) Rabbit Branch. (*c*) Orchard and Insect Pests. (*d*) Markets & Refrigerating Works. (*e*) Entomological. (*f*) Public Abattoirs. (*g*) Irrigation in Agricultural Areas. (*h*) Vegetable Pathology and Botany. (*i*) Dairying. (*j*) Tropical Agriculture. (*k*) Experimental Farms. (*l*) Clearing by Traction Engine. (*m*) Horticultural.	Rabbit, Stock Diseases, Scab, Brands, Insect Pests, Noxious Weeds, Fertilisers and Feeding Stuffs, Contagious Diseases in Bees, Droving, Abattoirs, Vermin.	Agricultural, horticultural, and pastoral pursuits generally, irrigation, abattoirs and refrigerating works.
6. Education— (*a*) Technical Education.	Education.	Primary and technical education, inspection of schools, training of teachers, technical education.
7. Railway—	Government Railways.	Management, maintenance and control of Govt. Railways.
8. Mines— (*a*) Explosives and Analytical. (*b*) Inspection of Machinery. (*c*) Mining Engineers. (*d*) Mines Water Supply. (*e*) Geological Survey. (*f*) State Batteries.	Mining, Sluicing and Dredging for Gold, Explosives, Inspection of Machinery, Mines Regulation, Coal Mines, Mining Development.	Mining generally, water supply and stock routes on the goldfields, State batteries and reduction plants.
9. Lands— (*a*) Lands and Surveys. (*b*) Woods and Forests.	Land, Roads, Cemeteries, Licensed Surveyors, Bush Fires, Timber Regulations.	All business in connection with holdings under the Lands Acts, forest reserves, roads, land selection, district survey offices, land agencies.

TASMANIA.—ADMINISTRATIVE GOVERNMENT, 1911.

Departments, Sub-Departments, Branches, etc.	Acts Administered.	Matters dealt with or under Control.
1. Premier— (*a*) Governor's Establishment. (*b*) Premier's Dept. (*c*) Executive Council. (*d*) Agent-General.	... ...	Correspondence with State, Federal, Colonial, British, and and Foreign Govts., with Agent-General & Governor, despatches from Secretary of State referred by the Governor, matters submitted by other Ministers.
2. Chief Secretary— (*a*) Houses of Parliament. (*b*) Electoral. (*c*) Audit. (*d*) Statistical & Registration. (*e*) Inspection of Machinery. (*f*) Fisheries. (*g*) Public Buildings. (*h*) Charitable Institutions. (*i*) Boys' Training School. (*j*) Invalid Depôt. (*k*) Neglected Children's Department. (*l*) Medical Institutions. (*m*) Hospitals. (*n*) Public Health. (*o*) Explosives. (*p*) Public Service Board.	Audit, Bank Holidays, Cemeteries, Coroners, Registration of Births and Deaths, Botanical Gardens, Charitable Institutions, Electoral, Fire Brigades, Fisheries, Hospitals, Inebriates, Museum and Art Gallery, Newspapers, Pensions, Pharmacy, Public Health, Public Service, Vaccination.	Charitable institutions, cemeteries, public health, electoral, franchise, fisheries, immigration, machinery, statistics, training & industrial schools, public service, explosives.
3. Treasury— (*a*) Taxes. (*b*) Printing. (*c*) State Savings Bank. (*d*) Agricultural Bank. (*e*) Merchant Ship's Officers Exam. Board.	Suppression of Public Betting, Licensing, Billiard Tables Licensing, Stamp Duties, Auction, Pawnbrokers, Public Debts, Loans to Local Bodies, Land Tax, Taxation, Income Tax, Assessment, Savings Bank, State Advances, Merchant Ship's Officers' Examination.	Finance generally, collection of internal revenue and of stamp duties, Government printing.
4. Mines—	Mining, Mining Companies, Mining Companies (Foreign).	All matters arising under Acts dealing with mining, registration of mining companies.
5. Lands— (*a*) Lands Branch Office, Launceston. (*b*) Agricultural and Stock Dept. (*c*) Council of Agriculture.	Crown Lands, Closer Settlement, Game Protection, Stock, Diseased Animals, Contagious Diseases (cattle), Rabbits Destruction, Californian Thistle, Vegetation Diseases, Codlin Moth.	Crown lands and surveys, agriculture and stock.
6. Public Works—	Railway Management, Public Works, Local Government.	Construction and control of public works, including railways.
7. Attorney-General— (*a*) Supreme Court. (*b*) Lands Titles. (*c*) Sheriff. (*d*) Magistracy. (*e*) Police.	Probate, Stamp Duties, Foreign Companies, Legal Practitioners, Real Property, Prisons, Bankruptcy, Local Courts, Infant Life Protection, Motor Traffic, Police, Police Regulation.	Courts of law, gaols, justices of the peace and coroners, lands titles, police, registration of deeds, Supreme Court & Judges.
8. Education—	Education.	Primary & technical education, University of Tasmania.

SECTION XXVI.

LOCAL GOVERNMENT.

§ 1. Introduction.

1. **Systems of Local Government.**—In all civilised nations, whatever the previous course of their constitutional history, the persistent and rapid growth of the functions of the central Government, with repeated assumptions of new and onerous duties and responsibilities, has rendered some attempts at decentralisation and some form of local government essential. Without such a relief national administration could be carried on with success only with great difficulty, if at all. Experience, ancient and modern alike, has demonstrated that a completely centralised bureaucracy—that is, a body of officials working from a single centre and responsible only to itself—cannot carry on indefinitely the administration of a large country; such a body tends to ignore the varieties of local conditions, to become stereotypped in its ideas and methods, and sooner or later breakdown is inevitable. There are two possible policies which a Legislature may adopt towards local authorities apart from the imposition of compulsory duties upon them. There is first (*a*) the grant of general power to all local bodies of a particular class - that is, the Legislature may establish a set of authorities and empower them to do anything which in their judgment will tend to promote the satisfactory administration and general well-being of the areas under their control, so long as any particular powers which they propose to use are not expressly prohibited or reserved to other authorities. But as this liberty might easily in some cases be abused, there is necessarily the restriction, of greater or less extent according to the country and the nature of the authorities in question, that the actual exercise of these general powers shall be subject to the approval of an administrative department of the central Government. Or, on the other hand, the Legislature may (*b*) grant only specific powers to local bodies—that is, may give them permission to do all or any of a number of enumerated things, with or without the approval of the central departments, and in this case nothing further can be done by the local body unless permitted by fresh legislative enactments. In a general way it may be said that legislation on the continent of Europe has ordinarily followed the first of these two methods, and has given to the local self-governing communities power to do anything for which they can get administrative approval; while in the Commonwealth, as well as in Great Britain and in the United States, the practice has been the opposite one—local authorities are empowered to do only specified things; but in order, in spite of this, to allow free play to local initiative and enterprise, parliamentary procedure permits of local authorities being able to obtain additional powers for particular works or undertakings by means of special Acts. This difference between the Australian or British and continental systems has two important results.

(i.) *Difference between Australian and Continental Systems.* (*a*) The first important result of this difference is that in Australia, England and the United States the enterprise and activity of local authorities depend upon the temper and ideas of Parliament—that is to say, upon the elected representatives of the nation; whilst throughout a large

part of the continent of Europe the controlling influence is ordinarily exercised by a bureaucracy whose opinion upon the matters in question may or may not be coincident with that of the majority of the electorate. The result is that in Australia it is the business of the State Parliaments to determine what powers are to be conferred upon local authorities, while, ordinarily, under the continental systems the administrative bodies have to regulate what the local authorities may or may not do. The efficiency of such continental systems depends almost entirely upon the character of the controlling bureaucracy, although it is true that the legal powers of a municipality under that system might be very much wider than those of a municipal council in Australia. If the bureaucracy is enterprising and ready to encourage and aid in every way the growth of local action and experiment—as it is in Prussia—then there is the largest scope for municipal development; but if, as in France, the bureaucracy is conservative in its ideas and slow to move, the action of local authorities remains cramped and limited.

(*b*) The second important result of the difference between the Australian and continental systems is that in all matters entrusted to them local authorities in Australia consider that their duty is to carry out the law according to the will of, and in the manner desired by, the ratepayers of their local areas, subject generally to the supervision of the central Government, whereas on the continent of Europe local authorities regard themselves normally as bodies appointed to carry out, within their respective localities, the will of the central Government, even in such matters as are of purely local importance. Local authorities under the continental systems are responsible to the central Government and are subject to administrative control, whilst in Australia municipal councils, so long as they do not infringe the Acts under which they are constituted, or which they have to administer, are responsible only to the ratepayers of their respective localities.

(ii.) *Various Systems in the Several States of the Commonwealth.* In all the States of the Commonwealth, Acts have now been passed providing for comprehensive schemes for the decentralisation of power by the constitution of various forms of local authorities to deal with a large variety of subjects and matters. The general policy of the Legislatures towards local authorities in Australia has already been pointed out. Generally speaking, these authorities exercise their powers under enactments of two kinds. (*a*) There are, first, what may be called constituent Acts, which create the various classes of local bodies and arm them with the powers necessary for the fulfilment of the duties intended to be discharged by them, and there are, secondly (*b*) general Acts dealing with one subject or group of subjects, of administration—such as the Public Health Acts—and giving power to the local authorities for that particular service. Although the Acts controlling local government in the several States vary considerably in detail, especially as regards the election of councillors and presiding officers, method of valuation, and rating powers, there is a great similarity between the powers and duties conferred and imposed upon local authorities in the various States; these powers and duties are many and varied. As a rule the municipal council is the highway authority, being responsible for all the roads within its area and the upkeep of all bridges; it is a public health authority; it supervises the sanitary work, the water supply and the lighting of its area, and for these and for other purposes may appoint officers; it administers the Acts relating to the sale of foods and drugs, the slaughter and diseases of animals, weights and measures, and river pollution; it may establish hospitals, public recreation grounds, libraries, and museums, and may provide asylums and support charitable institutions; it may make provision for preventing fires and floods; it administers the municipal property, makes by-laws with regard to a large variety of things and matters, and may acquire other powers by petition to the Governor. The councils are elected by the ratepayers and seek only to carry out the wishes of the electorate, subject to the general supervision of the central Governments.

(iii.) *Systems on the Continent of Europe.* On the continent of Europe a careful distinction is generally drawn between those internal affairs in which the central Govern-

ment is thought to be directly concerned and those which are held to be primarily of only local interest. In Prussia, for instance, the former includes, besides the army, State taxes and domains, ecclesiastical affairs, police, and the general supervision of local authorities, while to the localities are left roads, poor relief, and a number of miscellaneous matters. The work of the central Government is deconcentrated, that is to say, the country is divided into districts, in each of which there is a delegation of the central authority, doing its work and thereby decreasing the pressure upon the head offices. The executive agents in each locality are elected by the inhabitants, but they are also the representatives of the central Government, and as such they are members of the bureaucracy and are under its control, with the consequence that they look to the central Government for guidance and direction in regard to local affairs. Local government is in fact weak; it is not so much the exercise of the will of a locality by the central power, as the exercise of the will of the latter by the locality. The system of deconcentrated centralised control as carried out in Prussia has, however, some distinct advantages.

(*a*) In the first place the duties of supervising the actions of a large number of local authorities do not rest only upon a comparatively small number of officials at the seat of Government, but are carried out by delegations in all parts of the country, which are able to acquire a more intimate knowledge of local requirements and conditions.

(*b*) Secondly, the supervision is not only by Government officials, but by responsible and experienced persons elected by the inhabitants and who command local confidence. The general results are that, firstly, the staff at the central offices is relieved of much detailed work, and, secondly, that the control of the localities is rendered much less bureaucratic.

2. **Early History of Local Government of Australia.**—Before the more comprehensive systems of self-government were first provided for in the several States, various enactments had from time to time been passed and amended in order to satisfy the growing demand for local government which asserted itself as one of the primary results of the spread of education and increase of population. In the latter part of the year 1839 the first municipal law was passed in South Australia, which was thus the birthplace of local government in the Commonwealth. On 31st October, 1840, the principles of self-government were practically adopted in Adelaide by the election of a mayor and council. In 1842 the Sydney City Incorporation Act was passed by the New South Wales Government; under this Act the city was divided into six wards, and resident occupiers or owners of houses, warehouses, or shops within a radius of seven miles were duly enrolled as citizens and entitled to vote at the elections of councillors, the number of which was fixed at twenty-four. A city fund was established and rates levied. The duties of the council were to construct and maintain streets, sewers, and waterworks, to light the streets, and to make by-laws for the general good rule and government of the city. In the same year, 1842, Melbourne was incorporated as a town by special Act, and as a city in 1847, while Geelong was incorporated in 1849. The Acts by which Sydney and Melbourne were incorporated contained no provision for the extension of the municipal principle to other localities, but in 1842 an Imperial Act was passed under which the Governor of New South Wales was empowered to incorporate by Letters Patent every county or any part of a county to form districts for the purpose of local government. In the following year the districts of Appin, Campbelltown, Camden, Narellan, and Picton, in New South Wales, were incorporated under one county district council, while later in the same year Appin and Campbelltown were constituted as a separate district under the control of six councillors. In 1844 the Sydney City Incorporation Act was amended; by this time the number of county district councils had increased to eight, and these, in conjunction with the municipal council of Sydney and the Road Trusts, which were generally created by special Acts, constituted the whole of the local government system in New South Wales prior to 1858. The Imperial Act of 1850, under which the State of Victoria was granted responsible government, provided

for the division of the State into districts under the government of local councils. In all the States of the Commonwealth, systems of local government have been provided for; in some of the States, such as Victoria, practically the whole area of the State has for some years been divided into districts for the purposes of self-government, while in others, more especially in New South Wales, a general system of extending the advantages of local government throughout the more settled parts of the country has only recently been provided. In other States, systems of local government which have been in force for some years have, as is only to be expected, made comparatively slow progress owing to the small population scattered over such large areas. Taking, however, into consideration the benefits which must accrue, especially in a country of great distances, from the establishment of suitable systems of local government, and judging by the success of similar institutions in other countries, there is every reason to expect that, as population increases and settlement progresses, the people of Australia will take fuller advantage of the systems provided.

§ 2. New South Wales.

1. **Development of Local Government Systems.**—In the year 1858 the Municipalities Act, the first important measure with regard to general local government in New South Wales, was passed. Under this Act provision was made for the incorporation of any town or rural district as a municipality upon presentation to the Governor of a petition signed by at least fifty of the respective ratepayers, and containing a larger number of signatures than those attached to any counter petition. The members of the council were elected by the ratepayers, and the chairman was chosen by the councillors from their own number. The duties of the council were to abate and remove nuisances; to make by-laws for the regulation of their own proceedings and for the general good government of the town; to control all roads, bridges, ferries, and wharves; to establish hospitals, asylums, libraries, and gardens; and to establish tolls and rents for the use of markets, bridges, wharves, and jetties within and belonging to the municipality. The general rate was not to exceed one shilling in the pound, but a special rate for water supply, sewerage, and street lighting could be levied. Government endowment was provided for, by way of subsidies on the amount collected from rates, over a period of fifteen years. In all thirty-five districts were incorporated under this Act, and these districts, with the exception of Cook, which was united to Camperdown (now part of the City of Sydney) in 1870, and East St. Leonards, subsequently joined to St. Leonards, still exist, though the boundaries of most of them have since been changed.

(i.) *The Municipalities Act 1867.* The Act of 1858 was repealed in 1867 by the Municipalities Act of that year. Under the provisions of the latter Act the thirty-five existing municipalities were to continue their existence under the designation of boroughs, and all municipalities created in the future were to be classified either as (*a*) boroughs, or (*b*) municipal districts.

(*a*) *Boroughs* could consist of any city, town, or suburb of the metropolis, or of any populous country district, but every borough had to have a population of not less than 1000 and had to contain an area of not more than nine square miles, of which no part was more than six miles distant from any other part.

(*b*) *Municipal Districts* could comprise any part of the colony not containing a borough, but had to include an area of not more than fifty square miles, with a population of not less than 500 souls.

The duties and powers of the councils were extended and defined, while the maximum rate remained as before. This Act still left it optional for any district to become constituted as a municipality, with the consequence that only a small proportion of the State was incorporated under its provisions.

(ii.) *Division of the State into Shires, 1905.* The Act of 1867 was amended from time to time during the succeeding thirty years until the whole of the Acts—sixteen in number—were repealed by the consolidating Act of 1897. This Act did not alter the chief features of previous Acts, and still retained the voluntary principle of incorporation, which was not conducive to the adoption of a general system of local government, because so long as the central Government continued to construct and pay for local works, it was natural that the inhabitants benefited would be willing to deny themselves the advantages of self-government. The law on the subject remained in an admittedly unsatisfactory condition for several years, and, though various measures were introduced into Parliament for its amendment, it was not until the year 1905, when the Shires Act was passed, that a comprehensive scheme of local government was extended to the greater part of the State.

(*a*) *The Shires Act 1905* divides the whole State, with the exception of existing municipalities, the western division, Lord Howe Island, the islands in Port Jackson, and the Quarantine Station of Port Jackson, into shires, which were themselves subdivided into ridings, each riding having equal representation in the council, and were classified according to their extent and probable revenue and expenditure. An important feature of the Act was that the rates were to be charged on the unimproved value of the land, instead of on the annual rental; the rate to be levied was not to be less than one penny, nor more than twopence in the pound, and the minimum rate in respect of any portion of land was fixed at two shillings and sixpence. Another important provision of the Act was that as soon as a rate was imposed by a council, the operation of the Land Tax Act was suspended. The councils were vested with wide general powers and could acquire additional powers by resolution of a majority of the council followed by an application by the President on behalf of the council to the Governor.

(*b*) *The Local Government Extension Act 1906* amended and consolidated the law relating to municipalities and extended the principles of the Shires Act to municipalities. Provision was also made whereby the Governor was authorised to proclaim as a city any municipality which had, during the previous five years, a population of at least 20,000 persons and a revenue of at least £20,000, and which formed an independent centre of population.

(*c*) *The Local Government Act 1906.* Towards the close of the year 1906 the Local Government Act, which deals comprehensively with both shires and municipalities, was passed; by this Act, which was amended in 1908, both the Shires Act 1905 and the Local Government Extension Act 1906 are repealed, and their provisions are amended and consolidated.

(*d*) *The Local Government (Loans) Act 1907.* In 1907 the Local Government (Loans) Act was passed in order to overcome certain difficulties at the inception of the new system, authorising the Governor to approve of municipal loans in special cases, without going through the procedure required by the Local Government Act.

(*e*) *The Local Government (Amending) Act 1908.* This Act was passed in December, 1908, and contains important amendments, more especially in regard to the constitution of areas, functions of councils, values and valuations, and rates.

2. **Local Government Systems now in Operation.**—The law relating to local government in New South Wales is now contained in the Acts of 1906, 1907, and 1908 referred to above. Practically the whole of the State, with the exception of the Western Division, has now been brought under the operation of these Acts.

(i.) *Areas Incorporated.* Prior to the year 1907 the total area incorporated formed a very small part of the whole area of the State, as may be seen in the following statement:—

AREAS INCORPORATED IN NEW SOUTH WALES, 1860 to 1906.

Year	1860.	1870.	1880.	1890.	1900.	1906.
Area incorporated—Sq. miles ...	409	649	1,482	2,387	2,763	2,830

Total area of State (exclusive of Lord Howe Island), 310,367 *square miles.*

The areas incorporated in 1906 in each of the three territorial divisions of the State were as follows:—

DISTRIBUTION OF INCORPORATED AREAS, 1906.

Division.	Incorporated Area.	Unincorporated Area.	Total Area.
Eastern ... ... Sq. miles	1,977	93,742	95,719
Central ... ... „	571	88,579	89,150
Western ... ... „	282	125,216	125,498
Total	2,830	307,537	*310,367

* Total area of State, exclusive of Lord Howe Island, the area of which is 5 square miles.

The total area incorporated under the Local Government Act 1906, to the end of the year 1909, was 185,108 square miles, of which 182,111 square miles were comprised within shires and 2997 within municipalities. The areas incorporated comprise the whole of the eastern and central divisions of the State, with the exception of Lord Howe Island, the islands in Port Jackson, and the quarantine station at Port Jackson.

(ii.) *General.* The above Act came into operation on the 1st January, 1907; it provided for the continuation of existing shires and municipalities, for the creation of new ones, and for their reconstitution by uniting, dividing, altering, or converting areas. Each shire is divided into three ridings, and each municipality may be divided into wards by petition of the council or a majority of the ratepayers to the Governor. The councils consist, in the case of shires, of either six or nine councillors, and in the case of municipalities, of from six to twelve aldermen, except in the case of the union of two or more municipalities, when the Governor may determine that the council of the united areas shall consist of any number from twelve to eighteen aldermen. All occupiers of ratable property of a yearly value of at least £5 who have been in occupation for at least three months, of either sex, who are either natural-born or naturalised British subjects, of the age of twenty-one years and upwards, are entitled to be registered on the electors' roll, and any male person so enrolled is qualified to be elected as a councillor or alderman, unless he is otherwise ineligible.

(iii.) *Functions of Councils.* The general scheme of the Act was that councils, on their constitution, should start with a limited number of powers of a primary nature, and that, as their needs develop, they should from time to time acquire additional powers on following the prescribed procedure. On the constitution of a shire or municipality the councils may exercise any of the following powers:—The construction and maintenance of all public places, except those vested in the Railway Commissioners or other public bodies or trustees, and except national works; lighting of, and controlling the traffic in streets and roads; prevention of fires and floods; the administration of the Public Watering Places Act 1900 and the Impounding Act 1898, and certain parts of the Police Offences Act 1901, the Public Health Act 1902, and the Cattle Slaughtering and Diseased Animals

and Meat Act 1902. Other powers and duties, such as the construction of drainage and water supply systems without reticulation, the care and management of parks and commons, and the licensing of hawkers and public vehicles, are conferred and imposed upon municipal councils, while these same powers and duties may be acquired by shire councils by resolution of the council followed by application to the Governor.

(*a*) *Acquisition of Further Powers.* Further powers may also be acquired either by shires or by municipalities if the council decide that they are necessary for the good government of the locality; these are the administration of the Public Gates Act 1901, and the Native Dog Destruction Act 1901; water supply by reticulation; the maintenance of passenger ferries, of fire brigades, of municipal buildings, of cattle-yards and abattoirs, of markets, parks, and recreation grounds, of refuse destructors, of cemeteries and public baths; the manufacture and supply of gas, electricity, and hydraulic or other power; the regulation and control of theatres, public halls, and lodging houses; the establishment and management of public libraries, art galleries, museums, and public bands; the regulation and supervision of buildings and balconies; of the sale of fish and meat, and the suppression of nuisances caused by the emission of smoke or vapour. These powers may be acquired by a resolution passed by an absolute majority of the council followed by an application in the prescribed form to the Governor. On receipt of a petition signed by not less than fifty, or if there be less than 300 ratepayers on the roll, by one-sixth of the ratepayers, the Governor may direct that a poll be taken as to whether all or any of the powers applied for shall be conferred on the council.

(*b*) *Appointment of Executive Officers.* Provision is made in the Act for the appointment of officers and servants, such as shire engineers, municipal clerks, and sanitary inspectors, and also for the acquisition by councils of land or buildings either by agreement or compulsorily, for which purpose the provisions of the Public Works Act 1900 are incorporated.

(iv.) *Rates and Ratable Property.* All land is ratable except the following:—Commons, public parks, and public reserves not held under lease or license; cemeteries, public hospitals, benevolent institutions, and buildings used exclusively for public charitable purposes; churches and free public libraries; unoccupied Crown lands; lands vested in the University of Sydney occupied and used solely for the purposes of education; and vested in the Chief Commissioner for Railways and Tramways and actually used for the purposes of the Government railways or tramways. Rates levied by a council may be of four kinds, namely, general, special, local, or loan rates.

(*a*) *General Rates* are levied on the unimproved value at a rate of not less than one penny nor more than twopence per pound, but if the minimum rate be more than sufficient to meet the requirements of the council, it may be further reduced at the discretion of the Governor. A council of a municipality which has levied a general rate of not less than one penny on the unimproved value may impose such additional rate as may be required either on the improved or the unimproved value; the total amount to be derived from the general rate and the additional general rate taken together must not, however, exceed the amount yielded by a rate of 2d. in the £ on the unimproved value and 1s. 6d. in the £ on the assessed annual value of all ratable land.

(*b*) *Special, Local, and Loan Rates* may also be imposed either on the improved or the unimproved value at the option of the council, but in the case of special and local rates a poll may be demanded by the ratepayers as to whether the rate shall be imposed or not. Rates on the unimproved value

of land may also be levied for the purposes of the Country Towns Water Supply and Sewerage Acts 1880-1905, which provide for the construction by the Government of waterworks and sewerage systems in municipalities which are outside the areas served by the Metropolitan and Hunter River Boards. The cost becomes a charge against the municipality, carrying interest at a rate of 4 per cent., and payable by annual instalments over a period of not more than 100 years.

Particulars of rates levied are given in paragraphs 3 and 4 hereinafter.

(v.) *Endowment.* Government endowments to shires are fixed every third year and the amount is determined according to the extent of the shire, the probable revenue from a rate of 1d. in the £, the necessary expenditure, the extent of roads and other public works to be constructed and maintained, and other matters. The endowment in any year is paid on the basis of the amount of general rates collected in the preceding year. At the end of 1909 the endowments to be paid during the triennium 1910-12 were fixed. The classification for the period mentioned is as follows:—

NEW SOUTH WALES—ENDOWMENT OF SHIRES, CLASSIFICATION, 1910-12.

Class.	1st.*	1st.	2nd.	3rd.	4th.	5th.	6th.
No. of Shires	27	41	10	9	7	14	26
Endowment received in the £ on general rate ... ... Up to	*	10s.	15s.	20s.	25s.	30s.	†

* No endowment. † Not less than 40s. in the £ on the general rate.

It is also provided that all municipalities not receiving statutory endowment under any Act repealed by the Act of 1906 shall, upon the result of investigations made into their administration and financial necessities, be entitled to a sum not exceeding three shillings and fourpence in the pound on the general rate collected; but if the revenues are sufficient to meet the reasonable requirements of the corporations under proper management no endowment will be paid.

(vi.) *Borrowing Powers and other Provisions.* A council of a municipality is authorised to borrow up to 10 per cent. of the unimproved capital value, and all money so borrowed is a charge upon the revenue of the council. If a council desire that any proposed loan should be guaranteed by the Government application must be made to the Treasurer, who may either refuse or recommend the guarantee. Both shires and municipalities may temporarily borrow in any year an amount not exceeding one-third of the estimated revenue to be received from rates if the consent of the Minister shall have been first obtained. Auditors are appointed by the councils, and Government examiners are appointed to inspect the accounts of the councils. A defaulting area is defined to be an area in which a sufficient number of councillors have not been elected to form a quorum, or in which the requirements of the Act as to the levying of a general rate have not been carried out, or in which the council has ceased for six months to exercise its functions. The Governor is authorised to appoint an administrator for a defaulting area.

3. **Shires, 1909.**—The total area of the 134 shires constituted under the new system is 182,111 square miles, and the approximate population at the end of the year 1909 was 564,660.

The shires vary in area from 36 square miles in the case of Ku-ring-gai, immediately north of the metropolis, to 5745 square miles in the case of Lachlan in the Condobolin district.

(i.) *Valuation and Rates Levied.* The unimproved capital value of the shires in 1909 was £83,464,446, as against £82,414,771 in the preceding year. It is not possible to

give the improved capital value or the assessed annual value, as the shires are not compelled to make these valuations, and in many cases do not make them. The total amount of all rates levied was £374,206.

(ii.) *Revenue.* The principal heads of revenue for the three years since the new Act came into force are shewn in the following table :—

NEW SOUTH WALES.—INCOME OF SHIRES, 1907 to 1909.

Particulars.	1907.	1908.	1909.
General Fund—	£	£	£
General rates	287,635	382,336	374,540
Government endowment	235,794	162,859	261,029
Public works	3,064	65,781	57,017
Health administration	2,376	2,979	3,033
Public services	4,593	7,038	6,691
Shire property	...	517	1,721
Miscellaneous	2,197	4,198	5,651
Special and Local Funds	...	1,160	7,462
Total revenue	535,659	626,868	717,144

(iii.) *Expenditure.* The following statement shews the expenditure of shires during the years 1907 to 1909 inclusive :—

NEW SOUTH WALES.—EXPENDITURE OF SHIRES, 1907 to 1909.

Particulars.	1907.	1908.	1909.
General Fund—	£	£	£
Administrative expenses	100,435	116,932	117,696
Public works	249,868	516,072	529,954
Health administration	1,536	4,604	4,573
Public services	3,870	11,702	10,290
Shire property	18,853	397	1,911
Miscellaneous	11,043	6,453	5,886
Special and Local Funds	...	58	6,474
Total expenditure	385,605	656,218	676,784

(iv.) *Assets and Liabilities.* The financial position of the shires at the end of the year 1909 was strong, as there was an excess of assets of £232,107. The following table gives particulars of assets and liabilities as at the 31st December, 1909 :—

NEW SOUTH WALES.—ASSETS AND LIABILITIES OF SHIRES, 1909.

Assets.		Liabilities.	
Outstanding rates	£24,581	Temporary loans	£7,414
Stores and materials	8,384	Sundry creditors	10,508

Plant and property	29,402	Total	21,231
Furniture	11,779	Excess of assets	232,107
Other	1,490		
Total	253,338	Total	253,338

4. **Municipalities.**—Including the City of Sydney there are 190 municipalities in New South Wales; of these forty are in the suburbs of Sydney and twelve in the district of Newcastle and suburbs. Since the 1st January, 1908, under the Local Government Act 1906, municipalities must levy a general rate on the unimproved capital value of all ratable land, and may levy additional general, special, local, or loan rates on either the unimproved or improved capital value. Municipal rates are therefore no longer charged on the annual value; the only rates based on that value are those charged by the Metropolitan and Hunter River Water Supply and Sewerage Boards.

(i.) *Capital Value, Area, Population, and Rates Levied, 1901 to 1909.* The following table shews the improved capital value, the area, population, number of buildings, and amount of rates levied in municipalities for each year from 1901 to 1909 inclusive:—

NEW SOUTH WALES.—MUNICIPALITIES, IMPROVED CAPITAL VALUE, AREA, POPULATION, NUMBER OF BUILDINGS, AND TOTAL RATES LEVIED, 1901 to 1909.

§ Under the Local Government Act 1906, the Municipal year now closes on the 31st December.
‖ Number of dwellings.

The following table gives a comparison of the unimproved and improved values for the years 1907 to 1909 inclusive :—

NEW SOUTH WALES.—MUNICIPALITIES, IMPROVED AND UNIMPROVED CAPITAL VALUES, 1907 to 1909.

Particulars.	Unimproved Value.			Improved Value.		
	1907.	1908.	1909.	1907.	1908.	1909.
	£	£	£	£	£	£
Sydney—City	20,207,812	20,207,812	19,970,365	45,749,800	49,060,600	50,948,240
Suburbs	19,583,598	23,799,856	23,486,535	57,578,400	56,441,828	57,172,187
Metropolis	39,791,410	44,007,668	43,456,900	103,328,200	105,502,428	108,120,427
Country	14,875,612	20,104,983	19,798,286	41,668,300	44,784,238	44,716,888
Total	54,667,022	64,112,651	63,255,186	144,996,500	150,286,666	152,837,315

(ii.) *Revenue.* The Local Government Act 1906 prescribed that there should be a general fund in each local government area (municipality and shire), and also special funds for specified purposes. The regulations under the Act prescribed the system of accounts to be kept. This system differs materially from the old "cash" system of receipts (cash actually received) and disbursements (cash actually expended), and the financial results for 1908 and 1909 cannot be compared directly with those for previous years.

Prior to 1908 the municipal year ended on the first Monday in February; now it ends on the 31st December. In all statements of municipal accounts for the year 1908, therefore, the period referred to is from the 4th February to the 31st December, except in the City of Sydney, which does not come under the provisions of the Act of 1906 and where the accounts are kept for the calendar year. The only complete year for which financial particulars are available for the municipalities is, therefore, the year 1909. Particulars of revenue for that year are given in the following table:—

NEW SOUTH WALES—MUNICIPALITIES, REVENUE, 1909.

Particulars.	Sydney.	Suburbs.	Country.	Total.
	£	£	£	£
General fund	546,203†	413,220	297,710	710,930‡

† See note † to first table on preceding page. ‡ See note ‡ to first table on preceding page.

5. **Sydney Metropolitan Board of Water Supply and Sewerage.**—Prior to the year 1888 the main water supply and sewerage systems of Sydney and suburbs were under the control of the City Corporation, while several of the suburban councils had constructed local systems. For some years, however, it had been recognised that owing to the great increase in the population and size of the metropolitan area the water supply was inadequate and the sewerage system antiquated and inefficient. In 1867 a Royal Commission was appointed to enquire into and report upon various schemes for supplying water to the city and suburbs, and in 1869 a report was sent in recommending the adoption of what is known as the "Upper Nepean Scheme." Another commission was appointed in 1875 to investigate different proposed sewerage systems, and two years later a report was presented containing certain recommendations which form the basis of the present system. After considerable discussion and further investigation an Act was passed in 1880 authorising the schemes recommended by the two commissions being carried out. In the year 1888 the works had so far progressed that the Government, with the object of placing the administration of both water supply and sewerage systems throughout the county of Cumberland under the control of an independent body, passed an Act authorising the establishment of the Metropolitan Board of Water Supply and Sewerage. This Board consists of seven members, three of whom are appointed by the Government, two by the City Council, and two by the suburban and country municipalities in the county of Cumberland. The Board is under the general supervision of the Minister for Works—a provision considered necessary since the loan expenditure of the Board forms part of the public debt of the State.

6. **Metropolitan Water Supply.**—In the year 1850 authority was given by the Legislative Council to the City Corporation to construct water and sewerage works. Under this authority a water supply scheme was adopted and carried out, at a cost of nearly £1,750,000, by which the waters of the streams draining into Botany Bay were intercepted and pumped into three reservoirs. This system has now been superseded by the " Upper

Nepean Scheme" referred to above, the management of which was transferred to the Metropolitan Board of Water Supply and Sewerage in May, 1888.

(i.) *The Cataract and Prospect Dams.* A work of great importance and magnitude in connection with the Sydney water supply—the Cataract Dam—was completed in 1908. Prior to the construction of this dam, the system had been weak in the matter of storage, the only reservoir of any importance being that at Prospect, which was formed by the construction of an earthen dam completed in 1890, and which contains a supply available by gravitation of 5,446,000,000 gallons of water. The Prospect reservoir is supplied from the unstored waters of the Nepean, Cataract, and Cordeaux rivers by means of tunnels and conduits capable of carrying 150,000,000 gallons a day; the combined catchment area of the three rivers extends to an area of 354 square miles, and is favourably situated with regard to the coastal rainfall. The whole of this area has been acquired by the Crown, and every precaution is exercised to guard against pollution of the supply. It was found, however, in 1902—almost the driest year on record—that the Prospect reservoir was insufficient for the needs of the increasing population of Sydney and suburbs during a dry period. The Government, therefore, decided to construct additional reservoirs on the rivers forming the sources of supply, in which would be stored as much of the flood water from the available catchment area of 354 square miles as would be necessary to meet the constantly increasing requirements of the metropolis.

The first of this series of reservoirs is the Cataract dam, of which the catchment area above the impounding dam is about fifty-eight square miles. The water released from this reservoir flows down the bed of the Cataract River to a diversion weir at Broughton's Pass, where it enters the previously existing tunnel, and is conveyed thence by a system of open canals to the Prospect reservoir. In traversing the steep and rocky bed of Cataract River the water is thoroughly aerated. The total distance travelled by the water from Cataract to Sydney *via* Prospect is 66½ miles, of which 21½ miles represents the distance from Prospect to Sydney.

The principal dimensions of the Cataract and Prospect dams are given below:—

SYDNEY WATER SUPPLY—CATARACT AND PROSPECT DAMS.

Dam.	Height above Foundation.	Width at Top.	Thickness at Bottom.	Length.	Area of Reservoir	Capacity of Reservoir.
	Feet.	Feet.	Feet.	Feet	Acres.	Gallons.
Cataract ...	192	16½	150	811	2,400	21,411,000,000
Prospect ...	85½	30	523	7,300	1,266½	11,029,200,000*

* Of which 5,527,000,000 gallons are available by gravitation.

The present population of Sydney and suburbs supplied with water from these works is estimated at 668,940. The winter consumption of water ranges from twenty to twenty-two million gallons a day, while the summer consumption and evaporation together approximate to thirty million gallons a day. As the combined available capacity of the Cataract and Prospect reservoirs amounts to nearly 32,500,000,000 gallons, the storage available represents a supply for about 1000 days without rainfall.

(ii.) *Aqueducts and Mains.* The water is drawn off from the Prospect reservoir through a valve tower by cast-iron pipes and thence proceeds by canal, five miles in length, to the Pipe Head Basin, situated 16½ miles from Sydney. It is then conveyed for a further distance of five miles by two wrought-iron pipes, each six feet in diameter, to Potts' Hill reservoir, which has a capacity of 100,000,000 gallons, covers twenty-four and a half acres, and is designed to tide the city over any interruption of supply from Prospect, and to prevent fluctuation of pressure. A by-pass is laid along the floor of the reservoir to enable both six-feet mains to deliver water to Sydney direct. At Potts' Hill

the water passes through a screening tank constructed of copper-gauze screens, and thence proceeds towards the city in two 48-inch cast-iron mains. The first laid main is 48-inch as far as Petersham, whence it bifurcates, one branch (48-inch) leading to Petersham reservoir, the other (42-inch) to Crown Street reservoir, where the main pumping station is situated. The duplicate 48-inch main, completed in 1893, continues of the same diameter direct to Crown Street. The main pumping plant consists of three pairs of compound high-duty pumping engines and one electrically-driven centrifugal pumping unit. The first set is capable of raising 400,000 gallons per hour to the Centennial Park reservoir, a height of 104 feet above the pumps, at which place a new covered reservoir, of a capacity of 17,000,000 gallons, has been constructed for the purpose of ensuring a larger bulk of water within the city limits; the second set is capable of raising 210,000 gallons per hour to the Woollahra reservoir, a height of 140 feet, and also of raising 200,000 gallons per hour to Waverley, a height of 220 feet above the pumps; while the third set is capable of raising 100,000 gallons per hour to the Waverley tanks. The centrifugal plant raises 7000 and 4800 gallons per minute to Waverley and Woollahra respectively.

(iii.) *Northern Sydney.* A pumping station at Ryde has been erected for the supply of the suburbs on the north side of the harbour. The station receives its supply through a 32-inch steel main from the Pipe Head Basin, discharging into a reservoir, from which the water is pumped to a 1,000,000-gallon tank at Ryde, 234 feet above high-water mark, and by a continuation of the same main into two other tanks at Chatswood, at an elevation of 370 feet above high-water mark, and having a joint capacity of 3,000,000 gallons. Water is also pumped at this station direct to Pymble at 567 feet elevation and to Wabroongah at 717 feet. A 9-inch main extends over the Gladesville and Iron Cove bridges to supply the heights of Balmain, but is now being superseded by an 18-inch main.

(iv.) *Storage Reservoirs.* In connection with the water supply there are in all thirty-two service reservoirs, with a total maximum capacity of 51,716,000 gallons.

(v.) *Revenue, Expenditure, and Capital Cost of Sydney Waterworks.* The following table gives particulars as to the revenue, expenditure, and capital cost of the metropolitan waterworks for each financial year from 1901 to 1910:—

SYDNEY WATERWORKS—REVENUE, EXPENDITURE, AND CAPITAL COST, 1901 to 1910.

Year Ended 30th June.	Revenue.	Working Expenses.	Capital Cost exclusive of Items on which Interest is not charged.	Percentage of Working Expenses to Revenue.	Percentage of Revenue to Capital Cost.	Interest Payable on Capital Cost.	Net Profit after paying Working Expenses and Interest.

1909	128,444	642,220	25,911	9,457,660	201	40.34	71
1910	133,788	668,940	26,903	9,819,657	201	40.21	100

(vii.) *Other Water Supply Systems under the Metropolitan Board.* In addition to the main metropolitan water supply system there are certain other systems within the County of Cumberland managed by the Metropolitan Board. (*a*) The Richmond waterworks are entirely unconnected with the Sydney supply. The system consists of a small pumping station on the left bank of the Hawkesbury River, just below the confluence of the Grose and Nepean, a 6-inch supply main, four miles in length, and five and one-eighth miles of 3-inch and 4-inch reticulation mains. (*b*) The Wollongong waterworks are also unconnected with the Sydney supply. The source of supply is the Cordeaux River and the catchment area is 2400 acres in extent. The total capacity of the reservoir is 173,000,000 gallons and the total length of the main about nineteen miles, exclusive of the extension to Port Kembla and Unanderra. The town, of which the estimated population on 31st December, 1909, was 4400, is reticulated with 4-inch and 3-inch pipes. (*c*) The Manly waterworks are supplied by a special catchment area of about 1300 acres, and are also connected with the metropolitan system by a 10-inch main from Mosman, crossing Middle Harbour, with ball and socket pipes. There are two horizontal compound duplex pumps, each having a capacity of 1,000,000 gallons in seventeen hours. (*d*) The water-supply for the districts of Campbelltown, Camden and Narellan, and Liverpool is not drawn from the main Sydney supply through Potts' Hill, but is received by gravitation from the upper canal at Prospect.

7. **Metropolitan Sewerage System.**—The system which is now under the control of the Metropolitan Board of Water Supply and Sewerage comprises the old and new systems. The old system was initiated by the City Commissioners in 1853, and continued by their successors, the present City Council, since their incorporation in 1857. The old system was designed on the principles of what is known as the "combined system," and comprises four main outfalls, with subsidiary sewers along the principal streets; these, in turn, receive the reticulation sewers of the minor thoroughfares. The four main outfalls discharged directly into the harbour, and the consequent pollution of the water and menace to public health led to the appointment of a commission to enquire into the best means of diverting the sewage from the harbour, and of disposing of it when thus diverted. The new intercepting system is the outcome of the labours of that commission. At the time of the transfer, in 1889, of the original sewerage works to the Metropolitan Board there were 70¼ miles of old city sewers in existence. The new system adopted is on the lines of the partially "separate system," and intercepts all sewerage from the gravitation zone—*i.e.*, from above a contour line about forty feet above high-water mark; while the sewerage from the low level areas—*i.e.*, from below that contour line, is eventually pumped into the gravitation sewers. The system consists of three main outfalls, viz.:—(*a*) The northern outfall, discharging into the Pacific Ocean at Ben Buckler Point, near Bondi, and taking all sewage previously discharged into the harbour.

(*b*) The southern outfall, discharging into the sewage farm at Webb's Grant, and providing for the remainder of the city and southern suburbs. (*c*) The western outfall, discharging into the Rockdale end of the sewage farm and providing for the western suburbs.

Another branch outfall has been constructed at Coogee, which discharges into the ocean and serves the districts of Randwick, Kensington and Coogee. On the northern side of the city extensive works have been completed. Septic tanks, into which main sewers discharge, have been constructed at Long Bay (Middle Harbour), Chatswood, and near Balmoral beach. At Manly an ocean outfall has been provided for the main sewer, and in the borough of North Sydney septic tanks were built in 1899 to deal with the sewage, while at Middle Harbour, Mosman, and Manly ample provision has been made for the sanitation of the districts.

(i.) *Revenue, Expenditure, and Capital Cost of Sydney Sewerage Systems.* The following table gives particulars as to the revenue, expenditure, and capital cost of the metropolitan sewerage systems during each year from 1901 to 1910:—

SYDNEY SEWERAGE SYSTEMS.—REVENUE, EXPENDITURE, AND CAPITAL COST, 1901 to 1910.

Year ended the 30th June.	Revenue.	Working Expenses.	Capital Cost, exclusive of Items on which Interest is not Charged.	Percentage of Expenditure to Revenue.	Percentage of Revenue on Capital Cost.	Interest Payable on Capital Cost.	Profit or Loss after Payment of Working Expenses and Interest.

8. **The Hunter District Water Supply and Sewerage Board.**—The waterworks of the Lower Hunter were constructed by the Government under the provisions of the Country Towns Water Supply and Sewerage Act of 1880. In 1892 a special Act was passed establishing an independent Board to control the water-supply works. This Board consists of seven members, of whom three are nominated by the Governor, one elected by the Newcastle Municipal Council, two by the adjacent municipalities, and one by the municipalities of East and West Maitland and Morpeth. The following municipalities and incorporated areas are within the area of the Board's jurisdiction :—

Newcastle Division.—Adamstown, Argenton, Ash Island, Boolaroo, Carrington, Hamilton, Hexham, Holmesville, Lambton, Merewether, Minmi, Newcastle, Plattsburg, Wallsend, Waratah, and Wickham.

Maitland Division.—Abermain, Aberdare, Bolwarra, Cessnock, East Greta, Heddon Greta, Hinton, Homeville, Kurri Kurri, Lorn, East and West Maitland, Morpeth, Oakhampton, Pelaw Main, Rutherford, Stanford Merthyr, Telarah, and Weston.

(i.) *Description of Waterworks.* The water supply is pumped up from the Hunter River about a mile and a half from West Maitland, the engines being situated above flood level on a hill about forty-four chains from the river. At the pumping station there is a settling tank of 1,390,500 gallons capacity, six filter beds, a clear water tank holding 589,500 gallons, and a storage reservoir of 172,408,100 gallons capacity. The filtered water is pumped from the clear water tank into two summit reservoirs, one of which is connected by a 10-inch cast-iron main 4⅛ miles in length, and supplies East and West Maitland, Morpeth, and Maitland, while the other is fed by two rising mains, one riveted steel pipe 20¾ in. diameter, and a 15-inch cast-iron main, 5⅝ miles long, and supplies the other districts under the control of the Board. In seven of these districts reservoirs having a total capacity of nearly 4,000,000 gallons are supplied by gravitation. On the hill at Newcastle there is also a high-level iron tank with a capacity of 20,000 gallons, which is supplied by a small pumping engine on the roof of the Newcastle reservoir.

(ii.) *Water Supply, Capital Cost, Revenue, and Expenditure, 1901 to 1910.* By the Act of 1892 referred to above and an Amending Act of 1894 the capital debt of the Board was to be liquidated by annual instalments distributed over 100 years with interest at 3½ per cent. By a further amending Act of 1897 the repayment of expenditure on permanent works was abrogated, and the annual instalments were to be paid in liquidation of the cost of renewable works to be fixed by the Government from year to year. The capital debt of the Board to the Government at 30th June, 1910, was £128,654 in respect of sewerage, and £467,428 with regard to water supply. The capital expenditure in respect of water supply at the 30th June, 1910, was £467,425, and in respect of sewerage £128,655. In the subjoined table particulars are given as to the revenue and expenditure, and also as to the number of houses and population supplied for each financial year from 1901 to 1910, inclusive:—

PARTICULARS OF THE HUNTER DISTRICT WATER SUPPLY, 1901 to 1910.

Year ended 30th June.	Revenue.	Working Expenses (including Interest).	Houses Supplied.	Estimated Population Served.	Supply.	
					Daily Average.	Total.
	£	£	No.	No.	1000 Gallons.	1000 Gallons.
1901	27,405	30,948	9,086	45,400	1,005	366,889
1902	29,558	32,109	9,875	49,400	1,119	408,508
1903	31,102	32,217	10,522	52,600	1,113	406,172
1904	31,360	32,361	11,100	55,500	1,093	399,954
1905	34,486	33,714	12,167	60,800	1,266	461,936
1906	40,801	34,801	12,968	64,800	1,479	539,655
1907	41,776	38,886	13,569	67,845	1,479	539,965
1908	45,695	39,615	14,457	72,285	1,654	603,755
1909	43,395	41,184	15,679	78,395	1,766	644,689
1910	46,767	43,126*	16,446	82,230	1,650	602,497

* Exclusive of an instalment of £10,500 to the sinking fund for reconstruction of renewable works.

The average daily consumption of water for all purposes per inhabitant was 20.07 gallons during the year 1910, as against 22.53 gallons during the previous year.

(iii.) *Sewerage Supply Works.* Considerable progress has been made by the Department of Public Works with the construction of the sewerage works for Newcastle and suburbs. The scheme is designed on the separate system, and will deal with the sewage partly by gravitation and partly by pumping. The works within the first two completed sections were transferred to the Board in 1907, and those within the third section in March, 1910. Up to the 30th June, 1910, about 30 miles of sewers, connecting with 671 separate properties, were under the control of the Board. In the financial year 1909-10 the revenue was £6192 and the expenditure was £6117.

9. **Water Supply and Sewerage in Country Towns.**—With the object of assisting municipalities to construct systems of water supply and sewerage, the Country Towns Water Supply and Sewerage Act of 1880 was passed. Under this Act the amount for carrying out the works is advanced by the State, and the municipality has the option of undertaking the construction of the works, failing which the Government undertakes the duty. Municipalities which avail themselves of the provisions of the Act are empowered to levy a rate for each service not exceeding a maximum of 5 per cent. on the assessed value of land and tenements, in addition to the ordinary municipal rates. The original Act, as amended in 1894 and in 1905, provides that the sum advanced, with interest at 4 per cent. per annum, must be repaid by a maximum number of 100 yearly repayments, and also provides for the issue of licenses to workmen, for the recovery of rates and for making by-laws for the assessment of lands and other purposes.

(i.) *Waterworks.* Up to the 30th June, 1909, forty country municipalities had availed themselves of the privileges of the Act as regards waterworks, all of which at that date had been completed and handed over by the Government. The total amount expended on these works was £731,016, and the total of the sums payable annually for a period of 100 years was £26,850, including interest at the rate of 3½ per cent., the first repayments having become due at various dates ranging from the end of the year 1893 to the end of 1908. In the calculation of these repayments the interest on the expenditure has been added, and any payments by the councils, as well as sums remitted under the authority of the Act, have been deducted. A number of other municipalities have constructed works out of their own resources.

(ii.) *Sewerage Works.* Only eight municipal councils have taken advantage of the Act providing for the construction of sewerage works in country towns. On the 30th June, 1909, the capital debt of these systems was £51,445, the amount payable annually to the Government being £1911. Other sewerage systems are in existence in several places, but with few exceptions the operations have been on a small scale.

10. **Board of Fire Commissioners of New South Wales.**—Reference has been made in the section of this book dealing with the subject of Private Finance (see page 884) to the constitution of the Board of Fire Commissioners of New South Wales, which has now superseded the Metropolitan and all other Fire Brigade Boards in that State.

(i.) *Receipts and Disbursements of Metropolitan Board with Total Amounts at Risk, 1902 to 1909.* The subjoined table shews the actual receipts and disbursements of the Metropolitan Board, and also the total amounts of risks held by the insurance companies within the metropolitan area for each year from 1902 to 1909 inclusive:—

SYDNEY METROPOLITAN FIRE BRIGADES BOARD.—RECEIPTS AND DISBURSEMENTS, ALSO TOTAL AMOUNTS AT RISK, 1902 to 1909.

Year.	Receipts.					Disbursements.	Net Risks.
	From Government.	From Municipalities.	From Fire Insurance Companies.	From other Sources.	Total.

* Not available.

(ii.) *Country Fire Brigade Boards.* Forty-one country Boards were established under the Fire Brigades Act 1902. These Boards were entitled to receive subsidies from the Government. Owing to an ambiguous clause in the statute the insurance companies and municipalities did not always consider themselves called upon to contribute to the expense of maintenance of the brigades as defined by the Act. In addition to the Boards constituted under the Act there were a number of country fire brigades in existence, towards the support of which the several municipalities generally contribute. In many country districts volunteer fire brigades have been established for the purpose of dealing with bush fires.

11. **Sydney Harbour Trust.**—The establishment of this Trust was the direct outcome of the outbreak of bubonic plague in the port of Sydney in the early part of the year 1900. It was proved that this disease was due to the introduction of plague-stricken rats in vessels arriving from ports in which the disease had made its appearance. As a consequence the whole of the foreshores of the harbour, together with certain adjoining wharves, stores, dwelling houses, and other properties, were vested in a body of trustees. The Trust was established by an Act which came into force on the 11th February, 1901. Under this Act an independent body of three Commissioners was created for the purpose of administering the affairs of the harbour and of fostering its interests, each commissioner being entitled to hold office for seven years, subject to certain conditions. This Board of Commissioners is invested with the exclusive control of the port and shipping, lighthouses, beacons, buoys, wharves, and docks (with the exception of wharves and docks constructed on land which has been alienated from the Crown), in Sydney Harbour, and is empowered to levy certain tolls, dues, rates, rents, and charges, and to resume or purchase lands and buildings. Prior to the establishment of the Trust, the extensive foreshores of the port offered opportunities to private individuals of acquiring water frontages, which enabled them to participate in the revenue to be derived from the wharfage and tonnage rates as prescribed by the various Acts. This alienation of the water frontages was in return for comparatively small payments. In effect, this deprived the Crown of an annual revenue which, under other circumstances, might have been applied to the maintenance of the port. One of the greatest changes made by the Sydney Harbour Trust Act was the alteration of the basis upon which wharfage is charged, so that goods which do not use the wharf, but are lightered overside, are subject to wharfage. The Act embodied the wharfage schedule appended to the Wharfage and Tonnage Rates Act of 1880, by which the inward rates were fixed at one shilling and eightpence per ton, and the outward at tenpence; but it did not provide for any reduced

rate for transhipment goods arriving from oversea as had previously been allowed, although it gave the Commissioners power to make or to recommend certain exemptions and to increase the inward wharfage to three shillings per ton measurement, or to four shillings per ton dead-weight. During the year 1901 the Commissioners recommended the Government to increase the inward rates to two shillings and sixpence per ton and to abolish outward wharfage, and these recommendations were duly endorsed by the Executive Council. Liberal concessions were also made with regard to transhipment goods arriving from oversea. All goods produced or manufactured within the State of New South Wales were exempt from wharfage rates until the Sydney Harbour Rates Act 1904 was passed. Under this Act a schedule of wharfage charges was provided for, a small charge of fivepence per ton being imposed on all goods transhipped; important amendments were also made in the old tonnage rates charges (which had been in existence since 1880), with the result that many vessels which previously escaped payment have now to pay a fair charge for the use made of the wharfage accommodation provided by the Trust. Considerable improvements have been made by the Commissioners in the wharfage accommodation of the port and in the sanitary condition of the area vested in the Trust by the construction of new jetties, sheds, offices, and waiting rooms; by dredging and by preventing the pollution of the waters of the port; by opening up new roads; and by taking means to prevent rats and other vermin from finding a harbourage in the produce stores and in the vicinity of the wharves.

(i.) *Revenue, Expenditure, and Capital Cost.* The subjoined table gives particulars of the revenue and expenditure of the Trust, and also shews the total capital debt for properties, etc., vested in the Commissioners, the amount of interest payable on the debt, and the balance of revenue after deducting expenditure, interest, and the amount of the Commissioners' salaries:—

* For the period from 11th February to the 30th June, 1901. †Not determined until the year 1904. ‡ The amount of interest has been computed by taking the rate of interest on the total capital debt of the State. § In addition to expenditure and interest, Commissioners' salaries (amounting in 1909-10 to £3,300) have been deducted. ‖ Represents a loss.

The revenue for the year 1909-10 shews an increase of £2947 on that for the previous year, and is the highest attained since the formation of the Trust. The corresponding increase in expenditure was £7283, which was incurred chiefly on account of extra requirements for dredging, and repair and maintenance of properties.

(ii.) *Dredging and Towing.* The subjoined statement gives particulars of the dredging and towing done by the five dredges and the six tug boats owned by the Trust:—

§ 3. Victoria.

1. **Development of Types of Local Authorities.**—In Victoria there are now two types of municipal institutions, (*a*) boroughs, including cities and towns, and (*b*) shires, and although they are now dealt with by the same Act, their origin was distinct, and in the early days of their development they were provided for by independent enactments. Melbourne and Geelong, the latter of which was for many years the second largest town in the State, having been incorporated under special statutes prior to the establishment of a general system of local government, are not subject to the provisions of the Local Government Acts except in a few comparatively unimportant details. Melbourne was incorporated as a town in 1842, and as a city in 1847 ; Geelong was incorporated as a town in 1849.

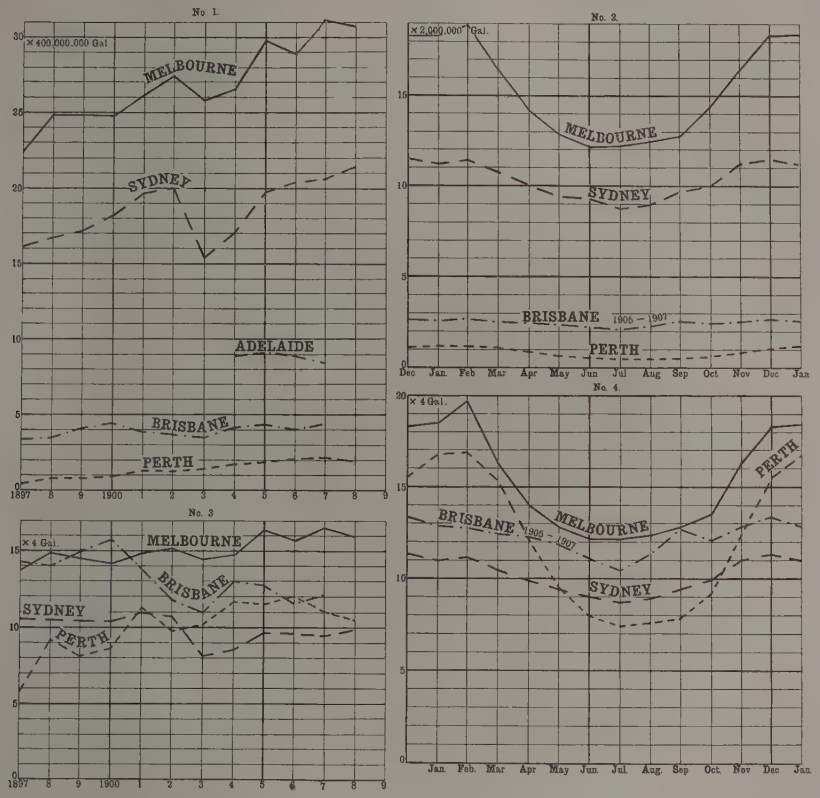
(i.) *Institution of Road Districts.* The Imperial Act of 1842, under which the Governor of New South Wales was authorised to form districts for the purpose of self-government, has already been referred to. This Act was succeeded by the Act of 1850, under which the district of Port Phillip was separated from New South Wales, and which provided that the proclamation of districts (under the Act of 1842) which had not been followed by an election of councillors should be void, and where councillors had been elected the Letters Patent forming such districts could be revoked by petition. For the future such districts were only to be incorporated upon petition of the inhabitants to the Governor, who was authorised to establish elective district councils, with power to frame by-laws for making and maintaining roads and bridges, establishing schools, and levying local tolls and rates. The necessity for a more comprehensive scheme of local government soon became apparent, owing to the increase of settlement on the land which followed the excitement of the gold rush, and in 1852 two committees of the Legislative Council were appointed, one to enquire into the operations of district councils which had been established, the other to report generally upon the condition of the roads and bridges in the State, and as to how the funds for their construction and maintenance could be best expended. The report of the latter committee was of considerable value, because it formed the basis of the first Victorian Act which provided a scheme for the local government of country districts, namely the Roads Act of 1853. Under this Act a distinction was made between main roads and parish or cross roads. The Governor was authorised to declare any part of the colony to be a road district ; main roads were placed under the care of a central Road Board with an Inspector-General and staff, while parish roads were to be made and maintained by the district councils, who were empowered to levy rates for the purpose.

(ii.) *Establishment of Shires and Extinction of Road Districts.* The Act of 1853 continued in force for ten years, when it was repealed, and its provisions amended and

consolidated in the Road Districts and Shires Act 1863. By this Act the central Road Board was abolished, and the establishment of shires and shire councils was authorised. Any district having an area of not less than 100 square miles and a revenue from general rates of not less than £1000 might be incorporated as a shire, the duties and powers of which were the same as those of the districts, but additional privileges, such as power to raise loans and to grant licenses, were conferred upon the shires. Provision was also made for the regulation of the proceedings of shire councils, the preparation of voters' lists, elections, accounts, revenue, rates, auditors, and other matters, and these provisions have been substantially continued in later Acts. The result of the Act of 1863 was that the road districts were gradually developed into or were absorbed by the shires, and the next important measure which was passed, the Shires Statute Act of 1869, recognised only the latter, and with respect to shires retained the principal features of the preceding Act.

(iii.) *Constitution of Urban Municipal Districts and Boroughs.* In the meantime suburban districts and country towns were growing up, and in the year 1854 an Act was passed for the establishment of municipal boroughs in Victoria. Provision was made whereby any district having an area of not more than nine square miles, no part of which was more than six miles from any other part, and having a population of not less than 300, might, on petition, be constituted a municipal district. This Act, which thus originated those municipalities now known as boroughs (including cities and towns), was amended and repealed by the Municipal Institutions Consolidating and Amendment Act 1863, which re-enacted the principal features of the previous Act. These features are practically the same as those which now prevail with regard to boroughs. The Act of 1863 was in turn amended from time to time, and the law relating to boroughs was consolidated in 1869 by the Boroughs Statute Act.

(iv.) *Legislation applying to all Types of Municipalities.* Both the Shires Statute Act and the Boroughs Statute Act of 1869 were repealed and their provisions amended and consolidated by the Local Government Act 1874, which, after further improvements and extensions, was in turn consolidated by the Local Government Act 1890, which was itself amended from time to time. In 1899 a select committee of the Legislative Assembly was appointed to enquire into and to report upon the working of the Act of 1890 and to suggest amendments required in the law relating to local government. This committee was subsequently constituted a Royal Commission, and in 1902 issued a report to which was appended the draft bill which became the Local Government Act 1903, the provisions of which now regulate the working of municipalities in the State.



2. **Local Government Systems now in Operation.**—Local government is now administered under the Act of 1903 throughout the whole of the State, with the exception of about 6000 square miles in the mountainous parts of the county of Wonnangatta, and the whole of French Island.

(i.) *Constitution of Municipalities.* Provision is made for the continuation of municipalities established under previous Acts and for the constitution of new ones.

(*a*) *Shires.* Any part of the State containing ratable property yielding, upon a rate not exceeding one shilling in the pound, a sum of £1500 may be constituted a shire upon petition of at least fifty inhabitants.

(*b*) *Boroughs.* Any part of the State, not exceeding in area nine square miles, and having no point distant more than six miles from any other point, and containing a population of not less than 500 and ratable property yielding, upon a rate not exceeding one shilling in the pound, a sum of £300, may be constituted a borough upon petition of at least 250 resident householders. Any borough having during the preceding financial year a revenue of £10,000 may be declared a town, or having a revenue of £20,000 may be declared a city upon petition under the common seal of such borough. Provision is

GRAPHS SHEWING CONSUMPTION OF WATER IN METROPOLITAN AREAS.—
MELBOURNE, SYDNEY, AND PERTH, 1897 TO 1908, AND BRISBANE, 1905 TO 1907.

EXPLANATION OF GRAPHS.—No. 1.—Total annual consumption of water in metropolitan area, 1897 to periods shewn on graph. In the Adelaide water districts there are no governing meters; the quantities shewn are as recorded by gaugings taken at the reservoirs and include evaporation and absorption. The base of each small rectangle represents an interval of one year, and the vertical height represents 400,000,000 gallons.

No. 2.—Average daily consumption of water in metropolitan area during each month of the year. (Mean of period 1897 to 1908.) The base of each small rectangle represents an interval of one month, and the vertical height represents 2,000,000 gallons.

No. 3.—Average daily consumption of water per head of population in metropolitan area, 1897 to 1908. The base of each small rectangle represents an interval of one year, and the vertical height represents 4 gallons.

No. 4.—Average daily consumption of water per head of population in metropolitan area during each month of the year. (Mean of period 1897 to 1908.) The base of each small rectangle represents an interval of one month, and the vertical height represents 4 gallons.

MAP SHEWING THE POSITION AND EXTENT OF THE "AUSTRALIAN ARTESIAN BASINS."

The area occupied by these basins is approximately 775,000 square miles, of which 376,000 square miles are in Queensland, 139,000 square miles in South Australia, 152,000 square miles in New South Wales, 33,000 square miles in Victoria, and 75,000 square miles in Western Australia.

also made for severing any part of a municipality and annexing the same to an adjoining municipality: for dividing municipalities into any number of subdivisions not exceeding eight; and for uniting two or more boroughs which form one continuous area so as to form one borough.

(c) *Townships.* Upon petition signed by not less than twenty-five ratepayers resident in any portion not exceeding three square miles in extent of any shire and distant more than ten miles from the boundaries of the city of Melbourne, the Governor may, with the consent of the municipal council, proclaim such portion a township.

(ii.) *The Municipal Council.* It is provided by the Act of 1903 that, in the case of existing municipalities, the council shall consist of the number of members assigned to it at the commencement of the Act, but, when the number of members is determined under the Act, such number shall be, in case the district is not subdivided, some multiple of three, not less than six nor more than twenty-four, and, in case such district is subdivided, the number produced by the return of three councillors for every subdivision. Every person liable to be rated in respect of property in the municipal district of the ratable value of £20 at the least is qualified to hold the office of councillor in any municipality, provided that no female, nor any undischarged bankrupt, nor a person attainted of treason or convicted of felony shall be so qualified. Other persons may also be disqualified on the ground of interest. Provision is made for the retirement of one-third of the councillors annually in rotation, and for the election and privileges of the chairman, who is styled the mayor of a borough and the president of a shire.

(iii.) *The Municipal Electorate.* Every person who on the 10th June in any year has attained the age of twenty-one years, and is liable to be rated in respect of property within a municipal district, in respect of which all rates made before the 10th March of the year have been paid, is entitled to be enrolled as a voter, but no person may be enrolled in respect of property rated under £5 a year, unless there is a house on the property, and he resides there. The occupier and the owner of any ratable property may not be both enrolled in respect thereof, the former having the right to be enrolled instead of the latter. Corporations liable to be rated may appoint not more than three persons to be enrolled in their place. Joint occupiers and owners, not exceeding three, are each entitled to be enrolled, and in case more than three persons are rated in respect of any property, those whose names stand first in order upon the rate last made or upon the last valuation and return are so entitled. All persons who are not entitled to be enrolled by reason solely of non-payment of rates may be placed on a separate voters' list, and for the purpose of enabling them to vote at elections of members for the State Parliament they may be included in the rolls of ratepaying electors therefor if duly qualified in other respects. Plurality of votes is allowed on the scale shewn in the following statement:—

VICTORIA.—PROPERTY QUALIFICATIONS FOR ENROLMENT AS MUNICIPAL VOTER.

Number of Votes.	Annual Ratable Value of Property.	
	Boroughs (including Cities and Towns).	Shires.
1	Under £50.	Under £25.
2	From £50 to £100.	From £25 to £75.
3	£100 and upwards.	£75 and upwards.

Voters' lists are prepared annually by collectors appointed for the purpose; provision is made for the revision of the lists, for the time and place of holding elections, for the

nomination of candidates, for the application of the Voting by Post Act 1900; for the appointment of officers, and for the meetings and proceedings of councils.

(iv.) *Powers and Functions of Councils.* Municipal councils are empowered to make by-laws for a great number and variety of purposes, of which the most important are as follow:—The control and regulation of roads and streets, buildings, wharves, and public places, of nuisances, passenger vehicles, carters, boatmen, and porters; the regulation and maintenance of water supply, sewerage, drainage, and lighting; the establishment and control of fairs and public sales, labour marts and offices; the preservation and management of commons and public reserves, the regulation of traffic and hoardings; the public health and the prevention of contagious or infectious diseases, and generally for maintaining the good rule and government of the municipality. Councils are authorised to undertake the supply of light, heat, or motive power for public or private purposes; they may construct and maintain tanks, dams, and reservoirs, and may provide public baths, markets, weighbridges, pounds, abbatoirs, places of public recreation, and charitable institutions. One of the principal functions of the councils is to construct and maintain public highways, streets, bridges, ferries, and jetties within their respective localities. At the request of the council the provisions of the Act as to the maximum weight which it is permissible to carry on vehicles on any public road within the municipality, may be made to apply by proclamation.

(v.) *Ratable Property.* All land, including buildings and improvements thereon, within a municipality is ratable property, except the following:—Crown lands unoccupied or used for public purposes; land used exclusively for commons, mines, public worship, mechanics' institutes, public libraries, cemeteries, free primary schools, and charitable purposes; land vested in, in the occupation of, held in trust for, or under the control of any municipality, local governing body, or commissioners under the Rates Act; land vested in the Railway Commissioners, in the Minister of Public Instruction, in the Board of Land and Works, in the Commissioners of the Melbourne Harbour Trust, and in the Melbourne and Metropolitan Board of Works. The valuation of all property is computed at its net annual value, that is to say, at the rent at which the same might reasonably be expected to let from year to year, free of all usual tenants' rates, taxes, and cost of insurance, but no ratable property may be computed as of an annual value of less than 5 per cent. upon the fair capital value of the fee-simple thereof.

(vi.) *Rates.* The municipal councils are empowered to levy rates, which, together with grants and subsidies received from the Government, license fees, market dues, rents, tolls, and sanitary charges, form their chief sources of income. The rates which may be levied are of three kinds, namely—general, extra, and separate rates.

(*a*) *General Rates* are levied at least once in every year, and must not exceed two shillings and sixpence in the pound of the net annual value, nor be less than sixpence in the pound of such value. Every general rate must be made for one year or half a year, or such other period less than a year, but not less than three months, as the council thinks fit, and must be levied on the occupier of the property rated, or if there be no occupier, or if the occupier be the Crown or the Minister of Public Instruction, or a public or local body, then upon the owner of the property.

(*b*) *Extra Rates* may be levied in any municipal district which is subdivided equally in respect of all the ratable property within any one or more of the subdivisions, but cannot be levied except in accordance with the requisition of not less than two-thirds of the councillors returned by such sub-division. The amount of general and extra rates levied in any year must not exceed two shillings and sixpence in the pound of the net annual value.

(*c*) *Separate Rates* may be levied where it appears to the council that any works or undertakings authorised by the Act are for the special benefit of any particular portion of the municipal district, but may be made only upon petition signed by a majority of the occupiers and by at least one-third of the owners of the properties affected, and must be confirmed by order of the Governor-in-Council. Separate rates may be levied equally on all properties affected, or may be differential according to the benefits to be received by different properties, and the amount of the rate must be such as will, in the opinion of the council, suffice to provide for the payment of interest and periodical repayments of, or sinking fund for, the money borrowed on the security of such rate.

(vii.) *Borrowing Powers.* The council of every municipality may borrow money upon the credit of such municipality by the sale of debentures, either for the purpose of liquidating previous loans or for the purpose of constructing certain specified permanent works or undertakings, such as the construction, alteration, or enlargement of streets, roads, bridges, ferries, sewers, and drains; the construction and purchase of waterworks, electric light or gas works, abattoirs, markets, baths, pleasure grounds, libraries, museums, and places of public resort and recreation; the establishment of hospitals, asylums, and other buildings for charitable purposes; the destruction and disposal of refuse, and the purchase of land or any easement, term, right, or privilege in, over, or affecting land. The amount of money so borrowed at any time for permanent works must not exceed ten times the average income of the municipality for the three preceding years, and the amount borrowed in the case of any municipality already indebted must not exceed the difference obtained by subtracting from ten times such average income the balance remaining unpaid of any previous loans. The question as to whether any loan for the purpose of permanent works shall be incurred must be submitted to a poll of the ratepayers upon demand signed by any twenty persons whose names are inscribed on the municipal roll. The council of any municipality may, in addition to the borrowing powers mentioned above, borrow money for permanent works or undertakings on the security of its income, but not upon the credit of the municipality, by the issue of debentures or by a mortgage over such income. The amount of money so borrowed must not at any time exceed five times the average income of the municipality for the three preceding years. The income referred to does not include moneys derived from general, separate, or extra rates, special improvement charges, publicans' licenses, of endowment from the consolidated revenue fund. Temporary advances by way of overdraft of the current account may also be obtained, but must not at any time exceed one-half the prior year's revenue.

(viii.) *Endowment.* Under the Local Government Act 1874 an annual endowment of £310,000 was provided for the municipalities. This amount ceased to be payable in 1879, but a subsidy, amounting to £310,000, was voted by Parliament annually, and was increased year by year, until £450,000 was granted in 1889-90 and 1890-91. The Local Government Act 1891 authorised the payment of an annual endowment of £450,000, but this amount was reduced year by year to £50,000 in 1902, but was increased to £75,000 for the year 1906-7, and to £100,000 from the 1st July, 1907. For the purpose of distributing the endowment, the shires are classified. Under the Municipal Endowment and Reclassification of Shires Act 1907, a new classification was adopted under which the amount of the endowment is to be allocated. In addition to the endowment of £75,000 (increased to £100,000 from the 1st July, 1907) the municipalities received from the Government during the financial year 1909-10 a sum of £84,544 out of the Licensing Act Fund as the equivalent for (*a*) fees for licenses, (*b*) fees for the registration of brewers and spirit merchants, and (*c*) fines, penalties, and forfeitures incurred under the Licensing Act 1876. Under the Act of 1907 the endowment of £100,000 is payable in equal moieties in March and September of each year. No city or town is entitled to receive any part of the endowment. The distribution

amongst the boroughs and shires is based on the amount of general and extra rates received in the twelve months ending on the preceding 30th September according to the following scale :—

VICTORIA.—ENDOWMENT OF BOROUGHS AND SHIRES, 1909-10.

To every Borough or 1st Class Shire, 3s. in the £	To every 4th Class Shire, 8s. in the £
„ „ 2nd Class Shire 5s. „ „	„ 5th „ 10s. „ „
„ „ 3rd „ „ 6s. „ „	„ 6th „ 12s. „ „

For the three financial years commencing the 1st July, 1907, however, the amounts were definitely fixed by Act No. 2129.

3. Boroughs and Shires.—Number, Population, and Value of Ratable Property, 1901 to 1910.—The following table shews the number of cities, towns, boroughs, and shires, their estimated population, the number of ratepayers and dwellings, and the value of ratable property for the years 1901 to 1910 inclusive :—

* Census figures. † The shires of Caulfield and Malvern were constituted boroughs in 1901. ‡ The shires of Coburg and Camberwell were constituted boroughs, and North Melbourne and Flemington were joined to City of Melbourne in 1905.

4. Municipal Assets and Liabilities, 1904 to 1909.—The assets of municipalities may be classified under three heads—(*a*) the municipal fund, (*b*) the loan fund, and (*c*) property ; the liabilities under two heads—(*a*) the municipal fund, and (*b*) the loan fund. The following table shews the amount of municipal assets and liabilities for each financial year from 1904 to 1909 inclusive :—

VICTORIA.—MUNICIPAL ASSETS AND LIABILITIES, 1904 to 1909.

Items.	1904.	1905.	1906.	1907.	1908.	1909.

6. **The Melbourne and Metropolitan Board of Works.**—This Board was established by an Act passed at the end of the year 1890, and entered upon its duties in June, 1891. The Board consists of forty members, one of whom is a chairman elected every four years by the other members, the retiring chairman being eligible for re-election. Nine members are elected by the Melbourne City Council, four by the South Melbourne Council, three by the Prahran, two each by the Fitzroy, Richmond, St. Kilda, and Collingwood, and one each by the other suburban municipal councils. The district over which the Board exercises control consists of eleven cities, twenty towns, and one borough, one shire, and parts of three others, comprising a total area of 90,821 acres, and containing an estimated population on the 31st December, 1909, of 553,880. The waterworks for the supply of Melbourne and suburbs were originally carried out by the Government, which had for that purpose contracted loans amounting to £2,389,934; these works were vested in the Board in 1891. The primary object of the creation of the Board was not, however, to take over these works, but was to supply the long called for and pressing want of a sewerage system for the metropolis. The plans and estimates of the cost of the metropolitan sewerage were originally prepared by an expert civil engineer from England, and were furnished to the Board on its creation. The plan recommended by the designer and selected by the Board's engineer-in-chief was estimated to cost £5,030,000, but this plan was modified by the engineer-in-chief, with the concurrence and assistance of the Board, so as to reduce the estimated cost to £3,451,000, and plans were made and the work carried out accordingly. The original plan and estimate contemplated only the construction of the main sewers, but this was altered by Parliament, which added the duty of constructing branch sewers and of treating right-of-ways as streets and sewering them likewise, an obligation which added considerably to the original estimate. To carry out its work the Board is authorised to borrow £8,750,000, exclusive of the loans contracted by the Government for the purpose of waterworks and taken over by the Board. The liability on Government loans on the 30th June, 1910, was £1,688,663, and for loans raised by the Board was £8,701,000. The Board is still empowered to borrow £750,271 before reaching the limit of its borrowing powers.

(i.) *Total Cost of Water Supply and Sewerage, 1853 to 1909-10.* The subjoined table shews the total expenditure on construction and maintenance of water supply and sewerage from 1853 to 1910. The figures given include proportion of salaries, law costs, advertising, travelling expenses, etc.

* Excess of stock distribution over purchases.

7. **Melbourne Metropolitan Water Supply.**—From the year 1835 to 1857 the inhabitants of Melbourne depended for their water supply entirely upon rainwater caught in tanks, or upon water carts filled from the River Yarra above the falls. In 1848 the city

council appointed a committee to enquire into and report generally upon the water supply and sewerage of the city. This committee recommended that a comprehensive system of sewerage should be carried out, and a rate levied for that purpose; the stringent enforcement of provisions as to slaughtering stock and as to the removal of refuse; that the space between Melbourne and the beach be cleared so as to allow the free access of pure sea air; that a Building Act should be passed and that the streets should henceforth be formed of a uniform width. Most of these recommendations were carried out. A Building Act was passed in 1849, and the filthy lanes in the city were remade and drained. In 1845 the first proposal was made to supply the city with water, by means of a water-wheel to be worked by the Yarra Falls. Five years later a small steam engine was erected to pump water into a tank situated in Flinders Street, from which water was drawn by carts, and in 1851 an elaborate report was issued by the city surveyor, recommending a plan for the city water supply which was soon afterwards adopted. The source from which it was proposed to conserve the water for the supply of Melbourne consisted of several creeks and springs which flow from Mount Disappointment, about thirty-two miles north of the metropolis, and which, when united, form the Plenty River; this scheme was adopted, and has resulted in the Yan Yean Reservoir scheme. In 1853 the duty of supplying water to the metropolis was transferred from the city council to the Commissioners of Sewers and Water Supply, and towards the end of the same year the work of construction of the Yan Yean system was commenced. On the 31st December, 1857, the first water was turned on by Major-General McArthur, acting for the Governor, Sir Henry Barkly, K.C.B.

(i.) *Development of System, 1857 to 1910.* The following statement shews the development which has taken place in the water supply system of Melbourne during the fifty-three years since its inception:—

MELBOURNE WATER SUPPLY SYSTEM, 1857 to 1910.

Year.	Served Population.	Capital Cost.	1000 Gallons, Charge per—	Rate in £	Mains & Pipes, Mileage of—	Supply in Gallons, Average daily.
		£				
1857	95,442	748,974	10/- and 6/-	1/-	104	3,250,000
1910	558,600	3,921,517	1/-	7d.	1,335	34,508,414

(ii.) *Proposed Extensions.* The water supply committee of the Metropolitan Board of Works recently recommended the augmentation of the catchment area by permanently reserving two areas amounting in all to 140 square miles—the one comprising the Upper Yarra watershed, eighty-one square miles in area; the other comprising the O'Shanassy River district, fifty-nine square miles in extent. A second service reservoir—having a capacity of 25,000,000 gallons—was constructed at Preston, costing £52,097 to 30th June, 1910 (this also includes cost of scour main).

(iii.) *Description of Water Supply Systems.* The water supply of Melbourne consists of two main systems—the Yan Yean and the Maroondah.

(a) *The Yan Yean System* is the main source of supply. It commences by collecting the water from the Silvery and Wallaby Creek valleys, to the north of Mount Disappointment 2700 feet high, which forms one of the prominent heights of the main Dividing Range in Victoria. The waters of the Silvery Creek are brought by means of an aqueduct a little over eight miles long, constructed at a cost of £59,603, to a weir at the head of the Wallaby Creek aqueduct which carries the combined waters of the two creeks for a distance of five and a quarter miles, and discharges over the crest of the Dividing Range at a height of 1694 feet above sea level, and then

drops a height of 133 feet in 683 feet into Jack's Creek, one of the branches of the Plenty River. The Wallaby Creek aqueduct was constructed at a cost of £69,712. Its carrying capacity is 33,000,000 gallons a day, while the average daily flow of the combined Silvery and Wallaby Creeks is 12,000,000 gallons. From its drop into Jack's Creek the water follows the natural bed of the stream for about three miles to the Tourourrong reservoir, which is a small reservoir of about thirty-six acres in extent, and having a capacity of 60,000,000 gallons. From Tourourrong the Clear Water Channel carries the water for a distance of four and three-quarter miles to the old Plenty inlet channel of the Yan Yean reservoir. This channel is 13 feet 6 inches wide and 4 feet 6 inches deep, the section being a quadrant of a circle of 4 feet 9 inches radius, with one to one side slopes. The fall of this channel is 7 feet 6 inches to the mile, with a carrying capacity of 12,000,000 gallons per day. The cost of the Tourourrong reservoir and this channel was £77,952. In it there are waterfalls, the highest of which is 17 feet. The water from the old Plenty channel enters the Yan Yean reservoir through a spur, forming its western bank, by means of a tunnel 1000 feet long. The Yan Yean reservoir, which is twenty-two miles from the city, is formed by the construction of an earthen bank 49 chains long, 30 feet high, 20 feet wide on top, with a slope next the water of three to one, and an outside slope of two to one. The bywash is 5 feet below the top of the embankment, at a level of 602 feet above low-water mark in Hobson's Bay. The reservoir, when full, covers an area of 1560 acres, with a maximum depth of 26 feet, and an average depth of 18 feet. Its total capacity is 6,400,000,000 gallons, of which 5,400,000,000 gallons are available for consumption. From the Yan Yean reservoir to the Pipe Head dam at Morang, a distance of seven miles, an open aqueduct capable of delivering 33,000,000 gallons a day has been constructed. From the Morang reservoir, the bywash of which is 485 feet above sea level, a 30-inch cast-iron main, 27-inch cast-iron and a 30-inch wrought-iron main carry the water a distance of seven miles to the storage reservoir within the metropolitan area, at Preston. The No. 1 Preston reservoir is constructed partly in excavation and partly in bank; it is 20 feet deep, and holds 16,000,000 gallons. The bywash is 328 feet above the sea level, and the cost to 30th June, 1910, including scour main was £23,239. A second reservoir of 25,000,000 gallons capacity was built during 1908-9, the walls being of reinforced concrete with earth backing. These are the main distributing reservoirs of the central city supply.

(*b*) *Maroondah System.* The water for this system is obtained from the Maroondah River, a tributary of the Yarra. The waters of the Graceburn are picked up by a small weir 686 feet above sea level, and carried for a distance of three-quarters of a mile in a concrete-lined channel to a well near the main road leading from Healesville to Marysville. From this well an 18-inch wrought-iron pipe, one and a quarter miles long, leads the water to the main Maroondah aqueduct. The completed Maroondah scheme involves a storage reservoir with a dam 105 feet high, calculated to store 2,000,000,000 gallons of water. This dam has not yet been constructed, as the natural flow of the creeks, together with the storage in Yan Yean reservoir, has proved quite capable of providing all the water at present required for the metropolis. The creeks contributing to the flow in the Maroondah aqueduct, in addition to the Graceburn, are the Coranderrk, Donnelly's and Sawpit Creeks. In each case the water is conveyed by pipes into the main aqueduct from diversion weirs on the creeks. A temporary weir of Portland cement concrete has been constructed across the Maroondah River, from which point the water is led in an aqueduct forty-one miles long to the Preston reservoir, where it joins the water from the Yan

Yean system. The channel, owing to recent improvements, is now capable of delivering 30,000,000 gallons daily, the cross section being a quadrant of three feet ten inches radius with one to one slopes and a fall of one foot to the mile. The valleys are crossed by wrought-iron syphons, and with the exception of the Plenty River, which is crossed on a wrought-iron girder bridge, all the syphons are laid under the beds of streams. Each syphon is provided with a scour pipe large enough to take the full flow of the aqueduct, enabling the water to be directed down any of the natural watercourses when it becomes necessary to empty any length of the aqueduct for cleansing purposes. The total cost of the Maroondah system to 30th June, 1910, was £770,312.

(c) *High Level System.* Besides the Yan Yean and Maroondah systems, the high levels of the eastern suburbs of Melbourne are provided for by a direct main from the Yan Yean reservoir. This main is thirty-two inches in diameter, constructed of wrought-iron plates from $\frac{1}{4}$ inch to $\frac{7}{16}$ inch thick, 20$\frac{1}{2}$ miles long, and cost to the 30th June, 1910, £199,147. The discharge is about 9,000,000 gallons per day. There is a storage reservoir of 9,000,000 gallons capacity at Surrey Hills, the by-wash of which is 430 feet above sea-level.

(d) *O'Shanassy Supply.* During 1908, after a period of extended drought, it became evident that to provide for the growing needs of the metropolis, additional water supply resources must be acquired and, after a lengthy investigation it has been found that the most efficient and economical results will be obtained by introducing a third system of supply from the O'Shanassy River, a tributary of the Yarra above Warburton. This project involves the construction of an open aqueduct and pipe line of an aggregate length of about 48$\frac{1}{2}$ miles, delivering water to the Eastern Metropolis by way of Mitcham. The watershed of the O'Shanassy River has been excised from the permanent forests area and vested by the Governor-in-Council in the Melbourne and Metropolitan Board of Works. The Board is now seeking to acquire the lands necessary for the construction of these works, and authority for the necessary expenditure has been granted by Parliament. Surveys, designs and contracts are in course of preparation for these works.

(iv.) *Catchment Areas, Reservoirs, and Aqueducts.* (a) *Drainage Areas.* The whole of the catchment areas are absolutely free from population or cultivation. The Government pursued the policy of gradually purchasing all private rights over the various watersheds, which policy the Board has carried on and completed; the original owners have been bought out, while the township of Fernshaw, in the Maroondah system, was entirely purchased and obliterated. The present drainage areas from which the water is delivered cover the following areas:—

MELBOURNE WATER SUPPLY.—CATCHMENT AREA, 1910.

	Silver and Wallaby Creeks.	Plenty River and Jack's Ck.	Yan Yean Reservoir Catchment.	Maroondah Catchment.	Total.
Area in acres	12,000	12,000	5,000	40,000	69,000

All the water is delivered by gravitation, no pumping being required in any portion of the area supplied.

(b) *Storage Reservoirs.* In connection with distribution there are eight service reservoirs having a total capacity of 73,000,000 gallons. From the Preston reservoirs, which form the main distributing point, a number of service mains lead into the reticulation system of the metropolis. The total daily quantity of water which can be sent into Melbourne is as follows:—

MELBOURNE WATER SUPPLY.—MAXIMUM DAILY SUPPLY WHICH CAN BE DELIVERED.

System.	Yan Yean.	Maroondah.	High Level Main.	Total Supply.
Gallons per day ...	33,000,000	30,000,000	9,000,000	72,000,000

(c) *Aqueducts.* Up to the 30th June, 1910, 191 miles 9½ chains of 12 inch to 54 inch mains and 1062 miles 79¼ chains of reticulation mains, below 12 inch, had been laid, in addition to which there were 80 miles 72¾ chains of aqueducts and syphons, or a total length of aqueducts, mains, and reticulation pipes of 1335 miles 1½ chains.

(v.) *Quantity of Water, Number of Houses, and Population Supplied, 1901 to 1910.* The following table gives various particulars shewing the increase in the supply of water in Melbourne and suburbs from 1901 to 1910 inclusive:—

MELBOURNE WATERWORKS.—NUMBER OF HOUSES, POPULATION, AND WATER SUPPLIED, 1901 to 1910.

Year Ended 30th June.	Number of Houses Supplied.	Estimated Population Supplied.	Average Daily Supply.	Total Supply for the Year ended 30th June.	Average Daily Supply.		Rate Levied.	Assessments of Tenements Served by Metropolitan Water Supply.

1. Works commenced in 1853. 2. Revenue commences in 1854. 3. Returns for expenditure commence in 1859. 4. First interest paid in 1856.

8. **Melbourne Sewerage.**—As stated above, the chief object of the creation of the Melbourne and Metropolitan Board was to carry out an efficient system of sewerage. Old Melbourne used to be a city of cesspits, and it was not until the latter sixties that these were abolished, filled up, and the movable pan system gradually adopted throughout the whole metropolitan area with night removal. The cost of removal in 1894 was about £90,000, equal to a capital expenditure of £1,750,000. This objectionable system has been displaced by the water carriage system throughout a large portion of the metropolis, and in other parts the work of reticulation is now proceeding. A considerable part of central Melbourne is below the 10 foot contour and was originally full of swamps, which were sources of danger to the public health. All these swamps have now been filled up, and the abolition of the accumulations of stagnant water has effected a very great improvement in the health of the city and suburbs. The sewerage system is designed to carry off all water used in water closets, lavatories, baths, and urinals, together with all chamber slops and water used in cooking, washing clothes and floors, and from sinks in kitchens and sculleries, drainage from stables and cow houses, together with all liquid refuse, which in the opinion of the Board will not prejudicially affect the sewers, the machinery, or the sewage farm. Rainfall from the streets flows into the river and is not taken into the sewers, which are designed to provide for 30 cubic feet per head per day from the assumed future population, calculated on the basis of a population of 1,000,000 people ultimately settled on the areas now capable of being connected with the pumping station.

(i.) *Description of Sewerage Systems.* The whole of the sewage of the metropolis is being gradually collected by means of two principal main sewers and a subsidiary main leading to the pumping station at Spotswood.

The two main sewers are (*a*) *North Yarra System.*—The North Yarra sewer, which commences with Heidelberg (part of) and thence takes up East Kew, Preston, Coburg, Northcote, Brunswick, the Clifton Hill part of Collingwood, also Fitzroy and the North Carlton, North Melbourne, and Flemington and Kensington parts of Melbourne, together with Essendon and Footscray. (*b*) *South Yarra System.*—The Hobson's Bay main which starts with Moorabbin (part of), picking up Brighton, Caulfield, Malvern, St. Kilda, Camberwell, a small part of Nunawading, besides the remaining part of Kew, also Hawthorn, Prahran, South Melbourne, Port Melbourne, Richmond, the remaining part of Collingwood, also East Melbourne and other remaining parts of Melbourne. (*c*) The Subsidiary main, which takes in Williamstown and joins the Hobson's Bay main before it enters the pumping station.

On the 30th June, 1910, the sewerage system, including mains, branches, reticulation, and drains, had been practically completed in the following districts, viz.:—Port Melbourne, South Melbourne, Melbourne (except very small portions in Flemington and Kensington), Richmond, Prahran, and Collingwood, and very nearly the whole of Fitzroy and St. Kilda. Reticulation extensions had also been laid from time to time in various portions of above districts. A large portion of Brighton, Caulfield, Malvern, Camberwell, Kew, Hawthorn, Brunswick, Northcote, Essendon, Footscray and Williamstown had likewise been dealt with, also a portion of Moorabbin. During the past twelve months good progress has been made in the work at Essendon, Brunswick, and Moorabbin (part of), also to a less extent in Flemington and Kensington (Melbourne), Fitzroy, Camberwell, Malvern, and Brighton. Work is now proceeding rapidly in Moorabbin (part of), Brighton, the small part of Nunawading, also in Camberwell, Brunswick, Northcote, Fitzroy, and Williamstown.

The whole of the sewerage work still remains to be done in Heidelberg (part of), Coburg, and Preston, also a considerable portion in Williamstown, Footscray, Essendon, Northcote, Brunswick, Kew, Camberwell, Caulfield, and Moorabbin (part of). Besides the foregoing, about half of the Malvern district, with smaller portions in Brighton and Hawthorn, and very small portions in Flemington and Kensington (Melbourne), Fitzroy St. Kilda, and Nunawading (part of), yet require completion.

In all, 114¼ miles of main and branch sewers and 1091⅛ miles of reticulation sewers have been completed. There were also 1628⅛ miles of house connections drains laid (7½ miles of cast iron and 1620⅝ miles of vitrified stoneware pipes), under the supervision of the Board, or a total altogether of 2833½ miles of mains, branches, reticulation sewers and house connections drains connected with the Spotswood Pumping Station.

The whole system was so far advanced on the 30th June, 1910, that on that date the sewage from 112,809 tenements could be collected. Of these, 105,993 tenements were connected, together with 41 public conveniences and 62 public urinals, 120,171 water closets, 85,383 baths, 64,577 sinks, 57,397 sets of wash troughs, 27,759 lavatories, 11,908 stables, 7290 urinals, 4463 polluted areas and paved yards, 1726 cellars, 921 slop hoppers, 263 latrines, and 233 dairies.

When collected at Spotswood the sewage is raised 125 feet to the head of the outfall sewer, through 2¾ miles of 6-feet and 4-feet wrought-iron rising mains, from whence it gravitates to the farm in a partly-open and partly-closed channel 15⅜ miles long, eleven feet in diameter, and having a grade of two feet to the mile.

(ii.) *Metropolitan Sewage Farm.* The farm contains 8847 acres, situated on the western side of the Werribee River. The price paid for the land was £17 10s. per acre. About £297,000 has been spent on the property in perfecting the arrangements for the distribution of sewage. The cost of the farm to the 30th June, 1910, was £452,678. About 26,607,927 gallons of sewage have to be disposed of every twenty-four hours in irrigating the fields. It is spread over properly-prepared blocks of land by a series of mains and lateral carriers. The effluent, after filtering through the land, is discharged into Port Phillip Bay in a clear and transparent condition, all the sewage held in suspension being left in the soil. The main supply channels for carrying the sewage on to the fields are about ten chains apart, and a good system of open drains to carry off the surplus water is provided. Many of these drainage channels are ten feet to twelve feet wide at the top and seven feet deep, and through them the water drained off from the subsoil is constantly flowing to the bay. The prepared blocks on the farm are laid down with prairie grass and lucerne, on which sheep are depastured. During the financial year 1909-10, 22,893 sheep were bought, at a cost of £11,992, other expenses amounting to £4294. During the same period the total receipts from the sale of wool, skins, and 32,128 sheep amounted to £31,289. The profit on sheep for the year amounted to £8446.

(iii.) *House Connections.* The work of house connections with the sewerage system is carried out under a carefully prepared by-law. Under the Amending Act of 1897, after a property has been declared to be a sewered property, the owner has several options. (*a*) He may submit a plan of his house connections for approval, and on approval being given, may agree to carry out the work within one month. (*b*) He may submit a plan, which, if approved of, he may ask for an estimate of the cost of carrying out. This the Board is bound to supply, and then the owner may either carry out the work himself or ask the Board to carry out the work, which it must do for the estimated price, whether the work costs less or more. (*c*) On default of the owner the Board may carry out the work, and at the request of the owner accept payment by forty quarterly instalments, bearing interest on such portion as from time to time remains unpaid at the rate of 5 per cent.

(iv.) *Number of Houses Connected, Capital Cost, Revenue and Expenditure, 1901 to 1910.* The following table gives particulars as to the number of houses connected to the sewerage system, the total capital cost, and the receipts and disbursements during each year from 1901 to 1910 inclusive:—

MELBOURNE SEWERAGE WORKS.—TENEMENTS CONNECTED, CAPITAL COST, RECEIPTS AND DISBURSEMENTS, 1901 to 1910.

* Excluding revenue from sale of sheep and from interest.

9. **Water Supply in Country Towns.**—By the Water Act 1905, which came into operation on the 1st May, 1906, the control and management of all Irrigation Trusts, with one exception, and of a number of waterworks and water supply districts were centralised, and their works and property vested in the State Rivers and Water Supply Commission, to whom many of the duties of the Water Supply Department were also handed over. Further information with regard to this Commission and to the works and districts under its control are given in the section in this book dealing with Irrigation and Water Supply. There are, however, in different parts of Victoria a number of other waterworks which are concerned chiefly with domestic supply, and which are controlled by local authorities, *i.e.*, by Waterworks Trusts or by municipal corporations. These works are constructed out of moneys either granted or lent by the general Government. The following table gives particulars as to the waterworks under the control of Trusts and municipal corporations for each year from 1904 to 1909 inclusive :—

VICTORIA.—COUNTRY WATERWORKS UNDER TRUSTS AND MUNICIPAL CORPORATIONS, 1904 to 1909.

Year	Waterworks Trusts.						Municipal Corporations.*

* Particulars as to the receipts and expenditure in respect of waterworks under the control of municipal corporations are not available. † Returns not available.

Under the provisions of the Local Government Act 1903 municipal councils are authorised to construct and maintain tanks, dams, and reservoirs, and must maintain existing works for the gratuitous supply of water. They are also empowered to accept the management and control of new waterworks within their respective localities, and

may, with the consent of the Governor, construct or purchase new works within or without their locality. Councils are also authorised to enter into contracts for the supply of water for any period not exceeding ten years with the owners of any waterworks. Every municipality may levy a special water rate for water supplied, or for the purpose of constructing waterworks or paying the interest on any loan contracted by the council for such purpose, but the amount of the rate must not exceed in any year the sum of two shillings in the pound, provided that a minimum sum of ten shillings may be fixed by the council to be paid in respect of any property at which water is supplied.

(i.) *Geelong Waterworks Trust.* The Geelong Municipal Waterworks Act 1907 provided for the constitution of a Municipal Waterworks Trust for the supply of water to Geelong and district. In January, 1908, the works were transferred to the Trust from the control of the State Rivers and Water Supply Commission, the amount paid by the Trust to the State being £265,000, which was raised by loan. The capital cost of the works at the date of transfer was £442,322. The available storage capacity of the reservoir is 642,207,000 gallons. The Trust is authorised to supply water to (*a*) the town of Geelong, (*b*) the suburbs thereof, including all places within five miles of the Geelong Post Office, and (*c*) any place within ten miles on either side of the main pipe from Stoney Creek to Geelong.

10. **Fire Brigades.**—Under the Fire Brigades Act of 1890 a metropolitan fire district and nine country fire districts were established, the former being placed under the control of a Metropolitan Fire Brigades Board, and the latter under the control of a Country Fire Brigades Board.

(i.) *Metropolitan Fire Brigades Board.* The metropolitan fire district originally comprised the area included in the several municipalities within a radius of ten miles from the Melbourne General Post Office, but this area has since been extended in certain directions so as to include the greater part of the Shire of Moorabbin and also the township of Mordialloc. The Board is composed of nine members, of whom three are appointed by the Governor-in-Council, three by the municipal councils, and three by the insurance companies. On the 31st December, 1909, the Board had under its control 50 stations, 200 permanent men, 160 auxiliary firemen, 10 steam fire engines, 4 gasolene engines, 2 chemical engines (1 motor), 2 petrol motor fire engines, 101,043 feet of hose, and 172 fire-alarm circuits having 507 street fire-alarms, of which 406 contained telephones. The total length of wire in use outside stations for fire alarms and telephones is about 342 miles.

(ii.) *The Country Fire Brigades Board.* This Board consists of nine members, of whom three are appointed by the Governor-in-Council, two are elected by the municipal councils of the districts where there are brigades registered under the Board, two by the fire insurance companies, and two by the registered fire brigades. At the end of the year 1910 there were eighty-nine municipal councils and fifty-five insurance companies included in the operations of the Act. All the brigades are volunteer brigades, but in the large towns permanent station-keepers and watchmen are employed. There were 101 registered brigades and 2041 registered firemen at the end of the year 1909; seven more brigades were about to be registered. At the same date the plant consisted chiefly of 5 steam engines, 62 manual engines, 10 horse brakes, 61 apparatus carriages, 3 fire escapes, and about 145,000 feet of canvas hose.

(iii.) *Financial Operations of both Boards.* The following table gives particulars as to the financial operations of both Boards during each year from 1904 to 1909 inclusive:—

VICTORIA.—REVENUE AND EXPENDITURE OF METROPOLITAN AND COUNTRY FIRE BRIGADES BOARDS, 1904 to 1909.

11. **The Melbourne Harbour Trust.**—This Trust was constituted under an Act passed in 1876, as a result of public agitation and demands extending over a period of thirty-four years, to the effect that the cost of landing goods should be reduced, and the delays in receiving goods should be abolished. Both demands arose from the fact that vessels of a draught greater than twelve feet had to discharge in the bay into lighters.

(i.) *Constitution of the Trust.* The Harbour Trust Act was drafted on the lines of similar institutions in Great Britain, such as the Thames Conservancy, the Mersey Harbour Board and the Clyde Trust. Under the Act of 1876, as amended in 1883, the number of Commissioners is fixed at seventeen, nominated or elected as follows:—Five were nominated by the Governor-in-Council, three elected by merchants, three by shipowners, two were elected by the City Council, and one each by the ratepayers of South Melbourne, Port Melbourne, Williamstown, and Footscray. The sum of £1700 per annum was set aside for the remuneration of the Commissioners.

(ii.) *Works Undertaken by Trust in the River and in the Port.* In 1879 a report dealing with various propositions for the improvement of the port and harbour was issued by Sir John Coode, an English engineer, who had been engaged by the Commissioners for the purpose. This report which recommended (i.) the cutting of a new channel through the flats to the south of Fishermen's Bend, (ii.) the construction of a dock, and (iii.) the widening and deepening of the channel in the river, was adopted by the Commissioners, who were empowered in 1883 to borrow the amount of £1,000,000 for the purpose of carrying out the necessary works. In 1890 a Consolidating Act was passed, and the borrowing powers of the Trust were increased to £2,000,000. The river was widened from Queen's Bridge to the bay to about 300 feet, while the depth has

been gradually increased until at the present time it is twenty-six feet at low water. Three and a-half miles of wharfs have been constructed in the river at Melbourne.

(*a*) *The Coode Canal.* In 1886 the canal across the flats below Fishermen's Bend was completed at a cost of £96,000. The length of the canal is 2602 yards, the distance from Queen's Bridge to the river entrance being thereby reduced from seven miles to five and three quarter miles, and the navigation being greatly facilitated. At the present time this channel, which is called the Coode Canal is being widened 100 feet, which will make its total width 408 feet, and its width at low water 366 feet. The work of widening the canal is still in progress.

(*b*) *The Victoria Dock.* This dock, four miles up the river and opened in 1892, has an area of ninety-six acres and a depth of twenty-six feet at low water. The entrance to the dock is 160 feet wide. There are 8800 feet of wharfage, and the total cost, including wharves, sheds, and approaches thereto, was £416,038. The sheds have a total length of 12,000 feet, and cover an area of 568,070 square feet.

(iii.) *Works in the Bay.* Prior to 1889 all the mail steamers and vessels of heavy draught had to lie at anchor in the bay, and there discharge into lighters. One of the first works undertaken by the Commissioners was to make the railway piers at Williamstown available to these vessels. This work was completed at a cost of £256,160. In 1893 a channel over 8000 feet long and 600 feet wide was constructed, running in a southerly direction from Port Melbourne Railway Pier and having a navigable depth of twenty-eight feet. The cost of this work was £218,379.

(iv.) *Dredging.* The total quantity of material raised by the dredging and excavation done in the improvement of the river and bay amounts to about 39 million cubic yards. During the eleven years ending 31st December, 1910, the average cost of dredging per cubic yard was 2.57 pence and the cost of towing and depositing 3.55 pence, not allowing for depreciation of plant. The Trust has expended £224,970 in reclaiming land within its jurisdiction. The amount of material raised annually is now about 1,200,000 cubic yards.

(v.) *Financial Operations.* The revenue of the Trust is obtained from wharfages, and quayage rates, rents and license fees from lands and ferries, and other license fees. One-fifth of the revenue of the Trust is paid to the consolidated revenue of Victoria. The following table gives particulars of the revenue and expenditure of the Trust from 1905 to 1910 inclusive:—

§ 4. Queensland.

1. **Development of Local Government Systems.**—The first step in the direction of local government in Queensland was the incorporation of Brisbane as a municipality by proclamation on the 6th September, 1859, about three months prior to the separation of that State from New South Wales. The provisions of the Municipalities Act, which was passed in the mother colony in 1858, and which has already been referred to, applied to settlement in the Moreton Bay district, and were amended by an Act of the Queensland Government in 1861. Three years later the provisions of these two Acts were amended and consolidated, and authority was given for the incorporation as a municipality of any city or town, or of any rural district, on petition to the Governor signed by at least 100 resident householders. The duties and powers of the councils were extended and additional privileges were conferred under this Act.

(i.) *Inauguration of General System of Local Government.* Various amendments were made in the law from time to time, without, however, altering the main features of the Act of 1864, until the year 1878, when the Local Government Act was passed, amplifying the powers of municipalities, and providing for the incorporation of rural areas as shires. The provisions of this Act, which was adopted from the then new Local Government Act of Victoria, were found to be unsuited to the requirements of a large and sparsely populated country like Queensland, and were not applied to any new area. The Act was therefore only of practical value to a few of the existing municipalities. In 1879 the Divisional Boards Act was passed. This Act was intended to provide for local government outside the boundaries of municipalities, and was applied simultaneously by the Executive to about 660,000 square miles of territory, which was divided, by proclamation, into seventy-two divisions, some of them of immense area and carrying only a very small population. The Act provided for a free grant to any division equal to one shilling in the pound of the annual value, and also for endowment to the amount of £2 for every £1 of rates collected for a period of five years. In case of the failure of the people of any division to elect the first members of their Board, the appointments were made by the

Governor-in-Council. On the 30th April, 1880, a Gazette was issued first announcing the names of the elected Boards, and then appointing the members of the nominated Boards.

In 1881 and 1887 the Divisional Boards Act was amended, and by a further amending Act, passed in 1890, the rates thenceforward were to be charged on the unimproved capital value of the land, and this system has since been retained. In 1896 a commission was appointed to enquire into the working of the Local Government Acts and to recommend amendments which might be considered desirable; a report subsequently sent in by this commission recommended that increased powers of local government should be granted in certain matters, and to the report was appended a draft bill which, with certain alterations and curtailments, became the Local Authorities Act of 1902, the provisions of which, together with the amendments in 1903 and 1905, now regulate generally the working of local areas within the State.

(ii.) *The Local Authorities Act 1902 and 1910.* Considered generally, these Acts comprise the Local Government Act 1878, and amending Acts, together with the Divisional Boards Act of 1887, the Valuation and Rating Act of 1890, and the Local Authorities (Joint Action) Act of 1886. They do not, however, comprise all the statutes relating to the powers and duties of local authorities, for certain Acts, such as the Tramways Acts and the Health Acts, while conferring powers upon these bodies, deal also with other subjects, and are in the nature of general Acts upon these subjects. The Act of 1902 contains a number of provisions enlarging the powers of local bodies and rendering their duties more explicit; thus the jurisdiction of councils with respect to roads, bridges, wharves, ferries, and reserves is amplified, and provision is inserted for putting under their control, when circumstances warrant it, such public lands as cemeteries, commons, foreshores, and the like. They have enlarged powers as to traffic, the eradication of noxious weeds, the reclamation of lands, the destruction and prevention of pests, the construction of buildings, the prevention of fires, and the control of places of public resort and amusement. They are empowered to establish works for lighting, etc., and to construct tramways in districts and under circumstances to which the existing Tramways Acts are not readily applicable. The proper execution of all these matters requires additional rating, and provision is made therefor in the Act.

2. **Systems of Local Government now in Operation.**—The principal features of previous enactments as to the division of the State into local areas are retained in the Acts of 1902 and 1910, but such areas in the future are to be of two classes—(*a*) towns and (*b*) shires. All municipalities formerly constituted as boroughs become towns, except Brisbane, Rockhampton, and Townsville, which are declared to be cities, and all shires and divisions become shires. The Governor-in-Council may, after giving notice in the *Gazette*, constitute, unite, divide, or abolish areas for the purpose of forming new areas, and may by proclamation constitute a town a city.

(i.) *The Municipal Council.* All local areas are governed by councils, the members of which are called aldermen in the case of towns and councillors in the case of shires. *Town councils* are composed of either seven, nine, or eleven members, as declared by Order-in-Council, but if the town has wards three members are assigned to each ward. *Shire councils* are composed of five, seven, or nine members, as declared by Order-in-Council, but if the shire is divided the number cannot be more than three for each division, and need not be the same for every division.

(ii.) *Qualification of Aldermen and Councillors.* Every male ratepayer of the age of twenty-one years, if a natural-born or naturalised subject, is qualified to be elected as a member of a council, unless he is an uncertificated insolvent, is undergoing imprisonment, is (subject to certain exceptions) financially interested in any contract with the council, or is insane. Provision is made for the election of the mayor or chairman, and for the retirement of members by rotation. The first council of a newly constituted town is elected, but that of a newly constituted shire is appointed by the Governor-in-Council, unless otherwise directed by the order constituting the shire.

(iii.) *Qualification of Voters.* Generally every person of either sex of the age of twenty-one, who is a natural-born or naturalised subject, and is rated as an occupier or owner of ratable land, is entitled to vote. The number of votes depends upon the value of the land in the following scale:—

QUEENSLAND MUNICIPALITIES—PLURALITY OF VOTES.

Value of land ...	Less than £500.	From £500 to £1000.	£1000 and upwards.
Number of votes ...	1	2	3

In case of joint owners or occupiers, each is to be considered the owner or occupier of land of a value equal to that of the whole divided by the number of owners or occupiers not exceeding three. If more than three persons are joint owners or occupiers, those whose names stand first on the rate book or valuation or return are to be taken. Companies may nominate their secretaries, managers, or directors for the purpose of voting.

(iv.) *Powers and Duties of Councils.* Generally the council is charged with the construction, maintenance, and management of all roads, streets, bridges, culverts, ferries, wharves, jetties, and other necessary public works, and is invested with powers to acquire land and buildings in connection with a variety of public works and for a number of public purposes. The council also has general power to make by-laws with a view to the good government of the local area under its management. Authority is given to the councils to establish markets and weighbridges and to fix dues for the use of the same; to undertake the manufacture or supply of light or hydraulic or other power; to destroy noxious weeds; and to control the erection of new buildings and the repair of dangerous or neglected ones. The council may also make by-laws with respect to a multitude of matters mentioned with great particularity in a schedule to the Act, and may also exercise various powers conferred by a number of Acts, set forth in the second schedule, such as the Tramways Act 1882, the Water Authorities Act 1891, the Electric Light and Power Act 1896, and the Health Act 1900.

(v.) *Valuation.* All land is ratable except the following:—Crown land unoccupied or used for public purposes; land in the occupation of the Crown, but this does not include lands rented in towns by the Crown; land used for public purposes; commons; cemeteries; and land not exceeding in area fifty acres and used exclusively for public worship, educational purposes, an orphanage, or library. Generally the value is estimated at the fair average value of unimproved land of the same quality held in fee-simple in the same neighbourhood. In the case of land held under gold-mining lease, or under lease from the Crown, the value is deemed to be a sum equal to twenty times the annual rent.

(vi.) *Rates* are levied on the unimproved capital value, and are of two kinds, general and special. *The general rate* must not be greater than sixpence in the pound, nor less than a half-penny, while *special rates* must not exceed threepence in the pound, but this provision does not include separate rates, special water rates, loan rates, cleaning rates, or tramway rates. Special rates may be levied for the purpose of constructing and maintaining permanent works, while separate rates may be declared for defraying expenses incurred in the execution of a work for the special benefit of any particular part of the area. A special rate may also be levied for the administration of the Health Acts.

(vii.) *Loans.* Money may be borrowed by local authorities either from the central Government, from outside sources by means of debentures, or by way of overdraft of current account. (*a*) *Government Loans.* The total amount that may be advanced by the Treasury, inclusive of sums owing, may not exceed a sum equal to five times the then ordinary annual revenue of the local authority, except in the case of loans for reproductive undertakings, for which special arrangements may be made by application to the Governor-in-Council. Notice of a proposed loan must be published, and, if demand be made by any ratepayers, having in the aggregate twenty votes, a poll must be taken to decide whether the money shall be borrowed or not. (*b*) *Debentures.* A local authority

may apply to the Governor-in-Council for permission to borrow money by the sale of debentures, but application must only be made after a resolution for borrowing the money has been adopted and confirmed, and after an opportunity has been given for the taking of a poll on the question, and (if a poll has been taken) when the result is in favour of the loan. (*c*) *Temporary Loans* from banks may be made by way of overdraft of the current account, but no such overdraft may exceed the ordinary revenue of the local authority in the year then last past.

(viii.) *Tramways.* Any ratepayers, having not less than one-third of all the votes of the ratepayers within any particular area, may by petition request the local authority to apply to the Governor-in Council for the constitution of such area as a "tramway area." After an opportunity for taking a poll on the question has been given, and (if a poll has been taken) when the result is in favour of the tramway, the petition may be granted by the Governor, who may authorise the issue of a Government loan for the purpose of constructing or for purchasing the tramway. The total amount advanced for the purpose must not exceed £3000 for every mile constructed. As regards the repayment of tramway loans, the local authority may levy a tramway rate, and the provisions of the Local Works Loans Acts 1880 to 1889 are incorporated. Up to the end of the year 1907 tramways had been constructed under these provisions in seven shires, their total length being 161 miles. In some cases these lines are run by the Queensland Railway Commissioner on behalf of the constructing authority. Particulars as to the working of tramways run by local authorities are given in the section in this book on "Roads and Railways." (See pp. 746-7 hereinbefore.)

3. **Area, Population, Number of Dwellings, Rates, Assets and Liabilities of Cities Towns, and Shires, 1905 to 1909.**—The following table gives particulars of the area, population, number of inhabited tenements, assets and liabilities of cities and towns and of shires, for each year from 1905 to 1909 :—

QUEENSLAND.—PARTICULARS OF CITIES AND TOWNS AND OF SHIRES, 1905 TO 1909.

* Exclusive of £13,141 interest on loans from Government. † Interest on Government loans (£4620) not included.

5. **The Metropolitan Water and Sewerage Board.**—This Board was constituted by the Metropolitan Water and Sewerage Act 1909, which divested the then existing Water Board of its powers and duties and vested them in an extended form in the new Board. The Act further empowers the Board to carry out a sewerage and drainage system, and relieves the Local Authorities of their responsibilities in that matter. The district of the new Board will comprise the cities of Brisbane and South Brisbane, the towns of Hamilton, Ithaca, Toowong, and Windsor, and the shires of Balmoral (except division 3), Coorparoo, Enoggera (except division 3), Sherwood (except division 1), Stephens, Taringa, and Toombul.

The Board consists of nine members, viz., the president and eight elected colleagues.

(i.) *Brisbane Water Supply.* The supply is derived from the upper reaches of the Brisbane River, and from two storage reservoirs, known respectively as the Enoggera and the Gold Creek reservoirs. For some years after the constitution of Brisbane as a municipality in 1859, the city supply was drawn from a chain of water-holes and sold to the residents. This scheme was later superseded by another under which water-carriers were licensed. Later, again, the Board of Water Supply was constituted, and the

construction of the Enoggera reservoir by the damming of Ithaca Creek was commenced 1864 and completed in August, 1866. This was followed in 1885 by the construction of the Gold Creek reservoir, which provided an improved service and better water. In April, 1892, the works at Mount Crosby, at the head of the Brisbane River, were completed. At these works the water is pumped to a reservoir 455 feet above Brisbane high-water mark, whence it is delivered to the city by gravitation. Works for increasing and purifying the water supply of Brisbane are to be carried out in the near future.

(ii.) *The Brisbane River Supply.* This is the principal source of supply, about 60 per cent. of the water used being taken from it. The catchment area above the pumping station is about 4000 square miles. The Mount Crosby service reservoir, into which the water is pumped from the river, is built in cement concrete, and is 267 feet long, 100 feet wide, and 15 feet deep from high-water line, which is 455 feet above high-water mark at Brisbane. The capacity is about 2,500,000 gallons. The outlet pipe is thirty-four inches in diameter, and leads through the valve-house to the gravitation main to Brisbane, 17¾ miles long and twenty-four inches in diameter. At Kenmore, eleven miles from Mount Crosby, a junction is effected between this 24-inch main and the 16-inch main from Gold Creek.

(iii.) *The Enoggera Reservoir.* The Enoggera are the oldest works now in use, and are distant from Brisbane about eight miles by road. The catchment area is nearly thirteen square miles in extent, and the reservoir, which is formed by an earthen dam, holds 1,000,000,000 gallons, of which 600,000,000 are available by gravitation. The greatest length of the reservoir is 2600 yards, and its greatest breadth 700 yards. There are two lines of pipes from the reservoir to Brisbane—sixteen inches and twelve inches in diameter. The total carrying capacity of these pipes is about 2,600,000 gallons a day.

(iv.) *The Gold Creek Reservoir.* This reservoir is situated in the upper waters of Gold Creek, a branch of Moggil Creek, distant from Brisbane by road about thirteen miles. The supply is drawn from a catchment area adjoining that of Enoggera, and comprising an area of nearly four square miles. The total capacity is about 406,000,000 gallons, of which 400,000,000 gallons are available. The diameter of the service main is sixteen inches, the distance from the valve house to Brisbane being 12½ miles. The greatest length of the reservoir is 1650 yards, and its greatest breadth 682 yards.

(v.) *Service Reservoirs.* (*a*) *Highgate Hill Reservoir.* This reservoir was constructed in 1889 to supply parts of South Brisbane. Its capacity is 2,176,000 gallons. To fill this reservoir, and in order to ensure a good water supply to the south side generally, an inverted syphon, sixteen inches in diameter, was laid under the Brisbane River between Toowong and West End in 1889. The syphon is 800 feet long, and is connected with both the Mount Crosby and Gold Creek mains. (*b*) *Wickham Terrace Reservoirs.* Two service reservoirs are constructed on Observatory Hill, Wickham Terrace, for the supply of the lower parts of North Brisbane. They are supplied from the Enoggera reservoir through a 12-inch main, the water being aerated as it enters into the reservoirs, which together hold 570,000 gallons. (*c*) *Bartley's Hill Reservoir.* This reservoir was built in 1907 to increase the supply to the Hamilton, Clayfield, and Nundah districts. Its capacity is 1,367,256 gallons, top water level 250 feet above high-water spring tides. It is supplied from the Mount Crosby reservoir through a 12-inch main. It is roofed over, and fitted with louvres for ventilation.

(vi.) *Brisbane Waterworks: Cost, Revenue, Expenditure, and Interest, 1901 to 1910.* The subjoined table gives particulars as to the cost, the revenue and expenditure, and

the amount of interest and loan redemption during each year from 1901 to 1910 inclusive:—

BRISBANE WATERWORKS—COST, REVENUE, EXPENDITURE, INTEREST AND REDEMPTION OF LOANS, 1901 to 1910.

Year.	Capital Cost.	Revenue from Rates and Sales of Water.	Working Expenses.	New Work Construction.	Interest and Redemption of Loans.
	£	£	£	£	£
1901	694,973	60,120	17,462	7,535	42,426
1902	711,178	60,917	19,305	18,168	26,716
1903	727,311	62,435	18,917	17,429	26,716
1904	740,618	63,338	23,888	13,244	26,716
1905	751,477	65,584	25,606	10,860	26,716
1906	*774,921	67,280	19,255	23,444	26,716
1907	792,264	69,709	20,025	17,343	26,716
1908	811,055	69,493	22,125	18,791	26,716
1909	825,812	69,736	25,246	14,756	26,716
1910	867,837	72,006	26,097	42,025	27,754

* The book value of the works at the end of 1907 was £569,770, the difference being amounts written off for depreciation, losses through floods, or the removal of smaller mains.

(vii.) *Brisbane Waterworks: Length of Mains, Tenements and Population Served, and Water Consumption, 1901 to 1910.* The following table shews the length of mains, the number of tenements connected, the population supplied, the total quantity of water supplied, the average daily supply, and the average daily supply per head of population supplied during each year from 1901 to 1910 inclusive:—

BRISBANE WATERWORKS.—PARTICULARS, 1901 to 1910.

Year.	Length of Reticulation Mains.	Number of Tenements Connected.	Estimated Population Supplied.	Quantity Supplied.	Average Daily Supply.	Average Daily Supply per Head of Estimat'd Population.
	Miles.	No.	No.	,000 Gallons.	Gallons.	Gallons.
1901 ...	198	15,652	78,260	1,536,260	4,208,931	55
1902 ...	216¾	17,346	86,730	1,499,674	4,108,696	47
1903 ...	229¼	17,435	87,175	1,413,722	3,873,211	44
1904 ...	240½	17,814	89,070	1,686,845	4,621,493	52
1905 ...	250½	18,855	94,275	1,749,820	4,794,028	51
1906 ...	264	19,223	96,115	1,630,899	4,468,216	46½
1907 ...	280¼	20,050	100,250	1,777,333	4,869,406	48⅛
1908 ...	296½	20,365	101,825	1,620,057	4,438,514	43⅝
1909 ...	308¼	21,560	107,800	1,673,287	4,584,351	42½
1910 ...	360	22,830	114,150	1,776,734	4,867,766	42½

The total length of the trunk mains is 52½ miles.

Particulars relating to the sewerage system of Brisbane are not available.

6. **Country Towns Water Supply, 1909.**—In addition to the city of Brisbane there were at the end of the year 1909 twenty-two towns in Queensland provided with water supply systems, constructed by municipalities chiefly from Government loans. The subjoined statement gives particulars of all the water supply systems—exclusive of Brisbane—for the year 1909 :—

QUEENSLAND.—PARTICULARS OF COUNTRY WATER SUPPLY SYSTEMS, 1909.

		£			£
Cost of construction		667,098	Expenditure	Office and salaries ...	9,542
Receipts	Rates and sales of water	67,395		Construction ...	23,175
	Other	19,633*		Maintenance ...	27,854
				Interest & redemption	28,544
	Total	754,126		Total ...	89,115
Assets		557,264	Liabilities		449,381

* Including £18,470 from Government loans.

7. **Fire Brigades.**—In the year 1909 there were twenty-six fire brigades organised in various towns in Queensland. The revenue of these brigades is derived chiefly from grants from the Government, from municipalities, and from the insurance companies, generally in equal proportions. The following table gives particulars for the year 1909 for the seventeen fire brigades from which returns were received :—

QUEENSLAND.—FIRE BRIGADES, 1909.

Receipts.	Amount.	Expenditure.	Amount.
	£		£
From Government	4,550	Salaries and wages	7,428
„ Local authorities ...	4,473	Building, repairs, etc.... ...	1,571
„ Insurance companies ...	4,374	Plant, stores, clothing, etc. ...	2,617
„ Other sources	878	Other	1,906
Total	14,275	Total	13,522

At the end of the year 1909 the fire brigades staffs comprised 44 permanent men, 365 partly paid, and 37 volunteers. The metropolitan brigade at Brisbane and the South Brisbane brigade protect an area of 9½ square miles; their joint staffs comprise 52 men. They have three steam engines, seven hose carts, and 16,200 feet of hose. There are 45 telephone fire alarms and 63 call points.

§ 5. South Australia.

1. **Development of Local Government Systems.**—In the latter part of 1839 the first municipal law was passed in South Australia, which was thus the birthplace of municipal government in the Commonwealth. On the 31st October, 1840, the principles of self-government were practically adopted in Adelaide by the election of a mayor and council, consisting of nineteen members, and the system has since been extended throughout the settled parts of the State by the formation of district councils and municipal corporations, which are the two types of local authorities now in existence.

2. **District Councils.**—The first District Councils Act was passed in 1858, was amended in 1862, and was further amended and consolidated by the District Councils Act of 1876, which provided for the continuation of existing districts and for the establishment of new ones by proclamation on the petition of the ratepayers. The revenue of the councils consisted of rents, profits, and income from lands vested in the council or over which the council had the control and management; fines and penalties enforced under the Act; fees for licenses; and general and special rates and loans. Provision was made for the election of councillors, their number, qualification, and retirement; for the election of auditors; the meetings, powers and functions of councils; the appointment of constables; revenue and expenditure; assessment and rates; and for making by-laws for various purposes. The Act of 1876 was amended from time to time, and was finally amended and consolidated by the Act which is now in force, namely, the District Councils Act 1887, which has in turn been amended in the years 1899, 1890, 1897, 1904, and 1905. These Acts were again amended by the Local Government Act, 1910.

(i.) *The District Councils Act 1887* provides for the continuation and amalgamation of existing districts and for the constitution as a new district of any part of the State containing rateable property capable of yielding upon a rate not exceeding one shilling in the pound the sum of £200. The Governor is authorised to alter the area or boundaries of any district by annexation or by subdivision. New districts are constituted upon petition to the Governor; every petition must be signed by fifty inhabitants of the part sought to be constituted, and if the proposed district comprises portion of a previously existing district, by a majority of the ratepayers of such portion.

(*a*) *Qualification of Councillors.* Every male ratepayer, if of full age, is qualified to be a councillor, unless he is a minister of religion; a stipendiary magistrate, an uncertificated insolvent, or is the treasurer or a paid official of the district council, or is interested in any contract, except for advertisements and printing, with the district council. The chairman is elected by the councillors from their own number.

(*b*) *Qualification of Electors.* Every person of either sex, if of the age of twenty-one years, whose name appears as a ratepayer in the assessment book is entitled to vote at the elections of councillors and auditors. In case of a joint tenancy or a tenancy in common, only one person is entitled to a vote for every £75 or part thereof at which the property is assessed.

(ii.) *Assessment and Rates.* Assessments are generally made at four-fifths of the gross annual rent at which the property would let for a term of seven years, or at 5 per cent. on the capital value, but in case of land within a township, not less than twenty acres in area, and not built on, used, or divided by roads, assessment is made at the rate of 2½ per cent. on the value of the fee-simple. All other township land unbuilt on is assessed at 5 per cent. on the fee-simple value, and for lands held under mining lease from the crown, the assessment may not exceed the annual rental. (*a*) *General Rates* may not be more than one shilling and sixpence nor less than threepence in the pound on the assessed value. (*b*) *Special Rates* for the execution of permanent works may also be declared, provided that the general and special rates together do not exceed two shillings and sixpence in the pound. No special rate may be declared without the consent of the ratepayers to be obtained at a meeting called for the purpose, and any six ratepayers may demand a poll to be taken on the subject. The ratepayers of any portion of a district may memorialise the council for specific works for the benefit of such portion of the district, and if the council decide to comply with the memorial a *separate rate* may be levied in respect of property in the portion defined. Lighting rates may also be declared, but must not exceed fourpence in the pound.

(iii.) *Loans.* Any council may, for the execution of any works for which a special or separate rate has been declared, borrow on the security of such rate up to ten times the amount which at the time of borrowing would result from a rate of one shilling in the pound, but if demand be made by any twenty ratepayers, the question whether or not the proposed loan be incurred must be submitted to a poll of the ratepayers. The interest payable on any such loan must not exceed 6 per cent. By an amending Act passed in the year 1904, additional borrowing powers were conferred on the councils for the purpose of carrying out permanent works subject to the conditions that the total amount borrowed must not at any time exceed three times the amount which would result from a rate of one shilling in the pound, and that the principal sum and interest must be repaid by means of a sinking fund within forty-two years.

(iv.) *Revenue and Expenditure.* The revenue of the councils consists of rents profits and income from property vested in the council or over which the council has control; the proceeds from the sale of such property; fines and penalties imposed under the Act; fees for licenses; rates; and main road subsidies. Under the District Councils and Corporation Subsidy Act 1890 provision is made for grants out of the general revenue to district councils and corporations in lieu of fees received under the Auctioneers Act 1862 and the Licensed Victuallers Act 1880. The amount of such grant is a sum equal to five shillings in the pound on the amount collected from general rates not exceeding one shilling in the pound declared during any one year. Revenue may be expended in carrying out any authorised works; in payment of salaries and professional fees; in subscriptions to charities; in payment of councillors' travelling expenses; in promoting bills before Parliament, and generally in carrying out the purposes of the Act.

(v.) *Powers and Duties of Councils.* A council may carry out certain permanent works which are defined in the Act, and which comprise the following:—The construction of new streets and roads, sewers and drains; the construction or purchase of waterworks, district offices, pounds, abattoirs, markets, baths, hospitals, and other charitable institutions; the providing of libraries, museums, and places of public recreation; and the construction of tramways and machinery for the treatment of refuse. The councils are invested with wide powers to make by-laws for the more effective exercise and discharge of their powers, duties, and liabilities, particularly in respect of the following matters:—The compulsory purchase of land; manufacturing districts; the public health; the sale of food and drugs; the management of unoccupied waste lands of the Crown; drainage; piers, jetties, and wharves; weights and measures; vermin destruction; game and fisheries; streets, roads, and public places; fire brigades; impounding; and for fixing penalties for breaches of such by-laws. Upon the district councils is also imposed the duty of administering the Health Acts, the Sale of Food and Drugs Acts, the Game and Fisheries Acts, the Vermin Acts, the Bush Fires Act, the Impounding Act, the Weights and Measures Act, and the Slaughter House Act.

3. **Municipalities** were first established under the Municipal Corporations Act of 1861, which, after providing for the extension of the powers and duties of the Corporation of the City of Adelaide, authorised the Governor, on petition of a majority of not less than two-thirds of the property-owners, to incorporate any town, district, or place within the province, a municipality. This Act and its amendments were consolidated in the Municipal Corporations Act of 1880, which was amended from time to time until the year 1890, when it was repealed and its provisions consolidated by the existing Act, the Municipal Corporations Act of 1890, which was in turn amended in 1893, 1896, and 1903. These Acts were again amended by the Local Government Act, 1910.

(i.) *The Municipal Corporations Act, 1890.* After making provision for continuing existing corporations and by-laws the Act authorises the Governor to constitute new

municipalities, or to alter the boundaries of existing ones, on petition of not less than two-fifths of the ratepayers or owners of ratable property within the land proposed to be incorporated, separated, or added; and also to rearrange, increase or diminish the number of wards of a municipality on petition of not less than one-fifth of the ratepayers. Each council consists of a mayor, and of two councillors for each ward, and the provisions as to their qualifications are substantially the same as in the case of district councils referred to above. All persons of full age, if British subjects and not in receipt of public relief or alms, who are either owners or occupiers of any ratable property within a municipality are entitled to vote at the election of the mayor and councillors. Provision is made for the nomination and election of the mayor, councillors, and auditors, and for regulating the meetings of the councils.

(ii.) *Functions of Municipal Councils.* All public streets and roads are vested in the council of the municipality in which they lie, but no street can be declared a public street after the passing of the Act unless it is at least forty feet wide. Full powers are given as to opening, closing, or fencing public streets, and for supervising the formation and repair of private streets and lanes. Councils are further authorised to execute works for, or to contract for the lighting, sewerage, and drainage of municipalities; to take all measures requisite for the public health; to establish public baths, fountains, and parks; to grant licenses for slaughter-houses, hide and skin markets, for the depasturing of cattle, and for the removal of sand and gravel; to control the erection or pulling down and the maintenance of buildings and hoardings; to organise fire brigades, and to order the removal of inflammable buildings. Under the Health Act 1898, every district and municipal council is constituted the Local Board of Health for its particular district, and is charged with the execution of the provisions of that Act for securing the proper hygienic and sanitary conditions in such district.

(iii.) *Assessments and Rates.* Owners and occupiers of ratable property in municipalities are assessed each year on the same basis as stated above in respect to ratable property within districts under the government of district councils. In addition to the rate authorised by the Public Health Act *a general rate*, not exceeding one shilling in the pound, may be declared; rates for lighting and for the improvement of parks and reserves may also be levied, the former being limited to fourpence and the latter to threepence in the pound. The council may also declare a rate for defraying the expense of watering streets, to be apportioned among the persons liable for the rates in respect of properties fronting such streets. *Special and separate rates* may also be levied in the same manner as by district councils, but, in the case of municipalities, the general and special rates together must not exceed two shillings in the pound.

(iv.) *Borrowing powers* of municipal corporations are substantially the same as those of district councils, and similar additional powers were given to municipalities as to districts by the Municipal Corporations Amendment Act 1903.

(v.) *Revenue, Expenditure, and Miscellaneous.* Other provisions as to the revenue and expenditure of municipalities, and their powers as regards permanent works, are the same as those in force under the Districts Councils Acts, referred to above, while very wide powers are given to municipal councils in respect of a variety of matters and things to provide by means of by-laws for the general good government of the municipalities.

4. **Finances of District Councils and Corporations, 1901 to 1909.**—The subjoined tables shew the amounts of assessments and the revenue and expenditure of district councils and of corporations for each financial year from 1901 to 1909 inclusive; the figures given are exclusive of the Main Roads Funds, particulars as to which may be found in the section of this book on "Roads and Bridges." (See page 693 *ante*).

* Up to and including the year 1903, the financial year for Corporations ended on the 31st December, but after that date ends on the 30th November. The financial year for district councils ends on the 30th June. † For eleven months ended the 30th November, 1904.

5. **Adelaide Water Supply System.**—The water supply system of Adelaide is under the control of the Public Works Department. The supply is obtained partly from the catchment areas of the rivers Onkaparinga, Torrens, and Sixth Creek, and partly from springs and pumping stations. There are three storage reservoirs, situated at Happy Valley, Hope Valley, and Thorndon Park, having an aggregate capacity of 3,895,000,000 gallons, while the tanks used in connection with the springs and pumping stations have a further capacity of 4,824,000 gallons. The total capital cost up to the 30th June, 1910, was £1,802,703, the total revenue being £2,422,978 and the area served approximately 80,000 acres.

The following table gives various particulars relating to the water supply of Adelaide for the years 1904 to 1910 inclusive:—

ADELAIDE WATER SUPPLY.—LENGTH OF MAINS, REVENUE, EXPENDITURE, AND CONSUMPTION OF WATER, 1904 to 1910.

Year Ended 30th June.	Length of Mains.	Gross Revenue.	Working Expenses.	Net Revenue.	Percentage of Net Revenue on Capital Cost.	Total Consumption of Water.[1]
	Miles.	£	£	£	%	Million of Gals
1904 ...	640	70,333	19,257	51,076	3.09	3,550
1905 ...	647	72,471	20,002	52,469	3.16	3,650
1906 ...	656½	72,976	22,298	50,678	3.02	3,550
1907 ...	667½	74,727	19,703	55,024	3.24	3,350
1908 ...	673	76,707	21,233	55,474	3.26	4,000
1909 ...	684	81,412	20,762	60,650	3.53	4,000
1910 ...	704	82,290	22,709	59,581	3.31	4,000

1. In the Adelaide Water District there are no governing meters. The quantities shewn above are as recorded by gaugings taken at the reservoirs, and include evaporation and absorption.

6. **Adelaide Sewerage System.**—In connection with the sewerage system of Adelaide, which is also under the control of the Public Works Department, about 288 miles of sewers had been laid in the city and suburbs up to the 30th June, 1910. The sewage is disposed of on a farm and filter-beds, the latter being used only during the winter months.

The following table gives particulars relating to the Adelaide sewerage system for the years 1904 to 1910 inclusive:—

ADELAIDE SEWERAGE SYSTEM.—REVENUE AND EXPENDITURE, 1904 to 1910.

Year Ended the 30th June.	Revenue.			Expenditure.			Net Revenue.

7. **Water Supply in Country Towns.**—In South Australia there is a number of country waterworks under the control of the Public Works Department. These works are partly used for irrigation purposes, and the most important of them have already been referred to in the section of this book dealing with the subject of "Irrigation." (See p. 602 *ante*.) In addition to the works mentioned in the section referred to, there are other country districts served by reticulations extending over 311 square miles. Detailed particulars of the various works are not available. The total extent of country for which reservoir water is available is about 4250 square miles, the reservoirs holding, in the aggregate, 7,370,000,000 gallons, and the main pipe-lines reaching 2278 miles. The capital cost of the works under the waterworks branch, as distinct from the water conservation branch, which deals with isolated and remote districts, is approximately £4,095,000.

8. **Metropolitan Fire Brigade.**—The Metropolitan Fire Brigade is managed by a Board consisting of six members, two being nominated by the Government, one by the Adelaide city council, one by the other metropolitan municipalities, and the other two by the contributing insurance companies. The revenue of the Board is derived by contributions of three-ninths by the Government, four-ninths by the insurance companies, and two-ninths by the city of Adelaide and the other municipalities subject to the Act. During the year 1910 the number of calls received was 257, including 33 malicious false alarms.

§ 6. Western Australia.

1. **Types of Local Authorities.**—In this State there are three forms of local authorities, namely:—(i.) Municipalities, (ii.) Road Districts, and (iii.) Local Boards of Health. The first Municipalities Act was passed in 1871, but only a few districts were incorporated under it. In 1895 a more comprehensive measure, the Municipal Institutions Act, was passed, and after being amended from time to time was consolidated by the Municipal Institutions Acts 1902 and 1904. In 1906 the most recent enactment, the Municipal Corporations Act, was passed, repealing and consolidating previous enactments. The whole area of the State outside incorporated municipalities is divided into road districts, which are administered under the Roads Act 1902 and 1904. In municipalities the councils act as Health Boards for the purpose of administering the Public Health Act,

while outside municipalities local Boards of Health may be formed. In 1904 another local government measure, the Water Boards Act, was passed, under which Boards may be appointed for the control of waterworks, and rates may be levied for the purpose, the maximum being fixed at two shillings in the pound of ratable value.

2. **Municipalities** are now regulated by the Municipal Corporations Act, which came into force on the 1st January, 1907. Provision is made for the continuation of existing municipalities, and the Governor is authorised to constitute new municipalities on petition signed by at least fifty property-holders of the district proposed to be incorporated; to unite adjoining municipalities on petition under their common seals; to sever any portion from a municipality on petition signed by a majority of the ratepayers, and to annex such portion to a contiguous municipality or road district.

(i.) *Municipal Councils* consist of a mayor and councillors, the number of which depends upon the population of the municipality; if the population is less than 1000 there are six councillors, if from 1000 to 5000 there are nine councillors, and if the population is over 5000 there are twelve councillors, or three for each ward. Any male ratepayer of the age of twenty-one years, if a natural born or naturalised subject, is eligible for election as mayor or councillor, except ministers of religion, uncertificated bankrupts, prisoners, and certain other persons who may be disqualified on the ground of interest.

(ii.) *Qualification of Voters.* Every ratepayer, of twenty-one years of age or over, is entitled to vote at the municipal elections. In the case of joint owners or occupiers, each owner or occupier, if not exceeding two in number, is deemed to be the owner or occupier of half the property; if more than two in number the owners or occupiers may appoint two of their number to be registered in respect of the property. Corporations and companies may also nominate two persons to be registered as voters.

(iii.) *Powers and Duties of Councils.* The councils have power to make by-laws with respect to the usual matters pertaining to municipalities, and are also invested with the control and management of all public places, streets, roads, bridges, sewers, and drains within the municipality. They may contract for the lighting of any part of the municipality for a period not exceeding three years, and may levy a lighting rate; they may construct dams or reservoirs for water supply, may establish fire brigades and baths, and may provide places of recreation, pounds, abattoirs, markets, and weighbridges.

(iv.) *Valuation of Ratable Property.* All land is ratable property except the following:—Property of the Crown used for public purposes or unoccupied; property used for religious or charitable purposes; public libraries, museums, etc.; cemeteries; any land declared by the Governor to be exempt from municipal rates. Generally the annual value of improved or occupied land is the average rent obtainable, less 20 per cent., but in no case may the annual value be less than 4 per cent. of the fee-simple value. The annual value of unimproved or unoccupied land is taken to be not less than 7½ per cent. on the capital value. No allotment of ratable land may be valued at an annual value of less than £2 10s.

(v.) *Rates.* General rates are levied annually, but may not exceed one shilling and sixpence in the pound on the annual value. Lighting rates and special rates for the repayment of debentures and interest may also be struck, but may not exceed the maximum rate allowed in the case of general rates.

(vi.) *Borrowing Powers.* The council of a municipality may borrow money on the credit of the municipality for permanent works, or for the purpose of liquidating the principal moneys owing on account of any previous loan. Permanent works may be the construction or alteration of any street, footway, road, bridge, culvert, wharf, or jetty; the construction of sewers and drains, and works connected with sewerage and drainage; the construction or purchase of waterworks, tramways, municipal offices, pounds,

abattoirs, markets, and baths; the improvement of endowment lands; providing places of public recreation; the construction of a general warehouse, or a theatre, or of refuse destructors; and the purchase of quarries or land. The amount borrowed at any time may not exceed ten times the average ordinary income of the municipality for the two years last preceding, and the amount borrowed to liquidate any loan must not exceed the balance of principal owing. A municipality may also overdraw on the amount of its current account, but the overdraft must not at any time exceed one-third of the ordinary revenue for the preceding year.

(vii.) *Government Subsidies.* Grants are made annually to municipalities by way of subsidies on the amounts of rates collected. To entitle any council to participate in the allocation of the annual Parliamentary vote the council must have levied a minimum general rate of one shilling in the pound, and must have collected not less than £300 from such rate. Newly-constituted municipalities are, during the first year of existence, dealt with apart from the provisions of the general scheme, and are allowed a subsidy of £2 for every £1 of general rate collected; in subsequent years they participate according to the general provisions. The following table shews the basis on which the municipalities are classified:—

WESTERN AUSTRALIA.—CLASSIFICATION OF MUNICIPALITIES.

Income from General Rates.	From £20,000 to £30,000.	From £10,000 to £20,000.	From £5000 to £10,000.	From £500 to £5000.	Under £500.
Class	1st	2nd	3rd	4th	5th

No subsidy is paid on income from general rates exceeding £3000.

3. **Area, Population, etc., of Municipalities.**—Returns regarding the area, population, and valuation of municipalities are defective. They are shewn in the table hereunder:—

WESTERN AUSTRALIA.—NUMBER, AREA, POPULATION, NUMBER OF DWELLINGS, AND VALUATION OF MUNICIPALITIES, 1901 to 1909.

Year ended the 31st October.	Number of Municipalities.	Area	Population.	Dwellings.			Amount Payable in respect of Rates.

* Including bank balance, cash in hand, and fixed deposit. † Incomplete.
‡ Exclusive of the municipality of Mount Morgans.

6. **Road Districts.**—The whole area of the State, outside incorporated municipalities, is divided into districts, the executive powers being vested in elective boards. These districts were originally formed solely for the purpose of controlling roads and bridges, but their powers and duties have been extended, so that at the present time they correspond closely to the shires of the other States of the Commonwealth. The enactments at present governing the administration of the Road Boards are the Roads Acts 1902 and 1904, the Parks and Reserves Act, the Cattle Trespassing Act, the Width of Tyres Act, the Cart and Carriage Licenses Act, and the Dog Act. The general powers and duties of the Boards as regards roads and bridges are described in the chapter of this book entitled "Roads and Bridges." (See page 693 *ante*.) In addition to these powers and duties the Boards have power to do everything necessary for the proper management of the property under their control, and may also construct and maintain tanks, wells, and

dams, and bore for water for the purpose of supplying water along any road in the district. Subject to the provisions of the Roads Acts, the Board has also the control and management of any such public reserves, parks, commons, wells, dams, reservoirs, buildings, machines, etc., as the Governor may direct. The Board has also extensive powers for making, altering, and repealing by-laws.

7. **Boards of Health** may be established under the Public Health Act 1886, either within or outside of municipal boundaries. In the former case the Act is administered by the municipal councils, while in the latter case special Boards are elected by the ratepayers. The revenue of these Boards consists chiefly of moneys received from health rates and sanitary fees, and the largest item of expenditure is directly connected with the sanitary service. The following table shews particulars of the receipts and expenditure of the various Boards—both municipal and extra-municipal—during each year from 1901 to 1909 inclusive:—

WESTERN AUSTALIA.—RECEIPTS AND EXPENDITURE OF LOCAL HEALTH BOARDS, 1901 to 1909.

* Including sanitary rates, £11,745. † Including sanitary rates, £16,564. ‡ Exclusive of particulars of twenty-one boards which did not furnish returns, and of five boards which were not active during the year, all outside municipalities. Particulars for previous years are also incomplete. § Exclusive of expenditure of one extra-municipal board. ‖ Including sanitary rates, £17,707. ¶ Including sanitary rates, £16,804.

On the 31st October, 1909, there were forty-six Local Boards of Health within municipalities and sixty-nine extra-municipal Boards; fifteen of the latter were inactive during the year.

8. **The Perth Metropolitan Water Supply, Sewerage, and Drainage.**—The Perth Metropolitan Water Supply Works were first opened by a private company in October, 1890. Under the provisions of the Metropolitan Waterworks Act 1896, however, the works were purchased by the Government at a cost of £220,000, and were placed under the control of a Board, the functions of which have been exercised since the year 1904 by the Minister for Works. By the Metropolitan Water Supply, Sewerage, and Drainage Act 1909, all water and sewerage works formerly vested in the Metropolitan Board were transferred to a Minister of Water Supply, Sewerage, and Drainage. This Act also provides for the administration of the transferred properties, for the constitution of water reserves, for the construction and maintenance of works, for the prevention of waste, for rates and sale of water, and for other matters.

(i.) *Water Supply.* The supply of water is derived from three sources—(i.) the Victoria reservoir, (ii.) the Mundaring reservoir, and (iii.) from six artesian bores.

(*a*) *The Victoria Reservoir.* This is the main source of supply. The reservoir has a capacity of 220,000,000 gallons, and has a catchment area of 10,000 acres on the Darling Ranges. The water gravitates from the Victoria reservoir to Perth through two

mains which are respectively 21 inches and 12 inches in diameter, and 15½ and 17 miles in length. There are two service reservoirs—one of 2,413,000 gallons, and the other of 600,000 gallons capacity. The quantity of water drawn from this reservoir during the year ended the 30th June, 1910, was 392.7 million gallons.

(*b*) *The Mundaring Reservoir.* This reservoir is used as an emergency supply. It has a capacity of 4,650,000,000 gallons, but is only connected by one eight-inch main. During the financial year 1909-10, 18,891,000 gallons were drawn. This reservoir has a catchment area of 569 square miles, and was constructed in connection with the goldfields water supply.

(*c*) *Artesian Bores.* There are in all six artesian bores, the flow from which augments the main supply from the Victoria reservoir. The total flow is about 360,000,000 gallons during the season, which lasts approximately for six months.

(*d*) *Financial Operations of Board, 1901 to 1910.* The following table gives particulars of the financial operations of the Metropolitan Waterworks Board for each year ending the 30th June from 1901 to 1910 inclusive:—

PERTH METROPOLITAN WATERWORKS BOARD.—PARTICULARS OF FINANCIAL OPERATIONS, 1901 to 1910.

Year ended the 30th June.	Capital Cost of Works.	Depreciation.	Net Capital Cost.	Gross Revenue.	Cost of Maintenance and Management.	Interest Earned by Net Revenue on Net Capital Cost.	Percentage of Expenses on Gross Revenue.

* In thousands of gallons.

(ii.) *Sewerage and Drainage.* In Perth systems for the disposal of sewage and storm water have been carried out by the Public Works Department. The construction of septic tanks and filter beds was commenced in April, 1906, and has now been completed. In January, 1910, the construction of the main sewers and drains was nearing completion, while considerable progress had been made with the reticulation in certain districts. By the Metropolitan Water Supply Sewerage and Drainage Act 1909, the construction, maintenance, and control of these works were placed in the hands of the Minister of Works.

9. **Fremantle Harbour Trust.**—Under the provisions of an Act passed in 1902 a Harbour Trust was constituted for the general administration of Fremantle harbour, and since January, 1903, the Trust has had full control of all the affairs of the harbour. The works, which were commenced in 1892, were designed with the object of forming a safe and commodious harbour within the mouth of the Swan River, so as to admit vessels at all states of the tide, and thus enable cargo to be loaded and discharged at the quays and goods-sheds on the river banks. Two ocean moles have been thrown out from the north and south heads, the former being 3450 feet and the latter 2040 feet long. A channel, 450 feet wide and 30 feet deep at low water, has been blasted and dredged through the rock which formerly crossed the estuary to the river, and wharves and goods-sheds have been constructed along the reclaimed foreshore on the south side of the harbour. At the present time all the European mail boats, which make Fremantle the first and last port of call in Australia, are able to enter and leave the harbour in all weather and at all tides. For the year ended the 30th June, 1910, the total revenue of the Trust was £125,189, and the expenditure £44,246, shewing a gross profit of £80,943. The gross amount paid to the Treasury for the year was £75,253, being interest £50,505, sinking fund £14,430, and surplus revenue account £10,318.

10. **Fire Brigades Boards.**—Under the Fire Brigades Act 1898, fire brigades were established in a number of the more important centres of population in the State. These brigades were under the control of local boards, and were in some cases municipal and in others volunteer. On the 30th June, 1910, there were forty-five such Boards in existence. The figures given below shew particulars of forty-two of these Boards for the year 1909-10, three Boards having remained inactive during the year:—

WESTERN AUSTRALIA.—FIRE BRIGADES BOARDS, 1909-10.

Number of firemen	784	Value of land, buildings, & plant	£38,449
Receipts	£15,682	Expenditure...	£15,458

An Act to make further provision for the protection of life and property from fire was passed in 1909 and came into operation on the 1st January, 1910. It is called the District Fire Brigades Act, and divides Western Australia into two fire districts under the West Australia Fire Brigades Board. The Act does not apply to the municipal district of Perth or to any other municipal district to which the provisions of the 1898 Act apply, but those bodies are at liberty to petition to be brought within the operation of the new Act.

§ 7. Tasmania.

1. **Development of Local Areas.**—In this State the city of Hobart was incorporated by special Act in the year 1852, but it was not until 1858, when the Rural Municipalities Act was passed, that a general scheme for the establishment of municipalities was extended throughout the State. This Act was amended from time to time without, however, altering its chief characteristics. In 1869 a Roads Act was passed, and after being amended at various times was consolidated in 1884. Under the provisions of these Acts parts of the State were placed under the control of Town Boards and Road Trusts.

The general rate under the Municipalities Act was limited to one shilling and sixpence in the pound of annual value, while special rates could be levied in rural districts, provided that the general and special rates together did not exceed one shilling and sixpence in the pound.

2. **Acts now in Force.**—In 1906 the whole of the Acts dealing with local authorities were amended and consolidated by the Local Government Act of that year. The whole State, with the exception of the urban municipalities of Hobart and Launceston, is divided into municipal districts, and every Rural Municipality, Town Board, Main Road District, Road District, Local Health District, Fruit District, Rabbit District, School District, and Public Recreation Ground District included in any municipality established by the Act is abolished. Each district is incorporated and is under the control of a warden and councillors, who, in addition to the specific duties and powers imposed and conferred by the Act of 1906, are vested with powers and authorities under the following Acts:—The Codlin Moth Act 1888, the Rabbits Destruction Act 1889, the Public Health Act 1903, the Education Act 1885, the Roads Act 1884, the Rural Municipalities Act 1865, the Police Act 1905, the Town Boards Act 1896, the Public Recreation Grounds Act 1888, the Cemeteries Act 1865, and the Californian Thistle Act 1883. The Governor is authorised to unite, subdivide, or abolish municipalities or wards on petition, and may do so without petition if in any municipality there is at any time no council or an insufficient number of councillors to form a quorum. The Act of 1906 was amended in 1908, and it is proposed to still further amend the Act in the 1911 session of Parliament.

(i.) *Formation of Councils.* In the case of municipalities not divided into wards the council is to consist of the number of members, being a multiple of three, assigned to it by the Governor, while the councils of municipalities which are subdivided consist of three councillors for each ward. Any resident elector is eligible to act as a councillor unless he is disqualified as being an interested person, a bankrupt or convict, or as undergoing a sentence of imprisonment, or as insane. The warden is elected by the councillors from their own body.

(ii.) *Qualification of Electors.* Both owners and occupiers of property within a municipality are allowed plurality of votes according to the following scale :—

Annual Value of Property	Under £30.	£30 to £80.	£80 to £160.	£160 to £240.	£240 to £360.	£360 and upwards.
Number of Votes	1	2	3	4	5	6

In the case of joint owners or occupiers the number of votes according to the above scale is equally divided as far as possible, and the vote or votes which cannot be so divided may be given by such one of the joint owners or occupiers as may be appointed by the others. The provisions of the Acts relating to voting by post at parliamentary elections may be made applicable to any municipal election on the petition of the council to the Governor.

(iii.) *Local Districts and Committees.* Any municipal council may by special resolution define a local district to be assigned to a local committee, and any district proclaimed under the Public Recreation Grounds Act 1888 may also be defined as a local district. A local committee may exercise any of the powers and functions conferred upon councils as may be declared to be within its province by special resolution.

(iv.) *Revenue and Rates.* The ordinary revenue of a council, which consists principally of (*a*) rates (other than special rates), tolls, ferry dues, market dues, fees, and other charges authorised by the Act, and (*b*) grants from the central Government, is carried to a general account called the municipal fund. Rates are of two kinds, namely, (*a*) general, and (*b*) special. (*a*) *General Road Rates*, of not less than sixpence in the pound of the annual value of the whole of the ratable property in a municipality, must be levied at least once a year, but the total amount of all such rates levied in any one year must

not exceed one shilling and threepence in the £. The proceeds of general road rates are carried to a separate account and are to be applied for the purposes of constructing and maintaining roads, streets, bridges, jetties, wharves, and tramways; at least three-fifths of all sums received in respect of property situate in a particular ward from the making of such a rate must be expended within such ward for the purposes mentioned. *General Health Rates* may be levied either prospectively or retrospectively in order to defray the expenses incurred in the execution of the Public Health Act 1903. (*b*) *Special Rates* may be made for the purpose of defraying the cost of constructing and maintaining works for sewerage or drainage, for the manufacture of gas, electricity, hydraulic or other power; watering or lighting roads; maintaining public recreation grounds; the destruction of rabbits; any of the purposes of the Public Health Acts; and of constructing and maintaining slaughter houses, abattoirs, or other works. A *Codlin Moth Tax* may be levied as prescribed by the Codlin Moth Act 1888, and when a council undertakes the removal of house refuse from premises the expense of such work is to be paid for by a *Special Cleansing Rate*. For defraying the expenses incurred in the execution of any work for the special benefit of a particular part of a municipality, the council may also levy a special rate called a *Separate Local Rate* upon all ratable property within such part, but the question as to whether any work is or is not for the special benefit of any particular part of the municipality must be referred to the Minister, who may direct, when such rate would exceed sixpence in the pound, that the question of levying the same be left to the decision of the electors of the defined part; whenever the expense to be incurred involves more than one yearly rate, the question must be referred to the electors.

(v.) *Ratable Property.* The council is not empowered to levy any rate or charge (except for water, prevention of fire, cleansing, drainage, or sewerage, or for light or power actually supplied, or for any service actually rendered) upon—Crown property; any property used solely for religious purposes; any portion of any premises used exclusively as a public library, museum, school of arts or mines, literary or scientific institution, or any cemetery; benevolent asylums or charitable institutions; or upon any building or place vested in trustees for an agricultural or pastoral society for the purposes of a show ground. The Crown has in any such case the right to commute its liability by payment of a sum agreed upon between the council and the Treasurer.

(vi.) *Borrowing Powers.* Power is given to the council to borrow money either—

(*a*) By the sale of debentures under provisions of the Local Bodies Loan Act for the purpose of permanent works and undertakings, or for the purpose of liquidating the principal sum owing on account of a previous loan; or

(*b*) By way of temporary advances against rates to an amount not exceeding one-half the expected total proceeds of such rate. Temporary advances must be paid within twelve months of the date of borrowing.

(*c*) Under the amending Act of 1908, councils may raise temporary loans by way of bank overdraft on the credit of the municipality to an amount not exceeding one-half of the prior year's revenue, and in addition may overdraw to the extent of deposit receipts for money due by the bank.

(vii.) *General By-laws.* The councils have wide powers to make by-laws for the general purposes of the Act, and particularly in connection with the following matters:—The trespass and agistment of animals; the erection or demolition of buildings, awnings, and temporary structures; the prevention and extinction of fires; the granting of licenses; the regulation of markets and weighbridges and the establishment of rents and fees for the use thereof; the regulation or the prohibition of the introduction of any pest or anything affected by a pest; the control of public safety and the preservation of public decency; the control and management of roads and footways; the imposition

and collection of tolls upon roads and bridges, and of rates and dues upon ferries, wharves, tramways, jetties, piers, and markets under the control of the council; the regulation of various trades and callings; the control of the general traffic in public places, boats and boatmen, vehicles, steam rollers, and bicycles.

The councils are also vested with all powers which were conferred upon any of the local bodies mentioned above (see page 1039 *ante*, par. 2), and which were abolished by the Local Government Act 1906.

(viii.) *Water Districts.* Any number of municipalities, situated so as to be capable of taking advantage collectively of some common water system or catchment area, may by petition to the Governor be constituted a water district under the Act. In every case where a water district is proclaimed upon the joint petition of two or more municipal councils the management of such district is in the hands of a joint council consisting of such a number of members of each of the councils as the Governor may determine. This council is invested with borrowing and rating powers and may supply water within the district on such terms as it may fix, provided that no water may be supplied for irrigation until domestic and stock supply purposes have first been satisfied. Provision is also made in the Act for uniting municipalities for the purpose of carrying out sewerage, irrigation, or water conservation schemes for the common benefit of the municipalities, or for any other purpose authorised by the Act, such as, in the opinion of the Governor, is likely to be of permanent utility, and is best capable of being carried out by concerted action.

3. **Value, Revenue, and Expenditure of Municipalities.**—The following table shews the annual value, total receipts, and expenditure of municipalities for the years 1908 and 1909 :—

TASMANIA.—ANNUAL VALUE, REVENUE, AND EXPENDITURE OF MUNICIPALITIES, 1908 and 1909.

Year.	Number of Municipalities.	Annual Value of Ratable Property	Revenue.				Expenditure.[2]
			From Rates.	From Govt.	From other Sources.[1]	Total.	
		£	£	£	£	£	£
1908 ...	51	1,340,243	142,466	40,254	186,466	369,186	353,699
1909 ...	51	1,404,328	173,453	44,293	92,244	309,990	318,501

1. Including sums derived from loans. 2. Including repayments of loans.

The capital value of ratable property in 1909 was £27,705,040.

4. **Total Revenue and Expenditure of Local Bodies, 1907 to 1910.**—Particulars as to Road Boards and Road Trusts are given in the chapter of this book on "Roads and Bridges." In addition to the local authorities already mentioned, Marine Boards have been established at seven ports in Tasmania for the purposes of constructing and maintaining wharves and jetties and of controlling all matters relating to the shipping in the respective ports. Twenty water trusts and forty cemetery trusts have also been established in connection with municipal bodies. The subjoined statement shews the total revenue and expenditure for all local bodies, exclusive of all amounts contributed by the general Government, during each financial year from 1907 to 1910 inclusive.

TASMANIA.—REVENUE AND EXPENDITURE OF ALL LOCAL BODIES, EXCLUSIVE OF AMOUNTS CONTRIBUTED BY THE GENERAL GOVERNMENT, 1907 to 1910.

Particulars	1906-7.	1907-8.	1908-9.	1909-10.
*REVENUE.				
	£	£	£	£
Marine Boards and Lighthouses	69,143	66,586	72,810	74,723
Municipalities	136,919	170,159	396,186	309,990
Road and Bridge Trusts	30,472	34,612	*a*	*a*
Cemetery Trusts	1,124	1,269	*a*	*a*
Town Boards	29,237	35,506	*a*	*a*
Water Trusts	8,335	18,715	2,281*b*	2,325
Total	275,230	326,847	471,277	387,038
†EXPENDITURE.				
	£	£	£	£
Marine Boards and Lighthouses	60,480	77,601	69,213	82,627
Municipalities	141,550	171,202	353,699	318,501
Road and Bridge Trusts	30,320	34,153	*a*	*a*
Cemetery Trusts	1,210	1,359	*a*	*a*
Town Boards	32,812	35,328	*a*	*a*
Water Trusts	5,300	24,171	2,334*b*	1,923
Total	271,672	343,814	425,246	403,051

* Exclusive of amounts contributed by the general Government. † Exclusive of expenditure from Government contributions. *a* Included in municipalities under the new Local Government Act. *b* Receipts and expenditure of eight water trusts not included in municipalities.

5. **Hobart Water Supply.**—The original water supply of Hobart was obtained from a stream known as the Hobart Rivulet, flowing from Mount Wellington, the works being carried out in 1831 by the Imperial Government. These works consisted of an aqueduct and a line of cast-iron pipes, the water being distributed to several points known as "wells." By an Act of the State Parliament passed in 1860 the works were transferred to the municipality. Under this Act certain additional streams flowing from Mount Wellington were acquired as sources of supply, and a storage reservoir containing 45,000,000 gallons was constructed. The catchment area on Mount Wellington at present comprises an area of 4200 acres, the sources of supply having been extended at various times as far as the North West Bay River, fifteen miles from Hobart.

(i.) *Storage Reservoirs.* There are two storage reservoirs about 2½ miles from the city. One contains 68,000,000 gallons and is 502 feet above sea-level, while the other contains 45,000,000 gallons and is 447 feet above sea-level. The whole of the supply is by gravitation. The water is brought from the various streams by means of stone aqueducts and cast-iron pipes to the reservoirs, and thence by four 10-inch cast-iron mains, of which three lead to the distributing reservoirs and one direct to the shipping and southern portion of the city.

(ii.) *Capital Cost, Tenements Connected, Length of Mains, Revenue and Expenditure, 1910.* The total capital cost to the end of 1910 was £204,879, but a considerable amount of reticulation work has been done out of revenue and not charged to capital account. The outstanding loans at the end of 1910 amounted to £160,175. At the same

date the number of tenements supplied in the city and suburbs was 7655, the population at the end of the year 1909 was 38,916, and the length of reticulation mains at the end of 1910 was 81 miles. The revenue and expenditure for the last six years were as follow:—

HOBART WATERWORKS.—REVENUE AND EXPENDITURE, 1905 to 1910.

Particulars.	1905.	1906.	1907.	1908.	1909.	1910.
	£	£	£	£	£	£
Revenue	20,127	19,125	21,802	19,719	20,091	20,643
Expenditure	16,576	15,817	17,785	22,901	23,729	22,238

(iii.) *Proposed Extensions.* Parliamentary sanction to borrow £63,000 has been obtained for the purpose of improving the water supply of the city and suburbs of Hobart; £56,500 of this amount is to be spent on a new storage reservoir, a contract for the construction of which has recently been let.

6. **Hobart Sewerage System.**—A scheme for the construction of a sewerage system in Hobart was adopted in 1903. The sewage is collected and treated in septic tanks and is then discharged into the estuary of the River Derwent. Up to the end of the year 1909 about 51 miles of sewers (out of a total length of 66 miles) had been laid, and 3948 tenements, sewering a population of 18,000, had been connected at a cost of about £129,503. The revenue for the year was £6215. Extensions are in progress with a view to completing the sewering of over 2000 acres so as to serve an estimated population of about 30,000 people. It is expected that the whole of the tenements will be connected with the sewers by the end of 1911.

§ 8. Local Government Finance.

1. **Introduction.**—In the preceding parts of this section certain particulars have been given regarding local authorities in each individual State. It is proposed to here give in a comparable form for each State particulars regarding the financial operations of local governing bodies. The areas controlled by these bodies are variously known in the several States as cities, towns, boroughs, shires, municipalities, municipal districts, and road districts. The particulars given in the tables in the two next paragraphs relate to financial years ending as follow:—New South Wales: Municipalities, with the exception of the City of Sydney, from 4th February to 31st December. Particulars of the City of Sydney and shires are for the calendar year 1909. Victoria: 30th September, 1909, except Melbourne, 31st December, and Geelong, 31st August, 1909. Queensland: Calendar year, 1909. South Australia.—Corporations, 30th November, and district councils, 30th June, 1909. Western Australia.—31st October, 1909, except road districts, 30th June, 1909. Tasmania.—Calendar year, 1909.

2. **Number, Revenue, Expenditure and Valuation of Local Authorities, 1909.**—The following table gives particulars of the number, revenue, expenditure, and valuation of local authorities in each State and in the Commonwealth during the year 1909. It may be noted that, excepting in Tasmania, the metropolitan water supply systems are not under municipal control; the particulars given of revenue and expenditure for the five States other than Tasmania do not, therefore, include revenue and expenditure on account of these systems.

SECTION XXVII.

INDUSTRIAL UNIONISM AND INDUSTRIAL LEGISLATION.

§ 1. Development of Trades Unions in Australia.

1. **General.**—In Australia, industrial unionism paved the way for industrial legislation. Conditions of employment were on the whole favourable to the investigation of industrial problems; and experimental legislation was possible because of the simplicity and directness of the aim of those engaged in industrial occupations. Moreover, the non-existence of the complexity of the problems and of the organisation of older countries did not interpose difficulties which might otherwise have operated. Hence rapid changes in laws regulating industry occur and are likely to occur. To a great extent the trades unions were responsible for these laws. They steadily and continuously urged an amelioration of the condition of the working man, and by organisation and discipline they presented a united front to opposing forces, and attained many advantages by a recognition of the principle that unity is strength. Their efforts have resulted in improved conditions, particularly short hours and a healthier mode of life. One great aim of present-day industrial legislation has been said to be, to extend "the reasonable comforts of a civilised community" to those engaged in every branch of industry. Large organisations have been able to attain their ends by force of numbers, and, in the case of the great bulk of the artisan and similar classes, through the solidarity of their unions. The smaller and less perfectly organised industries, unable to maintain an effectual struggle with hope of success, are now receiving, by legislative enactment, the benefits already accrued to the trades unions.

While the demands of the early unionists have almost in their entirety been conceded by the employer, unionism nevertheless continues. Industrial legislation has not yet reached the stage when the conflicts between employer and employees cease, and unions sometimes attain their ends by a strike, or by threatening a strike.

Each State of the Commonwealth has enacted, with more or less elaboration, legislation respecting trade unions and respecting the regulation of the conditions of industrial life, particularly those of factory employment; and has also regulated the hours of business for the great majority of shops. Some of the States have also established machinery for the regulation of wages and other matters connected with employment.

At the present time there is an obvious tendency to adjust such matters throughout Australia on uniform lines. The industrial condition of any State of the Commonwealth

naturally reacts quickly on any other State. This is one of the consequences of a unified tariff, and of the fact that the general economic conditions of any one part of the Commonwealth must necessarily affect very intimately every other part. An expression of the intimacy of these economic and industrial relations of different parts is seen, for example, in the refusal of an Arbitration Court in New South Wales to fix wages in the boot trade in that State at a higher rate than that fixed by the Wages Board in Victoria, because of the additional burden which such a rate would place on local manufacturers.

2. **History of Unionism in Australasia.**—(i.) *Commencement of Unionism: the Eight Hours' System.* The first trade union in Australia was the "Operative Masons' Society," established in Melbourne in 1850. In 1851 a branch of the "English Amalgamated Society of Engineers" was founded in Sydney. For many years the only unions existing were practically those formed by the several branches of the building trades. They were all subject to the English law prohibiting conspiracies and combinations in restraint of trade, though it does not appear that such law was ever put in force in Australia. The main object of the early unions in Australia was the limitation of the working week to forty-eight hours. The minor and friendly society benefits that were usual amongst the unions of older countries were also desired; but the chief aim was the establishment of the eight hours' principle, and that aim for many years was the chief link between the unions. It is difficult to obtain detailed information concerning the unions prior to trade union legislation, but their early history generally resolves itself into an account of the early efforts put forth by metropolitan operatives to secure the limitation of the working day to eight hours.

(ii.) *New Zealand.* The system was first put into practice in Australasia in 1848 by the "Otago Association," which purchased an area of land upon Port Chalmers, N.Z., and proceeded to build the town of Dunedin, under a system which recognised the eight hours' day, thus instituting, in the New World of the south, that period of toil as the limit of the working day. Thus the system began voluntarily in New Zealand long before the unions that demanded and acquired it in Australia had come into existence. But many years elapsed in the Dominion before trades unionism became an established fact. The first Congress of New Zealand Trades was held in 1885. In that year, too, the general celebration of the eight hours' principle by the combined trades was inaugurated.

(iii.) *New South Wales.* In New South Wales, the operative masons obtained the eight hours' concession in 1855, after a strike; but little development of the movement was noticeable until 1871, in which year four eight-hour trades—the brickmakers, stonemasons, labourers, and carpenters—inaugurated the annual celebration.

(iv.) *Victoria.* The first Melbourne Eight Hours' procession was held in 1856, the trades taking part being the masons, bricklayers, carpenters and joiners, plasterers, painters, and slaters. In the following year nine trades and about 700 men took part in the function; but the principle of the Eight Hours' Day had been recognised, and new unions were quickly established under the influence and guidance of the pioneers of the movement.

(v.) *Queensland.* After the fever of the gold rush to the Fitzroy River had subsided, settled conditions prevailed in the building industry, and the trades, being well established and organised in Queensland, celebrated their inaugural festival of the eight hours in 1866. In this capital, as in Melbourne, the pioneer trade was the stonemasons.

(vi.) *South Australia.* In South Australia, the establishment of the eight hours' system by the unions was accomplished in 1873, the building trades, represented by the stone-cutters, painters, and carpenters, again being the leaders.

(vii.) *Western Australia.* The discovery of gold in Western Australia caused rapid development in the infant cities and towns of that State, and mechanics found abundant employment in the building trades. Unions were soon formed, and the eight hours became an established system in 1896.

(viii.) *Tasmania.* Trade unions were established in Tasmania in 1874, the shipwrights of Hobart being the pioneer society. Here, as on the mainland, the eight hours' day was the chief aim of the operatives, and here, as in Sydney, it was conceded only after a strike. Within a few years, the general system of trades unions was instituted. The inaugural celebration of the system was celebrated in 1890.

(ix.) *The System Universal throughout Australasia.* No provision for eight hours was made in the original documents which set out the conditions of labour under which the members of the Otago Association were to work in 1848. It was intended to insert a clause embodying the principle, but it was found that such a clause would be inoperative, as contracts to bind free settlers to serve under any conditions of labour beyond the seas were not provided for by any Imperial Statute. The system, however, was tacitly agreed to by both parties, and quietly and voluntarily the eight hours' day was established. Not so amicable were the methods by which it was acquired in the other colonies. There had to be unions of men and unions of trades, before the requisite forces were available to overbear opposition to the system, and, at any rate in two cases, the tradesmen resorted to strikes before the concession was granted. Generally it may be said that trades unions in the Commonwealth sprang out of the desire for an eight hours' day; and with the Western Australia celebration of 1896, trades unionism, with its eight hours' charter, completed its circuit of the Commonwealth. From 1880 to 1890 there was in the States where industry was systematised great activity in the organisation of labour, more particularly at the end of that period. In sympathy with the widespread industrial unrest in England the occurrence of similar unrest in Australia drew the wage-earners into the unions in large numbers: the return of industrial peace, however, was marked by a decrease in numbers.

(x.) *Organisation of Unions.* The first regular association of unions in Australia was the Trades Committee in Melbourne, formed in 1859, which afterwards became the present Trades and Labour Council. Similar councils now exist in all the States. Composed of delegates from the unions they exercise a general care over the interests of their members.

(xi.) *Union Acts.* The Trade Union Acts of England and the collateral Conspiracy and Protection of Property Act have been copied by the States, the Acts also providing for unions of employers. The latter provision has been but slightly utilised, however, as apparently it offers no well-defined inducement. South Australia adopted the Acts in 1876, New South Wales in 1881, Victoria in 1884, Queensland in 1886, Tasmania in 1889, and Western Australia in 1902.

The Acts referred to provide for the legal recognition of combinations which come under the definition of trade unions; the registration of unions of seven or more persons, the registration of councils or other bodies to which registered trade unions are affiliated, the vesting of union property in registered trustees, with penal provisions in respect of defaulting officers. The registered unions are required to furnish annual returns of members and funds to a special department.

3. **Operations and Organisation of Unions subsequent to the Acts.**—(i.) *Unions.* Except as hereinafter mentioned, the Unions do not avail themselves of the Trade Union Acts to any large extent. Information concerning them in some States is not at present available, since they do not divulge their membership and funds. The figures given for registered trade unions must not therefore be regarded as affording any criterion by which the present position of unionism may be judged. The discrepancy between the numbers of registered and unregistered unions in some States may be gauged by the fact

that there were at the close of the year 1909 seventy-four unions affiliated with the Melbourne Trades Hall, thirteen with the Bendigo, and sixteen with the Ballarat Trades Hall, making a total of 103. In Victoria only five, however, were registered, and some of the latter are not affiliated. In South Australia there were sixty-seven unions affiliated to the local Trades Council, but only twenty-four were registered. In Western Australia the number of unionists registered under the Industrial Arbitration Act was about 33 per cent. more than the number registered under the Trade Union Acts. In New South Wales the numbers were almost identical.

The failure to register under the Trade Union Acts does not deprive the unions of the privileges conferred by the Conspiracy Acts.

(ii.) *Workmen and Employers in Unions.* Available statistics at present do not shew what proportion of Australian workmen are members of trade unions, though a census of occupations would at least for some States enable an estimate to be made.

The Acts are but little availed of by employers.

(iii.) *Concerted Action.* The consummation of the eight hours' system, at which the early unions had aimed, was followed by demands for further concessions and privileges. An intercolonial congress of delegates of trades unions was first held in Sydney in 1879. At the second congress in Melbourne, in 1884, sixty-nine delegates from New South Wales, Victoria, and South Australia were present, representing forty-one unions, branches, or societies. Following the methods of European associations the Australian unions sought to achieve an improved condition for their members by the establishment of rules concerning minimum wage, limited hours of toil, the restriction of the number of apprentices and improvers, and the prohibition of the employment of non-union labour. Some of the unions refuse to admit to membership any but skilled journeymen, on the ground that their object is to encourage the attainment of proper skill.

(iv.) *Representation in Parliament.* It was during the decade 1880-1890 that the trade unions of Australia espoused direct legislative representation and advocated State interference between employer and employee. This policy has been called "new unionism." A resolution affirming the desirability of Parliamentary representation of labour being carried at the congress of 1884, a number of members representing the special interests of the wage-earners were elected to the Legislatures of some of the States, but the unions took no steps to obtain representation by men chosen from among their own ranks until after the great labour troubles of 1890-1892. In that period serious strikes occurred in the maritime, shearing, and mining industries, and it was then that the Labour party proper was formed, though a certain amount of ameliorative legislation had already found its way into the statute books of the States. Since 1890 the party has considerably influenced Australian politics. In 1904, 1908-9, and 1910-11 Labour Governments occupied the Commonwealth Treasury benches, the elections held in April, 1910, having resulted in the Labour party gaining an absolute majority in both of the Federal Houses of Parliament. The present Governments in New South Wales and South Australia are Labour. Western Australia has also had a Labour Government; and in Victoria and Queensland, the Labour party is an important element in Parliament.

Triennial federal conferences laid down a policy for the party, but at present there is no authoritative Commonwealth organisation, and the policy is not binding upon a State league. The Political Labour Council controls political and the Trades Hall Council trade union matters. The former consists of delegates from both unions and "branches." The branches are coterminous with State electoral districts, and nominate candidates for those districts. Candidates for the Commonwealth Senate are balloted for by all league members in the State, and for the Commonwealth House of Representatives by the branches in the constituency.

4. **Registered Trade Unions.**—(i.) *Unions of Employees.* The statistics of registered trade unions of employees not only do not represent the position of unionism, but, in addition, the statistics themselves for past years are so defective as to be practically value-

less. The number, etc., of these unions is therefore no guide to the position of unionism in Australia. It will be seen that some of the registered unions fail to supply returns; this non-supply may lead to cancellation of the registration. The figures at the end of 1909 were as shewn hereunder:—

REGISTERED TRADE UNIONS OF EMPLOYES, 1909.

State.	No. of Unions.	No. of Members.	Receipts.	Expenditure.	Funds.
			£	£	£
New South Wales	166	127,402	148,202	147,152	94,900
Victoria	5	8,096	4,258	4,205	4,890

Tasmania	Nil	...	...	...	...
Commonwealth ...	351	170,895§	222,809§	218,604§	151,810§

* Returns for 30 unions only, 3 having failed to furnish returns. † Returns for 5 unions only, 20 having failed to furnish returns. ‡ Industrial unions registered under the Arbitration Acts. § Excluding 20 unions in South Australia and 3 in Queensland.

(ii.) *Unions of Employers.* At the close of 1909 there were in New South Wales three unions of employers, with 1441 members; in Queensland three, with 151 members; in South Australia one, with 22 members; and in Western Australia forty-seven, with 408 members.

5. **Registration under Industrial Arbitration Acts.**—Western Australia, and New South Wales up to 30th June, 1908, were the only States with Industrial Arbitration Acts under which industrial associations could be, and actually were, registered. The number of registered unions in New South Wales shewed a gradual increase from 1902 to 1907, the figures in the latter year being 109 unions of employers, with 3165 members, and 119 unions of employees, with 88,075 members. Under the Industrial Disputes Act which has succeeded the Arbitration Act of 1901, the information is not required to be furnished. Since the Act of 1908 has operated, industrial organisation has proceeded rapidly, owing to a very evident general desire on the part of the workers to obtain the status necessary to entitle them to the advantages offered by the Act. Registration under the Trade Union Act is a condition precedent to registration under the Industrial Disputes Act, so far as new unions are concerned. This probably accounts for the large number of unions which were formed during 1909. In Western Australia, the employers' unions numbered 45, with 441 members, in 1904; 59 unions, with 520 members, in 1905; 57 unions, with 534 members, in 1906; 56 unions, with 552 members, in 1907; 48, with 409 members, in 1908; 47, with 408 members, in 1909. Unions of employees have declined in late years. At the end of 1904 and 1905 there were 140, with 15,743 and 15,461 members respectively; in 1906 there were 130 unions, with 16,015 members; in 1907, 121 unions, with 14,544 members; in 1908, 121 unions, with 15,187 members; and in 1909, 122 unions, with 17,282 members. These figures include councils and associations. Registration under Commonwealth legislation began in 1906. In that and the four following years, there was but one union of employers, with 6 members. The unions of employees numbered 20 in 1906, with 41,413 members; 24, with 57,306 members, in 1907; and 37 unions, with 69,536 members, in 1908, and 7 unions, with 14,161 members in 1909.

§ 2. Laws Relating to Conditions of Labour.

1. **Tabular Statement of Statutes affecting Labour.**—The Statutes enacted in the several States of the Commonwealth, which, more or less directly, affect the general conditions of labour, are shewn in the table below. Where merely an incidental reference to labour conditions is made in a statute, as is the case with, *e.g.*, the

Hawkers and Pedlars Act 1892 of Western Australia, or the Firms Registration Act 1899 of South Australia, the Act is not included in the table.

2. **Benefits sought to be Conferred by the Acts.**—(i.) *General Provisions.* The legislation enacted has generally had for its object the shortening of hours, fixing of rates of payment, provision of sanitary accommodation, ventilation and cleansing of premises, and general amelioration of the conditions of labour, particularly that of females and children, in factories. The principal provisions of these statutes are set out in the table hereinafter.

(ii.) *Historical.* The first Australian Factories Act was passed in 1873 in Victoria, and became law on 1st January, 1874. It was entitled "The Supervision of Workrooms and Factories Statute," and contained only six sections. The existing Victorian Act, passed in 1905, contained originally 163 sections, and is now extended by four amendments of 35, 40, 6, and 54 sections respectively. There are, moreover, numerous regulations in force under its authority. The three principal provisions in the Act of 1873 were (*a*) that any place in which not less than ten persons were engaged for hire in manufacturing goods should be constituted a factory; (*b*) that such factories as to building, sanitation, etc., should be subject to regulations made by the Central Board of Health; and (*c*) that no female should be employed for more than eight hours in any one day without the permission of the Chief Secretary. The administration of the Act was entrusted entirely to the local Boards of Health, and the system was found to be less effective than was hoped. The conditions which have given rise to trouble in the old world tended to reproduce themselves in the young and growing industries of the States. Factory workers

had to contend with the absence of security for a living wage; unsatisfactory sanitary surroundings; and unchecked and unscrupulous competition of Chinese in certain trades. The advocacy of legislation to control the conditions of employment became pronounced in Victoria in 1880, and a strike of tailoresses in Melbourne in 1882 led to a recognition of the real state of affairs. As a result of unsatisfactory working under the local governing bodies, and on account of agitation of the operatives, a commission was appointed in 1883, and reported the necessity of legislation for the regulation of factories, and in particular pointed out the fact that men were compelled to toil for as many as eighteen hours and women sixteen hours a day. It also shewed that the condition of out-workers was very undesirable, and that the apprenticeship system was frequently used to obtain labour without remuneration, apprentices being dismissed upon asking for payment at the end of their time. The Factories and Shops Act 1884, while providing for the suppression of many evils in respect of accommodation and lengthy hours, did not touch the two last mentioned. It provided for Government inspection, and also that six persons should constitute a factory if the premises were situated in a city, town or borough. In 1887 a short amending Act was brought in to remedy some defects that were found to exist. Its principal provision was that any place in which two or more Chinese were engaged should be deemed a factory. In 1893 a further enactment reduced the number of persons constituting a factory to four. Another Royal Commission sat in 1895, resulting in the Act of 1896, which dealt with matters previously untouched, and the system of regulation was carried on by the Act of 1900 and the complete codification of the law in 1905.

Similar conditions were found to prevail in other States. New South Wales and Queensland adopted regulative measures in 1896 and subsequent years, and South Australia in 1894, 1900, and 1906. Western Australia followed suit in 1902 and 1904. Tasmania adopted the Victorian Act of 1873 in 1884, with a small extension in 1905; and in 1910 enacted Factories, Wages Boards, and Workers' Compensation Acts.

The same remarks apply in a general way to the condition of employees in shops.

3. **Limitation of Hours.**—(i.) *Factories.* As already remarked, the adoption of the eight hours' system for adult males has generally been the outcome of the representations made by the trade unions. Except in New Zealand, there is no general legislation to enforce the principle, although there is now a general recognition of it. A week of forty-eight hours is the usual working week. The larger unions, however, have lately moved for a *net* day of eight hours, with Saturday half-holiday, no loading of other week days being permitted by way of compensating for the Saturday afternoon. Under this scheme there are, for five days, equal divisions for periods of labour, recreation, and rest, and four hours' work on Saturday, making a working week of forty-four hours. In the majority of occupations, forty-eight hours weekly is the recognised limit of work. On the establishment of Wages Boards and Arbitration Courts, in the States where those institutions exist, the authorities thus created adopted the rule as part of their determinations and awards wherever it seemed reasonably practicable. In some of the larger classes of building trades, the hours have been reduced to forty-four a week, and in some technical and specialist trades, a lower maximum has been fixed, such for example, as the type-setting machine operators in Victoria, for whom the maximum has been fixed by the Wages Board at forty-two hours weekly. Reasonable provision is made by Statute or award for work performed outside the scheduled hours. Organisations of employees, however, oppose overtime in any industry until all the operatives in that industry are working full time.

In the case of women and children there has been very general enactment in the States of the forty-eight hours' limit, and in addition, the maximum periods of continuous labour, and the intervals of cessation therefrom, have been prescribed in all the States. Tasmanian factories' legislation deals exclusively with females and young persons. New Zealand has fixed a weekly maximum of forty-five hours for females and boys under 16. The first enactment of the forty-eight hours' limit in Australia was in 1873, when the Parliament of Victoria fixed that period for women and girls in factories.

(ii.) *Shops.* All the States have statutes containing provisions respecting the hours during which shops in large centres may be kept open for business. These provisions, in effect, not only limit the hours during which shop-hands may be employed, but apply also where the shops are tended by the proprietor alone, or by himself and family, with, however, certain exceptions, such as exist in the State of Victoria. In that State shops wherein not more than one assistant, whether paid or not, is employed, are permitted to remain open for two hours a day longer than other shops of the same class. The object of this is to relieve the hardship which exists for such persons, for example, as widows who are wholly dependent for a livelihood upon the casual trade of small shops. It is, however, reported that little or no benefit has accrued from the permission. In New South Wales, Victoria, Queensland, South Australia, and Western Australia the closing time of shops, except those specially exempted, is 6 p.m. on four days of the week, 10 p.m. on one day (except 9 p.m. in South Australia), and 1 p.m. on one day—thus establishing a weekly half-holiday. In Western Australia the opening hour is fixed at 8 a.m. In addition to fixing the closing hour, the total daily and weekly working hours are delimited in the case of women and children. In some States, butchers' shops must be closed an hour earlier than other retail establishments, the reason being the early hour at which assistants must start to attend to the markets and early morning trade.

(iii.) *Hotels, etc.* Establishments, the opening of which in the evening is presumably necessary for public convenience—such as hotels, restaurants, chemists' shops, etc.—are required to remain open for longer hours or are permitted to do business during hours prohibited in other establishments.

(iv.) *Half-holidays.* The provisions of the early closing laws differ somewhat in each State, but the main objects, namely, the restriction of long hours of labour, are identical throughout. Formerly, in some of the States, there were, and there are still in others, provisions making the early closing of a business, or the selection of a day for a half-holiday, dependent upon the option of the majority of the business people concerned, or upon the local authority. The anomalous results of the system whereby shops on one side of the street bounding two municipalities were open, when those upon the other side were closed, led to the introduction of the compulsory system, whereby the hours of business are absolutely fixed by statute. In Queensland, the day of the weekly half-holiday is fixed for Saturday. In Victoria also the Saturday half-holiday became compulsory in 1909, and in New South Wales in the following year, and there is a strong movement throughout the Commonwealth in favour of closing on the afternoon of that day.

(v.) *Exempted Trades.* The hours for shops exempted from the general provisions of the Acts are also prescribed, and special holidays are provided for carriers.

4. **Other General Conditions of Labour.**—Measures for the protection of life, health, and general well-being of the worker, tabulated hereunder, exist in most of the States. Though in some instances founded upon English legislation, they are also in many cases peculiar to Australia. Despite experience and continued amendment they have not even yet attained to a settled form. Of the Australian States, Victoria originally had the most complete system of industrial legislation. Other States gradually adopted the Victorian statutes, either *en bloc* or with amendments suggested by local conditions. Western Australia followed very closely the legislation of New Zealand, where also the measures for the amelioration of the industrial conditions are enforced by law.

5. **Administration of Factories and Shops Acts.**—The provisions of Factories and Shops Acts and of the Early Closing Acts in some of the States are consolidated under a single Act, but in others are separate enactments. The chief provisions of the principal Acts for registration, administration, record-keeping, etc., and of regulations under those Acts, are set out in the following summary :—

(*a*) Factories are defined to be places where a certain number of persons are employed in making or preparing goods for trade or sale, or in which steam or other power is employed. In some States the employment of a Chinese, in some of any Asiatic, constitutes the place a factory.

(*b*) A Minister of the Crown administers the Act in conjunction with a Chief Inspector of Factories. Inspectors of both sexes visit the factories with full powers of entry, examination, and enquiry. Broadly speaking, these powers confer upon the Inspector the right to enter, inspect, and examine, at all reasonable hours by day and night, any factory where he has reason to think anyone is employed; to take a police constable, if necessary, to assist him in the execution of his duty; to require the production of all certificates, documents, and records kept by the occupier, in accordance with the terms of the enactments; to examine, either alone or in the presence of any other person, every person whom he finds in a factory; to make whatever examination he deems necessary to ascertain whether the provisions of the Act are complied with.

(*c*) Registration of factories before occupation is obligatory. Description of premises and statement of the work to be done must be supplied, and a certificate of suitability of premises obtained.

(*d*) A record of all employees, giving the names, ages, wages, and work of each under a certain age (18, 20, 21, etc.) must be kept and filed in the Chief Inspector's office.

(*e*) Names and addresses of district inspectors and certifying medical practitioners must be posted; also the working hours, the holidays, and the name, etc., of the employer.

(*f*) Records of out-work must be kept, containing the names and remuneration of workers, and stating the places where the work is done. Out-workers are required to register.

(*g*) Places in which only the near kin of the occupier are employed are generally exempt from registration.

(*h*) Meals may be prohibited in workrooms, etc. In some States occupiers are required to furnish suitable mealrooms.

(*i*) The employment in factories of young children is forbidden, and medical certificates of fitness are required in the case of young persons under a certain age. Special permits, based on educational or other qualifications, may be issued for young persons of certain ages.

(*j*) Guarantees of an employee's good behaviour are void unless made with the consent of the Minister.

(*k*) Persons in charge of steam engines or boilers must hold certificates of service or competency.

(*l*) Provision safeguarding against accident is made for the fencing off and proper care of machinery, vats, and other dangerous structures. Women and young persons are forbidden to clean machinery in motion or work between fixed and traversing parts of self-acting machinery while in motion; and dangerous trades are specified in which a minimum age is fixed. Notice of accidents must be sent to the district inspector. (Dangerous trades are generally under the administration of Boards of Health.)

(*m*) Provision is made for the stamping of furniture, in order to disclose the manufacturer, and whether it is made by European or Chinese labour.

(*n*) Minimum wage provisions are inserted. Premiums to employers are forbidden.

(*o*) Sanitation and ventilation must be attended to, and fresh drinking water supplied. Separate and adequate sanitary conveniences for each sex are required.

(*p*) Shopkeepers are required to provide proper seating accommodation for female employees. (In some States this is the subject of special legislation.)

(*q*) A dressing-room for females must be provided in factories the manufacturing process of which requires a change of dress.

(*r*) Adequate protection must be against fire and efficient fire-escapes provided.

(*s*) Wide powers of regulation are granted to the Executive and large penalties imposed, including a penalty by way of compensation to any person injured or the family of any person killed through failure to fence machinery and other dangerous structures.

6. **Registered Factories.**—The number of establishments registered under Factories Acts is shewn below, and is of interest as indicating the extent to which the Factories Acts apply:—

FACTORIES REGISTERED UNDER ACTS, 1910.

* Metropolitan area only. † Figures for 1909. ‡ General Factories Acts not operative before 1911.

7. **Mining Acts.**—Mining Acts regulate the working of mines. Generally the employment underground of females and of boys under fourteen years is prohibited. No boy under seventeen years may be employed as lander or braceman at any plat or landing place; no lander, braceman, underground worker, or man in charge of motive power may be employed more than eight hours a day. A large number of scientific provisions for the protection of the lives and health of miners is also inserted in the Acts. Engine-drivers must hold certificates of competency. Persons may be licensed to certify to the condition of boilers. Provision is made to enable injured persons or the relatives of persons killed to recover damages if the injury or death results from a breach of the regulations referred to above. Inspection of mines is fully provided for. Sunday labour is forbidden. In New South Wales and (since 1st February, 1910) Victoria still more advanced mining legislation exists; numerous sections are designed to ensure the well-being of the workers, such as limitation of hours, etc.

8. **Other Acts.**—The British *Employers' Liability Acts*, and in some States the *Workmen's Compensation Act* 1897, have been adopted. In some States the provisions of the former are extended to seamen. Other legislation regulating conditions of labour has been enacted by the States. The British *Conspiracy and Protection of Property Act* (38 and 39 Vic., c. 86) has been adopted. Servants' registry offices are placed under administrative control, and the rates of commission chargeable are fixed by regulation. Power is given to workmen to attach moneys due to a contractor who employs them in order to satisfy a claim for wages, such wages being made a first charge on moneys due to a contractor. Workmen are given a lien for wages over material whereon they are working, even if it becomes part of other property. This is in addition to the common law lien, which ceases when possession of the property is parted with. Workmen's wages are protected from attachment. In Victoria, provision is made for the compulsory resumption of suburban lands to provide workmen's homes.

9. **General Results of Industrial Legislation.**—The results of the legislation described must be sought in the Reports of the Inspectors of Factories of the several States. Generally speaking, the perusal of these reports and of the reports of Royal Commissions which have enquired into the working of the Acts, affords satisfactory evidence that the Acts have, on the whole, effected their objects.

10. **Comparative Statement of Factories Law in Australia and New Zealand.**—The tables which follow shew at a glance the chief provisions of the Factories and Shops Acts in the Commonwealth and in New Zealand.

§ 3. Legislative Regulation of Wages and Terms of Contract.

1. **General.**—Two systems, based upon different principles, exist in Australia for the regulation of wages and general terms of contracts of employment. A "Wages Board" system exists in New South Wales, Victoria, Queensland, South Australia, and Tasmania, and an Arbitration Court in Western Australia. In New South Wales, Industrial Arbitration Acts of 1901 and 1905 instituted an Arbitration Court. This court expired on 30th June, 1908, having delivered its last judgment on the previous day. Wages Boards were substituted under the Industrial Disputes Act 1908. A Wages Board Act, to come into operation in Tasmania when proclaimed, was assented to on 13th January, 1911. There is also the Arbitration Court of the Commonwealth, which has power, however, to deal only with matters extending beyond the limits of a single State. New Zealand has an Arbitration Court for regulating wages.

2. **Wages Boards.**—(i.) *Historical.* This system was introduced in Victoria by the Factories and Shops Act of 1896. The original Bill made provision only for the regulation of the wages of women and children, but was afterwards amended in Parliament to extend the system to adult operatives of both sexes.

The Act of 1896 made provision for the regulation of wages only in the clothing and furniture trades and the bread-making and butchering trades. By an Act of 1900 the operations of the Act were extended to include all persons employed either inside or outside a "factory" or "workroom"—see sec. 4, i. (*a*) —in any trade usually carried on therein. This section is now in the Act of 1905. The Act of 1907 extended the system to trades and businesses not connected in any way with factories, making provision for the appointment of Wages Boards for metropolitan shop employees, carters and drivers,

persons employed in connection with buildings or quarrying, or the preparation of firewood for sale or the distribution of wood, coke, or coal. The Act of 1909 extended the system to the mining industry, and those of 1910 extended the operation of the Acts to shires.

The regulation is effected by a Board, called a Special Board, to distinguish it from the Board of Health. Boards for the regulation of wages in the trades specified in the Act of 1896 are appointed as a matter of course, and by the Executive other Boards are appointed only if a resolution for appointment be passed by both Houses of Parliament. Originally the Board was elected in the first instance, but the difficulty of compiling electoral rolls led to the adoption of the system of nomination, which has proved satisfactory.

The Board fixes the wages and hours of work and may limit the number of "improvers" to be employed (usually by prescribing so many to each journeyman employed). There is no power in Victoria to limit the number of apprentices employed, but such a power does exist in other States. The Board fixes the wages of apprentices and improvers according to age, sex, and experience, and may fix a graduated scale of rates calculated on the same basis. Apprentices bound for less than three years are improvers, unless the Minister sanctions a shorter period of apprenticeship on account of previous experience in the trade. The Minister may sanction the employment of an improver over twenty-one years of age at a rate proportionate to his experience. Outworkers in the clothing trade must be paid piece rates. Manufacturers may, by leave of the Board, fix their own piece rates, if calculated upon the average wages of time workers as fixed by the Board.

Licenses for twelve months to work at a fixed rate lower than the minimum rate may be granted by the Chief Inspector of Factories to persons unable to obtain employment by reason of age, slowness, or infirmity. Licenses are renewable.

Penalties are fixed for the direct or indirect contravention of determinations, the obedience to which is ascertained by examination of the records of wages, etc.

A Court of Appeal has power to review determinations of the Boards.

The Acts fix an absolute weekly minimum wage, and the evasion of this provision (such as had occurred regarding females employed in the clothing trade), by charging an apprenticeship premium, is prevented by the prohibition of all such premiums. Until the Minimum Wages Act of 1908 began to operate, this absolute minimum provision did not exist in New South Wales.

South Australia enacted the Wages Board system in 1900, 1904, and 1906, but the first-mentioned Act was rendered inoperative owing to the disallowance by Parliament of the regulations necessary for carrying it into effect. The Act of 1904 revived the Wages Board system respecting women and children employed in clothing and whitework trades. The action of this statute was paralysed by a decision, the effect of which was to prevent the fixing of a graduated scale of wages as is done by the Victorian Boards. The necessity for some protection to the persons intended to be benefited by these statutes was urged in the annual reports of the Chief Inspector of Factories, but, until 1906, without effect. Many employers, however, voluntarily complied with the Boards' determinations, though these were without legal force. The system was brought into full operation by the Act of 1906, which preceded the Victorian Act of 1907, in extending the system to other than factory trades, and was of a wider scope than the Victorian Act.

The system is also in operation in New South Wales and Queensland, and will come into operation in Tasmania during 1911. In Western Australia the object is attained under the Arbitration Court system.

It is claimed that the efficacy of the Wages Board system is proved by the increasing anxiety of trades which have not yet been allowed to come under it, to take advantage of it, and apply its benefits to their own conditions.

(ii.) *Mode of Constitution.* The following statement is taken from the Report of the Chief Inspector of Factories, Victoria, for 1907. It is still applicable in that State, and is interesting, in view of the very general movement throughout Australia towards the constitution of Wages Boards. The method is not precisely the same in the different States, but that of Victoria is given as being the State in which the system was first introduced, and has had most remarkable development:—

"The constitution of a Board, and the appointment of the members of a Board, involve two distinct procedures. Before a Special Board is constituted, it is necessary that a resolution in favour of such a course should be carried in both Houses of the Legislature. It is usual for the Minister administering the Factories Act to move that such a resolution should be passed. He may be induced to adopt such a course, either by representations made by employers and employees, or by employees alone, or by the reports of the officers of the department. The reasons alleged by employers for desiring a Board are, usually, unfair competition; and those by employees, low wages, and often the employment of excessive juvenile labour. If the Minister is satisfied that a case has been made out, he will move the necessary resolution in Parliament, and when such resolution has been carried, an Order-in-Council is passed constituting the Board. The Order indicates the number of members to sit on the Board. The number of members must not be less than four nor more than ten. The Minister then invites, in the daily press, nominations for the requisite number of representatives of employers and employees. These representatives must be, or have been, employers or employees, as the case may be, actually engaged in the trade to be affected. All that is necessary is, that the full names and addresses of persons willing to act should be sent in. Where there are associations of employers or employees, it is not often that more than the necessary number of nominations are received. In any case, the Minister selects from the persons whose names are sent in, the necessary number to make up a full Board. The names of persons so nominated by the Minister are published in the *Government Gazette*, and

unless within twenty-one days, one-fifth of the employers, or one-fifth of the employees, as the case may be, forward a notice in writing to the Minister that they object to such nominations, the persons so nominated are appointed members of the Board by the Governor-in-Council. If one-fifth of the employers or employees object to the persons nominated by the Minister—and they must object to all the nominations, and not to individuals—an election is held under Regulations made in accordance with the Act. Shortly stated, employers have from one to four votes, according to the size of the factories carried on, as regards the election of employers, but as regards Special Boards for shops, each employer has only one vote; and each employee in the trade, over eighteen years of age, has a vote for the election of representatives of employees. The Chief Inspector conducts such elections, the voting is by post, the ballot papers being forwarded to each elector. Within a few days of their appointment, the members are invited to meet in a room at the office of the Chief Inspector of Factories, and a person (always a Government officer, and usually an officer of the Chief Inspector's department), is appointed to act as secretary. The members must elect a chairman within fourteen days of the date of their appointment, and if they cannot agree to a chairman, he is appointed by the Governor-in-Council. The times of meeting, the mode of carrying on business, and all procedure, is in future entirely in the hands of the Board. Vacancies in Special Boards, and, because of the preponderance of Chinese, all appointments of members of the Furniture Board, are filled on the nomination of the Minister without any possibility of either employer or employee objecting. The result of the labours of a Board is called a "Determination," and each item of such determination must be carried by a majority of the Board. It will be seen that, unless employers and employees agree, a full attendance of the Board is required, as, in case of a difference of opinon, the chairman decides the matter, and he has only one vote, the same as any other member of the Board. When a determination has been finally made, it must be signed by the chairman, and forwarded to the Minister of Labour. The Board fixes a date on which the determination shall come into force, but this date cannot be within thirty days of its signature by the chairman. If the Minister is satisfied the determination is in form, and can be enforced, it is duly gazetted. In the event of the Minister considering that any determination may cause injury to trade, or injustice in any way whatever, he may suspend same for any period, not exceeding six months, and the Board is then required to consider the determination. If the Board does not make any alteration, and is satisfied that the fears are groundless, the suspension may be removed by notice in the *Government Gazette*. This power is not, however, likely to be used by the Minister, as provision is now made by which either employers or employees may appeal to the Court of Industrial Appeals against any determination of a Board. This Court consists of any one of the judges of the Supreme Court, sitting alone, and the judges arrange which of them shall for the time being constitute the Court. An appeal may be lodged (*a*) by a majority of the representatives of the employers on the Special Board; (*b*) a majority of the representatives of employees on the Special Board; (*c*) any employer or group of employers, who employ not less than 25 per cent. of the total number of workers in the trade to be affected; or, (*d*) 25 per cent. of the workers in any trade. The Court has all the powers of a Special Board, and may alter or amend the determination in any way it thinks fit. The decision of the Court is final, and cannot be altered by the Board, except with the permission of the Court, but the Court may, at any time, review its own decision. The Minister has power to refer any determination of a Board to the Court for its consideration, if he thinks fit, without appeal by either employer or employee. The decision of the Court is gazetted in the same way as the determination of the Board, and comes into force at any date the Court may fix. The determinations of the Board and the Court are enforced by the Factories and Shops Department, and severe penalties are provided for breaches of determination. No proceedings for breaches of the determination can be taken by any one without the sanction of the Department. Any employee, however, may sue an employer for any wages due to him under any determination, notwithstanding any contract or agreement expressed or implied to the contrary."

(iii.) *Special Minimum Wage Provisions.* At the end of 1908 the Minimum Wage Act was passed in New South Wales. A summary of the provisions of this enactment, and a statement of some of the ills it was intended to meet, as set out in the departmental reports, will serve as an indication of the general trend of public feeling in regard to employees throughout the Commonwealth. The Act provides for a weekly wage of not less than four shillings to all persons coming within the definition of "workman" or "shop assistant." That such a measure was necessary is evidenced by the fact that in the workrooms in the Metropolitan district no less than 514 girls, whose ages ranged from 13 to 21 years, were, at the end of 1908, in receipt of less than four shillings per week, and in the Newcastle district there were 272 girls employed in the dressmaking and millinery workrooms receiving less than four shillings a week, the majority being paid no wages at all for their services. The Minimum Wage Act applies to persons coming within the definition of "shop assistant" in terms of the Early Closing Act. A minimum rate of threepence per hour or portion of an hour is to be paid when overtime is worked at intervals of not more than one month, and a sum of not less than sixpence as tea-money is to be paid on the day the overtime is worked. The payment of a premium or bonus on behalf of employees in connection with the manufacture of articles of clothing or wearing apparel is prohibited. The system of so-called apprenticeship without payment originally carried with it the recognition of an obligation to teach the trade, especially in the dressmaking and millinery industry. This aspect of the case had, to a very great extent, been forgotten in the large workrooms, the training received for some time being more that of general discipline than of a technical character. With a minimum wage of four shillings, an employer will find it worth while to teach her employees, so as to bring in a return, in work, for the outlay as speedily as possibly, and discharges of partially-trained workers will be less frequent. It is expected that the trades will also be improved by the weeding out of those who fail to show reasonable aptitude for their work. It is hoped that the provisions of the Act will result in considerably less overtime being worked by the younger girls, who are the persons chiefly affected by its provisions.

(iv.) *Comparison with Functions of Boards of Conciliation in Britain.* It may be noted that the Boards of Conciliation, appointed in England under the Conciliation Act 1897, appear to correspond to the Australian Wages Boards in a remarkable degree, and not in any way to the Arbitration Courts of Australia, inasmuch as they are appointed for each trade or calling, and not to adjudicate generally upon any cases which come before them. Eminent success attended the Board of Trade's conciliatory efforts in the settlement of industrial disputes in 1909. The disastrous struggles of the previous year in the shipbuilding, engineering, and kindred industries had no counterpart, the good offices of the Board of Trade tiding over the two serious labour troubles, viz., that in the South Wales coal field, arising out of the operation of the new Mines Eight Hours Act, and that in the Scottish coal trade, regarding a proposed reduction in wages.

3. **The Arbitration Court System.**—(i.) *Acts in Force.* The following is a general account of the main features of the Compulsory Arbitration laws of Australia. A few important divergences between the Acts are noted. The New South Wales Acts expired on 30th June, 1908.

The Acts in force at the close of the year 1909 were as follows:—

South Australia: The Conciliation Act 1894.

Western Australia: The Industrial Conciliation and Arbitration Acts 1902 and 1909.

Commonwealth: The Commonwealth Conciliation and Arbitration Acts 1904, 1909, and 1910.

(ii.) *Significance of Acts.* In Victoria in 1891, and in New South Wales in 1892, Acts were passed providing for the appointment of Boards of Conciliation, to which application might be made voluntarily by the contending parties. The awards of the

Boards had not any binding force. Boards were applied for on but few occasions, their lack of power to enforce awards rendering them useless for the settlement of disputes.

The first Australian Act whereby one party could be summoned before, and, presumably, made subject as in proceedings of an ordinary court of law to the order of a court, was the South Australian Act of 1894. Its principles have been largely followed in other States, but it proved abortive in operation in its own State, and in many respects is superseded by the Wages Board system already described. Western Australia passed an Act in 1900, repealed and re-enacted with amendments in 1902, New South Wales followed in 1901. A bill introduced into the Tasmanian Parliament in 1903 was rejected by the Upper Chamber. The Commonwealth principal Act, passed in 1904, applies only to industrial disputes extending beyond the limits of a single State. In Western Australia there is under the Act a Court of Arbitration and three Boards of Conciliation. Each of the latter has a limited jurisdiction over the industrial district assigned to it, but the Boards are practically obsolete, as nearly the whole of the work under the Arbitration Act has devolved upon the Court.

(iii.) *Industrial Unions.* The Arbitration Act, framed to encourage a system of collective bargaining and to facilitate applications to the court and to assure to the worker such benefits as may be derived from organisation, virtually creates the Industrial Union. This, except in New South Wales, is quite distinct from the trades union; it is not a voluntary association, but rather an organisation necessary for the administration of the law. Industrial unions (or "organisations," as they are styled in the Commonwealth Act) may be formed by employers or employees. They must be registered, and must file annual returns of membership and funds. Unions of employers must have a minimum number of employees. In New South Wales and Western Australia the minimum is 50, under the Commonwealth Act, 100. All unions of employees must possess the following qualifications:—In New South Wales the union must be a trade union or branch thereof, or be an association of unions; in Western Australia a membership of 15, and by the Commonwealth Act a membership of 100 is required. The union rules must contain provisions for the direction of business, and, in particular, for regulating the method of making applications or agreements authorised by the Acts. In Western Australia rules must be inserted prohibiting the election to the union of men who are not employers or workers in the trade, and the use of union funds for the support of strikes and lockouts; a rule must also be inserted requiring the unions to make use of the Act. The Amending Act of 1909 regulates the binding of apprentices and terms of apprenticeship. The Commonwealth Acts forbid the employment of funds for political purposes.

(iv.) *Industrial Agreements.* Employers and employees may settle disputes and conditions of labour by industrial agreements, which are registered and have the force of awards. They are enforceable against the parties and such other organisations and persons as signify their intention to be bound by an agreement.

Failing agreement, disputes are settled by reference to the court. This consists of a judge of the Supreme Court of the State, or, in the case of the Commonwealth, of the High Court. In the States, he is assisted by two "members," who are chosen by and are appointed to represent the employers and employees respectively. Technical assessors may be called in to sit with and to advise the court.

Cases are brought before the court either by employers or employees. The consent of a majority of a union voting at a specially summoned meeting is necessary to the institution of a case; the Commonwealth Act requires the certificate of the Registrar that it is a proper case for consideration.

The powers of the court are both numerous and varied; it hears and makes awards upon all matters concerning employers and employees. The breadth of its jurisdiction may be gathered from the Commonwealth definition of industrial matters. The definition includes the principal matters dealt with by the Acts in a concise form. "Industrial

matters" include all matters relating to work, pay, wages, reward, hours, privileges, rights, or duties of employers or employees, or the mode, terms, and conditions of employment or non-employment; and in particular, without limiting the general scope of this definition, include all matters pertaining to the relations of employers and employees, and the employment, preferential employment, dismissal or non-employment of any particular persons, or of persons of any particular sex or age, or being or not being members of any organisation, association, or body, and any claim arising under an industrial agreement.

(v.) *Powers of Court.* The court may fix and enforce penalties for breaches of awards, restrain contraventions of the Acts, declare any practice or regulation to be a "common rule" of the trade, and define the limits of its observation (the Commonwealth Court has power to mitigate the hardships of the common rule), hear objections to it, and exercise all the usual powers of a court of law.

The court may prescribe a minimum rate of wage; it may also (except in Western Australia as regards employment) direct that preference of employment or service shall be given to members of unions. An opportunity is offered for objection to a preference order, and the court must be satisfied that preference is desired by a majority of the persons affected by the award who have interests in common with the applicants.

The Commonwealth Court is to bring about an amicable agreement, if possible, to conciliate and not to arbitrate, and such agreement may be made an award.

All parties represented are bound by the award, and also all parties within the ambit of a common rule or (in the case of Western Australia) giving adherence. The court possesses full powers for enforcement of awards.

In Western Australia there is also a system of Boards of Conciliation, consisting of representatives of employers and employees. These, however, are practically obsolete. They had power to make awards, which were binding if not challenged within a month after being filed, but which were almost invariably appealed from.

States have included their railway and tramway employees, and also the employees of certain other public bodies under the Acts; the section of the Commonwealth Act giving the Commonwealth Court power over State employees has been declared unconstitutional by the High Court.[1]

(vi.) *Miscellaneous.* The Commonwealth and Western Australian Acts absolutely forbid strikes and lockouts. The New South Wales Act specifically forbids them, prior to or during the pendency of a case, leaving events after the award to be dealt with by the court. Protection is afforded to officers and members of unions against dismissal merely on account of such officership or membership, or on account of their being entitled to the benefit of an award.

It has been settled by the High Court that an Arbitration Court cannot direct—

(*a*) That non-unionists seeking employment shall, as a condition of obtaining it, agree to join a union within a specified time after engagement;

(*b*) That an employer requiring labour shall, *ceteris paribus*, notify the secretary of the employees' union of the labour required.[2]

4. **Comparative Statement of Tribunals for Regulating Wages in Australia and New Zealand.**—The table on pages 1068 and 1069 shews at a glance the Acts which operate in fixing wages, their application, the constitution and function of tribunals enacted under them, and the effect and extent of the tribunals' decisions. It will be seen that in all the States, except Tasmania, where general factories legislation is not yet operative, there is machinery for the regulation of wages; and also in New Zealand.

2. Trolly, etc., Union of Sydney and Suburbs v. Master Carriers' Association of New South Wales. (2 C.L.R. 509)

5. **Movement Towards Uniformity.**—The wide difference between the development in the several States of the Commonwealth of the regulation by State institutions of the remuneration and conditions of the workers, has given rise to a desire on the part of the Commonwealth Government to secure uniformity throughout Australia by any suitable and constitutional action on the part of the Commonwealth. The provisions of States wages laws vary considerably. In New South Wales, Victoria, and Western Australia, some experience has been gained of their working. The Wages Board system is new in South Australia, Queensland, and Tasmania. The desirability of uniformity has, as already mentioned, been recognised by the New South Wales Arbitration Court, which refused the Bootmakers' Union an award which would increase the wages of its members to amounts exceeding those paid in Victoria in the same trade, the express ground of the refusal being that New South Wales manufacturers would be handicapped by the payment of a higher rate of wage than that prevailing in Victoria.

6. **Constitution Alteration Proposals.**—Two proposed laws for the alteration of the constitutional powers of the Commonwealth in regard to industries and businesses have been passed by the Commonwealth Parliament. These laws are to be submitted to the people (in the form of Referenda) on the 26th April, 1911. The first law proposes to amend section 51 of the Constitution Act (see p. 39 hereinbefore) so as to give the Commonwealth Government increased powers to deal with (*a*) trade and commerce (*b*) corporations (*c*) industrial matters, and (*d*) trusts and monopolies. The second law proposes to insert after section 51 of the Constitution Act, a section empowering the Commonwealth Government to make laws with respect to monopolies. Further particulars of these proposed laws are given in the Appendix at the end of this book.

7. **The "New Protection."**—The opinion has been expressed that a manufacturer who benefits by the Commonwealth protective tariff should charge a reasonable price for the goods which he manufactures, and should institute a fair and reasonable rate of wage and conditions of labour for his workmen.

The above view is known as the "New Protection," a phrase which, though novel, is already firmly established in Australian economic discussions, and the statutes referred to immediately hereinafter are the expressions thereof.

By the Customs Tariff 1906, increased duties were imposed upon certain classes of agricultural machinery, notably the "stripper-harvester," a machine invented in Australia, which has, to a great extent, replaced the "reaper and binder and thrashing machine" in the harvesting of wheat. By the same Act it was enacted that the machines scheduled should not be sold at a higher cash price than was thereby fixed, and that if that price should be exceeded, the Commonwealth Executive should have power, by reducing the customs duties imposed by the Act, to withdraw the tariff protection.

By the Excise Tariff Act 1906 (No. 16 of 1906), an excise of one-half the duty payable upon imported agricultural machinery was imposed upon similar machinery manufactured in Australia. But it was provided that the latter should be exempt from excise if the manufacturer thereof complied with the following condition, namely, that the goods be manufactured under conditions as to the remuneration of labour, which—

(*a*) Are declared by resolution of both Houses of the Commonwealth Parliament to be fair and reasonable;

(*b*) Are in accordance with the terms of an industrial award under the Commonwealth Conciliation and Arbitration Act 1904;

(*c*) Are in accordance with the terms of an industrial agreement filed under the last-mentioned Act;

(*d*) Are, on an application made for the purpose to the President of the Court, declared to be fair and reasonable by him or by a judge of a State court or a State industrial authority to whom he may refer the matter.

By the Excise Tariff Act 1906 (No. 20 of 1906), excise duties are imposed in respect of spirits, and it is provided that if any distiller (i.) does not, after the Act has been passed a year, pay his employees a fair and reasonable rate of wages per week of forty-eight hours or (ii.) employs more than a due proportion of boys to men engaged in the industry, the Executive may on the advice of Parliament impose an additional duty of one shilling per gallon on spirits distilled by that distiller.

Exemptions have been claimed by the manufacturers of agricultural machinery in South Australia, New South Wales, Victoria, and Tasmania. These were granted in the two first-mentioned States in consequence of an agreement entered into between the employers and employees. In Victoria, "this whole controversial problem with its grave social and economic bearings" (to quote the words of the President of the Court) was discussed in a lengthy case upon the application for exemption by Victorian manufacturers, now widely known as the "Harvester Case," and in the report of that case may be found the legal interpretation of the Acts under consideration. The exemptions claimed were refused, and the court after discussing the meaning of the words "fair and reasonable" defined them by laying down what it considered to be a scale of fair and reasonable wages. The High Court has, however, pronounced that the legislation under these Excise Acts is unconstitutional as being an extension of Federal action beyond the powers granted, and a usurpation of the ground reserved to the States.

The Bounties Act 1907 makes provision for the encouragement of certain Australian industries by the payment to producers of certain moneys allotted by the Act upon the production of the commodities specified. The Act also provides for the refusal or reduction of a bounty, if the production of a commodity is not accompanied by the payment to the workers employed in that production of a fair and reasonable rate of wage. The amounts paid in bounties during 1909-10 were :—

COMMONWEALTH BOUNTIES PAID (EXCLUDING SUGAR), 1909-10.

Cotton.	Flax and Hemp.	Sisal Hemp.	Preserved Fish.	Tobacco Leaf.	Cotton Seed for Manufacture of Oil.	Coffee, Raw.	Fruits, Dried.	Combed Wool or Tops Exported.	Iron Manufactures etc.*	Wire Netting.*	Total.

* Paid under the Manufactures Encouragement Act, 1908.

The provision of bounties for sugar-growers is dealt with on page 398 *supra*. The present operative Act is the Sugar Bounty Act 1910, in the terms of which the grower receives bounty according to his production of sugar-cane grown by white labour. The bounties and expenses for the last six years were :—

SUGAR BOUNTIES EXPENSES, 1904-5 to 1909-10.

Year.	1904-5.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£	£

§ 4. Operation of the Wage-regulating Laws.

1. **System of Wages Boards.**—Wages Boards are appointed upon the application of either employers or employees. The grounds usually alleged by the former are that their business is hampered by "unfair" competitors, who pay only a sweating wage; by the latter, that they are sweated, or are entitled to an increase in their wages, by reason of the prosperity of the trade in which they are engaged.

2. **Wages Boards.**—The following table shews the position of trades in relation to the Boards. Some of the most recently appointed Boards have not yet made a determination.

WAGES BOARDS, 1910.

	Total Number of Distinct Trades carried on in Registered Factories.	Total Trades under Boards.	Total Factories Regist'r'd	Total Employees.	Total Employees under Wages Boards.	Percentage under Boards.	Number of Determinations.
Victoria	147	91	5,248	79,348	75,000†	77%	70
Queensland ...	77	30	1,995	24,123	No record	...	43
South Australia* ...	75	44‡	1,628	16,026	12,910	80%	23

* Applies to Metropolitan area only, and includes only persons employed in factories. † Including a considerable number working outside registered factories, such as shop employees in certain businesses, etc. ‡ Some 20 of the Wages Boards have only recently been authorised for appointment, and are now in course of formation.

In New South Wales there were in November, 1910, 117 Boards in existence. Awards of Boards and of the Industrial Court numbered 195, of which 54 were variations of previous awards, 20 were awards of Boards re-enacting awards of Court of Arbitration, 18 were awards of Industrial Court varying awards, and the remaining 103 were original awards of Boards. Before the end of the year, two additional awards of Boards were made.

The Court of Appeal in Victoria has heard seven appeals from determinations of Wages Boards. In one case the decision was upheld; in five cases decisions were reversed or amended; in one case the Board, unable to come to a determination, referred the matter to the Court, which exercised its power of fixing a proper wage where the average wage paid by employers did not afford a living wage. The Court also heard an appeal for a modification of its determination with respect to a trade, and decided to modify such determination by reducing the working hours and increasing the wages in certain cases.

3. **Effect of Acts.**—The question whether the operation of the Acts has bettered the monetary position of the operative may be answered in the affirmative. Starting from the lowest point, the provision of an absolute minimum wage per week has stopped one form of gross sweating. Another case is that of the "white-workers" and dressmakers; with these the lowest grade was the "outworkers," who were pieceworkers. In some branches of the Victorian trade, in 1897, the wages paid to outworkers for all classes of certain goods were only from one-third to one-half the wages paid in the factories for low-class production of the same line of stuff. By working very long hours the outworker could earn ten shillings per week. The average wage of females in the clothing trade in 1897 was ten shillings and tenpence per week; there were, however, in that year 4164 females receiving less than one pound per week, and their average was eight shillings and eightpence. It was almost a revolution when a minimum wage of sixteen shillings per week of forty-eight hours was fixed by the Board, when pieceworkers' rates were fixed to ensure a similar minimum, and when outworkers were placed on the level of pieceworkers. Many employers refused to continue to give outwork and took the workers into the factories on time work. The sanitary conditions

required were far more healthy than could exist in the poorer class of dwellings. The evidence of South Australian reports discloses similar facts in that State.

4. **Change of Rate of Wage.**—The following table shews the change of affairs in Victoria in these trades :—

VICTORIA—WAGES OF FEMALES IN CLOTHING TRADES, 1897 and 1908.

Year	Class.	Females Employed in the Dress, Mantle, and Underclothing Trade.		Females Employed in the Shirt Trade.	
		Number.	Average Wage.	Number.	Average Wage.
			£ s. d.		£ s. d.
1897	16 yrs. and over receiving under £1 per wk.	4,164	0 8 8	435	0 12 3
	" " £1 and over ...	593	1 9 1	144	1 3 10

	Females Employed in ...	Dress and Mantle Trade.		Shirt Trade.		Underclothing Trade.	
		Number.	Average Wage.	Number.	Average Wage.	Number.	Average Wage.
			s. d.		s. d.		s. d.
1908	Females at minimum wage and over ...	3,216	21 8	246	22 4	819	19 9
	Pieceworkers	96	16 9	782	18 10	190	18 8

The above trades, the sweating in which is world-wide, are taken as examples, and corresponding results may be obtained in any State, according as there is or is not a regulative law. In Tasmania, where no such law has been in operation, the scale of wages may be gathered from the fact that in clothing factories females of three and five years' service, and of twenty to twenty-six years of age, receive twelve shillings per week.

§ 5. Operation of the Arbitration Acts.

1. **New South Wales and Western Australia.**—In New South Wales eighty-six agreements were registered under the Industrial Arbitration Act 1901, and two under the Industrial Disputes Act 1908. These affected 1157 employers and nearly 38,000 employees. In Western Australia thirty-four agreements were registered up to the end of 1906; ten in 1907, six in 1908, and fifteen in 1909, making a total of sixty-five. The estimated number of employers affected was 619; of employees, 15,946. The courts have been kept extremely busy. In New South Wales, up to the end of 1908, 252 industrial disputes were filed, 130 awards were made, and the balance of the disputes were settled, withdrawn, or, for some other reason, removed from the list. Fifteen industrial agreements were made "common rules," but these are ineffective in consequence of a legal decision. Fifty-five awards have been made "common rules." There have also been 648 summonses for breaches of awards. In Western Australia 276 industrial cases were, up to the end of 1909, determined; and sixty-five industrial agreements were made and filed. The Industrial Disputes Act of New South Wales has proved far more speedy in its remedial effects than did the Arbitration Acts. During recent years the industrial relations in several important industries have been regulated by Industrial Agreements, thus avoiding the necessity of having recourse to the Court of Arbitration.

§ 6. Other Commonwealth Legislation affecting Labour.

1. **Constitutional Power.**—By sec. 51 of the Commonwealth of Australia Constitution Act power is conferred upon the Parliament of the Commonwealth to make laws respecting, *inter alia*—

(xix.) Naturalisation and aliens.
(xxiii.) Invalid and old-age pensions.
(xxvii.) Immigration and emigration.
(xxxv.) Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State.

2. **Legislation.**—(i.) *Old-age Pensions Act.* A special appropriation was made by Parliament (Act No. 18 of 1908), whereby an Invalid and Old-age Pensions Fund was created; the payment of pensions was enacted by another statute (No. 17 of 1908) as from the 1st July, 1909, on which date the system of old-age pensions to persons of 65 years and upwards became established throughout the Commonwealth. The same Act provides for the payment of invalid pensions, on a date to be proclaimed; also for the age qualification for women being fixed at 60 by proclamation. In each case the proclamations were made in November, 1910.

(ii.) One of the first Acts of the Commonwealth was the *Pacific Island Labourers' Act 1901*, which prohibited the importation of further Kanaka labour for sugar plantations and provided for the deportation of those already in the Commonwealth.

(iii.) *The Immigration Restriction Acts 1901, 1905, and 1910* prohibit the immigration of any persons who are unable to comply with certain educational conditions. The effect of this Act is to exclude Asiatic and other coloured peoples from Australia.

(iv. *The Contract Immigrants Act 1905* defines a contract immigrant as an immigrant to Australia under a contract or agreement to perform manual labour in Australia. The contract must be in writing and must be made by or on behalf of a resident in Australia. Its terms must be approved by the Minister of External Affairs before the admission of the immigrant. It must not be made in contemplation of, or with a view of affecting an industrial dispute. The Minister must be satisfied that there exists a difficulty of obtaining a worker of equal skill and ability in the Commonwealth, but this last provision does not apply to contract immigrants who are British subjects either born in the United Kingdom or descended from persons there born. The terms of the contract must offer to the immigrant advantages equal to those of local workers. Domestic servants and personal attendants accompanying their employers to Australia are excluded from the operation of the Act. Contract immigrants not complying with the above conditions are excluded from Australia.

During the year 1907, 972 contract immigrants were admitted into the Commonwealth, of whom 731 were British, 107 were Spaniards, 80 Scandinavians, 41 Austrians, and 13 Germans. In 1908, 22 contract immigrants were admitted, of whom 20 were British and 2 German. The Britishers followed various occupations; the two Germans were piano makers. In 1909, 158 contract immigrants were admitted, of whom 152 were British. Their occupations were—47 agricultural labourers, 36 bottle makers, 37 station hands, and 32 various. No contracts were disapproved, and no contract immigrants were refused admission during 1907, 1908, or 1909.

(v.) *The Sugar Bounty Act 1910* and the *Bounties Act 1907* make the payment of the bounty contingent on the goods having been grown or produced by white labour.

(vi.) Part VII. of the *Trade Marks Act 1905*, providing for the registration of marks by any individual Australian worker or association of Australian workers for the purpose of indicating that the articles to which it is applied are the exclusive production of the worker or of members of the association—an adaptation of the American "union label"—has been held by the High Court to be constitutionally *ultra vires*. The Court made an order forbidding the Registrar to keep a workers' register.

SECTION XXVIII.

DEFENCE.

§ 1. Military Defence.

1. **Historical Outline.**—Prior to 1870, the main defence of Australia was entrusted to small garrisons of British troops quartered in the leading cities. The primary purpose of these bodies of troops was to serve as a convict guard. From time to time, rumours of wars and of attacks upon Australia deemed imminent as a result of European entanglements, caused the raising of local companies and batteries, which were generally disbanded upon the cessation of hostilities or the quietening of the rumours. The first of such bodies was the "Loyal Association" formed in 1801 as a volunteer corps, on account of the Napoleonic wars, and at the express invitation of the Governor. Half a century later, and at other later dates, fear of Russian aggression drove the colonists to measures of self defence. Efforts to permanently establish a defence force, however, failed until 1870. In that year, the withdrawal of the last Imperial regiment from Australia, and the sense of insecurity which the Continental wars had engendered, resulted in a definite basis for colonial defence being settled. Small detachments of permanent soldiery were established to act generally as a nucleus about which the citizen soldiery should be shaped, and, generally, to look after the forts and defence works, which had then begun to be erected. The system rested upon a volunteer basis, training and service being freely and enthusiastically given by the citizens, the Governments supplying arms and accoutrements and sometimes uniforms. Reward for five years' service frequently took the shape of grants of land. About 1880, Imperial experts advised the substitution of the purely volunteer system by a "militia" or partially-paid system. The provision of a small annual allowance, generally £10 or £12 per annum for the gunner or private, with a sliding scale for higher ranks, together with arms, accoutrements, ammunition, and all military necessaries free, enabled the "militia" system to be introduced about 1883-4. The expenditure was thereby increased, but it was held that the efficiency was enormously greater. With reductions in the rates of pay the system has remained to the present day. "Volunteer" corps have again been raised, and the "permanent" forces from time to time augmented. A detailed historical account of the Australian defence forces will be found in the Commonwealth Year Book, No. 2, pp. 1075-1080.

The establishment and strength of the military forces of the several States on 31st December, 1900, immediately prior to federation, was as follows, cadets, reservists, and rifle club members being excluded :—

ESTABLISHMENT AND STRENGTH OF MILITARY FORCES OF STATES,

31ST DECEMBER, 1900.

State.	Establishment.		Strength.	
	Officers.	Other Ranks.	Officers.	Other Ranks.
New South Wales	549	9,295	505	8,833
Victoria	394	6,050	301	6,034

2. **Land Defence of Federated Australia.**—(i.) *Assumption of Control by Commonwealth.* The Commonwealth of Australia Constitution Act of 1900 empowered the Commonwealth to legislate with respect to "the naval and military defence of the "Commonwealth and of the Several States, and the control of the forces to execute and "maintain the laws of the Commonwealth," and vested the command-in-chief of the Commonwealth forces in the Governor-General, authorising him to proclaim a date, after the establishment of the Commonwealth, for the transference of the Defence Department from each State. This transfer was effected in March, 1901, when the Ministry for Defence, one of the seven departments of the Executive Council of the federation, took over the control of the whole of the forces of the States.

(ii.) *The System of Administration.* Up to 12th January, 1905, the administration of the Commonwealth military forces was by means of a general officer commanding and a headquarters staff. On the date named, a Council of Defence, to deal with questions of policy, and a Military Board, to supervise the administration of the forces, were constituted. The main objects aimed at were (*a*) to establish continuity in defence policy; (*b*) to maintain a continuous connection between parliamentary responsibility and the control and development of the defence forces, the Minister being in constant and effective touch with his department; (*c*) to establish continuity of administrative methods by the creation of a continuous board; (*d*) the separation of administration from executive command, so as to develop the independence of district commands, and by giving scope to independent thought and initiative, make practicable a larger measure of decentralisation, and, more particularly, to make possible the ultimate development of a citizen force; (*e*) to maintain, on a uniform basis, the efficiency of the forces, by continuous and searching inspection by, and independent report from, an officer who, as Inspector-General, is appointed to report upon the results of the administration of the forces, the efficiency of the troops, the system of training, the equipment, the preparedness for war, and the state and condition of all defence works.

The military system of the Commonwealth is made up of—

(*a*) Permanent Forces which include

Administrative and Instructional Staff.
The Royal Australian Artillery Regiment (garrison).
The Australian Field Artillery (permanent).
Small detachments of—
Royal Australian Engineers.
Australian Army Medical Corps.
Australian Army Service Corps.

(*b*) Citizen Forces, comprising

Militia Forces of all arms.
Reserve Forces.

The Royal Australian Artillery Regiment (garrison) practically provides the garrison for certain naval strategic positions and other defended ports, and maintains the forts, guns, stores, and equipment in connection therewith. The other permanent detachments are to form a nucleus, each in its own arm, for instruction and administration of the citizen forces.

The forces of the Commonwealth are organised into—

(*a*) Field Force.
(*b*) Garrison Troops.

The field force consists of five Light Horse brigades, two infantry brigades, and four mixed brigades, and its duties are to undertake the defence of the Commonwealth as a whole, and to act as reserve to the garrison troops. The garrison troops find the necessary garrisons for the defended ports.

The reserves consist of (*a*) officers who, having passed through a certain period or course of training, have retired from active service, and (*b*) members of rifle clubs, attested under the Defence Acts. Rifle club members are required each year to fire a prescribed musketry course, a capitation allowance being paid to clubs for each member classed as efficient. Rifle clubs would furnish a means of bringing the active forces up to war strength in time of national emergency.

(iii.) *Strength of Military Forces under the Federation.* The position of the military forces under the Commonwealth is shewn in the following table :—

STRENGTH OF MILITARY FORCES, 1901 to 1910.

State.	1901. *1/3/01.	1905. 30/6/05.	1906. 30/6/06.	1907. 30/6/07.	1908. 30/6/08.	1909. 30/6/09.	1910. 30/6/10.

§ 2. Naval Defence.

1. **Historical Outline.**—Prior to 1890, when arrangements were made with the British Government for the maintenance of an Australian squadron, provisions for naval defence had been instituted in New South Wales, Victoria, Queensland, and South Australia, where gunboats, torpedo boats, or small cruisers were commissioned, and naval volunteers raised. A fuller historical account of the Australian naval forces under the States is given in the Commonwealth Year Book, No. 2, pp. 1084, 1085.

2. **The Naval Agreement with the British Government.**—(i.) *The Original Compact.* The naval defence of Australasia and its trade is entrusted primarily to ships of the Imperial Navy, maintained under an agreement entered into between the British Government and the Governments of the Commonwealth and New Zealand, and at their joint charge. This agreement was embodied in Acts passed by the several Legislatures some ten years prior to Australian federation. According to its terms, a naval force, additional to the vessels of the Australian Naval Station, which were to be maintained at their normal strength, was to act as an auxiliary squadron. It consisted of five fast third-class cruisers and two torpedo gunboats, and its special function was the protection of the floating trade in Australasian waters. The agreement was made for ten years, and was then, or at the end of any subsequent year, to be terminable only upon two years' notice being given. On its termination, the vessels were to remain the property of the Imperial Government. Three cruisers and one gunboat were to be kept continuously in commission, and the remainder in reserve in Australasian ports, but ready for commission whenever occasion might arise. The vessels were to remain within the limits of the Australasian station, and were to be employed, in times of peace or war, within such limits, in the same way as the Sovereign's ships of war, or employed beyond those limits only with the consent of the Colonial Governments.[1] The first cost of the vessels was paid out of Imperial funds, but the Colonial Governments paid interest on the prime cost at 5 per cent. (up to a maximum of £35,000 per annum), and a sum not exceeding £91,000 for annual maintenance of the vessels, or a total annual contribution of £126,000. In times of emergency or actual war, the cost of commissioning and maintaining the three vessels kept in reserve during peace, was to be borne by the Imperial Government, and, in every respect, the vessels were on the same status as the ships of war of the Sovereign, whether in commission or not. The officers and men of those in commission were subject to a triennial change. The tenth annual contribution, which was payable in advance on 1st March, 1900, apportioned on a population basis, was as follows:—New South Wales, £37,973; Victoria, £32,749; New Zealand, £21,304; Queensland, £13,585; South Australia, £10,439; Western Australia, £4816; Tasmania, £4776.

(ii.) *The Agreement of 1903.* The agreement was not dissolved by the union of six of the contracting colonies, but its renewal, with some alterations, was embodied in the Naval Agreement Act of 1903, the Parliament of New Zealand also assenting. It provided that the force should be made up of one first-class armoured cruiser, two second-class cruisers, four third-class cruisers, four sloops, and a Royal Naval Reserve of 25 officers and 700 seamen and stokers. One of the ships was to be kept in reserve, three to be partly manned for drill purposes for training the Royal Naval Reserve, and the remainder to be kept in commission and fully manned. Australians were, as far as possible, to man the three drill ships and one other vessel, but the vessels were to

---

1. The boundaries of the Australasian station were thus defined:—North—On the north from the meridian of 95° east, by the parallel of the 10th degree of south latitude to 130° east longitude; thence northward on that meridian to the parallel of 2° north latitude; and thence on that parallel to the meridian of 136° east longitude; thence north to 12° north latitude and along that parallel to 160° west longitude. West—On the west by the meridian of 95° east longitude South—On the south by the Antarctic circle. East—On the east by the meridian of 160° of west longitude.

Nothing in the agreement was to affect the purely local naval forces which had been, or might be, established in the colonies for harbour and coast defence. Such local forces were to continue to be paid for entirely by the colony, and to be solely under its control.

be officered by Royal Navy and R.N. Reserve officers. Eight nominations for cadet-ships were to be given annually in the Commonwealth and two in New Zealand. One half of the annual cost of maintenance was to be borne by the colonies—five-sixths of the half (but not exceeding £200,000) by Australia, and one-sixth (but not exceeding £40,000) by New Zealand. The agreement, like the earlier one, was for ten years. By a subsequent arrangement the strength of the squadron was established at one first-class armoured cruiser, three second-class cruisers, and five third-class cruisers. Three sloops were recalled as having no war value, but usually one has been attached to the station as a survey vessel.

3. **The Naval Defence of Federated Australia.**—(i.) *Assumption of Control by Commonwealth.* One of the reasons most frequently urged in favour of a federated Australia was the need for adequate defence. Accordingly, since the consummation of federation, the Commonwealth has assumed control of every branch of defence. Land defences have been unified and systematised, and it has been said that Australia is now ready to take full responsibility for the defence of her ports and dockyards, and for safeguarding her coastal trade. It may be mentioned that the floating trade of the Commonwealth amounts to £160,000,000 per annum, and its adequate protection involves corresponding naval provision with such naval war material as will permit the principal lines of sea communication being kept open; or, if not, ensuring that Australian ports are fully defended.

The Commonwealth Government has therefore started the building of an Australian navy, and in March, 1909, contracted with Messrs. Denny Brothers and the Fairfield Shipbuilding and Engineering Co. Ltd. for the construction of two torpedo boat destroyers, to cost £81,500 each; one vessel to be delivered in fourteen months, the other in fifteen months from the date of signing the contract. A third vessel of the same kind, to be ready for shipment in twelve months, was also to be delivered in Australia in sections, at a cost of £72,500, for local completion.

In connection with the construction of these vessels, eight selected Australian workmen were sent to be trained in the yards of the successful tenderers.

(ii.) *The Naval Forces under the Federation.* Prior to 1905 a naval officer commanding administered the naval forces. On 12th January of that year the Council of Defence was established to deal with all questions of policy, and the Naval Board, then first constituted, took over the administration of the Commonwealth naval forces. Continuity of policy and administration are thereby believed to be ensured, whilst efficiency and uniformity are provided for in the scheme of inspection and report by an officer who, as Director of Naval Forces, is appointed to deal with the training of the *personnel*, and the condition of the *materiel*, of naval forces and works.

The following table shews the strength of Commonwealth naval forces on 30th June, 1910:—

STRENGTH OF COMMONWEALTH NAVAL FORCES, 1910.

Branch of Service.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.A.	Tas.	Total.
Permanently Employed	6	119	64	50	1	...	240
Partially-paid ...	321	229	297	124	17	13	1001
Cadets	200	239	122	205	...	...	766
Total ...	527	587	483	379	18	13	2,007

(iii.) *Harbour Defences.* The vessels for harbour defence obtained by the several colonies prior to federation, and remaining at 30th June, 1910, were:—

COMMONWEALTH NAVAL FORCES, HARBOUR DEFENCE VESSELS, 1910.

Description.	Name.	State.
Iron armour-plated turret ship ...	*Cerberus*	Victoria
Steel cruiser	*Protector*	South Australia
Steel gun vessel	*Gayundah*	Queensland
" "	*Paluma*	Victoria
First-class torpedo boat	*Countess of Hopetoun* ...	"
" "	*Childers*	"
Second-class torpedo boat	*Nepean*	"
" "	*Lonsdale*	"
" "	*Mosquito*	Queensland
" "	... ...	South Australia
Torpedo launch	*Gordon*	Victoria
"	*Midge*	Queensland

The *Gayundah* and *Protector* are utilised for the sea-training of the Naval Militia.

§ 3. The Training of Officers, etc.

1. **Instruction and Exchange.**—The former practice of obtaining officers and non-commissioned officers of the Imperial Army to act as instructors for the Australian military forces has been discontinued for some considerable time; but in August, 1905, arrangements were made for the mutual exchange of permanent officers between the Commonwealth and England, India, and Canada, three officers having been exchanged each year since 1906. At the same time the practice which has existed for some years of sending officers and non-commissioned officers to England for instruction has been continued, and this year two officers and four non-commissioned officers of the permanent forces will be sent. In addition, four officers of the militia forces were sent to India for instruction in 1908, four in 1909, and five in 1910.

§ 4. The Cadet System.

1. **School Cadets.**—Many years before the consummation of Australian federation the systematic military training of lads had been instituted in the schools of the colonies, and the cadet system had attained considerable development. The Commonwealth Government has made arrangements with the various Departments of Education so that boys attending school shall be afforded facilities for drill by their teachers, and regular instruction by the Cadet Instructional Staff of the military forces. The strength of the cadets has increased rapidly, and under the recently-introduced system great expansion is expected. The strength on the 30th June, 1910, was as shewn on the following page.

2. **Senior Cadets.**—Senior cadet battalions, for boys having left school, form a connecting link between the schoolboy soldiers and the citizen forces, the strength on the 30th June, 1910, being as shewn on the following page.

3. **Mounted Cadets.**—Mounted cadet corps have also been formed in various parts of the Commonwealth, the members supplying their own uniforms, mounts, and horse-gear, and being trained in troop and squadron drill by instructors appointed for that purpose. Their organisation is distinct from the educational establishments, but they

are under similar conditions as regards drill and discipline. It is hoped that this corps will form a useful recruiting ground for the mounted branches of the service.

The strength of the Commonwealth cadets, school, senior, and mounted, was on 30th June, 1910, as follows:—

STRENGTH OF COMMONWEALTH CADETS, 1910.

—	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	Total.
Cadet staffs... ...	3	4	2	3	2	1	15
Senior cadets ...	3,687	3,662	1,251	725	601	329	10,255
Mounted cadets ...	54	114	69	...	69	29	335
Cadets	6,983	7,275	3,949	2,355	2,381	1,278	24,221
Total ...	10,727	11,055	5,271	3,083	3,053	1,637	34,826

4. **Naval Cadets.**—Naval cadets have also been organised under the Defence Act. Generally the instruction, given by instructors of the naval forces, aims at embracing all branches of a seaman's training. The strength at 30th June, 1910, was 766.

5. **Boys' Brigades.**—In addition, boys' naval brigades and boys' (military) infantry corps have been instituted in connection with various societies. These have not come under direct Governmental control, and it is not intended that they should do so. But, while remaining unofficial, they are given a grant of 7s. 6d. a head for efficients, between twelve and sixteen years of age, who are properly uniformed, and receive instruction in physical drill, squad and company drill, knotting and splicing, and semaphore signalling. The idea of the originators of the movement is to keep the lads together in their leisure time, turning it to profitable account, and inculcating the principles of self-restraint and discipline, while at the same time preparing them for the sterner duties of citizenship.

6. **Scouts.**—Similar in intention is the "Boy-scout" movement. This organisation, instituted in England, extended to Australia in 1907, and has since spread rapidly, centres having been formed in the leading towns and in many country districts. Healthy and interesting instruction is given to the boys, and matters are taught that assist them in their private life, and are at the same time useful as war training. Principal among these are:—First aid to the injured, cultivating powers of observation and tracking, visual signalling, knotting and splicing, hut and bridge building, compass reading and map drawing, hygiene. Out-door life is encouraged, and bivouacs and camps are frequently held. Patriotism and comradeship are inculcated, and the use of intoxicants and narcotics prohibited. The movement is practically self-supporting. The "Girl-aid" movement has also been inaugurated, with the intention of giving girls training in discipline and the duties of camp life. These include first aid and nursing, simple camp cooking, signalling and telephoning, and hygiene.

§ 5. Commonwealth Defence Legislation.

1. **The Defence Acts of 1903 and 1904.**—(i.) *General Provisions of the Acts.* The defence of Australia at the present time is enacted and prescribed by the Defence Acts 1903-10 of the Federal Parliament. Many of the provisions of the Acts of 1903 and 1904 are merely enabling, empowering the Governor-General to arrange for the efficient defence of the Commonwealth, and to appoint officers to responsible positions and to commissioned ranks generally. The defence force is declared to consist of the naval and military forces of the Commonwealth, divided into "permanent" and "citizen" forces. The former consists of persons bound to continuous service for a term; the latter consists of persons not so bound. Prior to 1911, they were divided into "militia," who were paid, and "volunteers," who were not ordinarily paid, for their services. Members of rifle clubs

duly sworn, and enrolled persons who have done active service, make up the reserve forces. In time of peace, enlistment is voluntary. In time of war, the citizen forces may be called out the by Governor-General, who must state his reason for so doing, and communicate the fact to Parliament. Members of the naval forces may be called upon to serve outside the Commonwealth, but those of the military forces are not liable for such service. The forces may be used for the protection of the States from domestic violence. Command in time of war may be given to the Commander of any portion of the King's regular forces, or of the King's naval forces. For training, and in war, the naval forces may be placed on board ships of the navy of the Australian station. The Army Act (Imperial) is to apply to the Commonwealth military forces, and the Naval Discipline Act (Imperial) to the Commonwealth naval forces, while on active service, except where those Acts are inconsistent with the Commonwealth Defence Acts. Regulations, however, may prescribe that any provisions of the Imperial Acts named shall not apply. Provision is to be made out of the Consolidated Revenue Fund for families of men killed or incapacitated while on service.

Male inhabitants between 18 and 60 years of age are liable to serve in time of war, Parliament being informed of the occasion if in session, and being summoned within ten days if not. Under the Acts of 1903 and 1904 persons the doctrines of whose religion forbade them to bear arms or perform military service might be exempted.

Naval and military cadet corps are also established—to consist of schoolboys over 12 years of age, and youths between 14 and 19 not attending school. They are not liable for active service.

The construction and maintenance of vessels, building and equipment of forts, laying of mines, institution of arms and ammunition factories, the acquisition of artillery and rifle ranges, and the performance of all acts for efficient defence and protection, are provided for. Railways and tramways are to carry troops when required. In time of war, the control of these services may be assumed by an officer duly authorised, and vehicles and boats may be impressed, and troops billeted and quartered. Heavy penalties are decreed for unlawfully giving information as to defences, or unlawfully obtaining same; and for supplying inferior provisions, material, equipment, etc. Information required under the Act is to be correctly given. Persons required to enlist are to do so, and are to take the oath of affirmation prescribed, and no person is to procure or aid desertion or to harbour deserters. Obstructing drill, personating, sketching fortifications and works or trespassing in them, or even being, with the intention of graphic representation, in their vicinity with drawing or photographing materials, etc., is forbidden.

An exhaustive body of regulations has been drawn up under the authority of the Act, and the details of service and duties of members of the forces are set out therein. These, having been notified in the Government *Gazette*, have the force of law.

The Governor-General, under the powers conferred upon him by the Acts, has appointed an Inspector-General of the Military Forces, a Director of the Naval Forces, District Commandants, and commissioned officers generally. In the first appointment of officers, preference is accorded to persons who have served in the ranks. Promotions of officers are generally subject to passing the prescribed examinations, but distinguished service, or marked ability and gallantry in active service, may be permitted to gain promotion without examination. A Council of Defence, and Boards of Military and Naval Administration have been constituted. A Reserve of Officers has been formed, and also an Unattached List, whence officers may be employed for duty with any corps or with the staff. The authority of the Act to establish a Naval and Military College has not yet been availed of, but a Chair of Military Science has been endowed by the University of Sydney, and an officer of the Imperial general staff has been appointed Director of Military Science. Reference is made hereinafter to the course of instruction. It is hoped that now not only soldiers will be enabled to perfect themselves in the duties of their profession, but that the influence of the teaching will pervade all classes of the

community, and enable them to speak and vote more effectively, because with greater knowledge, when defence matters come up for consideration.

(ii.) *Regulations for Efficiency.* Under the regulations certain requirements for efficiency are set out for members of the militia forces, inefficients being discharged. The principal of these requirements are :—Attendance at the annual camps of training; completion of a course of "field training" in the special duties of the arm to which the member is attached; attendance at District Commandants' inspections; and the performance during the year of an allotted amount of drill, generally 12 days or equivalent. In the case of specialist corps the efficiency requirements are greater. Camps, inspections, musketry, and field-training parades count for efficiency, and two half-days or four nights are regarded as equivalent to a day. The attendance of militia and volunteer forces at the camps held during the visit of Field Marshal Lord Kitchener, G.C.B., etc. at the beginning of 1910 is shewn in the accompanying tables:—

ATTENDANCE OF MILITIA AND VOLUNTEER FORCES AT CAMPS OF CONTINUOUS TRAINING, 1910.

Arm.	Total Strength at date of Camp.	Total Average Daily Attendance.	Percentage of Average Daily Attendance to Strength.
MILITIA—			
Command Staffs	32	27	84
Light Horse	5,118	4,029	79
Field Artillery	1,330	1,043	78
Garrison Artillery	1,384	946	68
Engineers	787	615	78
Infantry—Militia	6,473	4,775	74
Intelligence Corps	54	46	85
Corps of Signallers	268	228	85
Army Service Corps	297	244	82
Army Medical Corps	682	552	81
Army Veterinary Corps	13	12	92
Total Militia	16,438	12,517	76
VOLUNTEERS—			
Infantry	2,940	938	32
Automobile Corps	32	17	53
Total Volunteers	2,972	955	32
Grand total	19,410	13,472	69

The numbers classed as "efficient" for the year 1909-10 were as follows:—

EFFICIENTS (MILITIA AND VOLUNTEER FORCES) 30th JUNE, 1910.

Force.	Strength on 30th June, 1910.	Efficients.	Percentage of Efficients to Strength.	Non-Efficients.
Militia	16,474	13,437	82	3,037
Volunteers	4,885	3,386	69	1,499
Total	21,359	16,823	79	4,536

2. **The Defence Act of 1909.**—The principal provision of this Act is the addition of enactments relating to universal obligation in respect of naval and military training; the making of regulations exempting from service (persons with objections to service on religious grounds being exempt in any case); registration and enrolment for naval and military training; and establishment of a military college. Authority is provided for the establishment and maintenance of factories for the manufacture of naval and military equipment and uniforms; and for the employment of persons in a civil capacity for any purpose in connection with the Defence Force, or in any factory established under the Act. Owners of horses, vehicles, etc., which may be impressed for defence purposes, may be required to register them periodically, and any land may be entered under proper authority. Intoxicating and spirituous liquors are forbidden in camps and canteens. The provisions of the Act regarding periods of universal training are set out below (page 1089). Heavy penalties may be exacted from persons who evade service, and from employers who prevent employees from serving. Exemptions from training in time of peace are permitted to those medically unfit; to those not substantially of European origin or descent (except duties of a non-combatant nature); to school teachers qualified as naval or military instructors, or who are officers of cadets; to members of permanent forces. Specified areas may be exempted. Registration of all liable to serve is prescribed. A Military College under a director and staff is to be established, and instruction is to be given by its graduates to the citizen forces.

3. **The Defence Act of 1910.**—The Act of 1910 is an extension of that of the previous year. The exemptions from service are further defined, and comprise membership of Parliament; the holding office as judges, magistrates, constables, prison warders, and lighthouse keepers. Hospital doctors and nurses, non-Europeans, and persons with conscientious objections to bearing arms, are to be exempted from duties other than those of a non-combatant nature. Burden of proof of exemption rests on the person claiming it. Authority is given for the establishment and maintenance of horse depôts, farms and stations for the breeding of horses. Uniforms are to be free to all ranks of the citizen forces. The period of adult training is extended to seven years, in place of two years provided under the Act of 1909, and the duration of service with the adult reserves is consequentially shortened to one year instead of six. The organisation and duties of the Commandant and members of the military college are further defined. Though it is generally intended that entrance should be in youth, provision is made that any member of the forces over the age of nineteen years who passes the prescribed examination may be admitted to the college.

§ 6. The New Defence System.

1. **Defence Policy.**—(i.) *Peculiar Position of Australia.* The Acts of 1909 and 1910 were the direct outcome of the feeling, shared by all classes of the community, that Australia was insecure under the voluntary system. Recently, the Minister of Defence referred to the fact that if on a map of the world all the countries stained with blood were to be marked, Australia would be the only white spot. It is the national policy to effect a guarantee that this exemption from war should continue.

(ii.) *Continuity of Administration.* Under the recent Acts the system of administration by naval and military boards continues. The Governor-General is empowered to make appointments and promotions of naval and military officers; appoint an officer to command the whole or any portion of the naval forces; appoint military districts and sub-districts; raise, organise and maintain permanent and citizen naval and military forces, as may be deemed necessary for the defence and protection of the Commonwealth and of the several States.

(iii.) *Compulsory Training.* By the Defence Acts of 1903 and 1904 all male inhabitants of Australia between the ages of 18 and 60 years were made liable to serve in the defence forces *in time of war.* The recent Acts make training and service compulsory *in time of peace.* By the Act of 1909 the principle of universal liability to be trained was made law for the first time in any English-speaking community. The liability is upon all male inhabitants of Australia (except those specially exempted), who have resided in the Commonwealth for six months and are British subjects.

2. **The Military Scheme.**—(i.) *The Land Army.* The Act prescribed Junior cadet training for lads 12 and 13 years of age, followed by Senior cadet training for lads from 14 to 18 years of age, equivalent in duration to sixteen whole days annually (of which eight should be in camps of continuous training), the remainder being divided into convenient parades throughout the year. Thereafter adult training for two years in the citizen forces equal to sixteen days annually (eight in camp), followed by registration or one muster parade each year for six years. The existing citizen forces were to be continued. Arrangements for registration, enrolment, inspection, and medical examination of all persons liable to be trained were made, and it was enacted that a military college should be established.

(ii.) *Visit and Report of Viscount Kitchener.* Before the Act came into operation, viz., at the end of 1909, Field-Marshal Lord Kitchener visited Australia at the invitation of the Government, and after inspecting the military forces at work at camps held at various places throughout the Commonwealth, and the forts and defence works erected or in course of erection, reported upon the whole scheme of land defence. His recommendations (with the exception of some confidential matters) were made public in the form of a memorandum in February, 1910. A scheme was propounded in conformity with the Defence Acts 1903-9. But a somewhat new aspect was given to the Act of 1909, and the consolidation of its aims was suggested. The principal alteration was the addition of five years to the period of training, by making soldiers of 20 to 25 years of age continue their citizen soldier service by attending annually six days in camp; followed by only one year's muster parade, and thereafter passing to the reserve. The trend and purport of the published report are as follows:—

With adequate training and organisation the material in the young manhood of Australia is satisfactory. At present the numbers, training, and organisation are inadequate for defence purposes, all the circumstances being considered. Compulsory training for a period, with an unstated amount of voluntary service added, will, it is held, ensure readiness for emergencies, the number proposed under the Defence Act of 1909 being sufficient, provided that the forces are efficiently trained, organised, and equipped.

The provision of a military force adequate to ensure local safety and public confidence at a time of attempted invasion is regarded as a paramount duty, and the home defence forces of Australia, it is proposed, should be determined on lines similar to those adopted in Great Britain.

The estimated strength of the land forces necessary to do this—consideration being given to the great ocean distances which lie between Australia and the territory of any possible enemies, the armed strength and power of transportation oversea of any conceivably hostile nation, and the extent of territory of the Australian Commonwealth, contrasted with its comparatively small population—is estimated at 80,000, half to secure the larger cities and defended ports from attack, the other moiety to operate as a mobile striking force anywhere in Australia.

These forces should be enrolled, organised, and trained on the principle embodied in the Defence Act 1909, viz., the compulsory training of every citizen for national defence. The organisation proposed is—

21 brigades of 4 battalions each—84 battalions of infantry ;
28 regiments of light horse ;
49 four-gun field batteries ;
7 four-gun heavy and howitzer batteries, the whole totalling 224 guns ;
7 communication companies, and 14 field companies of engineers ;
with departmental troops in proportion.

Peace and war establishments of infantry, light horse, and artillery are—

Infantry battalion—Peace establishment	750	; war establishment	1030
Light horse regiment	,,	,,	350	,,	,,	499
Artillery battery	,,	,,	130	,,	,,	151

The peace establishment would be found from the 80,000 trained soldiers, and the augmentation to war establishment would be provided by the addition of the recruits and the 25-26 year men. For the latter, in peace time, a muster parade would suffice.

The annual periods of training, over and above home training, would be :—

For junior cadets, 12 to 14 years—120 hours.
For senior cadets, 14 to 18 years—equivalent to 16 days.
Recruit training, 18 to 19 years—16 days, 8 of them in camp.
Trained soldiers, 19 to 20 years—16 days, 8 in camp.
Trained soldiers, 20 to 25 years—6 days in camp.
Trained soldiers, 25 to 26 years—muster parade only.

Thereafter, the trained soldiers would pass to the reserve.

On this basis the yearly quotas enrolled in the citizen force would be :—

PROPOSED YEARLY QUOTAS IN THE CITIZEN ARMY.*

Ages.	Infantry.	Light Horse.	Artillery.	Total.	Engineers & Departm'ts
18-19 years (recruits)	12,500	1,950	1,450	15,900	1,175
19-20 years	11,800	1,850	1,370	15,020	1,125
20-21 years	11,200	1,750	1,320	14,270	1,075
21-22 years	10,700	1,650	1,240	13,590	1,025
22-23 years	10,200	1,600	1,190	12,990	975
23-24 years	9,800	1,500	1,130	12,430	925
24-25 years	9,300	1,450	1,050	11,800	875
Total, 19-25 (trained soldiers)	63,000	9,800	7,300	80,100	6,000
25-26 years (for muster parade)	9,200	1,400	1,000	11,600	850

* In this table an annual wastage of 5 per cent. is allowed for mortality, medical unfitness, absence, and other casualties.

The reasons for the extension of the periods prescribed in the recent Defence Acts are—(*a*) The cadet training is valuable as a preparation, but it cannot replace recruit

training. Therefore the 18-19 year men should be classed as recruits. (*b*) Soldiers to be efficient should be exercised in camp annually.

Division of the Commonwealth into 215 areas, varying in extent according to density of population, is proposed, each under command of a permanent instructional officer, assisted by one or two non-commissioned officers, and each providing a definite proportion of a fighting unit. The areas are to be combined to form one group, under the supervision of a superior instructional officer. These officers, together with those required for permanent troops, district staffs, and central administration, would form a staff corps ultimately to be drawn from the military college. They should be sent abroad for study, and also attached to other land forces of the British Empire. The citizen officers are to be specially trained in imparting instruction and in the leadership of men. Acceptance of a commission will entail a liability to serve as an officer for at least twelve years, but will not interfere with free movement from place to place in Australia, nor with the privilege of leave on private affairs to visit oversea countries. All promotions are to be from the ranks, and citizen officers are to be young men. To instruction in camps and classes should be added a correspondence system, and a military magazine, edited and published by the headquarters staff, should be circulated free. The citizen non-commissioned officers are to be specially chosen from those serving in the ranks, the most promising to receive special technical training, with pay and privileges superior to those of the soldier, since the N.C.O. will be carrying out more than the minimum legal requirement of service. The Australian citizen soldier experiences much of military value in the everyday conditions of his civil life. He is generally a good rider, active, lithe, and intelligent. With cadet training in shooting and the rudiments of drill, he would pass through the recruit stage, and during six years would serve annually the periods already set out, as an efficient and fully trained soldier, thereafter passing to the reserve.

Training of the citizen soldier would consist in "home" training under the staff corps in the vicinity of the men's homes; and camp training with neighbouring troops in concentration camps at some convenient place in the vicinity.

The retention of the position of Inspector-General is recommended, and his duties allotted.

The citizen force should, it is thought, be kept quite outside party politics, and a citizen officer elected to Parliament should be at once seconded.

The training of the new citizen troops would cost as follows:—

COST OF TRAINING UNDER SCHEME PROPOSED BY LORD KITCHENER.

Pay and horse allowance	£276,000
Rations during continuous training	38,000
Forage during continuous training	15,000
Transport of troops	78,000
Clothing, service pattern only	100,000
Horse hire and local transport	25,000
Miscellaneous	15,000
Total	£547,000

The annual total cost would be very close to that estimated for the fourth year of the scheme propounded under the 1909 Act, except that with increased training more gun and small arm ammunition would be required. An addition of £44,000 was therefore made to that estimate. A summary of the cost in the seventh year of the proposed scheme is given hereunder:—

SUMMARY OF ANNUAL COST IN SEVENTH YEAR OF SCHEME PROPOSED BY LORD KITCHENER.

Staff corps	£142,000
Permanent services	234,000
New Citizen Troops—	
Pay, allowances, and camp expenditure	547,000
New military college	15,000
Home instruction of the citizen officers	4,000
Compulsory Cadet Training—	
Jun. and sen. organisations, including all stores required	161,000
Reserves—	
Members of rifle clubs, etc.	126,000
Fixed defences, material only...	40,000
Mobile Armament—	
Field artillery and machine guns, with vehicles, harness, and all stores	60,000
Small arms	85,000
Ammunition—gun and small-arm...	136,000
General equipment	84,000
New works and buildings, rent, repairs, and maintenance	150,000
Miscellaneous	100,000
Total	£1,884,000

Railway construction, while developing the country, has resulted in lines of little use for defence owing to different gauges and lack of systematic interior connection. A war railway council is suggested, composed of the Chief Railway Commissioner in each State, under the presidency of the Quartermaster-General of the citizen forces, to secure co-operation with the military authorities in concentration and mobilisation.

Lord Kitchener's report also deals in detail with the mode of enrolment of the citizen forces, registration of all youths, record of changes of residence, and exemptions from service; pay of officers of the staff corps; pay of citizen officers and soldiers during service; entry and course of instruction at military college and its military and civil staff; the establishment and organisation of units; details of progressive training; plans for mobilisation; and allotment of functions of members of Military Board.

In the transition period, it is considered that a great deal of preparatory work might be done by the appointment of area officers from the existing militia and volunteer officers, and the existing permanent instructional staff. These should be assisted by the staff warrant and non-commissioned officers, supplemented by suitable appointees. Thus the completely-trained staff corps officer would find his area mapped out, the registration complete, and the various classes from junior cadets upwards formed. He would then take over a going concern, only requiring the guidance which he by reason of his thorough military grounding can give, to raise each quota of the national force to the high standard of efficiency demanded by the nation.

3. **Organisation of Land Forces under the Defence Act 1910.**—(i.) *Proclamation.* The Defence Act 1910, passed by the Parliament which was returned at the elections of April, 1910, came into operation on 1st January, 1911, by proclamation. On account either of sparseness of population or difficulty regarding communications (either of which reasons would entail expenditure incommensurate with military efficiency), certain areas are exempted. In all other parts of the Commonwealth territory the clauses decreeing universal training are proclaimed.

The proposed organisation is based upon necessary considerations of (*a*) the numbers available; (*b*) the length of service demanded; (*c*) the proportion of the various arms required. It differs in some of its details from the scheme propounded by Lord Kitchener and includes—

28 regiments of light horse;
56 batteries of field artillery;
93 battalions of infantry;

and a due proportion of engineers, communication, army service, and army medical corps, troops for forts, and other services.

In connection with the numbers available the figures of estimated male population are of interest. The total number at cadet age, *i.e.*, between 12 and 18, at 31st December, 1910, was about 292,000; at citizen soldier age, *i.e.*, between 18 and 26, 334,000; these latter, with 338,000 at ages between 26 and 35, give 672,000 as the total males at the best period for military service. In addition there are about 580,000 between 35 and 60.

The actual requirements under the scheme enumerated in sections 125, 126, and 127 of the Defence Act 1903-1910, are as follow:—

Section 125. All male inhabitants of Australia excepting those who are exempted by this Act) who have resided therein for six months shall be liable to be trained, as prescribed, as follows:—

(*a*) From 12 to 14 years of age, in the junior cadets;
(*b*) From 14 to 18 years of age, in the senior cadets;
(*c*) From 18 to 25 years of age, in the citizen forces; and
(*d*) From 25 to 26 years of age, in the citizen forces.

Provided that, except in time of imminent danger of war, service under paragraph (*d*) shall be limited to one registration or one muster parade.

Section 126. (*a*) The training in the junior cadets shall begin on the first day of July in the year in which the persons liable reach the age of 12 years, and shall continue for two years;

Provided that, in the case of persons who reach the age of 13 years in the year in which this part commences, the training shall begin on the first day of July in that year, and continue for one year.

(*b*) The training in the senior cadets shall begin on the first day of July in the year in which the persons liable reach the age of 14 years, and shall continue for four years;

Provided that, in the case of persons who reach the age of 15, 16, or 17 years in the year in which this part commences, the training shall begin on the first day of July in that year and continue for three years, two years, or one year respectively.

(*c*) The training in the citizen forces shall begin on the first day of July in the year in which the persons liable reach the age of 18 years, and shall continue for seven years.

Section 127. The prescribed training shall be, in each year ending the 30th June, of the following duration:—

(*a*) In the junior cadets 120 hours; and
(*b*) In the senior cadets four whole-day drills, twelve half-day drills, and twenty-four night drills; and
(*c*) In the citizen forces sixteen whole-day drills or their equivalent, of which not less than eight shall be in camps of continuous training.

Provided that in the case of those allotted to the naval forces and to the artillery and o the engineers in the military forces, the training shall be twenty-five whole-day drills, or their equivalent, of which not less than seventeen shall be in camps of continuous training.

Provided also that the duration of a whole-day drill shall not be less than six hours, of a half-day drill not less than three hours, and of a night drill not less than one hour and a half.

Provided also that in the senior cadets the number and duration of half-day and night drills may be varied by the substitution of other drills as prescribed of a total duration of not less than seventy-two hours.

The provisions for registration and inspection are contained in sections 142, 143, and 144 of the Act, and are as follow :—

Section 142. All male persons of Australia, who have resided therein for six months, shall register themselves or be registered by a parent, guardian, or other person acting *in loco parentis*, in the manner prescribed—

(*a*) During the month of January in the year in which they reach the age of 14 years (or, in the case of persons who in the year in which this part commences will reach the age of 15, 16, or 17 years, during the month of January in that year), or

(*b*) If not then present in Australia, or if for any other reason not registered at the prescribed time, within such further time and in such manner as is authorised by the regulations.

Section 143. (*a*) All persons liable to be trained under paragraphs (*c*) and (*d*) of section 125 of this Act and not exempted by this Act shall be allotted to the several arms and corps.

(*b*) Of all persons liable to be trained such a number as are required shall first be allotted for training in the naval forces.

(*c*) All persons liable to be trained under paragraphs (*b*), (*c*), and (*d*) of section 125 of this Act who are forbidden by the doctrines of their religion to bear arms, shall, so far as possible, be allotted to non-combatant duties.

Section 144. All persons liable to be trained shall attend at the prescribed times and places for inspection, and shall give such information as is prescribed, and shall submit to the prescribed medical examination.

The first work in the active carrying out of the scheme commenced with the training of 200 non-commissioned officers for the instruction of the projected army in a six months' camp. Area officers were chosen from the citizen forces, and underwent a six weeks' course of instruction. With the year 1911 came the active enrolment of the new cadets; the total registrations in training areas up to 31st January exceeded 120,000.

The progress of this work will be in stages, as follows:—

First stage, January to June, 1911.—Existing junior and senior cadets to continue to 30th June, 1911, but all equipment to be returned by that date; registration, inspection, and medical examination to proceed of lads whose 14th, 15th, 16th, and 17th birthdays occur in 1911; preparations to be made to clothe and equip the new senior cadets.

Second stage, July, 1911, to June, 1912.—Registration, etc., of lads whose 14th birthday occurs in 1912; new junior and senior cadet training begins from 1st July, 1911. Of the latter, about 20,000 will pass as recruits, inaugurating the new citizen forces in the third stage.

Third stage, July, 1912, to June, 1919.—Registration, etc., of lads whose 14th birthday occurs in 1913; new citizen forces training begins with 20,000 recruits (18 year old persons drafted from the new senior cadets). During the third, fourth, and subsequent stages the new senior cadet force, numbering 100,000, will continue. During this period the units under the new organisation will be created.

Fourth and subsequent stages, after July, 1913, (and each year).—Registration, etc., of lads whose 14th birthday occurs in 1914, and so on. In the fourth and subsequent stages, the new citizen forces will also be continued, increasing each year by 20,000.

The territorial organisation of the Commonwealth is one of areas based upon infantry units. There are 93 battalion areas, approximately equal in number of males of citizen soldier age, and each containing a battalion of infantry, with either a battery of field artillery (in urban districts), or a regiment of light horse (in country districts), and also a larger or smaller number of one or more other arms, departmental corps, etc. For internal administrative purposes, the battalion areas are subdivided into two or three training areas. Brigade areas are formed by grouping four battalion areas.

The instructors provided for training existing units and for territorial work in connection with the new system consist of 58 officers and 425 warrant and non-commissioned officers of the instructional staff (permanent), and 224 area officers (temporary). They are required to supervise the training of light horse, infantry, and senior cadet units, and to instruct in the non-technical duties of specialist corps. Additional officers and non-commissioned officers in the permanent troops will instruct in technical work.

The officers of the instructional staff will act as Brigade-Majors, and as such will represent the Commandant in the brigade area. They will be responsible for the instruction of officers of the existing citizen forces, will conduct local schools of instruction, supervise and instruct the area officers, and allot the non-commissioned officers of their detail to various duties. Assistant Brigade-Majors will also be furnished from the instructional staff. The duties of area officers will vary both in nature and extent, and will comprise registration and organisation of those to be compulsorily trained; the clothing, arming, equipping, and training of the new senior cadets; and the training of recruits in the citizen forces. They will also relieve citizens officers of administrative work, and perform the duties of adjutant to militia units.

The staff instructors (warrant and non-commissioned officers) will carry out the administrative work of their areas or units, and instruct cadets and recruits in light horse and infantry drill and tactics.

The area officers do not undertake the registering and inspection of junior cadets. There is no provision in the Act for registration before the 14th year; but when the junior cadet presents himself for registration before the area officer, it will be necessary for him to show that he has complied with the requirements of the Act during the five preceding years. It is probable that State Inspectors of Schools and special inspectors of physical training (to be approved, and appointed by the Minister of Defence), will undertake the supervision of the great body of the junior cadets, the training being in the hands of school teachers, who shall have been specially instructed for the purpose. The area officer and staff instructors will visit schools where the training is not carried out by the schoolmasters.

(ii.) *Record for Anthropometric Purposes.* In connection with the medical inspection, it has been arranged that the colour and character of hair, and the colour of eyes, of those examined shall be recorded for statistical purposes. Instructions have been compiled by the Commonwealth Statistician, in accordance with which the area officers will classify the hair-colour under four divisions, comprising three types of fair, two of reddish, three of brown, and two of black. The character of the hair is recorded also in four divisions, viz.: (*a*) perfectly straight and smooth; (*b*) wavy and curly; (*c*) frizzy; (*d*) woolly. Intermediate types are to be classed under the heading to which they approach most nearly. The eye-colour will be classified under four divisions, comprising sixteen types, viz., four of greyish, four of bluish, four of yellowish, and four of brown and hazel.

It is possible that later the recommendations of the British Anthropometric Committee will be adopted.

The object of the investigation is to study the development of the Australian nation, the necessary statistic for military identification purposes affording a unique opportunity. A possibility exists of co-ordinating anthropometric work in the schools with that done in connection with compulsory military service.

(iii.) *Exemptions and Disabilities for Service.* Exemptions from service are set out in sections 61, 61a, 138, 140, and 140a of the Act, as given below:—

Section 61. The following shall be exempt from service in time of war, so long as the employment, condition, or statute on which the exemption is based continues:—

(*a*) Persons reported by the prescribed medical authorities as unfit for any naval or military service whatever; and

(*b*) Members and officers of the Parliament of the Commonwealth or of a State; and

(*c*) Judges of Federal or State Courts, and police, stipendiary, or special magistrates of the Commonwealth or of a State; and

(*d*) Ministers of religion; and

(*e*) Persons employed in the police or prison services of the Commonwealth or of a State; and

(*f*) Persons employed in lighthouses; and

(*g*) Persons employed as medical practitioners or nurses in public hospitals; and

(*h*) Persons who are not substantially of European origin and descent, of which the medical authorities appointed under the regulations shall be the judges; and

(*i*) Persons who satisfy the prescribed authority that their conscientious beliefs do not allow them to bear arms; and

(*j*) Persons engaged in any employment specified by the regulations or by proclamation.

Provided that, as regards the persons described in paragraphs (*g*) (*h*) and (*i*) of this section the exemption shall not extend to duties of a non-combatant nature.

Section 61a. Where any question arises as to whether a person is exempt from service in the citizen forces, the burden of proving the exemption shall rest on the person claiming the exemption, and applications for exemption shall be decided by the Courts authorised in that behalf by the regulations.

Section 140. The Governor-General may by proclamation—

(*a*) Exempt from the training in time of peace, all persons residing within any area specified in the proclamation;

(*b*) Vary or extend any area so specified; or

(*c*) Withdraw any exemption under this section; or

(*d*) Limit any exemption under this section to any part of the training required by this Act.

Section 140a. The Governor-General may by proclamation grant a temporary exemption for a period not exceeding one year to—

(*a*) Persons who reside outside the areas in which training is carried out; and

(*b*) Persons who reside at so great a distance from the places appointed for training that compulsory attendance at the training would involve great hardships.

Section 138 added to the exemptions permitted under section 61 the following:—

(*a*) School teachers who have qualified at a school of naval and military instruction, or other prescribed course as instructors or officers of the junior or senior cadets.

(*b*) Members of the permanent naval or military forces.

It is also provided that—

Persons who are students at a Theological College as defined by the regulations, or theological students as prescribed, may, while they remain such students, on application, be exempted by any prescribed authority from the prescribed training, but shall, on ceasing to be such students, undergo such equivalent training as prescribed, unless exempted by some provision of this Act.

Certificates of exemption will be issued in proclaimed areas by the area officer, in exempt areas by an officer specially appointed. In case of dispute the matter will be referred to the Brigade-Major or Commandant. If the decision of this officer is not accepted,

application may be made by the person claiming exemption to the Courts authorised in that behalf by the regulations, whose decision is final. Burden of proof rests upon the claimant.

Any person who has been convicted by a Court of a disgraceful or infamous crime, or is of notoriously bad character, is permanently disqualified for service.

(iv.) *Penalties for Prevention or Evasion.* Employers may not prevent their employees from serving; nor may persons liable to service fail to perform it. The provisions of the Act regarding prevention and evasion are:—

Section 134. (*a*) No employer shall prevent, or attempt to prevent, any employee who is serving or liable to serve in the cadets or citizen forces from rendering the personal service required of him, or from attending any camp of instruction appointed to be held by the headquarters of the Commonwealth or any military district, or in any way penalise, or attempt to penalise, any employee for rendering or being liable to render such personal service, or for attending such camp, either by reducing his wages or dismissing him from his employment or in any other manner:

Provided that this section shall not be construed to require an employer to pay an employee for any time when he is absent from employment for the purpose of training.

Penalty: One hundred pounds.

(*b*) In any proceedings for any contravention of this section, it shall lie upon the employer to show that any employee, proved to have been dismissed or to have been penalised or to have suffered a reduction of wages, was so dismissed penalised or reduced for some reason other than for having rendered or being liable to render the personal service required of him or from attending the camp.

Section 135. (*a*) Every person who in any year, without lawful excuse, evades or fails to render the personal service required by this Part shall be guilty of an offence, and shall, in addition to the liability under section one hundred and thirty-three of this Act,[1] be liable to a penalty not exceeding One hundred pounds and not less than Five pounds:

Provided that, in the case of a cadet, no penalty shall be recoverable under this section until the end of the year in which he attains the age of 18 years.

(*b*) Any penalty under this section may be recovered summarily on the information or complaint of a prescribed officer.

(*c*) In fixing the amount of the penalty, the Court shall have regard to the means of the person offending and those of his parents.

(*d*) In addition to any penalty imposed, or (where the Court is of the opinion that the imposition of a penalty would involve undue hardship) in lieu of imposing any penalty, the Court may, if it thinks fit, commit the offender to confinement in the custody of any prescribed authority for a time corresponding in duration to the time which, in the opinion of the Court, would be taken up in rendering the personal service required.

(*e*) Any person committed to the custody of a prescribed authority in pursuance of this section may be detained by that authority at any prescribed institution or place, and while so detained shall be subject to the regulations governing that institution or place, and to the training and discipline as prescribed.

(*f*) It shall not be necessary for the confinement to be continuous; but the person having the custody of the offender may (subject to the regulations) release him for such periods, and call upon him to return to custody at such times, as he thinks fit; to the intent that he may follow his occupation, and that the times and periods of his confinement may correspond, as nearly as practicable, with the times and periods which he ought to have occupied in rendering personal service.

(*g*) Any person detained in any prescribed institution or place in pursuance of this section who escapes therefrom, or who being released from custody fails to return thereto, may be arrested without warrant by any prescribed person, and taken back to the institution or place, and may on the application of any prescribed officer be ordered by any

1. Section 133 enacts that non-efficients must attend an equivalent additional training for each year they are non-efficient.

Court of summary jurisdiction to be detained for such additional period not exceeding twenty days as the Court thinks fit to order.

Section 136. Every person who, without lawful excuse, evades or fails to render the personal service required by this Part shall, unless and until he has performed equivalent personal service as prescribed, be and remain ineligible for employment of any kind in the Public Service of the Commonwealth.

(v.) *Efficiency Requirements.* The requirements for efficiency in the senior cadets comprise attendance at compulsory parades, as follows:—

4 whole day drills of not less than six hours; and
12 half-day drills of not less than three hours; and
24 night drills of not less than one and a-half hours.

These statutory parades will be increased by extra voluntary parades, the object of which is to enable those who are backward to become proficient, and those who desire to qualify for promotion to obtain the necessary practice. Where leave of absence has been given from a statutory parade, attendance at a voluntary drill will count towards the efficiency requirements; but a statutory parade missed without leave requires two voluntary parades as compensation.

At the end of the year's training, a Board of Officers will classify the trainee as efficient, or otherwise. Those not efficient must do an extra year's training for each failure.

Variations may be permitted in the compulsory half-day and night parades, but a total of seventy-two hours must be served. The whole day parades will usually be held on public holidays. Schools, containing at least sixty senior cadets, may form separate units, and may arrange their parades to suit their school time table; but the cadets must attend the battalion parades.

The efficiency requirements for citizen forces and reserves have not yet been promulgated.

(vi.) *Allotment to Arms.* During senior cadet training there will be no allotment to the various arms of the service. The work of the trainee will cover the foundation work necessary for service in any arm, viz.:—Marching, discipline, the handling of arms, musketry, physical drill, first aid, guards and sentries, tactical training as a company in elementary field work, and elementary battalion drill. Thereafter the cadet with special educational or technical qualifications will be drafted as a recruit to one or other of the specialist or departmental corps, other cadets passing to the "line regiments" of the Australian Army—the light horse and infantry.

(vii.) *Uniform and Equipment of Senior Cadets.* The uniform will be simple and inexpensive, but suitable. It will consist of hat, woollen shirt, woollen breeches, and puttees. It will be free, and issuable every second year. There will be no distinction, and uniform will be worn at all parades and drills. Wearing of uniform when not on military duty or proceeding to or from parade is forbidden.

Equipment consists of a cadet rifle with sling and a waist-belt with pouch. The elder senior cadets who are good shots (but not exceeding 10 per cent. of the strength) are also allowed .303 (service) rifles. Free ammunition is also provided, 150 rounds of ball being available for each cadet. Arms must be kept in the offices or storerooms of the units, and issued for parades only. On no account are arms permitted to be taken to the cadets' homes.

(viii.) *Citizen Forces.* On 1st July, 1912, the eldest class of those who shall have commenced senior cadet training on 1st July, 1911 (viz., those born in the year 1894) will pass as recruits to the various arms of the new citizen force, forming its first members. Uniform will be simple and suitable for service, and the issue to each soldier will be such that he is able to parade (upon notice) with two woollen shirts, two pairs breeches, greatcoat, hat, sleeping-cap, two pairs puttees or leggings, two pairs military boots, and kit-bag. The future force is planned to comprise 120,000 of all ranks,

including about 5000 citizen officers and 8000 non-commissioned officers. Promotion will be absolutely by merit, the principle adopted being that *the best soldiers must lead, whatever their civil avocation or birth.*

(ix.) *Reserves.* No new reserves are created under the Acts of 1909 and 1910. The present reserves consist of (*a*) officers, etc., retired from active service; (*b*) members of rifle clubs. Provision will probably be made for those who, at the age of 26 years, pass out of the organisations created under the Act, to continue service with rifle clubs; but if this if not enacted, it is considered probable that a large proportion of the fully-trained citizen soldiers will remain members of the clubs.

(x.) *Number under Training.* An estimate of the male population of Australia of military age gives 188,000 between 14 and 18 years, and 295,000 between 18 and 25 years. The estimated medical rejections (based upon the experience of European countries) will probably be 10 per cent. for senior cadets, and from 30 to 35 per cent. for citizen soldiers. To these must be added persons in exempt areas. The number under training, when the system is in full operation, is estimated at 100,000 senior cadets, and 120,000 citizen soldiers.

Members of Boys' Brigades, Imperial Boy Scouts, and kindred associations must undergo the training laid down under the Act. These organisations may continue on a voluntary basis, but they will not be excused from the required service.

(xi.) *Allotment of Units to Brigade, Battalion, and Training Areas.* Each battalion area is to furnish one battalion of infantry, and each brigade area (*i.e.*, four battalion areas), is to furnish in addition, one company of engineers, one company army service corps, and one field ambulance. Light horse and field artillery units will also be furnished by some of the areas. Personnel for garrison artillery and submarine and electric engineers for field forces will eventually be supplied in the areas nearest to such localities. The average annual contingent of recruits will be about 155 for each battalion area, plus such additions as are required for light horse and field artillery units raised therein. The figures shewn in the following tables are approximate, and include the recruits (18-19 year), but not the 25-26 year men.

(xii.) *Higher Training.* The principal institution for the higher training of officers is the Military College, which has been established at the Federal capital. Entrance is by competitive examination, the first of which was held in February, 1911. Lectures and studies will commence later in the year. The course will last four years, and will be followed by a tour of duty in England or India, and a probationary year at area work. Graduates will eventually take the place of the area officers at present engaged; but it will be six years before any graduate of the college will be available; and fifteen years before all the area positions are supplied from it.

Government aid is also furnished to United Service Institutions, which have been established in the larger centres, and where lectures of great value are delivered by specialists, and war games, manœuvres, etc. carried out. Some of the institutions have large and well-selected libraries.

Schools of instruction, staff tours, etc., are also conducted, and a military magazine is to be published.

4. **The Naval Scheme.**—(i.) *Historical.* An outline of the development of the Australian naval policy will be found in Commonwealth Year Book No. 3, pp. 1060, 1061. For the more effective costal defence of the Commonwealth it was decided to create a naval force, Australian in character, to replace the squadron at present maintained under the naval agreement with the British Government. Engagements were entered into for the construction of three torpedo boat destroyers, two to be built in Britain, the other to be shipped to Australia in parts, and put together here. Proposals were also made for the construction of vessels in Australia. Skilled artisans were despatched from Australia to gain practical experience in the building of the vessels, and crews were specially trained for the service of them when completed.

(ii.) *Development of the Australian Navy.* The policy of development has continued with but slight variations in the proposals, despite three recent changes of Ministry.

A member of the Ministry, accompanied by naval and military expert advisers, attended the Imperial Defence Conference in London. The principal object of his mission, as declared by the Honourable the Minister of Defence in his second reading speech on the Defence Bill (21st September, 1909), was to concert with the other representatives as to the best measures to be taken to meet a common menace, particularly in the Pacific, where there must always be an outlet for Australian trade. The position was accepted that the burden of defence must in future be borne, not by part, but by the whole of the Empire, and therefore Australian plans and preparations must have the safety of the whole in view. As a fuller Imperial partnership is indispensable to the future security of the Imperial fabric, so a definite place in the Pacific must be allotted to Australia, as to other members of the Empire. It was agreed that Australia should provide an armoured cruiser of the *Indomitable* class, three unarmoured cruisers of the *Bristol* class, six destroyers of the improved "River" class, and three submarines; also the necessary auxiliaries, such as docks and depôt ships, for this fleet, which is to form a complete naval unit, and is to be one of the three divisions of the Eastern fleet. The British Government may provide an addition to this fleet. The cost of construction at English prices will be about £3,750,000, and the estimated annual cost about £750,000. Of this sum the Imperial Government offered to contribute £250,000, but the Commonwealth Government has decided to bear the whole cost.

The first instalment of the Australian fleet unit consists of the three destroyers already constructed. The first was launched at Govan-on-the-Clyde, on 9th February, 1910; the second at Dumbarton on 9th April following. The vessels are named after Australian rivers, those launched having been christened *Parramatta* and *Yarra*. These vessels were commissioned in September, 1910, as ships of the Royal Navy, and left Portsmouth on 19th September on their voyage to Australia. The crews had been sent from Australia to man the destroyers, and the Admiralty loaned 30 ratings to complete the complements. The Admiralty also arranged for the cruiser H.M.S. *Gibraltar* to be in touch with the destroyers throughout the voyage. In December, 1910, the vessels

arrived in Australia. The *Warrego* was shipped to Sydney in parts, and was re-erected at New South Wales Government dockyard, Cockatoo Island, Sydney. She was launched on April 4th, 1911. These destroyers are each of 700 tons displacement, with a length of 245 feet; beam of 24 feet 3 inches; draft, 8 feet 11 inches; depth 14 feet 9 inches. They have turbines, water-tube boilers and oil fuel, and have a legend speed of 26 knots. The armament consists of one 4-inch 30-pounder, three 12-pounders, and three 18-inch deck discharge tubes for torpedoes. The radius of action at cruising speed is nearly 3000 miles. The complement is 66 officers and men. It is intended to build the other three destroyers in Australia. The present annual naval subsidy (£200,000) will cease as soon as the larger obligation is taken over. While on the Australian station the ships will be under the exclusive control of the Commonwealth, both as regards movements and general administration, in time of peace. The *personnel* will be subject to the King's regulations, and under naval discipline, with standards of efficiency, and opportunities for advancement, as in the Royal Navy. The unit will pass under Imperial control whenever required for war purposes. It is to be manned as far as possible by Australians, supplemented by Imperial officers and men. A considerable number of the former are available, viz.—(*a*) those of the present permanent naval forces, (*b*) those in training with sections of the British fleet, (*c*) members of the Australian branch of the Royal Naval Reserve, (*d*) members of the Citizen naval forces, and (*e*) Senior naval cadets—a total of over 3000. A naval college will be established, and the necessary instruction imparted. The captain has been appointed on the recommendation of the British Admiralty, and will arrive in Australia in April to organise the college, which it is anticipated, will be built in Sydney. It is intended that there shall be interchangeability of officers and men, and also of ships. The British Admiralty invited tenders for the Australian *Indomitable* in January, 1910, and the tender of Messrs. John Brown and Co., Clydebank, was accepted. The vessel is now in course of construction, the date of completion being September, 1912. The ship is of the *Dreadnought* type, about 19,200 tons, with turbine engines. Her speed will be 26 knots, her armament eight 12-inch and sixteen 4-inch guns, and five torpedo tubes. She will have an 8-inch armour belt amidships, and a 4-inch belt at the ends. The estimated total cost of the vessel is £1,800,000. She will be named *Australia*. The three unarmoured cruisers will be known as the *Melbourne*, *Sydney*, and *Brisbane* respectively. The *Melbourne* is being built at the works of Messrs. Commell, Laird and Co. Ltd., of Birkenhead, and the *Sydney* at the works of the London and Glasgow Engineering and Iron Shipbuilding Co. Ltd., of Glasgow. These vessels will be about 5000 tons displacement, armed with 6-inch guns, and will cost about £450,000 each. It is the intention of the Government to build the third cruiser, the *Brisbane* in Australia, the raw material being imported. Tenders have also been accepted for the construction of two submarines, and it is anticipated that the vessels will be completed by the end of 1912.

(iii.) *Visit and Report by Sir Reginald Henderson.* At the invitation of the Government, Admiral Sir Reginald Henderson visited Australia to advise upon the best position for a central naval base, and the works necessary to make it effective; the positions for secondary bases for the service of a fleet, and their equipment for service in naval operations; also upon the location and character of the training schools for preparing *personnel* for the Australian naval service. The Admiral was also requested to report and advise on any other naval matters upon which he might care to express an opinion, and generally, in regard to all the measures to be taken in the formation of a fleet. After an inspection of various harbours, the Admiral propounded a scheme which he embodied in a report to the Government in March, 1911. It provides 52 vessels and 15,000 men; expenditure on ships, £23,290,000, with an ultimate annual naval vote of £4,794,000; construction of docks, £40,000,000. In twenty-two years the expenditure will be £88,500,000. Six naval bases, and eleven sub-bases, are recommended.

The 52 vessels of the completed fleet will be divided into Eastern and Western divisions, and will consist of 8 armoured cruisers, 10 protected cruisers, 18 destroyers, 12 submarines, 3 depôt ships, and 1 fleet repair-ship, the building of which will extend over 22 years. The *personnel* for this fleet, fully manned will be about 15,000. Of the

£23,290,000 initial cost of construction, the Commonwealth is already committed to £3,500,000. The annual cost of *personnel* will be £516,000 in 1912-3; and will increase to £2,226,000 in 1932-3. Annual cost of maintenance of ships in commission will be £262,000 in 1913-4; rising to £1,226,000 in 1933-4. Annual expenditure on construction and maintenance of ships will increase from £1,491,000 in 1912-3 to £4,824,000 in 1932-3. In 22 years the expenditure on the fleet alone will be £73,275,000; this, with an expenditure on fleet and harbour works of £15,225,000, makes a grand total of projected expenditure of £88,500,000. The strength of the fleet will be 23 ships in 1918, 42 ships in 1923, 48 ships in 1928, and 52 ships in 1933. In the earlier years most of the crews will be obtained from Great Britain; but this will cease in the period 1923-8. A system of "wireless" stations is recommended; also the establishment of naval reserves, the erection of barracks, and the institution of a naval college.

§ 7. Expenditure on Defence.

1. **Expenditure, 1905-6 to 1910-11.**—The following table gives the expenditure of the Department of Defence from 1905-6 to 1909-10, and the estimate for 1910-11:—

EXPENDITURE ON DEFENCE, 1905-6 to 1910-11.

Branch or Department.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11 Estimate

Miscellaneous "Other"	1,671	6,325	5,849	8,291	20,585	...
Fleet Unit	...	...	...	...	60,000	850,000
Total	970,345	1,035,795	*1,084,744	1,050,590	1,534,881	2,833,895

* In addition, the sum of £250,000 was paid into trust fund for harbour and coast defence.
† Includes establishments under the control of the Central Administration.

2. **Estimates, 1910-11.**—(i.) *Comparison with Preceding Year.* The administration estimates for 1910-11 shew an increase of £247,300 on those for the preceding year. The increase is shewn under the following heads:—

Central administration (including establishments under its control) ...	£73,268
Naval forces	32,590
Military forces, cadets, rifle clubs, and associations	141,442
	£247,300

(ii.) *Central Administration.* The principal increases are:—Cordite factory, £7583; Small Arms factory, £5675; Universal training, £23,000; Military college, £17,000; Naval college, £4675.

Provision is made for the staffs of the cordite and small arms factories for portion of the year, in anticipation of these establishments commencing active operations before the year expires.

The amount appropriated under universal training includes the expenses of training area officers and new non-commissioned officers of the instructional staff, appointed in accordance with the new scheme of compulsory service.

The Staff of the Military College has been appointed, and the pay of its officers and the general expenses of the institution have been provided for.

As a preparatory measure for providing the *personnel* of the fleet unit, which is to come into being in 1912, provision is made for the necessary staff for the initiation of a naval college for training cadets as officers.

Other amounts provide for the establishment of schools of instruction in gunnery, torpedo, signals, etc., and for a school for training boys as seamen.

(iii.) *Naval Increase.* An increase of 159 in the *personnel* is made, to provide the necessary crews for the three destroyers, *Parramatta*, *Yarra*, and *Warrego*. For the maintenance of these vessels the sum of £15,000 is provided.

(iv.) *Military Increase.* The principal increases in military expenditure, other than that given under central administration, are Permanent Forces, £42,291; and Militia Forces, £100,457; while a decrease of £15,682 is shewn regarding Volunteer Forces.

The increase of £42,291 for Permanent Forces is made up chiefly of Instructional Staff, £20,195; Royal Australian Artillery, £17,800; and Ordnance Department, £3118.

Pay is provided for the newly-appointed members of the Instructional Staff from 1st January, 1911, on which date they left their camp of instruction to commence service in their respective areas.

Two permanent batteries of field artillery (one in New South Wales and one in Victoria) have been created. Provision is also made for the purchase of an additional 68 horses for the proper horsing of the guns of the field artillery batteries.

The *personnel* of the Ordnance Department is increased, in order to cope with the large increase in volume of work and quantity of stores which will be required under the new schemes; and to provide examiners of stores and equipment on charge to regiments.

The volunteer forces were converted into militia as from 1st January, 1911, thus increasing the militia vote, and almost obliterating the amount previously voted for volunteers. The militia are being brought up to peace establishments. A sum of £62,000 is provided for the purchase and maintenance of 1285 horses for the field artillery batteries. The annual cost of hiring horses under the present system is approximately £37,500.

Under universal cadet training, a sum of £180,000 is provided for supply of stores, training of cadet officers, rent of stores for cadet equipment, allowances to area officers, and expenses incidental to the establishing of universal training. This is an increase of £30,000 on the amount voted for 1909-10, which was expended on the purchase of cadet rifles.

3. **Expenditure Compared with Various Countries.**—The total expenditure on defence and the expenditure per inhabitant, according to the latest available estimates, are, in the countries indicated, as follows:—

EXPENDITURE ON DEFENCE—VARIOUS COUNTRIES.

Country.	Year.	Army.	Navy.	Total.	Per Inhabitant.
		£	£	£	s. d.
Great Britain ...	1909-10	27,435,000	35,143,000	62,578,000	27 8
Germany ...	1909	40,676,000	20,427,000	61,103,000	19 2
France	1909	31,994,000	13,354,000	45,348,000	23 0
Italy	1908-9	11,028,000	5,676,000	16,704,000	9 9

Australia ...	1910-11	1,682,762	1,151,133	2,833,895	12 8

§ 8. The War Railway Council.

1. **The Constitution of the Council.**—It was suggested by Lord Kitchener that a War Railway Council should be appointed to secure co-operation between the Commonwealth Defence Department and the States Railway Departments in regard to concentration and mobilisation of troops. A conference, whose members comprised staff-officers of the Commonwealth forces and the chief railway commissioners of the States, was held in Melbourne in February, 1911, under the presidency of the Minister of Defence, and in March the report was made available. The decisions are embodied in a series of twenty resolutions. It is recommended that the War Railway Council should be constituted of eleven members as follows:—The quartermaster-general as president; the senior officer of the engineer and railway staff corps of the Commonwealth railway system and of each State railway system, the consulting military engineer, and two representatives of the naval and military forces as members; and a military officer as secretary. An engineer and railway staff corps is proposed, consisting at its commencement of 48 members, composed of officials of the Commonwealth and State government railways holding honorary military rank.

2. **Duties in Time of Peace.**—The duties of the council in time of peace would be generally to furnish advice to the Minister of Defence on railway matters, and particularly (*a*) to determine the method of supplying information to, and obtaining it from, the various railway departments; (*b*) to suggest regulations and instructions for carrying out movements of troops; (*c*) to suggest the method of organising railway staff officers in time of war, to act as intermediaries between the various railway authorities and the troops; (*d*) to consider the question of extra sidings, loading platforms, etc., and proposals towards unification of gauges; (*e*) to suggest the organisation and system of training of railway troops when the development of universal training supplies sufficient personnel whose ordinary employment is railway work; (*f*) in time of war to advise also on questions of mobilisation.

3. **Control of Railways in War.**—In times of war, the chief commissioner or general manager of any railway system of which the Commonwealth government assumes control should be appointed Director of Railways, and should have command of "Railway Control Officers" to be specially appointed as intermediaries acting between the railway administration and the troops. The chief duties of these control officers would be (*a*) to facilitate the transport of troops, animals, and material; (*b*) to act as channels of communication between the military authorities and the technical railway *personnel*; (*c*) to advise the local military authorities as to the capacity and possibilities of the railway; (*d*) to bring to the notice of the Director of Railways any means by which the carrying power of the railway may, for military purposes, be increased.

4. **Uniform Railway Gauge.**—The Council recommends the adoption of a uniform gauge of 4 ft. 8½ in. on the lines linking up the capitals between Brisbane and Fremantle and also on the proposed transcontinental line from Kalgoorlie to Port Augusta, the cost of conversion to be shared upon a basis to be determined between the Commonwealth and the States.

§ 9. Relation to the Empire.

During the New Zealand wars many colonists served with the British forces, their service generally being purely as individuals. At the outbreak of the war, the *Victoria*, a steam sloop of 450 tons register, with an armament of seven 32-pounders, and a crew of 95, a large percentage of whom had been in the Royal Navy, was offered by the Government of Victoria to the Imperial authorities for service in the New Zealand waters. The offer was accepted, and the vessel proceeded to Auckland, calling *en route* at Hobart, where she took on board part of the 40th Regiment (Imperial). The *Victoria* was employed continuously in transport and various operations along the coast until the termination of the war. In 1885 a field battery, an infantry battalion, and an ambulance corps, numbering in all 770, with 218 horses, left New South Wales to take part in the Suakin campaign. Lord Wolseley's despatch of 15th June, 1885, reads:—"The result was so satisfactory that I trust the noble and patriotic example set by New South Wales may, should occasion arise, be followed by other colonies."

In 1899 the outbreak of war with the Boers led to the several colonies offering contingents. This service was continued when, on 1st March, 1901, the control of the defence forces passed over to the Commonwealth. Besides the troops officially organised many Australians served as individuals in the campaign. The following table shews the strength of the military contingents sent at various times from Australia to South Africa:—

STRENGTH OF MILITARY CONTINGENTS SENT FROM AUSTRALIA TO SOUTH AFRICA.

State.	State Troops at State Expense.			State Troops at Imperial Expense.			Commonwealth Troops.			Grand Total.		
	Officers.	Other Ranks.	Horses.	Officers.	Other Ranks.	Horses.	Officers.	Other Ranks.	Horses.	Officers.	Other Ranks.	Horses.
New South Wales ...	160	3,217	3,135	76	1,308	1,443	78	1,271	1,294	314	5,796	5,872
Victoria	47	751	830	77	1,569	1,877	69	1,052	1,118	193	3,372	3,825
Queensland	39	694	868	73	1,346	1,603	37	699	736	149	2,739	3,207
South Australia ...	20	326	258	46	644	696	23	467	490	89	1,437	1,444
Western Australia ...	18	331	269	34	540	608	15	291	306	67	1,162	1,183
Tasmania	6	173	58	17	358	422	13	290	303	36	821	783
Total	290	5,492	5,418	323	5,765	6,649	235	4,070	4,247	848	15,327	16,314

There were, in addition, several special service officers attached, at the request of the colonial Governments, to the British forces; these officers served with the Imperial troops with a view to aiding the development of the Commonwealth forces, particularly in regard to the routine and administration of troops on service.

The Home Government also accepted the offer of contingents from Australia on the outbreak of the Boxer rebellion in China. Naval volunteers were furnished by New South Wales and Victoria, and South Australia equipped a gunboat for the Imperial service. The strength of the New South Wales contingent was 260, and that of the Victorian 200, of all ranks.

§ 10. University Course in Military Science.

Following upon the endowment by the Sydney University of a Chair of Military Science, a curriculum, to extend over a period of three years, commenced in March, 1907. Completion of the course entitles the student to a diploma in military science, and students not completing it receive certificates for any courses in which they have given satisfaction.

The courses for the first year are Military History and Science I. and Military Engineering. In the former subject ten lectures are given in military history and ten in strategy, and in the latter there are ten lectures with five days' practical instruction. In the second year the subjects are Military History and Science II. and Military Topography. The former comprises ten lectures in military history and ten in Imperial defence. In topography ten lectures and seven days' practical instruction make up the course. The subjects for the third year are Military History and Science III. and Military Law and Administration. Ten lectures in military history are joined with ten in tactics to make up the former, while there are ten lectures in the latter course.

The lectures for diploma are given at the Sydney University during Lent and Trinity terms. Short continuous courses of instruction in military subjects for the benefit of officers of the permanent and citizen forces are also arranged, the lectures being delivered during Michaelmas term.

§ 11. The Defence Forces of New Zealand.

The natives of New Zealand have generally shewn themselves well disposed to the British colonists, but in 1845-8 and 1860-70 there were native wars. In these, many of the tribes fought for the Colonial Government. Colonists joined with the Imperial troops in the campaign that began in 1845. In October, 1847, a detachment of Imperial soldiers arrived, under an agreement to perform garrison duty for a few days each year for seven years, and to be constantly in readiness for military service if required, in return for which each soldier received an acre of land with a cottage thereon. The New Zealand Fencibles were also constituted during the first Maori war. In 1860 volunteer forces were raised to fight with the Imperial troops. Military settlers were also enrolled in Australia and other places for service in New Zealand. During the war the Imperial troops were withdrawn, the Colonial Government undertaking its own defence. After the conclusion of the war, part of the field force was organised into a permanent artillery unit. The defences of the Dominion are now constituted under Acts of 1886, 1900, 1906, 1907, and 1909. In 1882 the strength of the forces maintained was 7367—made up of 732 cavalry, 907 artillery, 380 engineers, and 5348 infantry. The colony furnished 150 (approximately) officers and 4850 men for the South African war.

The Royal New Zealand Artillery, a permanent force, and auxiliary units of various arms, make up the military forces of the Dominion. Administration and control is in the hands of the Council of Defence. The Act of 1909 obliges all males between the ages of 14 and 21 years to undergo military service. The following table gives the strength of the various corps at the end of 1909:—

STRENGTH OF NEW ZEALAND DEFENCE FORCES, 31st DECEMBER, 1909.

HEADQUARTERS AND DISTRICT STAFFS	74
PERMANENT—	
Royal N.Z. Artillery (including Electric Light sections) ...	261
VOLUNTEERS—	
Field Artillery	456
Garrison Artillery Division ...	1,194
Engineers and Railway Pioneers	380
Mounted Rifles	4,186
Infantry, Cycle, and Signalling Corps	6,479
Field Ambulance Corps ...	215
Garrison Bands	148
Battalion Bands	383
Grand total trained ...	13,776

In addition there are the following:—Unattached officers, 213; reserves, 244; medical staff, 170; veterinary staff, 19; defence cadets, 4101; and rifle club members, 3596. The grand total of the defence forces is therefore 22,119.

The following table gives the military expenditure of New Zealand from 1904-5 to 1908-9:—

MILITARY EXPENDITURE, NEW ZEALAND, 1904-5 to 1908-9.

Year	1904-5.	1905-6.	1906-7.	1907-8.	1908-9.
Expenditure ...	£241,848	£196,328	£169,359	£200,997	£202,982

SECTION XXIX.

PAPUA (BRITISH NEW GUINEA).

§ 1. New Guinea.

1. **Geographical Situation of New Guinea.**—New Guinea, frequently described as the largest island in the world, lies to the north-east of Australia, between 0° 25′ and 10° 40′ S. latitudes, and between 130° 50′ and 150° 35′ E. longitudes. Its estimated area exceeds 300,000 square miles, the greatest length being 1490 miles and the greatest breadth 430 miles.

2. **Discovery.**—The island was probably sighted by Abreus in A.D. 1511. The first visit by Europeans was apparently either that by the Portuguese Don Jorge de Menesis on his way from Goa to Ternate in 1526, or that by the Spaniard Alvaro de Saavedra in 1528. In 1606 Torres, having parted company with De Quiros at the New Hebrides, sailed, on his way to the Philippines, through the strait which separates the island from Australia, and which now bears his name.

3. **Colonisation.**—Little progress was made for many years in exploration and settlement. First the Portuguese, and afterwards the Dutch, who to a great extent replaced them as the principal European traders in the East, seem to have jealously excluded other traders and adventurers, and to have kept the knowledge of their discoveries to themselves. The coasts were visited by Roda, Schouten, Lemaire, Tasman, Dampier, Torres, Bougainville, and Cook; but the difficulties of navigation, the savagery of the islanders, and the tempting fields for enterprise in the more temperate regions further south, diverted the energy of traders and voyagers. Forrest describes a voyage by himself in 1774. In 1793, New Guinea was annexed by two commanders in the East India Company's service. Since that date the Dutch have made extensive surveys of the western portion, and the British and Germans have occupied and colonised the eastern.

4. **Partition.**—These three powers have agreed to the partition of New Guinea, each having suzerainty over islands adjoining its own territory. The whole of the portion west of the 141st degree of latitude, comprising about 150,000 square miles, or nearly half the island, belongs to the Dutch. The eastern half is divided in almost equal portions between Great Britain and Germany, the area possessed by each (with adjacent islands) being about 90,000 square miles. An Anglo-German boundary commission, appointed for the purpose of defining the boundary between the territories of the two nations, started operations on 26th December, 1908, and completed the field-work on 27th October, 1909. The total length of boundary delimited was 66¼ miles. The work was both important and difficult. For a considerable portion of the survey, the country was exceedingly rough and mountainous, and the natives hostile. In one instance, the line was carried over a range at an elevation of 11,110 feet. The Dutch colony forms part of the residency of Ternate in the Moluccas, and has not been extensively developed. The German protectorate, where considerable political and commercial development has taken place, includes the northern part of the eastern half of the mainland, known as Kaiser Wilhelm's Land, and the large islands of the Bismarck Archipelago and the Solomon Group, as well as nearly 200 smaller islands. The south-eastern portion of New Guinea, nearest Australia, is British, and a dependency of the Commonwealth of Australia.

2. The Australian Dependency of Papua.

1. **Australian Dependency of Papua.**—Surveys of the east coast of New Guinea by Stanley, Yule, Blackwood, Moresby, and others, brought home to Queensland, and to Australia generally, the danger to her commerce which would result from foreign possession of the islands and coasts opposite to Cape York, and from the holding by a hostile power of the entrance to the splendid waterway inside the Barrier Reef. The mainland opposite the shores of Queensland east of the 141st meridian was therefore annexed by that colony in 1883; but the action was disallowed by the British Government. In 1884, however, a British protectorate was authoritatively proclaimed by Commodore Erskine over the region lying east from the 141st meridian as far as East Cape, with the adjacent islands as far as Kosman Island. In the year following an agreement with Germany fixed the boundaries between the possessions of the two countries, and to Great Britain was assigned the portion now known as Papua, lying between the extreme limits of 5° and 12° S., and 141° and 155° E. The British protectorate was subsidised by Queensland, New South Wales, and Victoria, and lasted till 4th September, 1888, when it was proclaimed a possession of the Empire. Its constitution was then that of a Crown colony, in association, however, with Queensland. Administration was in the hands of a Lieutenant-Governor, aided by an executive and a legislative council, and advised by a native regulation board. Port Moresby, on the south coast, was made the headquarters of the official establishment; a supreme court was established there, and magisterial courts in the districts; and an armed native constabulary force, numbering 213 on 30th June, 1910, under a European officer, was instituted for the maintenance of order.

2. **Annexation by Commonwealth.**—The territory was placed under the authority of the Commonwealth on 1st September, 1906, by proclamation issued in pursuance of Letters Patent of the 18th March, 1902, and was accepted by the Commonwealth by the Papua Act, 1905, which came into force by virtue of the proclamation aforesaid. The transfer was made under the authority of section 22 of the Constitution (see p. 38 hereinbefore). The territory is now under the administration of the Commonwealth, but not included within it.

3. **Physical Characteristics.**—The British Territory of Papua lies wholly within the tropics. The northernmost point touches 5° S. latitude; its southernmost portion, comprising Sudest and Rossel Islands, lies between 11° S. and 12° S. latitude. It is separated from Australia by Torres Straits. The length of Papua from east to west is upwards of 800 miles; towards either end the breadth from north to south is about 200 miles, but about the centre it is considerably narrower. The territory comprises also the islands of the Trobriand, Woodlark, D'Entrecasteaux, and Louisiade groups. The length of coast-line is computed at 3664 miles—1728 on the mainland and 1936 on the islands. The total area is about 90,540 square miles, of which 87,786 are on the mainland and 2754 on the islands. From the eastern end of the territory rises a chain of mountains, which forms a great central ridge and attains its greatest altitude, as it extends westwards, in the Owen Stanley Range, the highest points of which are Mount Victoria (13,200 feet), Mount Scratchley, the Wharton Range, and Mount Albert Edward. The western end of the possession is for nearly 300 miles generally low and swampy for some distance along the coast. The whole territory is well watered. The great mountains and a great portion of the lower country are covered with forest. The islands are mountainous, and, with the exception of the low coral islands of the Trobriand Group, part of Murua, and a few others of small dimensions, principally of volcanic formation. The highest is Goodenough Island, 8000 feet. The largest rivers of the mainland flow into the Gulf of Papua. The Fly River, with its tributaries, drains an extensive area of the territory of the Netherlands, as well as the British. Its length in British territory is about 620 miles, and it is navigable by a steam launch for over 500 miles. Other important rivers are the Turama and the Purari. There are many excellent harbours.

§ 3. Population.

The total white population of Papua on 30th June, 1910, was 879, made up of 662 adult males and 135 adult females (adults being persons over 16 years of age), and 42 male and 40 female children. The following table gives the population of Papua for the last five years:—

WHITE POPULATION OF PAPUA, 1906 to 1910.

YEAR ENDED 30TH JUNE.

1906.	1907.	1908.	1909.	1910.
687	690	711	702	879

It is not possible to make a reliable estimate of the number of natives, owing to the fact that much of the interior country is unexplored. It is generally assumed to be somewhere between 400,000 and 500,000. These speak many languages and dialects. The coloured population, other than Papuans, numbered on 30th June, 1910, 451. On the same date, half-castes, including Papuan half-castes, totalled 273. An Immigration Restriction Ordinance prohibits the immigration into the territory of persons who fail to pass the dictation test, or who are persons of bad character, or likely to become a charge upon the public. Exemptions may, however, be granted by the Lieutenant-Governor to persons of special skill whom it is desired to employ as overseers or foremen.

4. Native Labour.

The rights of both employer and labourer are conserved by the Native Labour Ordinance. Service on the part of the native is voluntary, and he must be justly treated, and properly housed and fed. Employers may recruit personally, or obtain their natives through a licensed recruiter. Contracts of service must be in writing, entered into before a magistrate or other qualified officer, and the natives must be returned to their homes on completion of engagement. During the period of service the recruiter or employer is personally responsible for the native's welfare. Refusal to work after engagement, or desertion from service, renders the labourer liable to imprisonment. On the other hand, a magistrate may terminate an engagement where unjust or harsh treatment by the employer is proved. The term of indenture must never exceed three years, and in the case of miners and carriers eighteen months is the limit, but re-engagements may be made. The magistrate must satisfy himself that the remuneration is fair, that the native is willing to undertake the service, and that there is no probability of unfair treatment or detention. Wages must be paid in the presence of an officer. A medicine chest, stocked with necessary drugs and first aid instruments, must be kept by all employers.

Just treatment, good food, and satisfactory remuneration for his labour has made the Papuan savage an excellent servant. With considerable natural aptitude and intelligence, he is able to understand readily what is required by his employer; consequently native labour is very largely engaged by the Administration for the construction of roads and public works, and by the private employer for the clearing and upkeep of plantations.

The number engaged under contract of service during the year ended 30th June, 1910, was 5585. In addition, there were 1947 persons employed who were not under contract of service.

§ 5. Production.

1. **Papuan Products.**—The products of the territory are obtained from its agricultural, forestal, fishing, mining, and manufacturing industries. A Papuan court has been opened at the Imperial Institute, London, where a representive collection of products is being made.

2. **Agriculture.**—(i.) *Soil and Rainfall.* The physical features of Papua are favourable to agriculture. Rich soils at varying elevations, and heavy and evenly-distributed rainfall, have ensured success in cultivating almost every tropical product of value. The territory comprises immense areas of rich alluvial and volcanic soils along the coast, and equally fertile land at elevations up to 6000 feet. Splendid rainfalls are recorded, except over a belt of country which runs back from the coast to the hills, and which has its dry season from May to November. This "dry" area is admirably suited for the production of tobacco, fibres, cotton, etc. An economic museum and agricultural library have been established. By anticipating and removing many of the pioneering difficulties the Government has made the task of the colonist an easy one.

(ii.) *Plantations.* On 31st March, 1910, there were 151 plantations. Agricultural settlement has been mostly in the Central and Eastern Divisions, though plantations are rapidly spreading in other districts, particularly the South-Eastern. The total area planted was 10,053 acres, or an average of 66 acres for each plantation. There are also large areas cleared ready or planting. The principal plantation industries entered upon up to the present are cocoa-nuts, rubber, sisal hemp, and coffee. Secondary agricultural industries are the cultivation of bowstring hemp, cotton, vanilla, kapok, cocoa, tapioca, cinnamon, tea, and tobacco. The following table shews the areas under the different cultures (exclusive of maize and vegetable products) on 31st March, 1910:—

	Acres.
Cocoanuts	6,716
Rubber	1,886
Sisal hemp	1,131
Coffee	176
Other cultures	144
Total	10,053

(iii.) *Government and Native Plantations.* There are six Government plantations of cocoanuts and para rubber, with a total area of 229 acres. The natives are compelled by an ordinance to plant cocoanuts for food supply. It is estimated that the total area so planted amounts to 350,000 acres.

(iv.) *Government Nurseries and Experimental Stations.* Sylvicultural nurseries have been established with the object of supplying settlers with seeds and plants, which have been imported from the East and West Indies, Central America, tropical Australia, Ceylon, the Malay States, and the Solomon Islands. Attached to the nurseries are experimental stations, where the suitability of soil and climate for the different products are tested and correct methods of cultivation demonstrated. Four nurseries have been established, the total area being about 190 acres. From these, 102,500 para rubber trees and seeds; 417,700 sisal hemp plants; 600 bowstring hemp plants; and various other plants have been distributed to planters. A Government orchard, for supplying fresh fruit and vegetables, has been established at one of the experimental stations, and yields considerable quantities of European fruit-foods.

(v.) *Indigenous Products.* There are many indigenous plants of great economic value. These comprise sandalwood and other timber trees, sugar-cane, cotton plants, rubber-both, vine, nutmegs, ginger, bamboos, palms, bananas, bread-fruit, edible nuts, sago-palms, fruits, and vegetables.

3. **Live Stock.**—On 30th June, 1910, the live stock in the territory consisted of 318 horses, 1123 head of cattle, 66 mules, 71 sheep, and 557 goats. A Government stud farm

has been established, for the breeding of horses. On 5th February, 1910, twenty-two stud mares, most of them in foal, were imported from Queensland. The importation of an Arab stallion is contemplated. The introduction of rabbits, foxes, hares, and monkeys is prohibited.

4. **Forest Products.**—There is a large variety of useful timbers in Papua. Of 120 varieties that have been catalogued, 16 are adapted to resisting heavy strains, and are suitable for girders, railway waggons, etc.; 10 for railway carriage and coach building; 15 for joinery, lining, flooring, etc.; 14 for butter boxes; 5 for boat building; 4 for piles; and 15 for cabinet work. Sandalwood is indigenous. It is largely used for cabinet work, and santal oil is distilled from its roots. Ebony is also produced for export. Rubber is a promising industry. There are considerable areas of native rubber (*Ficus Rigo*), but the planters generally prefer the imported para rubber. Guttapercha is obtained from species of *palaquium*, which grow on the hills. Drugs, dyewoods, and spices are also obtained from indigenous plants. Several saw mills have been imported, but up to the present little actual work has been accomplished. Contracts have, however, been made by residents to ship timber to Great Britain.

5. **Fisheries.**—Pearl-shell fishing occupies an important place in the industries of Papua. A considerable number of luggers is licensed, but the returns are mostly credited to Queensland, whose boundary approaches to within a few miles of the Papuan coast. The species of tortoise which supplies the commercial tortoise-shell is also a native of the territory. Bêche-de-mer is found along the shores and reefs. There is a dugong fishery on the coast of the Western Division.

6. **Mining.**—(i.) *Variety of Minerals.* Minerals have been discovered in many places, and over an extremely wide range. Those discovered so far are—gold, copper, silver, tin, lead, zinc, cinnabar, iron, osmiridium, gypsum, manganese, sulphur, and graphite. Of precious stones, only the topaz and beryl have been obtained. Large beds of apparently good coal also exist.

(ii.) *Gold.* In 1878 gold, the existence of which in the territory had long been known, was unsuccessfully sought by a party of Australian miners. Ten years later the first field was discovered. The search has now spread over every division, and finds have been recorded wherever the explorers have gone. The quantity and value of the gold yield for five years are given below:—

GOLD YIELD, PAPUA, 1905-6 to 1909-10.

1905-6.		1906-7.		1907-8.		1908-9.		1909-10.	
Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
ozs. 24,227	£ 87,869	ozs. 16,103	£ 58,886	ozs. 14,557	£ 51,024	ozs. 14,710	£ 51,108	ozs. 16,151	£ 60,181

Most of the rivers, with the exception of those flowing into the Gulf of Papua, have been declared open to gold-dredging, and good yields have been obtained from many of the rivers thus dredged.

The Gold-buyers Ordinance (Ordinance XVIII. of 1909) provides for the issue of licenses to buy gold, and imposes a penalty in respect to the purchase of gold by unauthorised persons.

(iii.) *Copper.* A rich and extensive copper field has been proclaimed, and about 30 square miles of it are being worked. There are indications that the mineral exists over a much wider region.

(iv.) *Other Minerals.* Some good samples of galena (sulphide of lead) have been obtained. Small quantities of cinnabar (sulphide of mercury), graphite (or plumbago), osmiridium (or iridosmine), zinc, native sulphur and other minerals are also found.

A mineral laboratory and museum has been fitted up, and is available to prospectors and others interested.

7. **Manufactures.**—The chief native manufactures are pottery, canoes, fishing nets, mats, shell ornaments, stone implements, and decorated gourds.

§ 6. Statistical Summary.

1. **Revenue and Expenditure.**—The revenue and expenditure for 1909-10, under principal heads, are given below; also a summary covering a period of five years :—

REVENUE OF PAPUA, 1909-10.

	£
Customs receipts	24,901
Postal receipts	2,229
Judicial fines and fees	517
Land leases	473
Liquor licenses	297
Native labour fees	845
Sanitary fees	97
Timber licenses	38
Fishing licenses	61
Rubber collecting licenses	43
Bird collecting licenses	20
Sale of drugs	7
Sale of Government property	1,335
Native hospital fees	228
Sale of plants and seeds	400
Mining receipts	877
Trading stations	59
Proceeds sale of water	10
Receipts from Curator of Intestate Estates	66
Government slip dues, and services of carpenters	177
Merrie England refunds and earnings	368
Printing office fees	50
Prison receipts	118
Pearl buyers' licenses	225
Interest from trust funds	80
Sale of forfeited allotments	297
Appropriation of former years	364
Money order commission	45
Stamp duties	154
Arms permits	61
Land deposits forfeited	141
Miscellaneous receipts	239
Total	£34,822

EXPENDITURE OF PAPUA, 1909-10.

	£
Lieutenant-Governor, Civil list	2,035
Government Secretary's Dept.	2,330
Treasury & Postal Department	4,382
Magistrates	6,718
Armed Native Constabulary	5,180
Gaols	2,413
Lands Department	1,351
Mines Department	12
Public Works Department	11,193
Medical	5,230
Merrie England	7,890
Other vessels and boats	2,577
Survey Department	2,627
Department of Agriculture,	2,194
Delimitation of Anglo-German boundary	1,496
Refunds from revenue	193
Department of Native Affairs	792
Central Court	218
Miscellaneous	6,043
Total	*£64,874

* The figures in this table do not, in all cases, agree with those shewn on page 817 hereinbefore. Those on this page were taken from the "Report on Papua," while those on page 817 were obtained from the "Commonwealth Auditor-General's Report."

REVENUE AND EXPENDITURE OF PAPUA, 1905-6 to 1909-10.

Item.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
			£	£	£
Revenue	20,236	21,813	26,019	27,706	34,822
Expenditure	38,350	45,335	48,525	51,824	64,874

2. **Imports and Exports.**—The value of imports and exports for five years is shewn in the table below. The figures for 1907-8 and 1908-9 evidenced considerable expansion

in trade over former years; and those for 1909-10 shewed an advance over 1908-9 of £25,497 in imports, and £20,907 in exports.

VALUE OF IMPORTS AND EXPORTS OF PAPUA, 1905-6 to 1909-10.

Particulars.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£	£	£	£	£
Imports	79,761	87,776	94,061	94,680	120,177
Exports	80,290	63,756	80,616	79,692	100,599
Total trade	160,051	151,532	174,677	174,372	220,776

The principal articles of import are foodstuffs, which in 1909-10 reached a total value of £35,785. The chief other imports in that year were:—Hardware and ironmongery, £16,047; drapery and clothing, £14,366; tobacco and cigars, £9659; building material, £5991; machinery, £4322; boats and launches, £3969; wine, spirits, and beers, £3677; and oils and kerosene, £3202. In each of the five years under review gold has formed considerably more than half the value of the total export. In 1909-10 the value of this metal exported reached £59,427. Other principal exports were:—Copra, £24,948; bêche-de-mer, pearls, pearl and turtle shell, £6849; sandalwood, £4628; copper ore, £1439; rubber, £904; coffee beans, £654; timber, £263; natural history specimens, £262.

3. **Postal and Shipping.**—Considerable development has been shewn in means of communication—the postal returns, and the tonnage of vessels cleared at Papuan ports, having lately largely increased. Particulars regarding postal matter are given hereunder:

POSTAL STATISTICS OF PAPUA, 1905-6 to 1909-10.

Year.	Letters.		Packets.		Newspapers.	
	Received.	Despatched.	Received.	Despatched.	Received.	Despatched.
1905-6 ...	38,273	40,120	7,221	2,656	41,014	10,489
1906-7 ...	49,541	41,036	7,487	2,581	38,374	12,846
1907-8 ...	53,118	47,521	6,655	3,137	44,052	12,674
1908-9 ...	57,055	51,259	8,608	3,997	48,070	14,320
1909-10 ...	64,357	56,776	8,893	5,575	52,178	21,104

In 1907-8 there were 1370 parcels received and 501 despatched; in 1908-9, 1566 were received and 467 despatched; and in 1909-10, 1351 were received and 379 despatched.

The following table shews the number, tonnage, and nationality of vessels cleared at ports during the years 1905-6 to 1909-10:—

SHIPPING—FOREIGN-GOING VESSELS CLEARED AT PORTS OF PAPUA, 1905-6 to 1909-10.

§ 7. Land Tenure.

1. **Method of Obtaining Land.**—(i.) *The Land Laws.* The broad principles upon which the land laws of Papua are based are:—(*a*) No land can be alienated in fee simple; (*b*) the rental of the land leased is assessed on the unimproved value of the land, and is subject to reassessment at fixed periods.

(ii.) *Agricultural Lands (Class A).* The terms upon which the land may be leased are exceedingly easy to the settler. He can obtain a leasehold of the best class of agricultural land for any period up to ninety-nine years on the following conditions:—

(*a*) Upon making application a small deposit fee, ranging from £1 for 100 acres or less, to £5 for 1000 acres, and £5 for every additional 1000 acres or portion thereof, is payable. This is returned to the applicant when, having accepted the lease, he has cultivated a portion of the land.

(*b*) No survey fees are charged to the lessee, and no fee is charged for the preparation or registration of the lease.

(*c*) If the lease is for not more than thirty years, rent shall be paid during the whole term at the rate of 5 per cent. per annum on the unimproved value of the land.

(*d*) If the lease is for more than thirty years the rent payable is determined at 5 per cent. per annum of the unimproved value of the land, but no rent is payable for the first period of ten years.

(*e*) The unimproved value of the land is to be appraised every twenty years during the currency of the lease, and the rent determined accordingly, but if on any appraisement the rent is raised by more than one-third, the lessee may disclaim the lease, and is thereupon entitled to receive compensation for his improvements.

The compulsory improvement conditions attached to agricultural leases are as follows:—

(*a*) One-fifth must be properly planted with some approved plants within five years.

(*b*) Two-fifths within ten years.

(*c*) Three-fourths within twenty years.

(*d*) During the remainder of the term three-fourths of the suitable land must be kept properly planted.

Provided always that, if at any time during the first five years of a lease it appears to the Land Board that reasonable efforts are not being made to fulfil the improvement conditions, they may recommend the Lieutenant-Governor to cancel the lease, and thereupon it shall be lawful for the Lieutenant-Governor, by notice in the *Gazette*, to cancel the lease accordingly.

All agricultural lands which have not been alienated by the Crown have been assessed under Section 13 of the Land Ordinance at an unimproved value of 5s. per acre. This appraisement definitely fixes all land rentals for agricultural lands for twenty years as follows:—First ten years, free; second ten years, 3d. per acre per annum.

The rental of agricultural leases for the whole term of ninety-nine years cannot exceed the following amounts, subject to the clause *re* voluntary forfeiture and compensation:—First twenty years—first ten years, *nil*, second ten years, 3d. per acre; second twenty years, 4d. per acre; third twenty years, 5½d.; fourth twenty years, 7½d.; balance of lease, 9$\frac{3}{7}$d.

(iii.) *Pastoral Lands (Class B).* Pastoral land, suitable for cattle and horses, can be obtained in easily accessible positions. All these lands are well watered and clothed with blady kangaroo, crowsfoot, couch, scurvy, and other grasses. The carrying capabilities of this land are estimated at forty head of cattle to the square mile. Application, deposits, fees, etc., are similar to those for Class A.

The compulsory improvement conditions attached to pastoral leases are:—

(*a*) Ten head of cattle, horses, asses, mules, or fifty head of sheep, per square mile must be on the land within five years.

(*b*) Within ten years these numbers must be increased to twenty head of cattle or 100 sheep or goats to the square mile.

(*c*) The land must be kept stocked to this extent for the remainder of the lease.

Provision for forfeiture of lease is the same as in the case of agricultural lands.

The rentals of pastoral leases for the whole term of ninety-nine years cannot exceed the following amounts, subject to the clause *re* voluntary forfeiture and compensation:—First twenty years—first ten years, *nil*, second ten years, 1s. per 100 acres; second twenty years, 3s. 1½d. per 100 acres; and increasing by one-third for every succeeding twenty-year period.

2. **Land Tenures.**—On 30th June, 1910, the lands of the territory were held as follows:—

	Acres.
Area of land held by the natives	56,541,838
Area of Crown land	1,013,790
Area of freehold land	26,547
Area of leasehold land	363,425
Area of territory	57,945,600

Since the operation of the Papua Act, private sales of land in the territory have practically ceased. The Government buys from the natives, and then leases to planters, who are forbidden to have direct dealings in land with Papuans. The development in leasehold tenures may be seen from the following table:—

TOTAL AREA HELD UNDER LEASE, 1905-6 to 1909-10.

Year ended 30th June.	1906.	1907.	1908.	1909.	1910.
Land held under lease ... acres	2,089	48,002	242,395	337,803	363,425

SECTION XXX.

PUBLIC HYGIENE.

§ 1. Introduction.

1. **General.**—Though the safeguarding of the public health as an organised department of administration is of comparatively modern growth, few branches of law have expanded more rapidly than the law relating to public health. The loss of potential wealth incurred through preventable diseases and deaths is of grave concern to the nation, and is a matter which has recently received an increased amount of attention both from the Commonwealth and State Governments and from the Health and other authorities in Australia. Numerous Acts of Parliament have been passed dealing with various aspects of the subject of public hygiene.

2. **State Legislation.**—In the first place there is a number of statutes, passed by the State Legislatures, such as Public Health Acts, Pure Food Acts, and Milk and Dairy Supervision Acts, providing, *inter alia*, for the constitution of Central Health Authorities, vested with definite powers, and furnishing the machinery necessary to enforce these powers. The general effect of this legislation has been to place local sanitary regulations and the execution of the Acts in the hands of the local authorities, subject to a general superintendence by a Government department.

3. **Commonwealth Legislation.**—Secondly, by the enactment of the Commerce (Trade Descriptions) Act 1905 and the Quarantine Act 1908, the Commonwealth Government has taken the first steps towards the exercise of its constitutional powers for the protection of the public health. Both these Acts are administered by the Department of Trade and Customs.

4. **Scope of Enquiry.**—In addition to the statutes already referred to, account should be taken of a large body of legislation which relates more or less indirectly to the subject of public hygiene. It deals with a great variety of subjects and matters, such as factories, conditions of employment, mines, merchant shipping, prevention of fire, buildings, dangerous performances, contagious diseases, and other matters. There is also a number of statutes which have been passed with the object of protecting and supervising infant life. Owing to exigencies of space it is not possible in this section to do more than give a brief description of the scope and results of the legislation relating to public hygiene in its more important aspects.

§ 2. The Public Health Acts.

1. **General.**—The most important statutes relating generally to the subject of public hygiene are the Health Acts which have been passed in each State. While the scope of these Acts differs considerably in some of the States, there is a general similarity in their chief provisions and range of operation. The administration of the Acts is generally carried on by a Central Board of Health under Ministerial control, while their actual execution is imposed on local Boards of Health or on the local authorities constituted

under the various Local Government Acts. Ordinarily the Central Board has general supervisory powers over local Boards and authorities, and also has power to act in case of default by a local Board or authority as to any duty under the Act, and to recover all expenses incurred. The Central Board may also make regulations, and the central and local Boards may make by-laws for various purposes generally specified in the Health Acts. Generally it may be said that the chief functions of the Central Health Authorities are:—(*a*) the collection and dissemination of useful information relating to health and the prevention of disease, and (*b*) to control, stimulate, and, where necessary, to supplement the efforts of the local authorities.

Inspectors are sent to make reports on the hygienic conditions of country towns or districts with a view to assisting the local authorities with advice, and keeping the central department posted as to the activity or otherwise of these various bodies.

Rating powers for sanitary purposes are conferred on local authorities by the Local Government Acts.

The general powers of local authorities under the Acts extend to a variety of subjects and matters, including—sewers and drains, sanitary conveniences, scavenging, cleansing, privies and cesspools, abatement of nuisances generally, offensive trades, public buildings, dwelling-houses and lodging-houses, hospitals, mortuaries, cemeteries and burial grounds, prevention of adulteration of food and drugs, unsound food, pollution of water, supervision of abattoirs and dairies, prevention of infectious diseases, and infant life protection.

2. **New South Wales.**—The Department of Public Health consists of a Permanent Head, Board and Secretary, together with the various staffs—medical, chemical and clerical; in addition there are five sanitary inspectors working under the medical officers of health and the chief sanitary inspector. The business carried on by the Department embraces public health and the general medical work of the Government. The Board is nominee; it was created in 1881, incorporated in 1894, and is charged with the administration of the following Acts:—Public Health Act 1902, Public Health (Nightsoil Removal) Act 1902, Dairies' Supervision Act 1901, Noxious Trades Act 1902, Cattle Slaughtering and Diseased Animals and Meat Act 1902, Sydney Abattoirs, etc., Act 1902, Quarantine Act 1897, Pure Food Act 1908, and Private Hospitals Act 1908. The Board also possesses advisory powers under the Local Government Act 1906.

3. **Victoria.**—In this State the Public Health Acts are administered by a Board composed of two members nominated by the Governor-in-Council and of seven members elected by the municipal councils. The medical and sanitary staffs of the Board consist of (*a*) the medical inspector, who is also chairman, (*b*) two assistant medical inspectors, (*c*) five port health officers, (*d*) five engineering inspectors, (*e*) one sanitary inspector, and (*f*) nine food inspectors. The main function of the Board is to enforce the execution of the Health Acts by the local municipalities, but it has been found advisable to supplement this supervisory function by an active policy of inspections as to the sanitary condition of various districts and the sampling of articles of food. The supervision of the sanitary condition of the milk supply is under the Dairy Supervision Branch of the Department of Agriculture. Acts administered by the Department of Public Health are:—The Health Act 1890, the Cemeteries Act 1890, the Cremation Act 1903, the Adulteration of Wine Act 1905, the Meat Supervision Acts 1900 and 1909, and the Pure Food Act 1905.

4. **Queensland.**—In this State a Department of Public Health was organised in 1901 under the authority of the Health Act 1900. Prior to that time a central authority —the Board of Health—existed, but was without legal power, and the responsibility of sanitary administration was thrown upon the local authorities. The Act of 1900 consolidated and amended prior health legislation and provided for the appointment of a Commissioner of Public Health, charged, under the Home Secretary, with the administration of the Act. The chief functions of the central authority are to advise and stimulate the local authorities on matters pertaining to the Act, and also, where neces-

sary, to compel the remedying of sanitary evils produced by local inefficiency or apathy. The production and sale of milk and the manufacture, sale, and export of dairy produce, in their hygienic aspects, are controlled by the Department of Agriculture and Stock under the Dairy Produce Acts 1904, 1905, and 1910.

5. **South Australia.**—The Central Board of Health in South Australia consists of five members, three of whom (including the chairman) are appointed by the Governor, while one each is elected by the city and suburban local Boards and the country local Boards. The Health Act 1898 provides that the municipal and district councils are to act as local Boards of Health for their respective districts. There are 175 of these local Boards under the general control and supervision of the Central Board. A chief inspector periodically visits the local districts and sees generally that the Boards are carrying out their duties. There is also a chief inspector of food and drugs (under the Food and Drugs Act 1908), and a chief inspector of cattle, and there are nine other inspectors in outlying districts who are directly responsible to the Central Board.

6. **Western Australia.**—The Health Act 1898, which has been amended by Acts passed in 1900, 1902, 1904, 1906, and 1909, provides for administration on the following lines:—The principal authority (under the Minister) is the Central Board of Health, consisting of five nominee members, and has general supervisory powers, including the approval of all appointments of officers, and confirmation of all by-laws made by local Boards, and supervision of finances. Within municipal districts, local administration is in the hands of the municipal councils, which act as local Boards of Health; while for districts outside municipalities local Boards may be appointed by the Governor. The control of dairies and dairy herds and of food supply are both functions of the health authorities under the Health Acts. An Amending and Consolidating Health Bill was introduced into Parliament in 1909, but has not yet been passed.

7. **Tasmania.**—In this State a Department of Public Health, under the control of a chief medical officer, was constituted by the Public Health Act 1903. The department has one inspector, but district health officers are not provided for. The number of local authorities under the Public Health Act has been reduced to fifty-one since the Local Government Act 1906 came into force. All parts of Tasmania are now furnished with the administrative machinery for local sanitary government.

§ 3. Inspection and Sale of Food and Drugs.

1. **Introduction.**—The importance of securing a pure and wholesome supply of food and drugs is recognised by both the Commonwealth and State Parliaments. Under the Acts referred to later, and the regulations made thereunder, the importation of articles used for food or drink, of medicines, and of other goods enumerated, is prohibited, as also is the export of certain specified articles, unless there is applied to the goods a "trade description" in accordance with the Act. Provision is made for the inspection of all prescribed goods which are imported, or which are entered for export.

(i.) *Commonwealth Jurisdiction.* Under Section 51 (i.) of the Commonwealth Constitution Act 1900, the Commonwealth Parliament has power to make laws with respect to trade and commerce with other countries and among the States. By virtue of that power, the Commerce (Trade Descriptions) Act, to which reference has already been made in another part of this book (see page 609), was passed in 1905.

(ii.) *State Jurisdiction.* The inspection and sale of food and drugs is also dealt with in each State either under the Health Acts or under Pure Food Acts. There is, in addition, in the several States, a number of Acts dealing with special matters, such as the adulteration of wine and the supervision of meat. The sanitary condition of the milk supply is also subject to special regulations or to the provisions of special Acts; this subject is more particularly referred to in the next succeeding sub-section hereof.

(*a*) *General Objects of Acts.* The general objects of the Acts dealing with the inspection and sale of food and drugs are to secure the wholesomeness, cleanliness, and freedom from contamination or adulteration of any food, drug, or article, and for securing the cleanliness of receptacles, places, and vehicles used for their manufacture, storage, or carriage. The sale of any article of food or any drug which is adulterated or falsely described is prohibited, as also are the mixing or selling of food or drugs so as to be injurious to health.

(*b*) *Inspection and Analysis.* Power is given to any authorised officer to enter any place for the purpose of inspecting any article intended to be used as a food or drug and also to inspect articles being conveyed through the streets, by water or by rail. He may take samples for examination or analysis, and may seize for destruction articles which are injurious to health or unwholesome. Chemical analyses and bacteriological examinations are made by qualified officers. Special provision is generally made in the Acts with regard to the sale of preservatives and disinfectants.

(*b*) *Advisory Committees.* In New South Wales, Victoria, and South Australia Advisory Committees have been appointed for the purpose of prescribing food standards and for making recommendations generally with a view to carrying out the provisions of the Acts. The duty of enforcing these regulations is entrusted to the local authorities, but it is stated that up to the present comparatively few of the local councils seem to have realised the importance of guarding the food supplies of the people.

2. **New South Wales.**—Provisions as to the sale of food and drugs in New South Wales are contained in the Pure Food Act 1908 and in the regulations made thereunder. The administration and enforcement of these provisions are primarily duties of the Board of Health, but may, by direction of the Governor, be left to local authorities. Analyses are made by the Department of Public Health free of charge.

(i.) *Special Provisions.* The Act contains a number of special provisions. Drugs must comply with tests specified in the British Pharmacopœia, and packages of food must be labelled with description, weight, or measure of their contents. The advertising or sale of any injurious or useless food, drug, or appliance may be prohibited, as also may the sale of any substance as a disinfectant or preservative. A person selling prohibited articles may not be liable to penalties under the Act if he prove that he purchased such articles with a guarantee in writing that they were not adulterated or falsely described, that he had no reason to believe that the same were adulturated or falsely described, and that he sold them in the same state as when he purchased them. The person giving the guarantee must be a resident in New South Wales, or, if a company, must have a registered office in New South Wales. The Board of Health may require the council of any local authority to submit for analysis during each year not less than three samples of foods or drugs for each thousand persons of the population of its area.

(ii.) *The Advisory Committee.* The Pure Food Act 1908 provides for the constitution of an Advisory Committee on whose recommendation the Board of Public Health may make regulations prescribing food standards, prohibiting the manufacture or sale of food, or the use or appliances containing any specified substances, and for generally carrying out the purposes of the Act.

3. **Victoria.**—In this State the prevention of the adulteration of food and of the sale of unwholesome food are provided for by the Health Act 1890, as amended by the Adulteration of Wine Act 1900 and the Pure Food Act 1905 and regulations made thereunder. While differing considerably in detail, the general provisions of these Acts are in many respects similar to those of the New South Wales Act of 1908. The Meat Supervision Acts 1900 and 1909 specially deal with the supervision of the slaughtering of animals and the sale of meat in Victoria. The Pure Food Act provides, *inter alia*, for the establishment of a specially qualified Foods Standard Committee charged with the

functions of formulating standards of purity, quality, and composition for articles of food and drugs. Various regulations as to both food and drugs have been made by this Committee. The Act requires explicit labelling of packages, and provides for the punishment, where possible, of the actual adulterator. The retail vendor is not penalised if it is clear that he has no guilty knowledge, and that he has taken reasonable precautions against committing an offence. A warranty or invoice may be available as a defence to any proceedings under the Acts, but if given by a person resident outside the State the defendant must prove that he had taken reasonable grounds to ascertain and did in fact believe in the accuracy of the statements contained in the warranty or invoice.

4. **Queensland.**—By Part VI. of the Health Act 1900 and by regulations made thereunder, provision is made for the inspection of food, and for the supervision of the sale of food and drugs by local authorities. The inspection and examination of food stuffs has, however, been almost entirely undertaken by the Department of Public Health, and it appears that very few of the local authorities make any attempt to carry into execution the provisions of the Health Act relating to food. Considerable activity was shewn by the Department during the year 1908-9 in carrying out a pure-food crusade, both in Brisbane and in provincial towns. Seventy prosecutions were carried through the courts in accordance with the food sections of the Act of 1900, and in sixty-three cases, fines were inflicted. During the year 1909-10 thirty-five prosecutions were undertaken and fines were imposed in thirty-three cases. In any prosecution for selling adulterated food or drugs no person may be convicted if he prove that he did not know of the adulteration, and that he could not, with reasonable diligence, have obtained that knowledge. It is also open to a defendant to prove that he purchased the goods with a written warranty from some responsible person carrying on business in Queensland.

5. **South Australia.**—The inspection and sale of food and drugs is now chiefly contained in the Food and Drugs Act 1908, and in the regulations made thereunder; certain special matters, such as water and meat supplies, are dealt with in Part VII. of the Health Act 1898. An important provision of the Food and Drugs Act is the constitution of the metropolitan area as a single district, so that the sale of food and drugs generally, as well as the inspection and supervision of dairy premises and cattle in the metropolis, is under the control of one central body—the Metropolitan County Board. Another important provision of the Food and Drugs Act is the appointment of an Advisory Committee to fix standards of foods and drugs, and to draw up necessary regulations. In addition to dealing with the supervision of the milk supply and dairies, the Act provides for the inspection and analysis of foods, drugs, chemicals, spirituous liquors, patent medicines, and proprietary articles, for the inspection and examination of all animals offered for sale or slaughter, and for the licensing of ice cream and aërated waters manufacturers. A warranty given by a person resident in South Australia is available as a defence to any proceeding under the Act, if the defendant prove that he bought the article in the same state as sold. Proof of absence of knowledge of adulteration is a sufficient defence if the defendant could not by analysis or other adequate test have obtained that knowledge.

6. **Western Australia.**—The adulteration of food and unwholesome food are dealt with under Part IV. of the Health Act 1898, the provisions of which, with regard to food control, are based on those of the English Health Act of 1875. Each local Board may be required to appoint its own analyst, but in many of the more remote country districts this is not insisted upon. Within municipal districts it is stated there is a fairly systematic inspection of various articles of food, while the samples submitted for analysis consist chiefly of milk. It is found that the effective supervision of imported tinned meats demands constant attention. Inspection of alcoholic beverages is carried out by spirit inspectors appointed under the Licensing Acts.

7. **Tasmania.**—Though provision exists under the Public Health Act 1903 for the inspection and supervision of food and drugs, it would appear that no systematic attempt at enforcement of food purity is made in Tasmania. The existing statutory powers leave these matters wholly in the hands of local authorities. The Department of Public Health has no power to take samples for examination or analysis. In any action under the Act a defendant must be discharged if he prove absence of knowledge or that he bought the article in the same state as sold, and with a warranty. A Bill to provide for the regulation of the sale of food and drugs was introduced in the Tasmanian Parliament in July, 1910.

8. **Food and Drug Standardisation.**—With the object of securing uniformity of food and drug standards of the principal manufactured products sold in the Commonwealth, a conference, which was attended by representatives of the Commonwealth and all the individual States except Western Australia, was opened in Sydney on 8th June, 1910. The result of this conference was that several adoptions of standards of food and drugs, and labelling of articles for consumption were made, so as to obtain uniformity in the several States. The recommendations of the conference deal with a variety of matters and are too lengthy for inclusion in this publication. Among the most important may be mentioned the following:—(*a*) The addition to articles of food of preservative substances, being other than common salt, sugar, spice, wood-smoke, vinegar, and acetic acid, should be prohibited as far as possible, and should be permitted only in minimum proportions. (*b*) The addition to any form of milk of any preservative (except sugar) should be prohibited. (*c*) The addition of foreign or artificial colourings or flavourings should be avoided as far as possible, and when permitted should be declared.

§ 4. Milk Supply and Dairy Supervision.

1. **Introduction.**—Milk is pre-eminently the food which needs most careful protection at each successive stage of its production, carriage, storage, and delivery, from exposure to infection from extraneous matter. The problem of obtaining a pure and clean milk supply has accordingly, during the last few years, demanded an increasing amount of attention from the Health authorities, and in each State special laws and regulations have been passed governing the supervision of dairy farms and dairies.

(i.) *General Provisions of Acts and Regulations.* In general, it may be said that it is not lawful to sell or offer for sale any milk which is not fresh or wholesome, or which has been watered, adulterated, reduced, or changed in any respect by the addition of water or any other substance, or by the removal of cream. Regulations made under the Acts provide for the carrying-on of dairy farms, dairies, factories, and creameries, under proper and wholesome conditions; and supervisors and inspectors are appointed to enforce these provisions. Generally, the execution and enforcement of the Acts is left to the local authorities.

(ii.) *Registration of Dairymen and Milk Vendors.* Dairymen, milk vendors, and dairy-factory or creamery proprietors are required, under penalty, to be registered. In some States registrations must be applied for before commencing to trade; in other States they must be applied for within a specified time after the premises are first used.

(iii.) *Inspection of Premises.* Dairy inspectors employed by the central department traverse the principal dairying districts, and inspect dairy premises, dairy herds, appliances, and utensils, and ascertain in what fashion the various local authorities carry out the duties imposed on them. Regulations and instructions are issued by the central departments for the information and guidance of local authorities, dairymen, milk vendors, and others, as to precautions to be observed in order to protect milk from contamination, and to ensure cleanliness as to the structural arrangements, dimensions

and ventilation of premises, and as to the care and health of dairy cattle. If an inspector is satisfied that any premises or apparatus used therein are unclean, or unfit for the purposes of dairy produce, he may require the owner to put the same in a proper and wholesome condition.

(iv.) *Notification of Diseases.* Every dairyman or milk vendor is required to report immediately any case of certain prescribed infectious diseases occurring in any human being engaged at or residing on his premises. It is the duty of the local authority to take care that communication between all persons belonging to the infected household and the milk business in all its details is prevented. Cases of notifiable diseases occurring in animals at a dairy farm or dairy must also be reported immediately, and the owner must at once isolate the diseased animal. The sale of milk from an infected cow is prohibited, and, under certain circumstances, an inspector may order an infected animal to be branded or destroyed.

(v.) *Analysis of Dairy Produce.* The local authority generally has power to enter premises and to take away samples of the milk, cream, butter, or cheese there found, and of the water supply therein, for the purpose of examination or analysis.

2. **Number of Dairy Premises Registered.**—The following table shews the number of dairy premises registered and the number of cattle thereon in each State during the year 1909-10:—

NUMBER OF DAIRY PREMISES REGISTERED AND CATTLE THEREON, 1909-10.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.
Premises registered ...	17,275†	11,581	10,275	244	282†	*
Cattle thereon	845,436†	97,623	253,294	2,137	4,525†	*

* Not available. † Figures are for year 1908-9.

3. **New South Wales.**—The provisions of the Dairies Supervision Act 1901 extend to the whole of the Eastern Division of this State and to all important dairying districts further inland. Other districts are brought under the operation of the Act by proclamation from time to time. Every dairyman, milk vendor, and dairy factory or creamery proprietor is required, under penalty, to apply for registration to the local authority for the district in which he resides, and also to the local authority of every other district in which he trades. Registrations must be applied for before commencing to trade and must be renewed annually.

4. **Victoria.**—The inspection and supervision in Victoria of dairies, dairy farms, dairy produce, milk stores, milk shops, milk vessels, dairy cattle, and grazing grounds are provided for by the Milk and Dairy Supervision Act 1905, administered by the Minister of Agriculture. Under the Health Act 1890 and the Pure Food Act 1905, however, the Department of Public Health is empowered to take samples of food (including milk, cream, butter, cheese, and other dairy products) for examination or analysis, and to institute prosecutions in case of adulterated or unwholesome food. By the end of the year 1909, eighty-seven municipal districts, comprising about one-sixth of the area of the State, had been brought under the operation of the Milk and Dairy Supervision Act. The municipal councils have the option of carrying out the execution of the Act themselves or of electing for execution by the Department of Agriculture; up to the present all the municipalities in which the Act has been proclaimed have elected for Departmental execution.

The following tables give particulars of dairy farms and dairies, their acreage, the acreage under cultivation, and the number of cows at the end of the year 1910:—

VICTORIA.—PARTICULARS OF DAIRY FARMS AND DAIRIES, 1910.

Particulars.	Dairy Farms.	Dairies.	Acreage.		Number of Cows.	Total License Fees received in 1910.
			Cultivated.	Total.		
			Acres.	Acres.		£
Number ...	9,163	2,418	275,994	10,480,432	97,623	4,804

5. **Queensland.**—The control and supervision of the milk supply and of dairies and the manufacture, sale, and export of dairy produce in Queensland are provided for by the Dairy Produce Acts 1904 and 1905, administered by the Department of Agriculture and Stock. These Acts and the regulations made thereunder apply only to prescribed districts, which comprise the whole of the coastal district from Rockhampton down to the New South Wales border and the Darling Downs, Maranoa, and Cairns districts.

6. **South Australia.**—The licensing and registration of dairies, milk stores, and milk shops, and the licensing of milk vendors are now provided for by the Food and Drugs Act 1908, which came into force on the 1st June, 1909. Regulations for registration under this Act were in course of preparation in April, 1910, and it is understood that in many cases the local authorities have held over registration pending the issue of such regulations. Reference has already been made (see § 3, 5 hereof) to the constitution of the Metropolitan County Board.

7. **Western Australia.**—In this State the inspection of dairy herds is under the control of the Department of Agriculture, while the supervision of dairy premises and of subsequent stages in the milk supply is carried out by the Health authorities. At the commencement of the year 1908 a campaign was instituted towards the elimination from dairy herds of tubercular cattle. This campaign took the form of the application to all the animals in each herd of the tuberculin tests and the isolation and slaughter of all re-acting animals.

8. **Tasmania.**—Under the Public Health Act 1903 it is the duty of local authorities to regulate the hygienic conditions of milk production and milk supply, and regulations dealing with milk, cream, and butter standards have been prescribed. Comprehensive by-laws for the registration and regulation of dairymen's premises exist in many districts, but outside the cities and a few towns it would appear that these are seldom enforced.

§ 5. Prevention of Infectious and Contagious Diseases.

1. **General.**—The provisions of the various Acts as to precautions against the spread and the compulsory notification of infectious diseases may be conveniently dealt with under the headings—(*a*) Quarantine; (*b*) Notifiable Diseases; and (*c*) Vaccination.

2. **Quarantine.**[1]—Under the Commonwealth Quarantine Act 1908, the systems of State quarantine formerly in operation were abolished, and a branch of the Department of Trade and Customs, under the immediate control of a Director of Quarantine, was created on 1st July, 1909. As far as is at present practicable uniformity of procedure has been established throughout the Commonwealth in respect of all vessels, persons, and goods arriving from oversea ports or proceeding from one State to another,

1. From information furnished by W. P. Norris, Esq., M.D., D.P.H., Federal Director of Quarantine.

and in respect of all animals and plants brought from any place outside Australia. In regard to interstate movements of animals and plants, the Act becomes operative only if the Governor-General be of opinion that Federal action is necessary for the protection of any State or States; in the meantime the administration of interstate quarantine of animals and plants is left in the hands of the States.

(i.) *Transfer of Quarantine Stations.* The transfer from the States to the Commonwealth of the quarantine stations, for the purposes of human quarantine, at the following places has been effected:—(*a*) *New South Wales.* North Head (near Sydney). (*b*) *Victoria.* Point Nepean (near Melbourne). (*c*) *Queensland.* Magnetic Island (near Townsville), and Thursday Island. (*d*) *South Australia.* Torrens Island (near Adelaide). (*e*) *Western Australia.* Woodman's Point (near Fremantle), Albany, and Broome. Animal quarantine stations in each of the States have also been transferred, and steps are being taken for the taking over by the Commonwealth of other stations. New buildings and improvements are in course of construction at several of the transferred stations.

(ii.) *Co-operation of Federal and State Authorities.* In order to secure co-operation between the Commonwealth and State authorities, and with the further object of economical administration, arrangements were, in 1909, made under which the chief medical officer of each State Health Department acts as the Chief Quarantine Officer in his State, and officers hitherto performing quarantine duties under the State Acts became Federal quarantine officers, payment for their services being made through the State Governments. Arrangements were also made for the administration of the Act and regulations relating to oversea animal and plant inspection and quarantine, to be carried out by officers of the States Agricultural Departments. Power to take action for the prevention of the spread of disease within a State still remains in the hands of the State, and as the functions of the Commonwealth and States may be exercised at the same time, the advantage of co-operation is apparent.

(iii.) *Chief Provisions of Act.* The Act provides for the inspection of all vessels from oversea, for the quarantine, isolation, or continued surveillance of infected or suspected vessels, persons, and goods, and for the quarantining and, if considered necessary, the destruction of imported goods, animals, and plants. The obligations of masters, owners, and medical officers of vessels are defined, and penalties for breaches of the law are prescribed. Power is given to the Governor-General to take action in regard to various matters by proclamation, and to make regulations to give effect to the provisions of the Act. Quarantinable diseases are defined as small-pox, plague, cholera, yellow fever, typhus fever, or leprosy, or any other disease declared by the Governor-General, by proclamation, to be quarantinable. "Disease" in relation to animals means certain specified diseases, or "any disease declared by the Governor-General by proclamation to be a disease affecting animals." "Disease" in relation to plants means "any disease or pest declared by the Governor-General by proclamation to be a disease affecting plants." The term "plants" is defined as meaning "trees or plants, and includes cuttings and slips of trees and plants and all live parts of trees or plants and fruit."

(iv.) *Proclamations.* The proclamations so far issued specify the diseases to be regarded as diseases affecting animals and plants; appoint first ports of landing for imported animals and plants and first ports of entry for oversea vessels; declare certain places beyond Australia to be places infected, or as places to be regarded as infected with plague; prohibit the importation (*a*) of certain noxious insects, pests, diseases, germs, or agents, (*b*) of certain goods likely to act as fomites, and (*c*) of certain animals and plants from any or from certain parts of the world; and fix the quarantine lines in certain ports of Australia.

(v.) *Regulations.* Regulations have been made prescribing the quarantine signal; the hours of clearance of vessels; forms of notices, orders, reports, and bonds to be used by masters, medical officers, quarantine officers, and importers; the period of detention of vaccinated and unvaccinated persons in quarantine; the conditions of removal of

goods and mails; the method of disinfection of persons, animals, and infected or suspected articles; the conditions under which certain animals not prohibited may be imported; the sustenance charges for quarantine animals; the conditions of importation of hides, skins, wool, hair, bones, and animal manure; the method of carrying out the quarantining, disinfection, fumigation, and treatment of plants and packages, Regulations have also been made with the object of preventing the ingress to and the egress from vessels of rats and mice, and for the destruction of rats, mice, and other vermin.

(vi.) *General.* The procedure has already been greatly simplified. Instead of all oversea vessels being examined in every State, as was formerly the case, those arriving from the south and west are now examined only at the first port of call and pratique is given for the whole of the Commonwealth, except in cases of suspicious circumstances, while vessels arriving from the northern routes are examined only at the first and last ports. It is expected that the restrictions placed upon oversea vessels will be further removed as the machinery of quarantine is improved. The present freedom from certain diseases which are endemic in other parts of the world, would, however, appear to justify the Commonwealth in adopting precautionary measures not perhaps warranted in the already infected countries of the old world.

3. **Notifiable Diseases.**—Provision exists in the Health Acts of all the States for precautions against the spread and for the compulsory notification of infectious diseases. When any such disease occurs the fact must be notified to the medical officer of health of the district. The duty of giving this notification is generally imposed, first on the head of the house to which the patient belongs, failing whom on the nearest relative present, and on his default on the person in charge of or in attendance on the patient, and on his default on the occupier of the building. Any medical practitioner visiting the patient is also bound to give notice.

(i.) *Notifiable Diseases Prescribed in each State.* In the following statement those diseases which are notifiable in each State are indicated by a cross:—

DISEASES NOTIFIABLE UNDER THE HEALTH ACTS IN EACH STATE, 1911.

* Under the Leprosy Act 1892.

(ii.) *Duties of Authorities.* As a rule the local authorities are required to report from time to time to the Central Board of Health in each State as to the health, cleanliness, and general sanitary state of their several districts, and must report the appearance of certain diseases. Regulations are prescribed for the disinfection and cleansing of premises, and for the disinfection and destruction of bedding, clothing, or other articles which have been exposed to infection. Bacteriological examinations for the detection of plague, diphtheria, tuberculosis, typhoid, and other infectious diseases within the meaning of the Health Acts are continually being carried out. Regulations are provided in most of the States for the treatment and custody of persons suffering from certain dangerous infectious diseases, such as small-pox and leprosy.

(iii.) *New South Wales.* The proclamation and notification of infectious diseases is dealt with in Part III. of the Public Health Act 1902. Special provision is made by that Act for the notification of small-pox and leprosy, and for the custody and treatment of lepers. Many improvements have been effected by the Sydney Harbour Trust (see Section XXVI. hereof; page 997) with a view to generally improving the hygienic condition of the area under its control, and especially with the object of preventing the introduction of bubonic plague. Special reports dealing with the ætiology of outbreaks of plague have been published.

(iv.) *Victoria.* Under Part VIII. of the Public Health Act 1890, the notification of small-pox, cholera, plague, yellow fever, and other prescribed malignant, infectious, or contagious diseases is compulsory. An amending Act, passed in 1907, requires medical practitioners and registrars to report all cases of notifiable diseases coming under their notice in any proclaimed district, and not merely those cases which occur in the district in which the practitioner or registrar is resident.

(v.) *Queensland.* Under Part VII. of the Health Act 1900, all cases of infectious diseases must be notified; special provision is made for notification of cases of phthisis and small-pox. A report on plague in Queensland for a period covering eight successive years—1900 to 1907—has been published by the Commissioner of Public Health. Apart from the statistical data collected and collated, the report deals exhaustively with the medical, preventive, administrative, and epidemiological aspects of the plague, as observed in Queensland. Plague hospitals are provided at Maryborough, Bundaberg, Gladstone, Mackay, Townsville, and Cairns. Provision is also made for the diagnosis of leprosy, and lepers are sent to Peel Island, Moreton Bay.

(vi.) *South Australia.* In this State cases of infectious diseases must be reported to the local Board, under the provisions of Part VIII. of the Health Act 1898. The onus of notification is placed primarily on the head of the family, and, failing him, the nearest relative, the person in charge, or the occupier of the house; in any case, notification must be given by the medical practitioner attending.

(vii.) *Western Australia.* Regulations made under the Health Act 1898 provide for the compulsory notification to local Boards of infectious diseases. The local Boards must report to the Central Board. The necessity for providing hospital treatment for infectious cases has been recognised by the Boards of Health, and in several instances wards for the treatment of these cases have been erected.

(viii.) *Tasmania.* Provisions regarding the prevention and notification of infectious diseases are contained in the Public Health Act 1903, as amended in 1908.

4. **Vaccination.**—In the State of New South Wales there is no statutory provision for compulsory vaccination, though such exists in all the other States of the Commonwealth. With the exception of Victoria, the Vaccination Acts are, however, not generally enforced. The following table shews, so far as particulars are available, the number of persons vaccinated in each State from 1901 to 1909 inclusive:—

NUMBER OF PERSONS VACCINATED IN EACH STATE, 1901 to 1909.

Year.	N.S.W.*	Victoria.	Q'land.†	S. Aust.	W. Aust.	Tasmania.
1901 ...	2,081	19,243	...	4,350	†	1,405
1902 ...	896	16,117	...	1,906	†	3,296
1903 ...	605	20,935	...	1,857	†	24,857
1904 ...	20	20,548	...	1,476	†	53
1905 ...	32	20,116	...	1,142	†	...
1906 ...	42	20,539	...	980	†	...
1907 ...	39	20,902	...	3,165	†	...
1908 ...	42	20,924	...	1,502	616‡	...
1909 ...	11	21,344	...	1,477	†	...

* By Goverment medical officers only. † Returns not available. ‡ Notifications of vaccinations to district registrars during year 1908-9.

The large increase in Tasmania in 1903 is accounted for by the small-pox epidemic which occurred in Launceston in that year.

(i.) *New South Wales.* Although there is no provision for compulsory vaccination in this State, public vaccinators have been appointed. A fee is paid, and free lymph is provided.

(ii.) *Victoria.* Compulsory vaccination is enforced throughout the State, under Part IX. of the Health Act 1890. From the year 1873 up to the present time it is estimated that 72 per cent. of the children whose births were registered have been vaccinated. Free lymph is provided.

(iii.) *Queensland.* Although compulsory vaccination is provided for in this State, under Part VII. of the Health Act 1900, only one remote district has been proclaimed under the Act.

(iv.) *South Australia.* The Vaccination Act 1882, which applies to South Australia and the Northern Territory, is enforced by the vaccination officer of the State and by the Police Department. Under this Act vaccination was compulsory, but in 1901 an Act to abolish compulsory vaccination was passed. This latter Act was subsequently amended, and the present law is that no parent is liable to any penalty if, within 12 months from the birth of the child, he makes a declaration that he conscientiously believes that vaccination would be prejudicial to the health of the child, and within seven days thereafter delivers the declaration to the vaccination officer. It is estimated that about 15 per cent. of the children born are vaccinated.

(v.) *Western Australia.* In this State vaccination is compulsory under the Vaccination Act 1878, which, however, remains almost a dead letter. All district medical officers are public vaccinators, but they receive no fee for vaccinations.

(vi.) *Tasmania.* All infants in Tasmania are nominally required, under the Vaccination Act 1898, to be vaccinated before the age of 12 months, unless either (*a*) a statutory declaration of conscientious objection is made, or (*b*) a medical certificate of unfitness is received. The Act is not enforced, and practically no vaccination of infants is performed in the State, or has been performed since the small-pox outbreak in Launceston in 1903, when 66 cases occurred with 19 deaths. It is estimated that 45,000 persons, or about one quarter of the present population, have been vaccinated.

§ 6. Filariasis and the Destruction of Mosquitoes.

1. **Introduction.**—The remarkable development of parasitology in recent years and the increase in knowledge of the part played by parasites in human and animal diseases have shewn that the difficulties in the way of tropical colonisation, in so far as these arise from the prevalence of diseases characteristic of tropical countries, are largely removable by preventive and remedial measures. Malaria and other tropical diseases are

coming more and more under control, and the improvements in hygiene, which science has accomplished, lend an entirely new aspect to the question of white settlement in countries formerly regarded as unsuitable for colonisation by European raćes. In Australia the most important aspect of this matter is at present in relation to such diseases as filariasis, malaria, and dengue fever, which, although practically unknown in the southern States, are of common occurrence in many of the tropical and sub-tropical parts of the Commonwealth. In Brisbane, for example, it is stated that during 1908 an examination was made of 200 patients who had been admitted consecutively to the general hospital, and it was found that 17 per cent. were suffering from filaria, though only a few of them had been brought in for treatment for that disease. It is also stated that an examination made in 1909 of 1000 patients admitted for all causes at the general hospital at Brisbane shewed that 13 per cent. of them were infected with filaria.

2. **Scope of Operations.**—In certain parts of Australia considerable benefit has already resulted from the adoption of methods of anti-malarial prophylaxis. The extermination of mosquitoes in their larval stage by drainage, screening and oiling of water supplies, and the isolation of infected persons, are some of the methods pursued with success. It would appear, however, that before any general comfort and freedom from house mosquitoes and from the diseases carried by these insects can result, a much wider crusade for the destruction of the mosquito, involving absolute co-operation and conscientiousness on the part of the community in the elimination of breeding places of mosquitoes, is necessary.* In many countries "Mosquito Brigades" have been organised, whose object is the killing of the mosquito and the removal, as far as possible, of the conditions favourable to the insects. In other countries the churches, medical societies, corporations, business organisations, factories, and schools have all taken part in organising lectures and spreading literature dealing with the mosquito.

3. **Queensland.**—The existence of filaria in Brisbane was first discovered about thirty years ago. Filariasis is now on the increase, and early in the year 1909 the Commissioner of Public Health for Queensland convened a conference of medical officers of health to the various local authorities to discuss the matter. A plan for combined action in mosquito destruction was the outcome, and it is stated that good results therefrom have already been noticed. Screening of domestic and other water tanks and destruction of larvæ by kerosene have been carried out in a number of places, while particular attention has been devoted to the draining of swamps within the metropolitan area. It may here be mentioned that an Institute of Tropical Medicine was inaugurated in January, 1910, at Townsville, under the control of an expert officer.

4. **South Australia.**—During the year 1907 malaria assumed such a serious form at the Government Smelting Works at Daly River, in the Northern Territory, that almost every employee was invalided to Palmerston for treatment. Early in 1908 preventive measures in the way of improved camp hygiene, treatment of swamps by petroleum, and the systematic use of quinine, were adopted, with the result that during that year no case of malaria appeared among the Government employees, although the natives and outsiders suffered as badly as before. The whole experiment cost under £5. Similar precautions have been adopted in other parts of the State.

5. **Other States.**—In Western Australia it is stated that malaria is not known to exist south of the 20th parallel, while filaria has not been discovered at all. No mosquito-borne diseases are known to exist in Victoria or Tasmania, and it is stated that filariasis is uncommon in New South Wales, the only cases known being imported ones. Kerosene and petroleum have been successfully used to destroy mosquitoes at various places in these States both by municipalities and private individuals.

---

* See Report of the Commissioner of Public Health, Queensland, 1908-9, Appendix C., p. 17.

§ 7. Supervision of Infant Life.

1. **Introduction.**—It has been frequently stated in recent years that when the social, climatic, and industrial conditions are taken into consideration the infantile mortality of Australia, particularly in the large towns, is much higher than it should be. It is now generally recognised, however, that infant mortality is largely attributable to parental ignorance and neglect, and that, in particular, improper feeding is accountable for perhaps the majority of infant deaths. In all the States of the Commonwealth, Acts have been passed with the object of generally supervising the conditions of infant life and of reducing the rate of infantile mortality, and in many of the large towns measures have been adopted by private individuals to spread among the mothers a knowledge of the best methods of feeding and caring for their infants. Milk Institutes have also been established after the manner of the *Gouttes de Lait*[1] in Europe, with the object of reducing the number of deaths of infants from milk poisoning in the summer months. Reference has been made in a previous part of this book (see page 189) to the number of infantile deaths and the rates of infantile mortality in each State, and it will be convenient to here shew corresponding particulars for the year 1910, classified according to metropolitan and other districts in each State:—

INFANTILE DEATHS AND RATES OF INFANTILE MORTALITY FOR METROPOLITAN AND OTHER DISTRICTS, 1910.

Districts.	N.S.W.	Victoria.	Queensland.	S.A.	W.A.	Tasmania.	C'wealth.
NUMBER OF INFANTILE DEATHS.							
Metropolitan	1,384	1,236	325	376	234	136	3,691
Other ...	2,011	1,181	692	372	359	432	5,047
RATES OF INFANTILE MORTALITY.*							
Metropolitan	83.74	92.61	84.22	78.33	78.87	118.56	86.54
Other ...	69.54	65.28	56.21	64.36	77.74	97.42	68.06

* *i.e.*, the number of deaths of infants under one year of age per thousand births.

It may be seen that in each State the rates of mortality are higher in the metropolitan than in other districts. The causes of "preventable" deaths may generally be attributed to milk poisoning, want of knowledge on the part of mothers, inability to nurse, and lack of the necessary medical facilities.

The figures in the above table do not, however, completely represent the hygienic aspect of the question. For every infant death recorded there are probably three or four survivors who have sustained more or less serious permanent physical damage, quite apart from injuries at birth or congenital causes. It is stated that the far-reaching influence of the first year or two of life upon the whole subsequent physical welfare of the individual cannot be recognised too clearly, and it has been alleged that many serious defects and diseases occurring in later life may be credited to results ensuing from infantile disease. This is particularly the case in respect of digestive diseases.[2]

The conditions regulating the employment of boys and girls in shops and factories are referred to in the section of this book dealing with *Industrial Unionism and Indus-*

1. Organised action in this direction commenced in 1894 in Belgium. The original Belgian Society is known as the "*Société des Gouttes de Lait.*" The movement has become an international one, and branches of the Society have been founded all over Europe. Similar philanthropic work was commenced in the United States of America before 1894.

2. See Report of Department of Public Health of Tasmania for 1906-7, by J. S. C. Elkington, Esq., M.D., D.P.H., Chief Health Officer.

trial Legislation (Section XXVII.). Certain particulars have also been given in Section XXIV. (see pages 944-6) of this book regarding Orphanages, and Industrial and Reformatory Schools in Australia. Though perhaps not directly connected with the subject of Public Hygiene, it will be convenient to refer briefly in this sub-section to the principal Acts which have been passed in each State dealing with the subject of child-life, and to the principal functions of the States' Children's Departments.

2. **New South Wales.**—In this State there is a State Children's Relief Board under the direct control of an Honorary Board of nine members and under the administration of the Minister of Public Instruction.

(i.) *Scope of Operations.* The scope of the Department's operations comprises matters under the following Acts:—

(*a*) *The Infants' Protection Act 1904.* This Act deals with the control of children up to the age of seven years in licensed homes, and with the supervision of such homes. These latter fall into two classes—(1) The private homes of individual women householders, licensed for two or three children, and (2) institutions maintained by public subscription, licensed for any number of children up to 100. The Act also deals with paternity proceedings in connection with the enforcement of maintenance for illegitimate children.

(*b*) *The State Children's Relief Act 1901.* This Act deals with the boarding-out of destitute children, and includes the extension of monetary aid for children under twelve years of age who are allowed to remain with their own mothers when the latter are widows or deserted wives in destitute circumstances.

(*c*) *The Children's Protection Act 1902* deals with the supervision of lying-in homes, in so far as the children born therein are concerned. It also provides for the registration of children up to three years old boarded out privately apart from their mothers.

(*d*) *The Neglected Children's and Juvenile Offenders Act 1905* has provided for the establishment of Children's Courts throughout the State. The Act deals with the disposal of neglected and uncontrollable children and juvenile delinquents who come before the Courts. It contains provisions for the supervision of truant children, and for the introduction of machinery necessary to carry out the purposes of the Act.

(*e*) *The Public Instruction Act 1880.* The supervision of all children of school age is carried out by officers of the State Children's Relief Department, and action in regard to truancy and prosecutions for breaches of the compulsory clauses of the Public Instruction Act are undertaken.

(ii.) *General Supervision of Conditions of Infant Life.* The principal functions of the State Children's Relief Department are as follows:—(*a*) Provision for sickly infants with, or without, their mothers at the homes at Paddington and Thirlmere. About twenty children are treated in each home. (*b*) The compulsory attendance of guardians of infants, boarded out independently by their mothers under the Children's Protection Act, at the Metropolitan Hospital fortnightly, in order that the children in their charge may be systematically supervised by the doctors, and the development of ailments checked. (*c*) A home for healthy babies, twenty in number, at Croydon, with their mothers, the object being to free the latter from the more or less contaminating influences of large institutions, and at the same time to protect the children from dangers of infection. (*d*) The establishment of separate cottage homes for invalid children, according to their ailments, including special cottages for the scientific treatment of epileptic and feeble-minded children. (*e*) The supervision of all children dealt with at the Children's Courts, with the exception of those sent to the training-ship *Sobraon*, the Carpenterian Reformatory, and the Industrial School for Girls. A special aspect of the Board's work under this heading is the supervision of children released on probation, and of children committed to the Farm Home, Mittagong.

3. **Victoria.**—The conditions of infant life in Victoria are, to some extent, supervised by the Department for Neglected Children and Reformatory Schools under the Neglected Children's Act 1890, the Crimes Act 1890, and the Infant Life Protection Act 1907. In Melbourne the Lady Talbot Milk Institute was established in 1908 in order to provide a supply of pure milk for infants. In the first annual report of the Institute, it is stated that out of about 300 infants supplied with milk by the Institute during 1908-9, only eight died. Crêches have been established in many of the suburbs of Melbourne.

(i.) *The Neglected Children's Act 1890.* This Act provided for the establishment of receiving houses and probationary schools, and for the committal of neglected children to the care of the department already referred to, or to approved private persons or institutions. Assistance is afforded to the department by ladies' committees in finding suitable homes for boarded-out children, and in supervising these homes. A receiving depôt has been established, and special schools are provided for boys who are backward in their education. A certain number of boys, who bear the best of characters, are sent to learn farming at the Rutherglen Viticultural College.

(ii.) *The Crimes Act 1890* provided, *inter alia*, for the establishment of reformatory schools for convicted children. During the year 1908 there were fifty-two court committals and ten transfers from gaol to reformatory schools.

(iii.) *The Infant Life Protection Act 1907.* This Act came into force on the 31st December, 1907, and all infants then in registered homes were transferred to the care of the department. Provision is made for the inspection of registered homes, which are divided into districts, allotted to four inspectors. The Act does not provide for the registration or supervision of maternity homes.

(iv.) *The Children's Court Act 1906.* This Act provides for the establishment of Children's Courts in every place in the State where a Court of Petty Sessions is appointed to be held. Any boy or girl under the age of seventeen years may be released by the Court on probation under the supervision of a Probation Officer, who may at any time bring before the Court any child under his supervision who has broken any of the terms of his probation. The Courts have power to commit children to the Neglected Children's Department or to reformatory schools.

4. **Queensland.**—The Infant Life Protection Act 1905 is administered by the Commissioner of Police. This Act provides, that, with certain exceptions, no person may receive, in consideration of any payment, into his house any infant under the age of three years for the purpose of nursing such infant apart from its parents for a longer period than forty-eight hours, or of adopting such infant, unless the person is registered as the occupier of the house and the house is registered as a nursing home. Registration of adopted infants is compulsory, and notice of the birth or death of illegitimate infants must be given within three days. Police investigation occurs in the case of every illegitimate child born, whether the child be finally sent to a nursing home, adopted, or taken charge of by parents or relatives.

The Lady Chelmsford Pure Milk Institute was opened in 1909 for the supply of a clean pure milk in Brisbane for infant feeding. The delivery of the milk began on the 1st July, 1909.

5. **South Australia.**—The State Children's Act 1895 provides for the constitution of a council to have the control of all State children and the supervision of all institutions for their reception, education, or training. The Act provides for the establishment and inspection of institutions, for the commitment, release, and apprenticing or placing out of children, and for the licensing and supervision of lying-in homes and foster-mothers. Illegitimate children are also received into the institutions under the care of the council.

and are placed out in various homes. It is stated that the result, so far as illegitimate children are concerned, is that the death-rate of infants supervised by the council is under 7 per cent., while the death-rate of those not under such supervision is 45 per cent.

6. **Western Australia.**— In Western Australia the State Children's Act 1907 provides for the control of boarded-out infants, the registration of foster parents, and the general supervision of the conditions of infant life and of neglected or destitute boys and girls under the age of eighteen years. The Act is administered by the State Children's Department. The registration of maternity homes is obligatory, and persons acting as paid foster-mothers to any child under the age of three years must be licensed. Neglected or destitute children may be committed to orphanages, and convicted children to industrial schools. There is one Government institution under the Act, and it is used as a receiving depôt for the temporary detention of all classes of children. The Act also provides for the establishment of Children's Courts, which must not be held in any police or other court-house.

With regard to the prevention of infantile mortality, the educational aspect has been met by the free distribution of pamphlets giving directions to mothers respecting the care and feeding of infants.

7. **Tasmania.**—The Infant Life Protection Act 1907, which is administered by the Commissioner of Police, provides for the protection of illegitimate and privately boarded-out infants, and for the compulsory registration of nursing homes and occupiers. Notice of the death of an infant in a registered home must be given within twenty-four hours, and the adoption of illegitimate infants under five years of age must be registered. Notice of the birth or death under the age of five years of an illegitimate infant is also compulsory. The Act also deals with paternity proceedings, in connection with the payment of preliminary or maintenance expenses for illegitimate children.

8. Medical Inspection of State School Children.

1. **Introduction.**—For many years medical officers of health and many others concerned in education generally have, from time to time, suggested the desirability of a medical inspection of school children. The State, which enforces school attendance under penalties, is also under the obligation of securing a satisfactory hygiene for the child during such attendance. Moreover, efficiency in education demands several things, viz., that the conditions under which the studies are made shall be physically and hygienically satisfactory; that there shall be no undue concentration of nervous effort on school work, and that the child shall be reasonably safeguarded against infection, etc. Only by an adequate scheme of medical supervision can these results be attained.

2. **Co-ordination of Effort.**—It may be seen in the succeeding parts of this subsection that, while the medical inspection of school children has been carried out in some of the States of the Commonwealth in a systematic manner, in other States but little has been done in the direction indicated. So far as it has been carried out, the medical inspection of school children goes to shew that in Australia, as in other lands, the hygiene, both of the schools and of the pupils therein, is more defective than is ordinarily recognised, and that, not only preventable physical injury to the rising generation from school conditions can be avoided, but also instruction itself can be made more efficient by a proper regard to the demands of a good school hygiene. With a view to securing uniformity of procedure in the several States, and to coming to an agreement as to how

far the scheme to be adopted should lean to the purely hygienic or the purely anthropometric side of the work, it has been proposed to hold an Interstate Conference of the Presidents of the Boards of Health and the Directors of Education. It was also proposed that, on comparable observations of physical characteristics being made by the States on a national basis of a proportion of their State school children, the necessary comparisons and interpretation of results should be undertaken in the Commonwealth Bureau of Census and Statistics. As regards the anthropometrical aspect of the matter, a uniform scheme of comparative physical observations of children would go to shew the ultimate influence of the Australian climate on the British race, and would serve as a guide to the importance of certain forms of physical training. In addition, the importance of gathering information concerning the general trend of physical and mental development of Australian children, the variations induced by environment in different localities and different latitudes, and the extent of preventable influences capable of injuriously affecting mental and physical development, are sufficiently apparent.

3. **New South Wales.**—In this State, arrangements were made in May, 1907, for the medical inspection of school children in Sydney, and later in the year the work was extended to Newcastle. At the inauguration of the scheme, it was considered advisable to restrict the work of the first year to two populous centres in order to determine what procedure would be necessary, and what limits could best be assigned in the further development of the work. Two inspectors were appointed for the first year's work, and the appointment of a third inspector in March, 1909, has enabled the scheme to be extended to the outlying suburbs of Sydney.

The results of the second year's work shew that during that period 98 schools, having an enrolment of 66,000 pupils, were visited by the inspectors. Of the total number of pupils, 14,360, or 21 per cent., were presented by the teachers for medical inspection as suffering from some physical defects. Of that number, 8216, or 57 per cent., were found to be suffering from defects of vision; 7171 children, or 49 per cent., were returned as suffering from post-nasal trouble; 3450, or 24 per cent., from throat trouble; 855, or 6 per cent., from swollen glands; and 615, or 4 per cent., from either defective hearing or ear trouble.

NEW SOUTH WALES.—HEIGHT AND WEIGHT OF SCHOOL CHILDREN, 1908-9.

18 ,, ...	67.56	136.09	63.02	120.60

Since its initiation in 1907, the scheme has embraced 105 schools, having an enrolment of 70,169 pupils, while upwards of 50,000 physical records have been received.

from teachers. During the year 1908-9, the anthropometric survey, comprising height and weight measurements and records of vision, was extended to schools in the outlying suburbs of Sydney, and in the Broken Hill, Kempsey, Grafton, and Lismore districts. The foregoing table shews the results of height and weight measurements recorded during the year 1908-9.

4. **Victoria.**—In Victoria three medical inspectors have been appointed by the Education Department, and a commencement was made towards the end of 1909 by the examination of the pupils attending the Melbourne Continuation School. An Advisory Committee was also appointed to formulate a scheme of medical inspection, which it is proposed to extend to all State schools in Victoria. The chief work of the inspectors has so far been a preliminary investigation of the health of the pupils in various schools in town and country, and it is stated in the Report of the Minister of Public Instruction for the year 1909-10 that the result of this investigation has shewn the presence of an amount of physical defect which, were it not paralleled in other lands would, by its magnitude, seem incredible. Up to the 30th June, 1910, the total number of children examined was 3560, of whom 2519 were in primary schools; of the latter number 1293 were boys, and 1226 girls. The following table gives particulars of defects found in the children examined in primary schools :—

Although the Health Acts have no relation to buildings owned or controlled by the Crown, as the result of a conference in 1905, between officers of the Education and Public Works Departments, a set of standard primary rules as to the hygienic requirements of State schools was drawn up, and since that time these standards have been utilised in connection with the construction of new State schools, and when practicable, in connection with alterations effected in old school buildings. Lectures have been given to school teachers on questions appertaining to school hygiene.

5. **Queensland.**—In this State, a systematic scheme for the inspection of State school children has recently been prepared. An elaborate undertaking is not to be

carried out at present, but the scheme is to be extended as success is achieved and beneficial results are proved. A course of instruction in hygiene as applied to school life is given at the Central Technical College for the special benefit of teachers, and a series of lectures and demonstrations has been organised between the Education Department, the Department of Public Health, and the Royal Sanitary Institute. Towards the end of 1907 a special examination of the eyes of 1745 school children and of 187 adults disclosed the fact that 385 persons, or 20 per cent., of those examined, suffered from imperfect vision resulting from eye disease, while there were 1740 persons, or 90.1 per cent., with affected eyes or eyelids or both. In 1909 a scheme to cope with ophthalmia was inaugurated by the Department of Public Instruction and has met with a considerable measure of success. Various investigasions have also been made from time to time regarding outbreaks of disease among scholars, and all the schools within the Metropolitan area have been inspected by officers of the Department of Public Health, and as a result numerous sanitary defects remedied.

6. **South Australia.**—In South Australia a commencement was made in the year 1909 towards the establishment of a scheme for the medical inspection of school children, by the examination of 1000 children in different parts of the State. No children under seven years nor over 15 years of age were examined. Investigations were made with regard to personal appearance, cleanliness, height, weight, chest measurements, teeth, eyesight, hearing, nose and throat, etc., and the results were, on the whole, satisfactory.

7. **Western Australia.**—During the latter part of 1906 and the first half of 1907 an extended examination of about 3300 children was carried out in Western Australia by the Department of State Medicine and Public Health with the co-operation of the Education Department. These children were attending the State schools in Perth, Fremantle, Kalgoorlie, Boulder, Bunbury, and Albany. Only two children were withheld by their parents from examination. The supervision of the health of school children has been extended up to the present, and advantage has been taken of every occasion on which the medical officers of the Department have visited country districts on official business to make a physical examination of the school children. Many physical defects among the children were detected, and the co-operation of the Inspector-General of Schools has resulted in steps being taken, where possible, to provide better hygienic conditions. The system followed during 1909 was that, wherever possible, a visit was made to a school and the teacher was asked to bring up all children who appeared to be suffering from any physical defects or bodily ailments. The exact condition of the child having been determined, a notice was sent to the parents calling attention to the necessity of obtaining treatment for the defect.

8. **Tasmania.**—The credit of being the first State in the Commonwealth to provide for the medical inspection of schools and school children in a systematic way rests with Tasmania, where, under the direction of the Chief Health Officer and the Director of Education, about 1200 children attending schools in Hobart were inspected in 1906. The general examination was based upon that of the Royal Commission on Physical Training (Scotland) of 1903, but considerable modifications and adaptations were found necessary in order to fit it to immediate requirements. No attempt was made to secure anthropometric observations beyond those of unquestionable medical value, and in only one case (colour of eyes) were any purely anthropological data collected. The sociological data obtained (parental occupation, etc.) were found of much service, and produced some interesting comparative results. Parents were given the option of declining examination for their children. The total number of children excluded on this account was 184, or 13.1 per cent. on the total number examinable.

The administration of the Medical Branch has continued to be carried out for the assistance of the Education Department, and from March, 1907, to June, 1909, the total number of children examined in State schools was 17,998. Of these, 10,095 were examined in country schools, 4681 in Hobart, and 3222 in Launceston. During the year 1908-9, the number of visits to schools made by the three medical inspectors was 641. During the same year twenty-one lectures were given at schools and were attended by about 1250 mothers and guardians. It is stated that these meetings are of great practical value in enabling an important class of parents to be reached by sanitary teaching in a form and manner which would be practically impossible under any other conditions, and that they also gain a great deal of sympathy and support for the medical work in schools, by enabling parents to become acquainted with the methods and objects underlying it. A course of lectures on School Hygiene has also been delivered to teachers at the Training College.

SECTION XXXI.

THE COMMONWEALTH SEAT OF GOVERNMENT.*

§ 1. The Selection of the Territory.

1. **Constitutional Provisions.**—The powers under which the Commonwealth Government has acted in taking steps towards the establishment of a seat of Government are conferred by the Commonwealth Constitution Act 1900. By section 125 of that Act (see p. 44 hereinbefore) it was provided that the seat of Government of the Commonwealth shall be determined by the Parliament and shall be within territory granted to, or acquired by, the Commonwealth. It was also provided (*a*) that the territory shall be situated in New South Wales not less than 100 miles from Sydney, (*b*) that it shall contain an area of not less than 100 square miles, and (*c*) that such portion of the territory as consisted of Crown lands shall be granted to the Commonwealth without any payment therefor. Finally the section provides that Parliament shall sit at Melbourne until it meets at the seat of Government.

2. **Early Steps towards Selection of the Site.**—During the years immediately preceding the federation of the Australian colonies a number of sites was suggested as being suitable for the establishment of the Commonwealth seat of Government, and on the 14th November, 1899, a Royal Commission was appointed by the Government of New South Wales to inspect and report in regard to places in that State proposed for the Federal capital. In all 40 different sites were submitted for consideration, and 23 of these were inspected by the Commission. The conclusion of this Commission was that any one of the three sites—(*a*) Orange (or Canobolas), (*b*) Yass, and (*c*) Bombala-Eden (Southern Monaro) would be suitable for the purpose desired. Having regard to the future, rather than the initial requirements of the Commonwealth, it was considered that Southern Monaro was entitled to the first place, and that Canobolas and Yass might be bracketed as about equally suitable.

(i.) *Inspection of Sites by Members of Commonwealth Legislature.* During the year 1902 the Commonwealth Government decided to give members of the Legislature an opportunity of becoming personally acquainted with the districts in which sites for the Federal capital city had been suggested. These inspections were carried out, and a considerable number of members of both Houses of the Commonwealth Parliament thus gained a knowledge of the districts such as personal inspection alone can supply.

(ii.) *Royal Commission to Report upon Proposed Sites.* With a view to giving effect to the constitutional provision referred to above, the Commonwealth Government on the 14th January, 1903, appointed a Royal Commission, composed of four members, to inquire into and examine the sites proposed for the seat of Government in the following

* This article has been prepared from information gained from personal observation and from data kindly furnished by Lieut. Colonel David Miller, V.D., I.S.O., Secretary for Home Affairs, under whose supervision all preliminary operations in the Federal capital territory have been conducted. Information has also been supplied by Lieut. Colonel Owen, A.I.C.E., Director-General of Works, and Mr. C. R. Scrivener, Director of Commonwealth Lands and Surveys.

localities, viz.:—Albury, Armidale, Bombala, Lake George, Orange—including Bathurst and Lyndhurst—and Tumut, and to report upon each of the sites with as little delay as possible. This Commission inspected each of the districts referred to, and on the 16th July, 1903, handed in its report, which was supplemented on the 4th August, 1903, by a special report on a proposed site for the capital at Dalgety. As to topography and general sutiability the sites inspected were placed in the following order—Albury, Tumut, Orange, Lyndhurst, Armidale and Bathurst (equal), Lake George, and Bombala; Dalgety was placed on an equality with Bombala, but as regards water-supply it was considered second only to Tumut.

(iii.) *Seat of Government Bill 1903.* On the 22nd September, 1903, the Commonwealth Government submitted to the House of Representatives a proposal that "with a view of facilitating the performance of the obligations imposed on Parliament by section 125 of the Constitution Act, it is expedient that a conference take place between the two Houses of Parliament to consider the selection of a seat of Government of the Commonwealth." This motion was passed by the House of Representatives, but was not concurred with by the Senate. On the 1st October, 1903, the Government introduced a "Seat of Government Bill" in the House of Representatives, with the result that after a ballot had been taken with a view to determining the opinions of members as to the place in New South Wales at or near which the seat of Government of the Commonwealth should be situated, Tumut was selected. The Bill as passed by the House of Representatives was read a second time in the Senate on the 14th October, 1903, and returned with the amendment of the substitution of Bombala in place of Tumut. The Bill as amended was considered in the House of Representatives, where, on the 20th October, 1903, the amendment by the Senate was disagreed with. The Senate, however, decided to insist upon the amendment referred to. It therefore appeared desirable to obtain further topographic, climatic, and other information regarding the proposed capital sites, particularly with reference to the relative merits of the Tumut and Bombala sites, and with these objects in view the Commonwealth Government secured from the Government of New South Wales the loan of the services of two surveyors, one of whom investigated the Southern Monaro district, the other the Tumut district. Both of these surveyors submitted their reports, accompanied by plans and statistical information, in May, 1904.

3. **The Seat of Government Act 1904.**—On the 15th August, 1904, the "Seat of Government Act 1904" was assented to. By this Act is was determined that the seat of Governnent should be within seventeen miles of Dalgety, in the State of New South Wales, and that the territory to be granted to or acquired by the Commonwealth, within which the seat of Government was to be situated, should contain an area of not less than 900 square miles and should have access to the sea.

At this juncture correspondence took place between the Governments of the Commonwealth and the State of New South Wales, with the object of obtaining the consent of the State to the provisions of this Act, and on the 22nd December, 1904, the Premier of New South Wales forwarded to the Prime Minister copies of resolutions passed by both Houses of the State Parliament to the effect that:—(*a*) The State would not grant 900 square miles in any part of the State. (*b*) The true intent of section 125 of the Constitution Act, as understood by that State, was that the area should be 100 square miles. (*c*) The Government was authorised to offer between 100 and 200 square miles at or near Tumut, Lyndhurst, or Yass. (*d*) The State was prepared to make provision outside such areas for water-supply. (*e*) The matter of railway construction should be carefully arranged, as the State was not prepared to enter into any large expenditure. Consequent upon these resolutions, correspondence, extending over a considerable period, took place between the Commonwealth and State Governments, more particularly respecting the technical interpretation of section 125 of the Constitution Act and the correct mode of procedure to be adopted by the Commonwealth and State in giving effect thereto, and finally a line of action was mutually agreed to between the two Governments.

4. **The Seat of Government Act 1908.**—On the 22nd September, 1908, the Minister of State for Home Affairs obtained leave to introduce a Bill for an Act to determine more definitely the seat of Government in the neighbourhood of Dalgety, and to provide for the acceptance by the Commonwealth of the territory and for other matters in relation thereto. This Bill was read a second time on the following day, and, after various ballots had taken place with the object of further determining the views of members as to the suitability of the several districts inspected, the Bill was passed by the House of Representatives with the substitution of Yass-Canberra for Dalgety. This alteration was approved by the Senate and the Bill was assented to on the 14th December, 1908. The chief provisions of this Act were (*a*) that the seat of Government should be in the district of Yass-Canberra in the State of New South Wales, (*b*) that the territory to be acquired by the Commonwealth should contain an area of not less than 900 square miles, and (*c*) that the territory should have access to the sea. Another important provision determined that the amount of compensation to be paid by the Commonwealth for the acquisition of any private lands within the territory should not exceed the value of the land on the 8th October, 1908, and that in other respects the provisions of the Lands Acquisition Act 1906 should apply. As already stated (see p. 1134 hereinbefore), all Crown lands must (under section 125 of the Consititution Act) be granted to the Commonwealth without any payment. The provision of the Act of 1908 just referred to is of considerable importance, inasmuch as, in the absence of this or any similar provision, the valuation of private lands, within the territory by the Commonwealth, would have to be effected under the Lands Acquisition Act 1906. The compensation to which the owner would be entitled under the latter Act would be the present value and not the value as at the 8th October, 1908.

Under the Act of 1908, the district in which the seat of Government is to lie was finally selected; it yet remained, however, to determine the actual territory for the seat of Government within that district, and to provide the machinery for the acquisition of such territory by the Commonwealth. The locality of the Yass-Canberra district may be seen on reference to the map given on page 1147.

§ 2. The Acquisition of the Territory.

1. **Territory as First Proposed.**—In order to enable the Commonwealth Government to decide on the most suitable territory for the purposes of the seat of Government within the Yass-Canberra district, a topographical investigation of that district was carried out early in 1909. In the first place a preliminary examination was made by a surveyor appointed for that purpose, and a report was issued as the result of this examination, stating that the site in the vicinity of Canberra approached nearer to what was required than any other in the Yass-Canberra district. Suggestions were also made as to the territory to be acquired by the Commonwealth, and it was recommended that such territory should include not only the site for the capital city, but also the catchment area (of the Cotter River) required for the domestic and civic water supply of the city, and the catchment areas (of the Molonglo and Queanbeyan Rivers) of the streams passing through the city site.

In March, 1909, an Advisory Board, consisting of four members, was appointed to consider the above report and to advise as to other matters requiring investigation. In the selection of the territory this Board gave prominence to certain essential qualifications and factors, viz.:—(*a*) contour and physical features; (*b*) area available; (*c*) aspect and shelter; (*d*) panoramic value; (*e*) railway facilities and approach; (*f*) facilities for classification of city areas; (*g*) ornamental water areas; (*h*) water-supply for domestic, power, and ornamental purposes; (*i*) environment and park lands; and (*j*) suburban settlement. The Board concurred with the conclusions arrived at as to the

suitability of the site for the capital city at Canberra, and also with the recommendations respecting the territory to be acquired by the Commonwealth. The Board further recommended (*a*) that the essential features of the proposed territory should be tested by actual survey; (*b*) that further investigation be made as to irrigation areas in connection with the disposal of effluent resulting from sewage purification; and (*c*) that a preliminary investigation should be made of practicable routes for a railway between the site and the sea coast. These last recommendations were duly carried out and a report was furnished advising that an area of approximately 1015 square miles should be acquired in the vicinity of Canberra, together with an area of about 2300 acres at Jervis Bay for the purposes of a Commonwealth port. This recommendation was adopted by the Commonwealth Government; the boundaries of the territory which it was at this stage proposed to acquire are indicated by the unbroken lines on the map on page 1148.

2. **Territory as Subsequently Agreed to.**—On the 20th July, 1909, the Prime Minister forwarded particulars of the proposed territory to the Premier of New South Wales, and invited him to take steps under section 111 of the Constitution Act* to pass a State Act for the surrender to the Commonwealth of sovereign rights over the territory comprising 1015 square miles, and to grant to the Commonwealth the area at Jervis Bay suggested for use in connection with the establishment of a Federal port. Correspondence ensued at this stage, and eventually a conference took place at Melbourne, with the result that the Premier of New South Wales submitted a proposal to the Commonwealth for the transfer of an area comprising 900 square miles, differing with the Commonwealth's proposal in the following particulars:—

(*a*) The exclusion of that portion of the catchment area of the Molonglo and Queanbeyan Rivers lying to the eastward of the Goulburn-Cooma railway line, over which area the Premier offered to secure to the Commonwealth water rights. This area, which comprises about 580 square miles, is shewn on the map on page 1148, and is indicated by the cross-hatched boundary.

(*b*) The addition to the remaining portion of the territory as proposed by the Commonwealth of an area of 465 square miles embracing the catchment areas of the Gudgenby, Naas, and Paddy's Rivers. The boundaries of this area are shewn on the map on page 1148 by the broken lines.

The territory thus suggested as the seat of Government is shewn on the map on page 1148, its boundaries being left free from cross-hatching. It may be seen that this territory (which, together with the area at Jervis Bay, has now actually been granted to and acquired by the Commonwealth) consists of two parts—(*a*) an area of about 435 square miles lying to the west of the Goulburn to Cooma railway and included in the original recommendation of the Advisory Board, and (*b*) a further area of about 465 square miles, including the catchment areas of the Gudgenby, Naas, and Paddy's Rivers. The total area of the territory is, therefore, approximately 900 square miles.

It may here be remarked that negotiations are now in progress between the Commonwealth and New South Wales Governments with a view to the acquisition by the Commonwealth of the catchment areas of the Queanbeyan and Molonglo Rivers. The Advisory Board regard it as essential that this area should be vested in the Commonwealth for the following reasons:—(*a*) To regulate the flow of the Molonglo River at the city site; (*b*) to prevent pollution; (*c*) to adopt measures for minimising turbidity; (*d*) to regulate flood waters; and (*e*) to provide an auxiliary source of water power.

3. **Agreement between Commonwealth and New South Wales Governments.**—On the 18th October, 1909, the Prime Minister of the Commonwealth and the Premier of

---

* This section provides as follows:—"The Parliament of a State may surrender any part of the State to the Commonwealth; and upon such surrender, and the acceptance thereof by the Commonwealth, such part of the State shall become subject to the exclusive jurisdiction of the Commonwealth."

New South Wales, subject to the approval of their respective Parliaments, agreed to the surrender by the State and the acceptance by the Commonwealth of the territory referred to in the preceding paragraph hereof, and made certain stipulations with respect to the surrender and acceptance of the territory.

The State of New South Wales agreed to surrender to the Commonwealth for the purposes of the seat of Government the territory therein described, and as shewn on the map on page 1149 hereof. The State also agreed to grant to the Commonwealth an area of two square miles for the purposes of a Commonwealth port, and in addition thereto certain other areas aggregating 2302 acres, which were considered necessary for the defence of the port. The State of New South Wales also granted to the Commonwealth :—(*a*) the right to construct, maintain, and work a railway from the territory to Jervis Bay; (*b*) The right to use the waters of the Snowy River or such other rivers as may be agreed upon for the generation of electricity for the purposes of the territory; (*c*) paramount water rights over the catchment areas of the Queanbeyan and Molonglo Rivers and their tributaries.

The State further agreed:—(*a*) To reserve from sale, lease, and occupation, except with the concurrence of the Commonwealth, all Crown lands in the catchment areas above referred to; (*b*) to protect from pollution the waters of the Queanbeyan and Molonglo Rivers; (*c*) in the event of the Commonwealth constructing a railway within the territory to its northern boundary, the State agreed to construct a railway from a point near Yass to join that railway.

4. **Seat of Government Acceptance Act 1909.**—On the 13th December, 1909, the Seat of Government Acceptance Act was assented to. This Act was expressed to commence on a date to be fixed by proclamation after the New South Wales Parliament had passed an Act notifying the agreement and surrendering the territory. The Acceptance Act confirmed the agreement (which was incorporated as a schedule to the Act), determined the site of the seat of Government, and authorised the Governor-General to declare by proclamation that on and from the proclaimed day the territory was accepted by the Commonwealth. It also made provision for the continuance in the territory, after its acquisition by the Commonwealth, of State laws and private interests in land and for the commencement of the administration of the territory by the Commonwealth.

On the 14th December, 1909, a similar measure entitled the Seat of Government Surrender Act was passed by the Government of New South Wales. This Act came into force by proclamation on the following day; it ratified the agreement and surrendered the territory to the Commonwealth.

5. **Proclamations Effecting Acquisition of Territory by Commonwealth.**—On the 20th January, 1910, a proclamation was issued by the Governor-General bringing the Seat of Government Acceptance Act into force on the 22nd January following. The effect of this proclamation was to bring the Act into force to the extent of enabling the Governor-General to issue a second proclamation vesting the territory in the Commonwealth. Prior to the issue of the second proclamation it was, however, considered advisable to secure further legislation in the direction of an Act to provide for the proper government and administration of the territory. The *Seat of Government (Administration) Act* was accordingly passed on the 25th November, 1910; the provisions of this Act are referred to in a later part of this section. On the 5th December, 1910, the second proclamation was carried vesting the territory in the Commonwealth on and from the 1st January, 1911.

§ 3. Physiography.

1. **General.**—The general locality of the Federal territory is shewn on the map on page 1147. The chief topographical features of the whole territory may be seen by reference to the map on page 1149, while those of the districts in the immediate vicinity of the city site are shewn on a larger scale on the map on page 1150. The total area of the territory is approximately 900 square miles, or 576,000 acres, of which it will be necessary to reserve from occupation the catchment area of the Cotter River, which has an extent of 170 square miles, or 108,800 acres. An area of about 12 square miles, or 7680 acres, has been set apart for the purpose of the city site, and it is proposed to reserve a further area of about 100,000 acres for parks, roads, military college, and other public purposes outside the city area, leaving 359,520 acres available for profitable occupation under reasonable conditions.

As regards accessibility, Canberra is 204 miles distant from Sydney, 429 miles from Melbourne, 912 miles from Adelaide, and 929 from Brisbane, from which it may be seen that the capital site is reasonably equidistant from the chief centres of population of the Commonwealth. As to access to the sea, it has been shewn that there is a practicable route for a railway between Canberra and Jervis Bay with a length of about 123 miles. To the north of the territory the country is open, and good roads lead to Yass (*via* Hall) and Gundaroo (*via* Sutton).

2. **Chief Topographical Features of Federal Territory.**—For topographical purposes the territory may be classified under four main heads:—(i.) The Canberra Ridge and Plain; (ii.) the Murrumbidgee Scarp; (iii.) the Paddy's and Gudgenby Rivers areas; and (iv.) the Cotter River catchment.

(i.) *The Canberra Ridge and Plain.* This area covers practically the whole of the territory lying to the east and north-east of the Murrumbidgee River. It is bounded on the north-east by the range forming the northern watershed of the Molonglo River and on the south and south-west (to within about eight miles south of Queanbeyan) by the Goulburn-Cooma railway. The area consists of ridges of about 2600 feet elevation running chiefly north and south, and alternating with plains of some 1800 feet; it is intersected by the Molonglo River, and includes the site which has been selected for the Federal capital city (see para. 3 below and maps on pages 1149-50). To the west of Queanbeyan, which is situated at the foot of the Jerrabombera Ridge, the valley opens out greatly, and in place of the hilly country on the eastward slopes of the Dividing Range, the landscape consists of a number of isolated knobs rising from very gently undulating pasture lands and of the ridges running down from the highlands of the Molonglo catchment. These are intersected by the winding course of the Molonglo River itself. There are five of these knobs in the immediate vicinity of the city site—Ainslie (2762 feet) lies to the north-east, Black Mountain (2658 feet) to the north-west, Mugga (2662 feet) to the south, and Taylor (2800 feet) and Stromlo (2570 feet) to the west—all rise about 900 feet above the Canberra plains. These knobs resemble volcanic cones, but they are in fact "residuals" of an older land surface of about 3000 feet level.

(ii.) *The Murrumbidgee Scarp.* This is a narrow ridge of country extending from almost as far north as the junction of the Murrumbidgee and Molonglo Rivers, along the west bank of the Murrumbidgee, to the south-western limits of the Federal territory. It comprises the area covered by the Bullen and Yarara Ranges, which rise to a height of 3084 feet at Castle Hill and to 4068 feet at Yarara, further to the south. A strong difference in the character of the two banks of the Murrumbidgee may be noticed and can be seen even on the rough contours shewn on the map on page 1149. The eastern bank is

low and undulating, and opens out into the Canberra and Molonglo plains, but the western bank is abrupt and continuous for many miles. Those tributaries of the Murrumbidgee which cut through the ranges on the west emerge through gorges several hundred feet in depth. The valley of the Murrumbidgee is constricted at two places, the Tharwa Gap (between Tennent and Rob Roy in the south) and the Urayarra Gorge (between McDonald and Stromlo in the north). These were formerly important crossings to the Gudgenby and Cotter areas respectively, but have since been supplied by the two Murrumbidgee bridges in the Federal territory. The Tharwa bridge is determined by the Old Divide forming suitable bluffs at each side of the river; the Urayarra bridge crosses the river at a place where a trenching of the main Murrumbidgee valley occurs.

(iii.) *The Paddy's and Gudgenby Rivers Areas.* These areas cover respectively the northern central and the southern central districts of the territory. To the west of the Murrumbidgee the character of the country changes somewhat abruptly. There are no flat plains with isolated knobs, but restricted valleys culminating in mountains rising to 4000 or 5000 feet. Paddy's River, with its tributaries the Tidbinbilla River and the Gibraltar and Blue Gum Creeks, flows into the Cotter River near the confluence of that river and the Murrumbidgee. Though it occupies a comparatively open valley at its head, it enters the Cotter by gorges a hundred feet or more deep. The Gudgenby, with its main tributary the Naas River, flows into the Murrumbidgee near Tharwa. The ridge of the hills constituting the catchment of the Naas River forms the lower western and southern boundaries of the territory for over 30 miles, the river itself running roughly parallel to the boundary. The contours of several of the various tributaries in the neighbourhood of Tharwa are quite abnormal, since many of these tributaries run into the main rivers in the wrong direction, *i.e.*, they run upstream. For example, the Gudgenby, Naas, and Chippendale tributaries are normal, but Sawyers' Creek, Booroomba Creek, Guises and Deep Creeks are all heading upstream at their several confluences.

(iv.) *The Cotter River Catchment.* Beyond the valleys of the Gudgenby and Paddy's Rivers are the precipitous valleys of the Cotter, separated from the country to the east by the 5000 feet ranges of Tidbinbilla. The catchment area of the Cotter River, from which the water-supply for the capital city is to be drawn, constitutes the western portion of the Federal territory. For many miles from its junction with the Murrumbidgee the Cotter is a narrow mountain stream, having a width of about 40 feet, the gradient of the bed being fairly uniform; it flows through a deep valley practically unoccupied, and, as no ring-barking of any moment has been done along its course, it is therefore unlikely that the water will be discoloured for a longer period than a few days. The upper reaches of the Cotter are still practically unknown. Only one or two surveyors and an occasional settler have ever been along the valley, which is completely uncharted. There are no roads, except that to the few farms at Brindabella (which is outside the Federal territory), and no settlements until Garrangobilly, on the main road between Tumut and Kiandra, is reached. In the ranges, surrounding the valley of the Cotter, are the mountains whose summits Coree (4657 feet), Tidbinbilla (5115 feet), McKeahnie (4904 feet), Bimberi (6264 feet), and Morgan (6144 feet) are amongst the highest in Australia. The Federal territory in fact extends to within 60 miles of Kosciusko (7300 feet), and includes a cluster of peaks over 5000 feet high, in addition to those mentioned.

3. **Topography of Capital Site.**—The locality of the site selected for the purpose of the Federal capital city is shewn on the map on page 1149; the topography of the site is shewn on a larger scale on page 1150. It is situated in latitude 35° 15′ S. and longitude 149° 15′ E. on the western side of the main Dividing Range; it is about 30 miles distant from that range and about 75 miles in a direct line from the eastern coast of Australia. The site may be described as a rectangular area, the eastern and western boundaries of the northern part resting on the slopes of Mount Ainslie and Black Mountain respectively, the southern boundary being intersected by the Narrabundah Range running from Mugga Mugga Mountain towards the Molonglo River. This river, which flows through the site

in a westerly direction, affords facilities for the conservation of water for ornamental purposes; it is joined by the Queanbeyan River at the town bearing that name and at a distance of some seven miles from Canberra. Through the latter place the river flows between low banks, giving everywhere an easy approach to the stream. The whole area is generally suited for building purposes, the feature contours being more marked, or bolder, on the south than on the north of the River Molonglo. The area set apart for the purpose of the city site covers approximately 12 square miles; this area was selected with a view to affording the fullest scope for the projection of the city design and the most effective location of the official centre.

The city will lie in an amphitheatre of hills, with an outlook towards the north and north-east, sheltered from both southerly and westerly winds, and in the immediate vicinity there are large areas of gently undulating country. The city will be visible on approach for many miles; the general contours of the country lend themselves to the purposes of effective city design, and streets with easy gradients can be readily laid out; prominent hills of moderate altitude present suitable sites for the principal public buildings. Some reference has already been made (see p. 1139 hereinbefore) to the nature of the country in the vicinity of Canberra. The comparative flatness of the landscape in the immediate foreground is broken by several conical hills arising from the Canberra plains and by the ridges running down from the highlands of the Molonglo catchment. The strike of these ridges is generally north and south; small tributaries, cutting the sides of the ridges, have converted them into picturesque features, while the pleasing effect of the outlook is still further enhanced by the graceful contours of the distant mountains.

No engineering difficulties oppose themselves to a satisfactory disposal of sewerage and effluent from treatment works. It will, however, be necessary to make provision for dealing with the storm waters, in which connection the general fall of the land favours a satisfactory scheme. There is a supply of perennially clear and pure water in the Cotter River, the catchment area of which embraces an area of about 170 square miles. According to recent records the supply of water at the point of gauging is sufficient for the domestic and civic requirements of a population of 200,000 persons based on a liberal scale.

(i.) *North of the Molonglo River.* The slopes towards the valley enclosed by these ranges culminating in Mount Ainslie and Black Mountain are at first abrupt, often rocky, sometimes precipitous, and clothed with an open forest of eucalypts, which extend to the junctions of the lower slopes with the gently undulating land and here and there projecting well out towards the centre of the valley. These two ranges are roughly three miles apart, the steeper slopes extending for a distance of about half a mile on either side, a narrow stretch of moderate inclination abutting upon the wider area of gentle undulation, which is relieved at intervals by elevated points rising some fifty feet above the general level. The soil in this valley is everywhere adapted for arboriculture, and much of it is of high quality suitable under modern methods of cultivation for the growth of crops.

(ii.) *South of the Molonglo River.* South of the Molonglo River the contour of the country is irregular, the Narrabundah Range, which culminates in Mugga Mugga (2662 feet), running in a north-westerly direction to Red Hill (about 2360 feet); here there is an almost abrupt descent to a level of about 2100 feet and beyond this point the range divides into a number of radiating spurs. On the Narrabundah Range and its subsidiary spurs down to the 1950 feet level there is an open forest of eucalypts, the average height of the trees being about 50 feet. No prominent watercourses flow through this area. Arboriculture will present no difficulty over any part of this land, for even on the higher rocky points there is a fair growth of trees.

(iii.) *The Molonglo River.* This river is ordinarily a sluggish stream; it drains some 700 square miles of country, and within and near to the city site it flows between

steep banks formed by the erosion of the alluvial plains at Canberra. During periods of prolonged drought the river ceases to flow; it is readily fordable at many places during the greater part of the year.

(iv.) *Shelter.* The largest areas sheltered from the most objectionable winds lie to the south of the Molonglo on the eastern side of the Narrabundah range and its tributary spurs; more restricted sheltered area lies on the east of Black Mountain.

(v.) *Range of View.* (*a*) *North of the Molonglo River.* Looking from the more elevated points on the northern site of the Molonglo River—such as Vernon Trigonometrical Station—towards the north, the view extends over a very gently undulating valley for some miles to the low range of timbered hills forming the northern boundary of the territory. Mount Ainslie, Black Mountain, and Majura, rising some 900 feet above the general level, are prominent features in the landscape.

Looking to the west and south-west through the gap between Black Mountain and the spurs from Red Hill on the Narrabundah Range, successive ranges are visible, in which there are various peaks attaining an altitude of from 4000 to 6200 feet above sea-level; these peaks are frequently snow-clad during the winter months. In the middle distance there are undulating pasture lands, relieved by the timbered slopes on either side of the Molonglo River, and by hills of pleasing contour rising some 500 feet above the general level. In the foreground flows the Molonglo River, bordered by willows. Southerly the view is limited by the Narrabundah Range, but towards the south-east the outlook extends over the alluvial reaches of the Molonglo as far as the timbered ranges lying to the east of the Goulburn-Cooma railway.

(*b*) *South of the Molonglo River.* On the south of the Molonglo, looking from Camp Hill, the view towards the north is somewhat similar to that from Vernon Trigonometrical Station, but here the Molonglo is in the foreground and its winding course can be traced on either hand for many miles. In the middle distance the Canberra church and parsonage, encircled by well-grown plantations, are prominent objects. Turning towards the north-east, the scene is varied; near the foot of Mount Ainslie lies Duntroon homestead with its garden and ornamental grounds; beyond the homestead glimpses of farms with undulating pastures are obtained, while the forest-clad ranges on both sides of the Molonglo form an effective background. Towards the east and south-east the country is of graceful contours with here and there a farm, the Goulburn-Cooma railway in the distance ascending the lower spurs springing from the main Dividing Range. Looking to the south, Mugga Mugga stands out prominently, and the Narrabundah Range as far as Red Hill limits the view.

4. **Geology of Capital Site.**—A geological survey of the site selected for the capital city has been carried out. The rocks composing the site consist of a somewhat contorted and folded sedimentary series of sandstones and quartzites, shales, slates, limestones, and volcanic tuffs. Igneous intrusions occur, consisting principally of quartz-porphyries and quartz-felsites. The sedimentary rocks, more especially the limestones, contain fossil corals, brachiopoda, and trilobites, indicating the age as Upper Silurian.

(i.) *Sandstone and Quartzite.* One of the most noticeable features of the city site is the occurrence of thick beds of buff-coloured sandstone, which occupy a considerable area, including Black Mountain at the north-west corner of the site. These sandstones have been used locally to some extent for building, for which purposes they are not, however, of first-class quality. Small quarries have been opened only in two or three places, and therefore the question as to whether a better quality of building stone is obtainable or not cannot be said to have been definitely decided.

Near their contact with the intrusive igneous rocks (referred to hereinafter) the sandstones have been transformed into dense quartzites, and all traces of their bedding planes have been entirely obliterated.

(ii.) *Shales and Slates.* Interbedded with the sandstones are certain thin-bedded shales, which, for the most part, are yellow, but in places, owing to the presence of peroxide of iron, they assume a chocolate colour. Deposits of bluish fissile slates also occur within the city area. So far as can be seen by their limited exposures these slates are not of sufficiently good quality to be utilised as roofing slates, though it is probable that careful prospecting may result in the discovery of deposits suitable for door-steps, paving stones, and other analogous purposes.

(iii.) *Limestones.* Beds of limestone are numerous within the city area and the surrounding territory, though none of the individual deposits is remarkable for its thickness; the most extensive in regard to length occurs along the northern slope of Red Hill, while the thickest beds observed are on the northern side of the Molonglo River. Most of these limestones appear, from their analyses, to be of good quality for the manufacture of mortar and hydraulic cement.

(iv.) *Calcareous Tuffs.* In proximity to the limestones of Red Hill occur beds of a calcareous tuff, which presents features of some interest. It consists of a dense, fine-grained, bluish rock of considerable hardness, which presents a banded and much corroded appearance when weathered. Analyses of several samples of this rock shew that it contains various proportions of carbonate and silicate of lime, so that it may be regarded as a more or less siliceous substance. This fact has suggested the possibility of the tuff being useful in connection with the manufacture of hydraulic cement.

(v.) *Crystalline Tuffs and Lavas.* At the north-eastern corner of the site there is a complex area (including Mounts Ainslie and Russell) consisting of crystalline volcanic tuffs, tuffaceous shales, and lavas; some of these tuffs are very coarse in texture, containing angular inclusions up to an inch in diameter, while others are almost indistinguishable from the quartz porphyries which are imbedded in them.

(vi.) *Igneous Rocks.* A well-defined belt of igneous rocks, principally quartz-porphyries and quartz-felsites, stretches from north-west to south-east across the city area. These, intruding the sedimentary series, tilt and contort the beds, and convert the sandstones in many places into quartzites. The quartz-porphyry has characteristics which will make it valuable as an ornamental building stone. The matrix is of a dark bluish-green colour, and is interspersed with crystals of quartz and felspar, and is similar in texture, hardness, and durability to a medium-grained granite. It appears probable that Mount Mugga Mugga will be the most suitable locality for a quarry, having in view the quality of the rock at that place and its proximity to the centre of building operations.

(vii.) *General Suitability.* Finally it may be said that the general geological conditions of Canberra are favourable for the purposes of city construction. The prevailing rocks are, without exception, suitable for the foundations of heavy structures, and would offer no insuperable difficulties in the construction of tunnels and pipe-lines for sewerage, or of surface reservoirs for water-supply purposes.

5. **Meteorology.**—Meteorological observations have not been taken on the capital site itself over a sufficient number of years to enable a proper appreciation of climatic elements to be arrived at. At Queanbeyan, however, which is only 8 miles distant from the capital site, rain records have been taken since September, 1870; at Duntroon since 1896; and at a number of other places near the capital site for various periods. Particulars of rainfall and temperatures, as recorded at Queanbeyan, have already been given in this book (see page 111).

(i.) *Rainfall.* The average rainfall for the whole of the Federal territory has been computed by the Commonwealth Meteorologist to be 25.5 inches, or about that of Melbourne or London. The following table gives particulars of the rainfall recorded at several places near the capital site:—

COMMONWEALTH SEAT OF GOVERNMENT.—RAINFALLS RECORDED AT PLACES NEAR CAPITAL SITE.

Station.	No. of Years.	Average.	Greatest.		Lowest.	
			Year.	Amount.	Year.	Amount.
		Inches.		Inches.		Inches.
Duntrooon	13	18.73	1900	28.94	1902	11.09
Kiandra	35	64.04	1889	90.06	1908	42.18
Lake George	25	27.00	1887	42.11	1908	15.90
Queanbeyan	39	22.63	1887	41.29	1902	10.42
Red Hill	23	33.93	1887	49.66	1902	18.94
Uriarra	15	32.92	1887	54.11	1899	20.00

The highest recorded average rainfall within the Federal territory is 32.92 inches at Uriarra, and the lowest, 18.73 inches at Duntroon. It is stated, however, that neither of these records can be accepted as accurate. At Queanbeyan the average rainfall is 22.63 inches; as much as 41.29 inches were registered at that place in 1887, and as little as 10.42 inches in 1902, a range of over 30 inches. The average rainfall in the city site itself is estimated to be 21.80 inches per annum. This equals or exceeds that recorded at the following places:—Berlin, Budapest, Christiania, Copenhagen, Madrid, Marseilles, Moscow, Naples, Paris, San Francisco, Stockholm, St. Petersburg, and Vladivostock.

No official records have been taken within the Cotter catchment area, but it is estimated that the average rainfall cannot be less than from 40 to 60 inches per annum, since Kiandra, which is only a few miles distant, has an average of 64 inches and is exposed to the same rain-bearing winds, while it has the disadvantage of being some 500 to 1000 feet lower than many of the peaks which serve as condensing or precipitating agents for the Cotter River. If the records of Kiandra can be taken as a guide, it follows that the precipitation on these higher levels does not suffer the extreme annual variations to which the lower levels of the Federal territory are susceptible, so that the flow of the Cotter River may reasonably be regarded as both fairly uniform and constant.

(ii.) *Temperature and other Matters.* The meagre temperature data so far obtained over the capital site leave many phases of weather inconclusive. Taking Queanbeyan as representative, the mean annual temperature may be assumed to be 55° Fah., the summer mean 68°, and the winter 42°. The maximum shade temperature recorded at Queanbeyan is 104°, the minimum 11° Fahr.; the ordinary summer temperatures are high, while the nights are invariably cool. During winter the temperature frequently falls below freezing point; the minimum record for 1910 is 26°, but that winter was exceptionally mild. The prevailing winds during the winter months are from points west of the meridian, and since those from the south, south-west, and west pass over the snow-clad Alps, they are keen. During the summer, hot winds from the west and north-west alternate with cool winds from the south, while the frequent north-east winds from the ocean are refreshing and serve to modify the summer temperature. It is rare for snow to fall within the city site, and still more rare for it to remain unthawed for more than a few hours after sunrise. Fogs are neither frequent nor dense. Observations of evaporation, and other climatic elements are not available for a sufficiently long period in order to form a reliable estimate of normals, other than those of rain and temperature.

A meteorological station was established in 1910 on the capital site and the following instruments installed:—evaporation tank, thermograph, barograph, hygrograph, aspirator, rain gauge, anemometer, and sunshine recorder.

6. **Vegetation.**—The timber line in the Federal territory is a fairly well marked feature, and, in the neighbourhood of the city site, roughly corresponds to the 2000 feet

contour. Below this line the country is open and almost without timber—partly naturally, and partly artificially. Above the line the country is generally timbered with eucalypts of moderate size.

One of the most urgent matters in connection with the Federal territory is that of re-afforestation. The steep slopes of many of the ridges are covered with loose material composed of a mixture of boulders and soil. This is held together normally by the tree roots, and nourishes not only the trees, but also a certain amount of pasture. After the trees have been ring-barked and cut down the roots decay, and there is nothing to prevent the loose soil washing down into the gullies. Owing to the destruction of the timber in many places on the steep face of the west bank of the Murrumbidgee, the soil is washed away too quickly for grasses to grow. The waters rush down rapidly to the creeks and bring about an alternation of floods and dry creeks, instead of more normal conditions. The discolouration of the Molonglo River is also largely due to ring-barking within the catchment area. The question of the re-afforestation of the Federal territory is under consideration, and is referred to hereinafter.

7. **Soils and Agriculture.**—The rocks which usually afford the richest soils—shales and basic rocks—are not present in notable quantity. Hence the country is chiefly a pastoral one. Wheat is, however, grown along the river banks, especially to the south of the Molonglo, and loads of potatoes are brought in from the Paddy's River area. Maize is grown successfully, and dairy farming is carried on to a limited extent.

There are considerable areas of gently undulating land well adapted for fruit-growing, and with proper cultivation ordinary farm crops could be profitably grown; apparently holders have found it easy to make a living by grazing and have, therefore, avoided as far as possible the more strenuous life that cultivation demands.

There is but little mining carried on within the territory. A copper mine near Bullen has been worked intermittently, and there are some old alluvial gold workings near the north-east corner of the city site. The similarity of the conditions prevailing at Canberra and at Pambula (near Twofold Bay), where rich chutes of gold have been extracted, suggests the possibility of workable deposits of gold occurring in the felsite rocks at the first-named locality.

It is intended to encourage farming in suitable districts by persons having small means, and to cultivate small irrigated holdings by the conservation of the waters of the Queanbeyan and Molonglo Rivers, which have a combined catchment area of 580 square miles. By this means it is proposed to employ a considerable agricultural population on the soil at various branches of industry, including agriculture, mixed farming, fruit-growing, and market gardening.

The present Government proposes not to alienate any of the lands in the territory, either within the city area or outside it, but to lease them on reasonable terms. It is anticipated that the revenue to be derived from these rentals in the earlier stages will total £30,000 a year, but with the development of the city, the rent-roll will be considerably augmented.

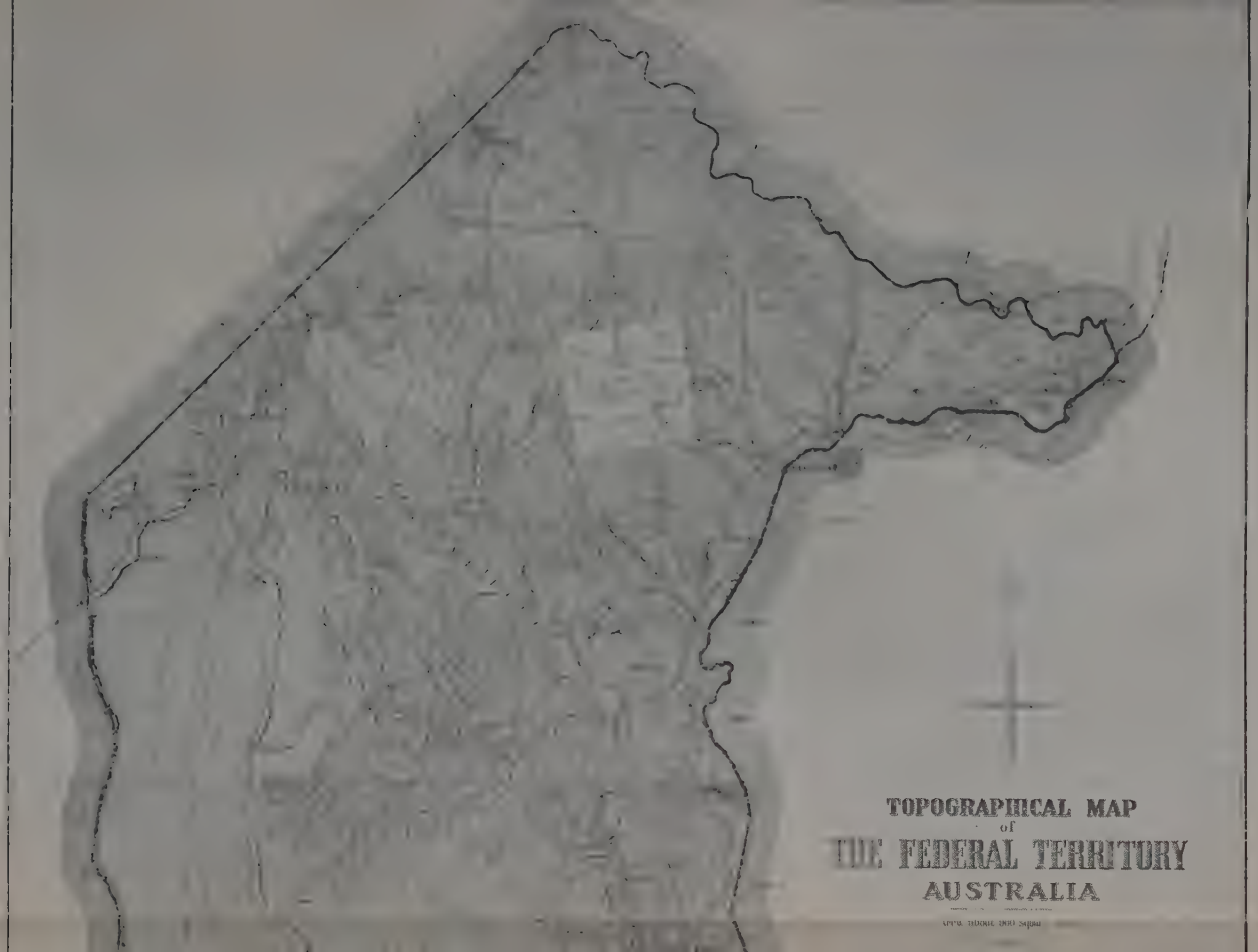
Over practically the whole of the city area the soils contain a large percentage of sand, and, though rarely of high quality, they give satisfactory results with careful treatment; the land is usually well drained naturally, and there is an almost total absence of marsh.

8. **Jervis Bay.**—The territory on the south side of Jervis Bay acquired by the Commonwealth includes (*a*) an area of about two square miles as described in the first schedule to the Seat of Government Acceptance Act 1909; (*b*) an area of 132 acres, known as Bowen Island, described in the same schedule; and (*c*) six other areas aggregating 2270 acres, also described in the schedule. The New South Wales Government has been

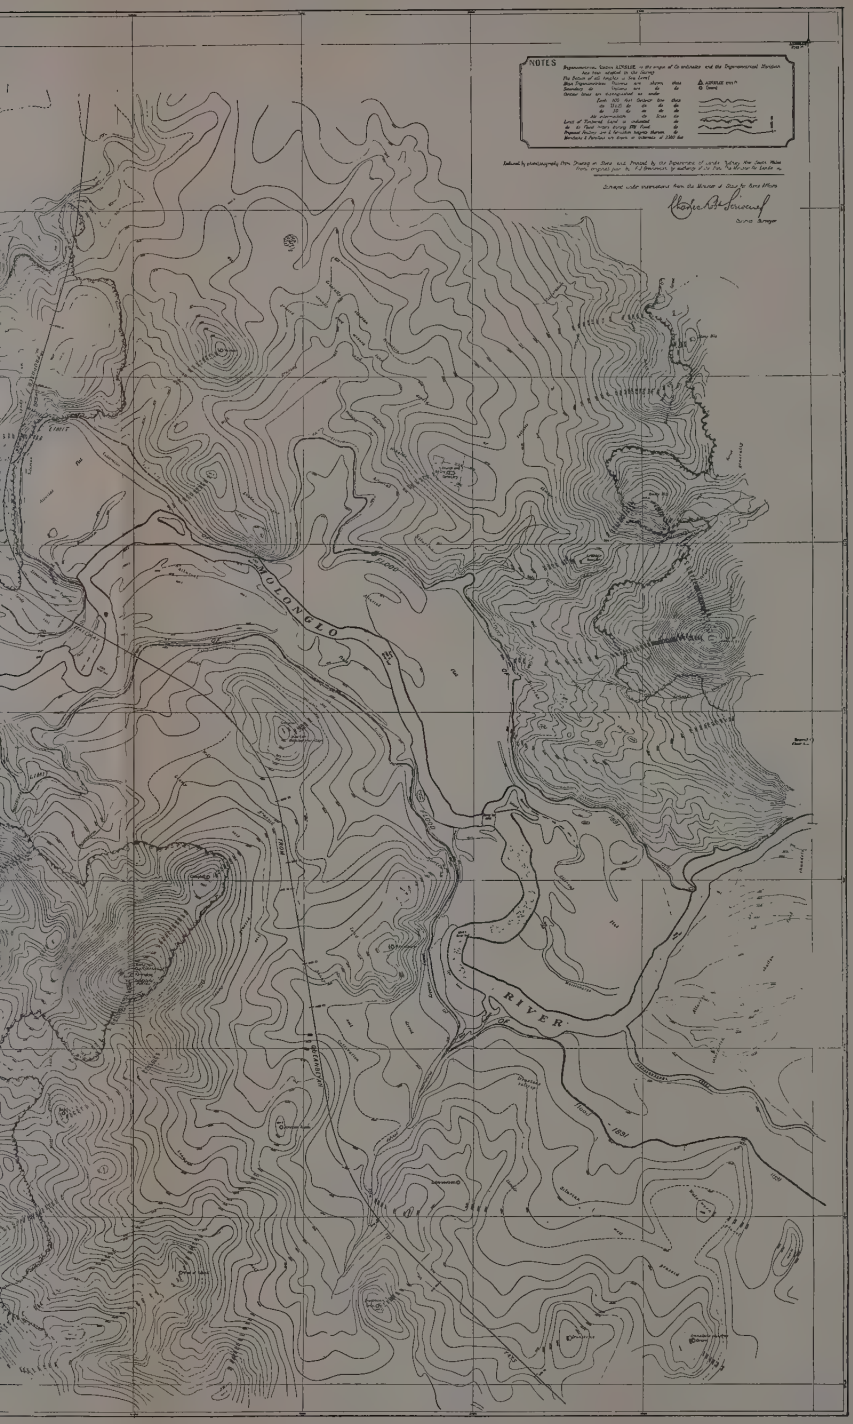
officially requested to agree to the extension of these areas for the reasons (*a*) that it is requisite to secure further lands on the coast line for the purposes of efficient defence, and (*b*) that it is desirable that the Commonwealth should have proprietary rights over the catchment area of Telegraph Creek and other adjacent lands.

The entrance to Jervis Bay, between Bowen Island and Point Perpendicular, is 1¾ miles in width. The main Federal territory is situated on the southern side of the bay, at what is known as Darling Road, where there is a good anchorage on a sandy bottom, carrying a depth of from 6 to 11 fathoms of water at low-water spring tides. The 5-fathom line comes close up to the shore, and there is nothing less than 11 fathoms thence to the ocean. The sheltered area of Darling Road may be taken to be about 1½ square miles, and it affords an excellent shelter for vessels of even the largest draught.

§ 4. Administration and Organisation of Services.



1. **General.**—By section 6 of the Seat of Government Acceptance Act 1909, it is provided that all laws in force in the Commonwealth territory, at the date of acquisition by the Commonwealth, shall, so far as applicable, remain in force until other provision is made. Power is given to the Governor-General to exercise certain functions hitherto vested in the Governor of New South Wales, subject to the proviso that the Governor-General may direct that any such function shall be exercised on behalf of the Commonwealth by the authorities of the State in whom it was previously vested. Before issuing the proclamation actually effecting the acquisition of the territory it was thought desirable to make further provision for the administration of the territory by the Commonwealth. The Seat of Government (Administration) Act was accordingly passed in November, 1910.



2. **The Seat of Government (Administration) Act 1910.**—This Act, which came into force on the 1st January, 1911, provides for the government of the territory and deals with the following matters:—(*a*) *Ordinances.* The Governor-General is authorised to make ordinances having the force of law in the territory, either House of Parliament being empowered, however, to disallow any such ordinance by passing a resolution to that effect. (*b*) *State Acts.* It is provided that certain State Acts should not continue in force in the territory. These Acts are as follow:—The Conciliation and Arbitration Act 1899, the Industrial Disputes Acts 1908 and 1909, the Local Government Acts 1906 to 1908, the Country Towns Water and Sewerage Act 1880, and all acts imposing rates, taxes, or duties (except duties on the estate of deceased persons). (*c*) *Commonwealth Acts.* It is also provided that the following Commonwealth Acts should apply within the territory:—The Commonwealth Conciliation and Arbitration Acts 1904 to 1910, the Australian Industries Preservation Acts 1906 to 1909, and the Secret Commissions Act 1905. The rates of postage and for telegrams are the same as if the territory were still part of New South Wales. (*d*) *Crown Lands.* The freehold of any Crown lands in the territory cannot be sold or disposed of except in pursuance of some contract entered into before the 1st January, 1911. (*e*) *Jurisdiction of Inferior Courts.* The inferior courts of the State of New South Wales exercise the same jurisdiction as they had before the commencement of the Act.

3. **Ordinances.**—Up to the end of March, 1911, only one ordinance had been made under the provision referred to above. This ordinance, which came into operation on the 1st January, 1911, deals with the provisional government of the territory. It directs that the State laws are to continue to be administered by the authorities of the State, and that magistrates, gaolers, and police are to be deemed to be officers of the territory. No new

license to sell intoxicating liquor in the territory may be granted; any existing publican's license may, however, be renewed from time to time for the same premises.

It is proposed to pass Commonwealth Acts providing a complete scheme for the government of the territory, as the opportunity and necessity arise. In the meantime it is intended to make other ordinances at an early date dealing with various urgent matters; it is understood that the first of these will relate to the local government of the territory by the Commonwealth.

4. **Financial and Other Arrangements.**—A trust fund, to be designated the Federal Capital Territory Account Trust Fund, is to be created by statute. Into this fund all moneys collected by the New South Wales Government on behalf of the Commonwealth in connection with the Federal territory will be paid. Disbursements on account of operations in the territory will be made out of this account, subject to appropriation by Parliament.

In order to enable the Commonwealth to undertake the administration of lands, roads, forests, mines, and allied services, now being conducted by the State on behalf of the Commonwealth, steps have been taken to obtain (*a*) certified copies of the registers of the State Lands Department, with full particulars relating to every area of land within the territory; (*b*) certified copies of every measured portion of land in the territory, and of all plans thereof deposited in the Government offices; (*c*) copies of the registers of the Yarrolumla shire shewing every holding within the territory, these being required before any scheme of municipal taxation can be introduced; and (*d*) information relating to land tenure and Local Government Acts of the State.

5. **Scheme for Organisation of Services.**—In January, 1910, approval was given by the Minister of State for Home Affairs of a general scheme for the organisation of services under the Seat of Government Act 1908, and the Seat of Government Acceptance Act 1909. This scheme provides for responsibility to the Minister for the administration of the various Acts to be passed in connection with the territory and the city, for the general management, for the conduct of operations, for orders, and for the receipt of intelligence.

(i.) *Administrative Arrangements.* It is proposed to divide the administrative arrangements into two sections:—(*a*) The drafting of Bills and the administration of Acts relative to city, lands, mines, agriculture, forests, stock, justice, police, education, health, works, roads, buildings, transport (including railways), power, lighting, water, sewerage, bridges, rivers, parks, harbour, observatories, and miscellaneous; (*b*) the other section of administration covers general management, embracing correspondence, records, stores, finance, revenue, and expenditure.

(ii.) *Executive Arrangements.* The primary division of the executive section of the services provides for (*a*) lands, (*b*) works, and (*c*) scientific. (*a*) *Lands.* The lands section has been placed under the control and supervision of the Director of Commonwealth Lands and Surveys, and embraces all survey operations regarding city, triangulation, engineering, territorial boundaries, topographical, roads, railways, and miscellaneous. That officer is also charged with duties relating to Crown lands, valuations, acquisitions, leases, roads, parks and reserves, agriculture, mines, and forests. (*b*) *Works.* The Public Works section of the scheme has been placed under the control and supervision of the Director-General of Works, who advises on professional matters respecting the design, construction, and maintenance of works. These works embrace public buildings, water, power, lighting, sewerage, roads, bridges, railways, and tramways. (*c*) *Scientific.* It is proposed to place scientific services under the control of a Director, who will advise the Minister respecting the various observatories which will be established in connection with the Federal capital, such as astronomy, solar physics, meteorology, etc.

§ 5. Surveys.

1. **General.**—After the acquisition of the territory and the selection of the city site, the first step to be taken towards the establishment of the capital city is the carrying out of a large number of necessary surveys. These comprise (*a*) contour surveys; (*b*) triangulation survey of the territory; (*c*) demarcation of the boundaries of the territory and the catchment areas; (*d*) engineering surveys for water-supply, sewerage, roads, bridges, and other associated objects; (*e*) topographical or feature surveys of the territory and of the catchment areas of the Molonglo and Queanbeyan Rivers, comprising in all an area of about 1480 square miles; (*f*) road surveys; (*g*) surveys in connection with the Yass-Queanbeyan railway; (*h*) demarcation of boundaries of lands at Jervis Bay; (*i*) surveys in connection with the railway line to connect the capital city with Jervis Bay, and the establishment of a harbour at Jervis Bay; (*j*) redetermination of boundaries of privately-owned properties in the territory; (*k*) preparation of plans and descriptions of the whole of the foregoing surveys. These surveys are being carried out under the direction of the Commonwealth Director of Lands and Surveys.

2. **Astronomical Observatory.**—In connection with these surveys it is in the first place important to observe that the site for an astronomical observatory has been located on the summit of a range of hills, known as Mount Stromlo, about 6 miles south-west of the city site, and situated symmetrically with regard to the eastern and western boundaries of the territory. The primary object in fixing this site is the determination of the initial meridian, to which all surveys, including not only those within the Federal territory but also ultimately throughout Australia, will be referred. A point on the summit of this range has been determined as the origin of all co-ordinates for the surveys which are to be carried out.

The site on Mount Stromlo was selected after due consideration of the conditions essential for the efficient employment of powerful astronomical instruments during the greater part of the year, viz., uninterrupted horizon, clear skies, transparency and steadiness of atmosphere, and freedom from dust, smoke, and frequent atmospheric disturbances. The elevation of the site—about 2570 feet above sea-level and 600 feet above the surrounding country—secures an uninterrupted horizon. On the top of the range there is ample room for the location of several observatories, and taking into account the advantages of the site—such as its relative remoteness from sea influences, the moderate gradient of the slopes on all sides, the nature of the soil and vegetation, and the aspect and general topography of the surrounding country—the elevation of 2600 feet is considered to probably afford a sufficient degree of atmospheric purity.

There are ranges some 20 or 30 miles to the south-west of the capital site having an elevation of from 4000 to 5000 feet, but the difficulty of obtaining access to these higher levels outweighs any advantage which the additional elevation might be expected to give.

Arrangements are being made for the erection on the site of a temporary observatory to house an equatorial telescope, having a 9-inch objective, in order to test the efficiency of the site by actual observations of astronomical and meteorological phenomena, extending over a period of at least twelve months.

3. **Progress of Surveys.**—As may be seen below a considerable amount of work has already been done in regard to the surveys which are to be carried out.

(i.) *Contour Surveys.* The first contour survey was carried out in 1909 and extended over an area of about 35 square miles; the object of this survey was to give a general idea of the character of the country about the city site. A close

contour survey, with vertical intervals of five feet, has now been carried out over the area embraced by the city site, for the purpose of enabling designs for laying out the city to be prepared. This survey has recently been extended beyond the city site so as to include the areas proposed for the water-supply reservoirs and pipe-line and sewerage-treatment works, as well as the sites for weirs on the Molonglo River. A model of the city site on a scale of 400 feet horizontal and 100 feet vertical has been prepared. Casts of this model will be sent to each of the centres from which information is to be distributed to intending competitors for the premiums offered for designs for laying out the city (see § 6, para. 5 hereinafter).

(ii.) *Triangulation and Demarcation of Boundaries.* The triangulation of the territory and the demarcation of boundaries are now being conducted, and it may be observed that an arrangement has been made with the Government of New South Wales under which the common boundaries, as determined by the Commonwealth Director of Lands and Surveys, will be accepted by both Commonwealth and State. The triangulation of the territory will be intermittent, and surveyors will be detailed for that work as circumstances warrant. Similarly, topographical work will not be continuous, but will be carried out, when the more urgent surveys have been completed.

(iii.) *Surveys for Engineering Works.* The surveys in connection with engineering works for water-supply and sewerage have been made, and investigations are in progress with a view to determining the characteristics of certain sites which it is proposed to utilise for reservoirs, weirs, and other engineering purposes. A survey has also been carried out for a road from the foot of Mount Stromlo to the observatory site on the summit. This road is to be constructed at an early date with a length of 2¼ miles and a ruling gradient of 1 in 20. Other surveys recommended by the Director-General of Works in connection with roads and bridges are also being carried out.

(iv.) *Railway Surveys.* A preliminary survey has disclosed a practicable route for a railway from the capital site to the Goulburn-Cooma line near Bungendore, with a ruling gradient of 1 in 75 and easy curves. This line will form part of the railway which will connect the capital city with Jervis Bay, as well as being the most direct route from the city site northwards, *i.e.*, to Sydney, Brisbane, etc.

a) Capital Site to Bungendore. The length of the line from the city site to Bungendore will be about 27 miles, of which 11 miles are within Federal territory and 16 miles in the State of New South Wales. It is estimated that the cost of construction of this line will be approximately £250,000 without equipment. The New South Wales Government has been invited by the Commonwealth Government to state the terms upon which they will be prepared to construct, equip, and maintain the line in such a manner as to conform to the standards of the State lines.

In order to provide transport facilities to the city site at an early stage in the operations, the original proposal was to connect the site with Queanbeyan, a distance of 9 miles. The line between Queanbeyan and Bungendore has, however, a gradient of 1 in 40 for more than 7 miles and curves of 12 chains radius, with short intervening straights extending over 2½ miles. Disregarding the question of cost and interest on capital expenditure, the deviation to Bungendore would therefore place the railway transport to the city site on a more satisfactory basis than would exist by connection with Queanbeyan.

(*b*) *Yass to Queanbeyan.* Reference has already been made (see page 1138) to the provision in the agreement between New South Wales and the Commonwealth for the construction of this line, which would pass through the Federal territory near the city site. A location survey of the route for this line is in progress, and the permanent marking of part of the line, which will pass through the Commonwealth territory, has been completed.

(c) *Railway to Jervis Bay.* A route for a railway to Jervis Bay, connecting with the line from the city site to Bungendore, has been selected, and location surveys are to be carried out. The length of the proposed line is approximately 96 miles, with a ruling gradient of 1 in 50 and curves of 12 chains radius as a minimum. The only bridges of any size will be those across the Shoalhaven and Mongarlow Rivers; smaller bridges will be required crossing Reedy and Durra Durra Creeks and the Coorang River. The descent towards Jervis Bay is gradual, the highest point being at the departure from the Goulburn-Cooma railway at 2550 feet above sea-level.

4. **Determination of Boundaries and Particulars of Land Tenure.**—Amongst other matters which are in train may be mentioned the valuation of privately owned properties lying within the territory, with reference to which the New South Wales Government has furnished a detailed statement shewing the nature of each occupation together with certain information in the possession of the State Department bearing upon the values of the properties. Particulars regarding the tenure of land within the Federal territory are given in the following table :—

COMMONWEALTH CAPITAL TERRITORY—PARTICULARS OF TENURES OF LAND, 1911.

Particulars.	Alienated.	In Process of Alienation.	Leases and Licenses.	Unoccupied.	Total.
Area in acres ...	163,447	147,180	195,033	67,021	572,681

§ 6. The Building of the City and Associated Matters.

1. **Preliminary Measures.**—Whilst the foregoing survey operations are being performed and the designs for laying-out the city are being prepared (see paragraph 5 hereinafter), it is proposed that the preliminary schemes for workmen's habitations, water-supply, sewerage, and other necessary works should be carried out for the necessities, not only of the city itself in its earlier stages, but also for the large number of persons who will be engaged on its construction.

(i.) *Accommodation of Workmen.* Arrangements for housing the employees engaged on the preliminary works and for controlling the area occupied by them are being made. At present the officers engaged in the surveying work under the direction of the Director of Commonwealth Lands and Surveys are established in camps. For the purpose of providing in a suitable position an area upon which these officers and other persons engaged in the establishment and construction of the city will reside, the estate known as Acton, covering an area of 1780 acres on the north side of the Molonglo River, has been acquired. This area was selected with due regard to hygienic conditions and to protection of the site from pollution. During the earlier stages, workmen will probably be distributed on engineering works away from the city site, but from the time when construction within the city begins, there will be an aggregation of a considerable number of men, their families, and dependents.

When this stage arrives, it is proposed to lay out the area referred to as a semi-permanent village. The streets will be formed and drained; cottages erected for married men and families; and accommodation provided for single men. Immediate steps are to be taken for the erection of offices and quarters for the staff. It is also proposed to

establish a general store, where all consumable supplies may be purchased. A hospital is also to be provided and equipped, the medical officer in charge to act also as health officer. The establishment of a Government hotel and the provision of schools for the education of children are also in view.

(ii.) *Transport.* Steps are to be taken for the early construction of a railway connecting the capital site with the Goulburn-Cooma line, either at Bungendore or at Queanbeyan. The construction of such a line will facilitate the supply of materials, plant, stores, and provisions, and will thus decrease the cost of engineering and building construction, and of workmen's living. In the initial stages it may be found necessary to construct a tramway from Queanbeyan for transport purposes until the railway is opened, such tramway to follow the route of, and be a permanent step towards, the line connecting Yass and Queanbeyan. The formation of main roads and deviations, and the maintenance and repair of existing roads and bridges for the transport of material required in connection with the earlier engineering projects, is to be taken in hand immediately. The roads in use in the territory are approximately 200 miles in length; about one-half of these are formed and gravelled in parts, the other half having natural surface with slight formation. There are four bridges—two each over the Murrumbidgee and Molonglo Rivers—constructed of timber. The main roads are to be reformed and gravelled or metalled; the necessary road-making plant is being purchased. A sum of £8000 has been made available for expenditure during the current financial year on road maintenance, and a further sum of £540 has been provided for the construction of a road to the observatory site on the summit of Mount Stromlo. A scheme is to be prepared for an efficient system of roads, throughout the Federal territory, radiating from the city site.

(iii.) *Water-supply and Sewerage.* It is proposed that a provisional scheme for water-supply and sanitation should be carried out at an early date, so that the men who will be engaged on the construction of the permanent water-supply and sewerage systems, of roads, bridges, railways, and other works, will be provided for in a manner which will meet all requirements in the direction of health, and which will not in any way interfere with the site upon which the capital itself will eventually stand. At a later stage, when these permanent works are sufficiently advanced and when construction within the city site commences on a large scale, a water-supply system will probably be adopted so as to form a permanent step towards the water-supply of the city upon official occupation. Similarly, in regard to sewerage, at first the arrangements will probably be more or less of a temporary nature, but it is proposed that the engineering works should be pushed so far ahead before building operations in the city are commenced, as will admit of a location being assigned for workmen, which will, in course of time, become a sewage district for the city extensions. The question of water-supply for afforestation will also receive early consideration.

(iv.) *Afforestation.* It is proposed to take steps at an early date for the afforestation of that part of the territory contiguous to the city site, in such a manner as not to interfere in any way with the design of the city. By being planted and properly laid out at an early date, the trees will be in a forward state by the time the capital city is ready for occupation. The scheme includes the growth of trees for scenic and ornamental purposes, for the prevention of the erosion of the banks of rivers and creeks, and for shelter. It appears probable that concurrently with the foregoing operations it will be found advantageous to commence some of the constructional works for the lake which is to be formed by utilising the waters of the Molonglo River at the capital site. It is proposed to obtain expert advice as to a scheme of afforestation and to establish local nurseries for the trees which will be used.

(v.) *Materials.* Steps are being taken with a view to the supply of local materials as far as possible. Shafts have been sunk and samples of shale, which it is thought will be

suitable for the purpose of brick making, have been obtained. Tests of these samples are being carried out in Sydney and Melbourne, and the establishment of brickworks is awaiting the results of these tests. The type of brick being made is the machine-made brick, treated by the semi-dry process. It is estimated roughly that ninety million bricks will be required for the public buildings; the delivery of these will probably be accomplished within six years after the erection of the brickworks, *i.e.*, at the rate of fifteen million bricks per annum. It is stated that there will be no difficulty as to the volume of shale available. Reference has already been made (see § 3, para. 4.) to the nature of the building stone available in the territory; further investigations are to be made. Granite occurs in large quantity over a great part of the territory; none has yet been used for buildings, but it is probable that, with the demand created by the establishment of the capital city, suitable quarries will be opened, while the porphyritic rock which outcrops frequently will no doubt provide valuable stone for ornamental purposes. Stone for road-making is abundant and quarries will be located; sand for building construction and pottery clays will be sought for. The question of the manufacture of sand lime bricks from local materials is under investigation.

Early steps will probably be taken for the delivery and seasoning of timber required for preliminary works. At a later date this scheme will be developed so as to provide the timber required for buildings in the city.

(vi.) *Power.* Power will be required in the early stages of the work for lighting, brickmaking, woodworking, pumping, possibly quarrying, and other purposes. It is therefore considered desirable that prior to the inception of active operations a power station should be installed to transmit electrical energy according to requirements. The project will be considered as part of a comprehensive scheme and will be installed in units.

(vii.) *River Gauging.* A complete system of river gauging throughout the territory and the catchment areas of the Molonglo and Queanbeyan Rivers is to be established.

2. **Probable Successive Stages of Works.**—A scheme, setting forth the proposed successive stages of the works involved in the establishment of the capital city, has been prepared by the Director-General of Works. Although the entire undertaking does not involve any one engineering work of great magnitude, it is necessary that the successive steps should be planned in such a manner that each may become a permanent step obviating temporary expedients. It is also necessary that the whole undertaking should be designed so that certain projects may initially form units or parts, which can be repeated or developed in course of time to meet increase of population. The probable stages in the evolution of the city, as set out hereunder, may overlap, and in some cases projects will continue through successive stages.

(i.) *First Stage. Transport, Materials, and Power.* Country roads and bridges; railway connection with Goulburn-Cooma line; brickworks; lime kilns; and timber (first instalment); generation and transmission of power for construction.

(ii.) *Second Stage. Hydraulic Engineering Works outside City Area.* Water-supply; storm-water drainage; sewerage outfall works; main sewer; sewerage district for workmen; timber (second instalment); railway bridge over the Molonglo River.

(iii.) *Third Stage. Engineering Works within the City Area preparatory to Occupation.* Street tunnels; power plant (permanent station and distribution); construction of housing for workmen; service reservoirs; and impounding weir on Cotter River.

(iv.) *Fourth Stage. Building Construction within the City and Completion of Engineering Works.* Public buildings (offices for use during construction); gasworks;

compensating weir on Queanbeyan River; railway to Hall (Queanbeyan to Yass line); impounding weir on the Molonglo for ornamental water; erection of public offices and buildings; erection of Parliament House; completion of city roads.

3. **Outline of Principal Projects.**—A provisional scheme has been formulated setting out the sequence of most of the important projects involved in the building of the city, together with the estimated time necessary for their design and completion, and their approximate cost. There are, however, certain matters which cannot be dealt with even provisionally at present—such as bridges over the Molonglo River and the impounding weir on that river for ornamental purposes—since the location and height of these will depend upon the level of the waters provided for in the accepted designs for laying out the city. Other important works, *e.g.*, the compensating weir on the Queanbeyan River, street tramways, the railway to Jervis Bay, and refuse destructor, are not included in the scheme, since it is considered that they are not essential for the first years of occupation. The scheme provides, subject to the approval and the appropriation by Parliament of the necessary funds, for the completion of the designs and buildings ready for occupation within a period of eight years.

(i.) *Water Supply.* There are two aspects of this matter, viz., one as regards workmen during construction, the other regarding the supply for the city. The former has already been referred to herein (see page 1151). It is proposed that a supply from the permanent source, the Cotter River, shall be provided before the time when there will be any considerable aggregation of workmen and dependents within the city area. In the meantime a supply of water will be provided for the men engaged on preliminary works, probably by pumping from the Molonglo River through sand filters into reservoirs. A weir has been erected on the Cotter River, and the discharge is determined by readings taken daily. The records thus obtained have confirmed the reports which have already been made to the effect that the capacity of the river is more than sufficient for the domestic and civic requirements of a population of 200,000 persons, based on an estimate of 100 gallons each per diem. A site for an impounding weir on the Cotter River has been selected at a place about one mile from the confluence of that river and the Murrumbidgee, and at a level of about 1560 feet. It is estimated that a weir at that place, 70 feet in height, will impound 800 million gallons of water; if the height were increased to 200 feet, the quantity impounded would be 4800 million gallons. The pipe line, after crossing the Murrumbidgee River, will lead to the pipe head reservoir on a hill near Mount Stromlo (2465 feet), thus necessitating a lift of about 800 or 900 feet. The proposed site for the service reservoir is at Red Hill (2300 feet), near the south-western boundary of the city site. It is proposed that the power for the pumping plant shall be transmitted electrically from the central power station.

(ii.) *Sewerage Scheme.* Various considerations demand that efficient measures should be taken to ensure the innocuous disposal of the sewage effluent. Any system adopted will involve land filtration, and the configuration of the country indicates the slopes of the Molonglo below (*i.e.* to the west of) the city site as the most suitable place for sewage treatment works. It is proposed that a system of bacteriological treatment combined with broad irrigation shall be adopted.

Until the designs for laying out the city are accepted, the lowest levels from which sewage will be taken cannot be determined, but it is stated that the engineering surveys, which have already been carried out, demonstrate that the areas available for irrigation by gravitation alone will be too small, and that pumping will be necessary. The lift required will, however, be small even to command a large irrigable area. The relative advantages of pumping the sewage or effluent are under consideration.

(iii.) *Power Supply and Distribution.* In distinction to a system under which independent power-generating units would be installed at various places—for example, at

the sewage outfall works and at the pumping station at the Cotter—the adoption of a central station scheme is of importance. It is proposed that the permanent central station shall consist of two generating units each of 500 kilowatts, and one spare unit. Until a proper water-supply is provided, the permanent power station cannot be erected. In the meantime, since power supply is necessary in connection with preliminary measures (see page 1152 hereinbefore), it is proposed to install the first unit in a temporary building on the bank of the Molonglo River, conveniently situated for condensing and feed water. When the permanent station is erected, the first unit will probably be moved from the temporary building and become part of the complete plant.

The question of the generation of electricity by water-power has received consideration. None of the rivers within the territory can be regarded as a suitable source for such power, because of the large capital outlay entailed for hydraulic headworks and the small horse-power which could be relied upon during successive years of drought. It is considered probable that in future years, when the population of the city has substantially increased, the current for a plant of large capacity could be economically generated by the utilisation of the waters of one of the rivers flowing outside the Federal territory.

(iv.) *Buildings.* The scheme provides for the sequence of designs and for the erection of public buildings without intermission, including the Governor-General's residence, Courts of Justice, police buildings and gaol, administrative offices, military depôt and offices, schools, observatory, medical and hospital buildings, railway station, Prime Minister's residence, accommodation for Members of Parliament, post office, Government printing office, and Town Hall. Other buildings will probably be erected within the first few years of, but not prior to, occupation, such as State House and necessary educational institutions. It has been decided that competitive designs should be invited for Parliament House after the design for laying-out the city has been selected (see paragraph 5 hereinafter). The plans will probably have to be designed in such a manner that initially the necessary buildings can be erected expeditiously and at moderate cost, and so as to form a permanent part of the whole design to be completed at a later date.

The scheme provides for the design and erection of public buildings only. It is proposed that buildings for commercial and residential purposes should be constructed by private enterprise, at a time when the engineering and other works of the city are considered to be sufficiently advanced.

(v.) *Gasworks.* It is considered that gas-supply for cooking and heating will be essential, and that such a supply will also be utilised to a large extent for lighting purposes. It is proposed, therefore, to produce a gas of calorific value suitable for modern lighting, as well as for heating and power. On the basis of available statistics regarding towns having both electric and gas supplies, the consumption for 20,000 people, including town street lighting, will be 80 million cubic feet per annum.

(vi.) *Compensating Weirs on Queanbeyan and Molonglo Rivers.* The proposal to construct a weir to impound ornamental waters in the city site will entail the erection of compensating weirs on the Queanbeyan and Molonglo Rivers. It is considered that the construction of one of the latter weirs should preferably precede that of the impounding weir at the city, and that it would be advantageous to first construct the weir on the Queanbeyan River. The area of the ornamental water will presumably be determined by the accepted city design, but in any case a constant flow of water will be required to maintain a definite level and to avoid so far as possible still waters in any arms or bays. The evaporation losses, deduced from the data obtained at Lake George, will be considerable, as also will be the loss by soakage. The requisite flow cannot be definitely stated until the extent of ornamental water is determined. In the meantime a weir is

being constructed to gauge the flow of the Molonglo at a reef near Yarrolumla station, so as to afford data by the time the designs for the city are under consideration.

(vii.) *Other Matters.* Other matters (in addition to the foregoing and to the preliminary measures specified in paragraph 1 hereof) dealt with in the scheme comprise lime-kilns, storm-water drains, military college, street tunnels, and city streets.

4. **Military College of Australia.***—This college has been established under the authority of the Defence Act 1910, to educate candidates for commissions in all arms of the Military Forces of the Commonwealth. A site within the Federal territory has been selected for the college at the Duntroon homestead, on the right bank of the Molonglo River, about seven miles from Queanbeyan, and near to the eastern boundary of the capital city area. The site, which comprises an area of about 370 acres, has a frontage to the Molonglo River, and has at present been leased by the Commonwealth for a period of two years with a right of renewal for a similar period. It will be possible to obtain within about twelve miles of Duntroon an additional area of country near the Murrumbidgee River suitable for encampment purposes, where field-artillery practice, field-firing, and other practical exercises can be carried out.

The homestead at Duntroon has been converted into offices for the administrative staff, orderly rooms, and quarters and mess-rooms for bachelor instructors. Temporary barracks and mess accommodation have been erected for the cadets, class rooms have been provided, and a parade ground constructed. The college is eventually to be connected with the water-supply and sewerage systems of the city; in the meantime temporary arrangements have been made.

(i.) *Cadets.* The establishment of cadets has been fixed at 150. The first batch will number thirty-three Australian cadets and ten from New Zealand, and will join in April, 1911. The next batch will go into residence in March, 1912.

(ii.) *Commandant and Staff.* The college is under the control of a Commandant. The staff consists of the following officers:—

MILITARY COLLEGE OF AUSTRALIA—STAFF OF OFFICERS, 1911.

Instructional.		Administrative.
Military.	Civil.	
2 Directors 6 Instructors	5 Professors 2 Lecturers	1 Adjutant 1 Quartermaster 1 Medical Officer

Warrant and non-commissioned officers will also be appointed.

5. **Designs for the Capital City.**—The Commonwealth Governmen is inviting competitive designs throughout the world for laying out the capital city, with the object of embodying in the construction of the Federal capital the most desirable features from the standpoint of general efficiency for its purposes, of engineering, hygiene, etc. The city will be the permanent seat of Government of the Commonwealth, the place at which the Federal Parliament will meet, where all Commonwealth legis-

* Compiled from information kindly furnished by Brigadier-General W. T. Bridges, C.M.G., R.A.A., Commandant of the Military College of Australia.

lation will be enacted, and where the Governor-General will have his official residence. It will therefore be primarily the official centre of the Commonwealth.

The creation of a capital is a unique opportunity, and it is hoped to reflect in the designs thereof the finest features of modern cities. The Commonwealth will have, as a precedent in the undertaking, the whole experience of the past in architecture and city planning. With the object of inducing experts of world-wide celebrity and reputation to place their talent at the disposal of the Commonwealth Government, it has been decided to award premiums of £1750, £750, and £500, respectively, for the three designs considered most meritorious. The whole of the necessary preliminary work, viz., survey and contouring, preparation of plans, etc., has already been undertaken, and the results are to be placed at the disposal of competitors; the conditions and particulars for the competition are accompanied by such plans, reports, and other exhibits as are necessary to enable the competitors to gain a full appreciation of all requirements. The information comprises historical notes, conditions of competition, requirements, general information, descriptive matter, and statistics relating to meteorology and climatology, together with contour, topographical, geological, and meteorological maps, a model of the city area, special reports, and also reproductions of landscape sketches taken from marked positions within the city site. The special consideration of designers is to be given to the allocation of appropriate areas suitably situated for public buildings and offices, and for commercial, residential, and industrial purposes, and it is expected that competitors will embody in their designs all recent developments in the art of town planning from the utilitarian, the architectural, the artistic, and scientific standpoints.

Information for the guidance of intending competitors will be available free of cost at the following places:—*Australia*: The Department of Home Affairs and the Public Works Department of each State. *New Zealand:* Public Works Department, Wellington. *Canada:* Public Works Department, Ottawa. *South Africa:* Public Works Department, Pretoria and Cape Town. *Paris, Berlin, and Washington:* The British Embassy. *New York and Chicago:* The British Consul-General. Applicants must establish their bonâ fides as intending competitors before being supplied with information.

SECTION XXXII.

MISCELLANEOUS.

§ 1. Immigration.

(A) The Encouragement of Immigration into Australia.

1. **Introduction.**—Various measures have from time to time been adopted by the Commonwealth and State Governments, as well as by private societies and individuals, with a view to promote the immigration of suitable classes of settlers into Australia. Some of the States of the Commonwealth are at present pursuing immigration policies of a vigorous nature; in others, relatively little is being done. The activities of the Commonwealth Government (which is vested with constitutional powers in regard to immigration under Sec. 51, xxvii., of the Constitution Act 1900) with respect to the encouragement of immigration have hitherto practically been confined to advertising in handbooks, newspapers, and periodicals, the resources and attractions of Australia.

2. **State Immigration.**—The advertising in the United Kingdom of the resources of the individual States has been carried out by their Agents-General in London. Various means have been adopted, including newspaper advertising; the publication of illustrated pamphlets bearing on the resources and principal primary industries of the State; lectures by officers who have a knowledge of the conditions prevailing in the State; official displays at the principal agricultural, manufacturing, and similar exhibitions; cinematographic pictures typical of industrial life and scenic views; and pictures and lantern slides.

(i.) *Nominated and Assisted Passages.* Arrangements have been made by most of the State Governments with several of the principal shipping companies for substantial reductions in the amounts of passage money to be paid by immigrants. These reductions are generally granted to all persons desiring to settle on the land or engaging in any form of rural industry, to domestic servants, and to any others who satisfy one of the several Agents-General in London that they will make suitable settlers. Provision has also been made whereby settlers may nominate their relatives or friends for passage to Australia at greatly reduced rates.

(ii.) *Reception on Arrival.* Immigrants whose coming is advised are met on board the vessel on arrival by Government officers, who make themselves acquainted with the needs of the passengers and assist and advise them in various ways. To those desirous of settling on the land, information and assistance is rendered by officers of the Lands Department, and special concessions are granted in respect of fares on the Government railways. In other cases endeavours are made to obtain employment for each applicant according to his special needs and qualifications.

(iii.) *Numbers of Immigrants.* Particulars of the net immigration to the Commonwealth are given on pages 131-3, and of assisted immigration on page 139, hereinbefore.

3. **Initiation of Commonwealth Scheme.**—For the financial year 1910-11 a sum of £20,000 was voted to the Commonwealth Department of External Affairs for advertising the attractions of Australia for settlers, farm workers, and tourists. The State Immigration Bureaux co-operate with the Department of External Affairs in keeping the High-Commissioner for Australia in London advised as to lands in the respective States available for selection, the openings for agricultural workers, and as to general information concerning matters of interest to intending settlers. A press advertising campaign has been initiated, the Commonwealth carrying on the general advertising of Australia by means of paragraphs and illustrated articles in British, European, and American publications, while the several States advertise for the class of immigrants they specially require. It is proposed that "landseekers' excursions" shall form an important part of the Department's operations. Bioscope films to be utilised for the illustration of lectures have been prepared, and handbooks for settlers and tourists, as well as folders, and other publications have been issued. Pictorial posters are also utilised.

4. **Visit of Scottish Agricultural Commissioners.**—In 1909 communications were entered into with Lord Pentland, Secretary of State for Scotland, relative to arranging for a visit to Australia of a number of prominent Scottish gentlemen interested in agriculture as land owners, farmers, Directors of Scottish Chambers of Agriculture, and also a number of men engaged in scientific agricultural education. Twelve Commissioners were nominated by Lord Pentland, and arrangements were made for them to tour the Commonwealth. The members of the Commission reached Fremantle on the 20th September, 1910, and, under the direction of a representative of the Department of External Affairs, proceeded to Queensland, and began an itinerary which took them throughout the principal agricultural districts and many of the pastoral districts of each of the States. The tour, extending over a distance of about 14,000 miles, concluded on the 19th January, 1911, when the Commission sailed from Fremantle. The Commissioners are submitting to the Commonwealth Government a report as to their observations, and the report will be circulated in the United Kingdom and elsewhere for the information and guidance of intending settlers and others.

5. **The High Commissioner for Australia and the Agents-General.**—Intending settlers or immigrants may, on application, obtain information from the High Commissioner for Australia—

THE RIGHT HON. SIR G. H. REID, P.C., K.C.M.G., ETC.
COMMONWEALTH OFFICES,
72 VICTORIA STREET,
LONDON, S.W.

Information regarding individual States may be obtained from the persons specified below:—

Western Australia	Sir W. NEWTON MOORE, K.C.M.G.	15 Victoria St., Westminster, London
Tasmania ...	Hon. JOHN MCCALL, M.D. ...	5 Victoria St., Westminster, London

(B) The Regulation of Immigration into Australia.

1. **Pre-Federal Restrictions.**—(i.) *Alien Races.* The several States of Australia had regarded it as desirable, long prior to Federation, to impose certain restrictions upon the admission of persons wishing to become inhabitants of those States. The influx of Chinese into the States, for example, was limited by stringent statutes, and later general Acts were passed in some of the States which had the effect of restricting the immigration of other—principally Asiatic—races.

(ii.) *Undesirable Immigrants.* Further restrictions were placed upon the admission of persons who were undesirable as inhabitants, either for medical or moral reasons, or who were likely to be an economic burden upon the community.

2. **Powers and Legislation of the Commonwealth.**—(i.) *Constitutional Powers.* By Chap. I., Pt. V., Sec. 51, xxvii. and xxviii. of the Commonwealth Constitution Act the Parliament of the Commonwealth is empowered to make laws with respect to immigration and emigration and the influx of criminals. (See page 39 herein).

(ii.) *Legislation.* The powers specified have now been exercised, and the laws passed in pursuance thereof supersede the State laws above referred to.

The first Act passed was the Immigration Restriction Act 1901, which contained provisions restricting the immigration of the classes of persons mentioned above. The clauses restricting the immigration of persons under contract were, however, repealed, and the Contract Immigrants Act 1905 was substituted therefor. (See page 50 herein.)

The Immigration Restriction Act of 1905 amends certain parts of the Act of 1901, and the immigration of alien races and undesirable persons is now regulated by the two Acts, viz., those of 1901 and 1905. This last applies only to immigrants under contract or agreement to perform manual labour in Australia. The admission of such persons is permitted if the contract is in writing, is made by or on behalf of some person named, who must be resident in Australia, and approved by the Minister. Such approval will not be given if the contract is made with the view of affecting an industrial dispute or if the remuneration and other terms are not as advantageous to the contract immigrant as those current for workers of the same class at the place where the contract is to be performed.

There is an additional provision where the proposed immigrant is not a British subject born in the United Kingdom or descendant of such a person. In such case it has to be proved that there is a difficulty in the employers obtaining in the Commonwealth a worker of at least equal skill and ability.

In case of infraction of the law it is provided that the contract is absolutely void and the immigrant and employer are both liable to penalties, and the employer is also liable to pay the immigrant until he obtains employment, or, at the option of the immigrant, to provide expenses for his return to the country whence he came.

3. **Prohibited Immigrants.**—(i.) *Provisions of the Acts.* Persons comprised in the following classes are prohibited from entering the Commonwealth, viz.:—(*a*) Any person who fails to pass the dictation test; that is to say, who fails to write out not less than fifty words of a language prescribed by regulation when dictated to him by an officer administering the Act. (*b*) Any person likely to become a charge upon the public. (*c*) Any idiot or insane person. (*d*) Any person suffering from an infectious or contagious disease. (*e*) Any person who has been convicted of an offence, other than a mere political offence, and has been sentenced to imprisonment for one year or longer and has not served his sentence or received a pardon. *f*) Any person undesirable for moral reasons.

Regarding (*a*) it may be stated that the Act of 1901 provided for the dictation of not less than fifty words of a European language. The Act of 1905 provided for the retention of this test until regulations be passed prescribing the languages to be employed. No such regulations have yet been made, and the provision of the Act of 1901 is therefore *de facto* still in force. It may be stated that the dictation test is not and never has been imposed upon persons of European race.

(ii.) *Exemptions.* To these restrictions there are the following exemptions, viz. :—(*a*) Any person holding an exemption certificate. (*b*) Members of the King's regular land and sea forces. (*c*) The master and crew of any public vessel of any Government. (*d*) The master and crew of any other vessel landing during the stay of the vessel in a Commonwealth port; but before the ship can obtain her outward clearance the crew must, at the demand of an officer administering the Act, be mustered, and if any member of the crew be missing, and would otherwise, in the opinion of the officer, have been a prohibited immigrant, then such person is deemed to be a prohibited immigrant, and until the contrary be proved, to have entered the Commonwealth contrary to the Act. (*e*) Any Commissioner of, or other person accredited from, the Imperial or any other Government.

(iii.) *General Provisions.* An immigrant may be required to pass the dictation test at any time within a year after he has entered the Commonwealth.

A prohibited immigrant within the meaning of (*a*) above may, at the discretion of an officer, be allowed to enter the Commonwealth, or to remain within it, upon depositing £100 and within thirty days either obtaining an exemption certificate or departing from the Commonwealth; in either case the deposit is returned.

The punishment for breach of the Act by a prohibited immigrant is imprisonment for six months and deportation in addition, if so ordered.

4. **Liability of Shipmasters and Others.**—The master, owners, agents, and charterers of a vessel from which a prohibited immigrant enters the Commonwealth are jointly and severally liable to a penalty not exceeding £100 for each entrant. The vessel may be detained as security, but may be released upon the giving of a bond with two sureties for the payment of any penalties; the vessel may be seized and sold in default of payment of penalties. The master, owners, agents, and charterers may be required to provide a return passage for the prohibited immigrant, and to pay for his maintenance during his detention prior to deportation. Masters of vessels are authorised to prevent such a person from landing and to obtain any necessary assistance.

Under the Immigration Restriction Act 1908, any person on board a vessel at the time of her arrival from any place outside Australia at any port in Australia who is not (*a*) a *bonâ fide* passenger of the vesssel, or (*b*) a member of the crew of the vessel whose name is on the articles, is deemed to be a stowaway, unless the master gives notice that the person is on board the vessel, and does not permit him to land until an officer has had an opportunity of satisfying himself that the person is not a prohibited immigrant. The master, owners, agents, and charterers of a vessel are jointly and severally liable to a penalty of £100 for each stowaway brought into any port in Australia. Power is given to search vessels for stowaways. The Immigration Restriction Act, 1910, provides penalties for being concerned in bringing immigrants secretly to the Commonwealth.

5. **Agreements with other Countries.**—Arrangements may be made with the Government of any country regulating the admission into Australia of the subjects or citizens of such country, such subjects being not, during the subsistence of the arrangement, required to pass the dictation test.

Persons who have resided either continuously or from time to time in the Commonwealth for a period of five years in the whole, and who are about to depart from it, being persons who, if they return, would be prohibited immigrants, may obtain a certificate of exemption entitling them to return.

Certificates of exemption are granted by the Minister of External Affairs, whose department administers the Act.

6. **Statistics.**—The following tables shew the number of persons who desired but were not permitted to land, those who were allowed to land, and the nationality of the persons admitted :—

PERSONS ADMITTED OR REFUSED ADMISSION TO COMMONWEALTH UNDER PROVISIONS OF IMMIGRATION RESTRICTION ACT, 1903 to 1910.

* No persons were admitted after passing the test in either of the years 1906, 1907, or 1910.
† Not specified. ‡ One person was admitted, after passing the test, in each of the years 1904, 1908, and 1909.

§ 2. Patents, Copyrights, Trade Marks, and Designs.

1. **Devolution of Jurisdiction upon the Commonwealth.**—Prior to the establishment of Federation, and for a few years thereafter, each Australian State possessed independent jurisdiction in respect of patents, copyrights, trade marks, and designs, and had, with the exception of Tasmania in regard to copyrights, enacted its own laws. Any person, therefore, who desired to obtain the grant of a patent, or the registration of any copyright, trade mark, or design had necessarily, with the exception aforesaid, to incur the trouble and expense of making separate applications. The Commonwealth Constitution Act conferred upon the Federal Parliament power to legislate respecting these matters. (See page 39 hereinbefore.) The Act of 1909 extended the jurisdiction to Papua.

The State Acts, though in general based upon the Imperial Statutes dealing with these subjects, were not wholly governed by them. The Commonwealth Acts, both in regard to principle and practice, have the same general foundation, but in some respects have been modified and brought into line with the totality of Australian experience.

2. **Patents.**—The first Commonwealth Patents Act was passed in 1903, and was amended in 1906, 1909, and 1910. (See page 50 hereinbefore.) Under these Acts, which are administered by a "Commissioner of Patents," the power of the States to grant patents was abolished, and their functions in that respect were transferred to the Commonwealth. A single Commonwealth patent now gives throughout the Commonwealth that protection which formerly could only be obtained by procuring a patent in each State. The rights of State patentees are in all cases reserved to them. The holder of a State patent in force may obtain, for a period not exceeding the unexpired time thereof, a Commonwealth patent for the invention comprised in the State patent. Any State may, however, be excepted from the patent if the Commissioner of Patents is satisfied that the invention either (*a*) is not novel, (*b*) has been made the subject of a pending application, or (*c*) has been published in such State. Comparatively small fees, totalling £8, are now sufficient to obtain for an inventor protection throughout the Commonwealth, and the only renewal fee (£5) is payable before the expiration of the seventh year of the patent, or within such extended time, not exceeding one year, as may be allowed.

(i.) *Applications for Patents.* Any of the following persons may make application for a patent:—(*a*) The actual inventor. (*b*) His assignee, agent, attorney, or nominee. (*c*) The actual inventor or his nominee jointly with the assignee of a part interest in the invention. (*d*) The legal representative of a deceased actual inventor or of his assignee. (*e*) Any person to whom the invention has been communicated by the actual inventor, his legal representative, or assignee (if the actual inventor, his legal representative, or assignee is not resident in the Commonwealth). An application for a patent must be for one invention only, and must be made in the form prescribed, and lodged by being left at or sent by post to the Patent Office at Melbourne. It must be accompanied by either a provisional or a complete specification. The application must contain a declaration in the prescribed form setting out the facts relied on to support the application, and must be signed by the applicant before a witness.

(ii.) *Term for which Granted.* The term for the duration of every patent is limited to fourteen years from the date of application. A patent ceases if the patentee fails to pay the renewal fee within the prescribed time.

iii.) *Opposition to Grant of Patent.* Within three months of the advertisement of the acceptance of a complete specification, or within such further time, not exceeding one month, as may be allowed by the Commissioner, any person may give notice at the Patent Office of opposition to the grant on any of the following grounds:—(*a*) That the applicant has obtained the invention from the opponent. (*b*) That the invention has not been communicated to the applicant by the actual inventor (if the actual inventor is not resident within the Commonwealth). (*c*) That the invention has been patented in the

Commonwealth on an application of prior date or has been patented in a State. (*d*) That the complete specification describes an invention other than that described in the provisional specification, and that the opponent has applied for a patent for such other invention in the interval between the leaving of the provisional and complete specifications. (*e*) Want of novelty. (*f*) Prior publication.

The case is heard and decided by the Commissioner, from whose decision an appeal lies to the High Court or the Supreme Court of the State in which the Patent office is situated.

(iv.) *Single Patent for Cognate Inventions.* The Act of 1909 provides that two or more provisional specifications for inventions which are cognate or modifications one of the other may be combined in one complete specification, upon which a single patent may be granted in respect of the whole of such applications.

(v.) *Patents of Addition.* By the Patents Acts of 1903 and 1909 special provisions are made for granting patents to an applicant or patentee in respect of any improvement on his invention. Such patents are called "Patents of Addition." They are granted for the unexpired term of the original patent, and in respect of such patents no renewal fee is payable.

(vi.) *Amendments.* Amendments to specifications by way of disclaimer, correction, or explanation may be allowed on request to the Commissioner, provided that the specification, if amended as requested, does not claim an invention substantially larger than, or different from, the original invention. Any person may oppose an amendment on giving notice of opposition at the Patent Office.

(vii.) *Revocations of Patents.* Revocation of a patent may be obtained by petition to the High Court or the Supreme Court of a State. Every ground on which a patent might at common law be repealed by *scire facias* is available as a ground of revocation. A petition for revocation may be presented by either (*a*) the Attorney-General or person authorised by him, (*b*) any person alleging that he was the actual inventor or that the patent was obtained from him by fraud, or (*c*) by any person alleging that he had publicly used, made, or sold within the Commonwealth before the date of the patent anything claimed by the patentee as his invention.

(viii.) *Compulsory Working and Licenses.* At any time not less than four years after the date of a patent, and not less than two years after the 13th December, 1911, any person may apply to the High Court or the Supreme Court of the State in which the Patent Office is situated for an order declaring that the patented article or process is not manufactured or carried on to an adequate extent in the Commonwealth. From and after the time when any such order may take effect, the patent is not deemed to be infringed by the manufacture or carrying on in the Commonwealth of the patented article or process, or by the vending within the Commonwealth of the patented article made within the Commonwealth. Any person interested may, after the expiration of two years from the granting of the patent, present a petition to the Commissioner alleging that the reasonable requirements of the public with respect to a patented invention have not been satisfied and praying for the grant of a compulsory license or, in the alternative, for the revocation of a patent. If the parties do not come to an arrangement between themselves, the Commissioner, on being satisfied that a *prima facie* case has been made out, must refer the petition to the High Court or the Supreme Court of the State in which the Patent Office is situated. If the Commissioner is not satisfied that a *prima facie* case has been made out he may dismiss the petition.

(ix.) *Restoration and Surrender of Patents.* The Act of 1906 provides for the restoration (under certain conditions) of applications or patents which may have lapsed through default of the applicant or of an officer of the Patent Office.

A patentee may surrender a State patent for an invention which has been further registered under Section 7 of the Act of 1903; or, by permission of the Court, may surrender a Commonwealth patent which is the subject of proceedings therein.

(x.) *Contracts and Proceedings.* No patentee may enforce conditions of contract which will restrict the rights of the user to simultaneously use, send, or carry out the inventions of any other persons; such contracts made prior to the Act of 1909 may be determined by three months' notice from either party.

Any person threatened by circular or advertisement with proceedings for infringement may apply for an injunction and damages, unless the threatening party shows due diligence in prosecuting an action.

(xi.) *International Protection of Patents.* The Patents Act of 1903 contained provisions under which the international arrangements for the protection of patents contained in the Imperial Acts could be made applicable to the Commonwealth by order of the King-in-Council. The necessary proclamation was issued by the Imperial Government as regards England and Australia on the 1st February, 1907, and as regards all other countries in the International Convention on the 5th August, 1907. British and foreign inventors are now, therefore, if they apply in Australia within twelve months of their first foreign application, entitled to receive patents for their inventions in priority to other applicants, and such patents have the same date as the date of the applications abroad. Corresponding arrangements have also been made by the Commonwealth with New Zealand.

(xii.) *Patent Attorneys.* Any person on passing the prescribed examination, and on paying a fee of £5, may be registered by the Commissioner as a patent attorney. A solicitor may practise as a patent attorney without passing the prescribed examination and without being registered as a patent attorney. No person may advertise his business in a manner to imply that he has official connection with the Patent Office.

(xiii.) *Patent Office Publications.* Every complete specification which has become open to public inspection by acceptance, or under the International Convention, is now printed shortly after being advertised, and the whole of the accepted specifications subsequent to No. 4000 of 1905, may now be purchased from the Government Printer, Melbourne, at the price of 1s. for each copy; reductions in price are made to purchasers of thirty or more selected specifications.

The *Australian Official Journal of Patents* is issued weekly, and contains lists of applications and proceedings, with illustrated notes of accepted complete specifications. A supplementary annual volume contains statistics, indexes to names of persons concerned, classified indexes to subject matter of applications lodged, and a numerical index to proceedings on Commonwealth applications which have been advertised during the year; there are also name and numerical indexes to proceedings on State applications.

(xiv.) *Applications Filed, Provisional Specifications Accepted, and Letters Patent Sealed, 1904 to 1910.* The numbers of individual inventions in respect of which applications were filed in the States or Commonwealth during each year from 1904 to 1910 inclusive are shewn in the following table. The number of applications accompanied by provisional specifications and the number of patents sealed in respect of applications made in each year are also shewn.

PATENTS.—APPLICATIONS FILED AND LETTERS PATENT SEALED IN THE COMMONWEALTH, 1904 to 1910.

Total	5,659	19,085	21,077	17,547	16,330	16,039	19,223

3. **Copyright.**—Prior to the establishment of Federation the copyright legislation enacted by all the States except Tasmania, throughout which State Imperial legislation governed local productions, was based upon and closely followed the English law of copyright, differing, however, in some cases therefrom as to the periods for which a copyright was granted. Only local publications were affected by it. A colonial law did not affect the rights of authors and artists where copyright was acquired outside the colony.

(i.) *Copyright Acts.* The first Commonwealth Act was passed in 1905 (see page 50 hereinbefore). It deals with literary, musical, dramatic, and artistic copyrights, and applies only to Australian publications. It may be applied to any copyright or performing right in any literary, musical, dramatic, or artistic work, entitled to protection in Australia by virtue of any Act of the Parliament of the United Kingdom, or entitled to protection in any State by virtue of any State Copyright Act, by registration of such right.

(ii.) *Principal Features.* The principal feature of the Australian Act is that it provides the same duration of right under the above heads, namely, the life of the author and seven years thereafter, or forty-two years from publication, whichever be the longer. Copyright subsists in every book, whether the author be a British subject or not, which has been printed in type, set up in Australia, or plates made therefrom, or from plates or negatives made in Australia in cases where type is not necessarily used, and has, after the commencement of the Act, been published in Australia, before or simultaneously with its first publication elsewhere. With respect to lectures, it is provided that the author shall be the first owner of the lecturing right, and that he may prevent publication of a report of the lecture by giving notice at the beginning of the lecture, or by a conspicuous written notice on the entrance door or in the lecture-room stating that reporting is prohibited. The owner of the copyright in a book may be requested by the Minister, on application being made by any person desirous of translating such book, to make a translation thereof, if it be not translated within ten years of publication. If the owner of the copyright fail to comply with such request the Minister may confer the right of translation into a particular language upon the person making the application. The person ordering a photograph for which consideration is paid is the owner of the copyright in it.

An important feature of the Copyright Act is that provision is made whereby the owner of the copyright in any book or artistic work, or his agent, may, by notice in the prescribed form, require any person to deliver up to him any pirated reproduction of the book or work, and similarly the owner of the performing right in a musical or dramatic work, or his agent, may forbid the performance of the work in infringement of his right,

and may require any person to refrain from performing or taking part in the performance of the musical or dramatic work specified. Any person failing to observe the requirements of any notice served under these provisions is liable to a penalty not exceeding £10.

(iii.) *Registration.* Registration is a necessary preliminary to an action for infringement, but copyright exists independently of registration. The Commissioner of Patents has been appointed "Registrar of Copyrights." Proceedings for the rectification of the register may be taken before the Supreme Court of any State. In the matters of copyright the Commonwealth is a party to the Berne Convention.

Particulars of applications for registration of copyrights and of the revenue derived therefrom are given in paragraph 6 hereof.

4. **Trade Marks.**—The remarks made concerning the unification of the patent system of the Commonwealth apply equally to trade marks. Under the Trade Marks Act 1905, which came into force on the 2nd July, 1906, the Commissioner of Patents is appointed to act also as "Registrar of Trade Marks." There are two trade marks, viz., the "Workers' Trade Mark" and the "Commonwealth Trade Mark," for which special provisions are contained in the Act; the provisions regarding the former of these two Trade Marks have, however, been held to be unconstitutional (see p. 1073 *ante*). The part of the Act, governing the registration and application of the Commonwealth Trade Mark, applies to all goods included in or specified by a resolution passed by both Houses of Parliament that the conditions as to remuneration of labour in connection with their manufacture are fair and reasonable.

(i.) *Essential Particulars of Trade Marks.* A registrable trade mark must consist of essential particulars with or without additional matter. The essential particulars must be one or more of the following:—(*a*) A name or trading style of a person printed, impressed, or woven, in some particular and distinctive manner; (*b*) a written signature of the person applying for registration thereof or of some predecessor in his business; (*c*) a distinctive device, mark, brand, heading, label, or ticket; (*d*) or invented word or invented words; (*e*) a word or words having no reference to the character or quality of the goods, and not being a geographical name used or likely to be understood in a geographical sense. The additional matter which may be added must be either (*a*) any letters, words, or figures or (*b*) any combination of letters, words, or figures or any of them.

(ii.) *State Registrations.* State registrations cease to be in force at the expiration of fourteen years from the date of the Commonwealth Act, or at the time when, under the State Trade Marks Act, the trade mark would, if after the commencement of the Commonwealth Act no fee for the continuance of its registration were paid, first become liable to removal from the register, whichever first happens. It is also provided that no fee shall be receivable nor shall any act be done after the commencement of the Commonwealth Act for the continuance of the registration of a trade mark under a State Act. Commonwealth registration of a State registered mark may be effected, and the fact of its registration in a State prior to the coming into force of the Commonwealth Act, may entitle the registered proprietor in the State to Commonwealth registration, notwithstanding the existence of defects which might be ground for refusal of an application for the registration of a new trade mark.

(iii.) *Duration of Registration and General Provisions.* The registration of a trade mark is for a period of fourteen years, but may be renewed from time to time. International and intercolonial arrangements for the mutual protection of trade marks may be made in a manner similar to that provided for the protection of patents. In this regard Australia has become a party to the International Convention for the protection of industrial property. Registration may be opposed by any person lodging a notice of opposition at the Trade Marks Office within three months after the advertisement of the application, or such further time, not exceeding three months, as may be allowed.

(iv.) *Publications.* The *Australian Official Journal of Trade Marks* is issued weekly and contains lists of applications and proceedings, with representations of marks (when

accepted) sought to be registered. *Copyrights.* An index of owners of literary, artistic, and international or State copyright, together with an alphabetically-arranged list of the subjects of works, is published in the official journal of trade marks, and, at the end of each year, published in consolidated form. *Designs.* Information corresponding with that given for copyrights is published. Indexes to names of applicants and subject matter of applications are compiled and are on sale.

5. **Designs.**—The Designs Act of 1906 came into operation on the 1st January, 1907. Under this Act a Commonwealth Designs Office has been established and the Commissioner of Patents appointed "Registrar of Designs."

(i.) *Registration.* Any new and original design which has not been published in Australia before the lodging of an application for its registration may be registered in respect of all or any of the articles enumerated in the classification contained in the regulations, which comprise jewellery, paperhangings, carpets, floor-cloths, lace, hosiery, millinery, wearing apparel, textile fabrics, bookbinding, and articles composed wholly or chiefly of a variety of solid substances. A separate application must be made in respect of each class in which the owner of the design desires it to be registered. After an application for the registration of a design has been lodged the design may be published and used without prejudice to the validity of the registration.

(ii.) *Duration of Copyright in Designs.* The registration takes effect as from the date of the lodging of the application, and, subject to the provisions of the Act, remains in force for a period of five years from that date. The owner of a registered design must, within two years after registration, substantially use the design in Australia, and if he fails to do so the copyright ceases. If, however, such design is used in any manufacture abroad the above period is limited to six months.

(iii.) *General.* The Act also contains provisions regarding the remedies for infringement of designs and the rectification of the register. Arrangements for the international and intercolonial protection of copyright in designs were made by the same proclamation referred to above with regard to patents and trade marks. The owner of a registered design must cause each article to which the design is applied to be marked before delivery for sale with the prescribed mark to denote that the design is registered.

6. **Applications for Copyrights, Trade Marks, and Designs.**—The following table gives particulars of copyright, trade mark, and design applications received and registered under the Commonwealth Acts from 1907 to 1910 inclusive:—

COPYRIGHT, TRADE MARK, AND DESIGN APPLICATIONS RECEIVED AND REGISTERED UNDER COMMONWEALTH ACTS, 1907 to 1910.

Year.	Copyrights.				Trade Marks.	Designs.

§ 3. Old-age Pensions.

1. **General.**—A system for providing for the relief of the aged poor by some means which did not involve the stigma associated in so many minds with the idea of charitable aid, and which, while protecting the recipients from actual want, still left to them as large a degree of freedom as possible, has long been sought for by economists, statesmen, and social reformers. The difficulties surrounding a satisfactory solution of the question are numerous and great, and various schemes have been propounded with the object of overcoming them. Two of the principal objections which have been urged against the introduction of a general system of old-age pensions are—

(i.) its costliness;
(ii.) its tendency to induce thriftlessness.

The former is undoubtedly a serious difficulty, since in any normally constituted population the number of persons aged say sixty-five years and upwards will represent about 5 per cent. of the total population, and the provision of the funds required to pay to these a sum which would provide them with even the barest necessaries of life would be a very considerable burden upon the State Treasury. To limit this amount various suggestions have been made, of which probably the most effective have been those which provide, the one for a contribution to the pension fund by the pensioner during his earlier years, and the other for a reduction of the amount of pension payable to those in receipt of income from other sources. The former of these is the principle which has been acted upon in the scheme in operation in Germany, while the latter is that which underlies the schemes in vogue in the Commonwealth, New Zealand, and the United Kingdom.

The objection which has sometimes been raised to the payment of old-age pensions on the score of the tendency to thriftlessness thereby induced is one which, in Australia, at all events, is not accorded much weight, the general feeling being that the number of cases in which the prospect of a pension of, say, 10s. per week from sixty-five onwards would lead to thriftlessness in earlier years, is so small as to be practically negligible.

2. **Introduction of Old-age Pensions into Australia.**—The credit of introducing old-age pensions into the Southern Hemisphere belongs, not to the Commonwealth, but to her sister dependency, the Dominion of New Zealand, where pensions have been payable since 1st April, 1898. The first State of the Commonwealth to make provision for the payment of old-age pensions was Victoria, whose legislation on the subject came into operation on 18th January, 1901. Later in the same year, viz., on 1st August, 1901, the pension system of New South Wales came into force, while in the case of Queensland old-age pensions became payable from 1st July, 1908. Finally, an Act providing for the payment of old-age pensions throughout Australia was passed by the Commonwealth Parliament in 1908, pension payments thereunder commencing on 1st July, 1909. This Act superseded the State Acts in so far as provision for old-age is concerned.

3. **Commencement of Commonwealth Act.**—The Commonwealth Invalid and Old-age Pensions Act was assented to on the 10th June, 1908, and payment of old-age pensions commenced as from 1st July, 1909. Provision is also made in the Act for the payment of invalid pensions. The part of the Act relating thereto, however, did not come into operation on the commencement of the Act, but it was provided that it should commence on some subsequent date to be fixed by proclamation. This proclamation was made on the 19th November, 1910, the first payments thereunder being made on the 15th December, 1910.

4. **Administration of Commonwealth Act.**—The general administration of the Act is, subject to the control of the Minister, placed in the hands of the Commissioner of

Pensions, who is assisted by a Deputy Commissioner appointed in each State. Power is given to the Commissioner and the Deputy Commissioners to summon witnesses, receive evidence on oath, and require the production of documents for the purposes of the Act.

Each State is divided into districts, each of which is placed in charge of a Registrar, whose duties consist in receiving and investigating pension claims and in keeping such books and registers as are required for carrying out the provisions of the Act.

5. **Pension Age.**—For an old-age pension the age qualification is similar to that previously in force in New South Wales under the State Act, viz., attainment of the age of sixty-five years, or, in the event of permanent incapacitation for work, attainment of the age of sixty years. The Act also provides that the age qualification for women may be fixed by proclamation at sixty years instead of sixty-five. This proclamation was made on the 19th November, 1910, the first payments thereunder being made on the 15th December, 1910. For an invalid pension the age qualification is attainment of the age of sixteen years if accompanied by permanent incapacitation for work.

6. **Length of Residence.**—In the original Act of 1908 the residential qualification for an old-age pension was the same as that of the New South Wales Act, viz., continuous residence for twenty-five years. Owing, however, to the fact that in the other two States in which pensions were payable under the State regime the residential qualification was only twenty years, an amendment of the Act was passed by the Federal Parliament in August, 1909, reducing the Commonwealth term to twenty years also, thus diminishing the chance of lapse of pension through transfer from State to Commonwealth. For an invalid pension continuous residence for at least five years is required. In neither case, however, is continuous residence in Australia deemed to have been interrupted by occasional absences not exceeding in the aggregate one tenth of the total period of residence. The applicant for any pension must be residing in Australia on the date when he makes his claim, and in the case of an invalid pension must have been incapacitated while in Australia.

7. **Rates of Pension.**—The rate of pension payable, whether for old age or invalidity, is required by the Act to be determined by the Commissioner or one of the Deputy Commissioners, and is to be fixed at such amount as he deems reasonable and sufficient, having regard to all the circumstances of the case, but must not exceed £26 per annum in any event, nor be at such a rate as will make the pensioner's income, together with pension, exceed £52 per annum.

8. **Limitations in respect of Income and Property.**—With a view to restricting the pensions to persons actually needing assistance, provision was made in all the State Acts reducing the payment when the applicant already possessed income or property above a given amount. This principle is also embodied in the Commonwealth Act. In the case of independent income it has already been mentioned that the pension payment must be so modified that the aggregate income, inclusive of pension, does not exceed £52 per annum. Payments received by way of benefit from any registered friendly society, or during illness, infirmity, or old age from any trade union, provident society, or other society or association, are not, for the purposes of the Commonwealth Act, treated as income. As regards accumulated property, the pension is subject to a deduction of £1 per annum for every complete £10 by which the net capital value of the property exceeds £50, except where the property includes a home in which the pensioner permanently resides, and which produces no income, in which case a net capital value of £100 is allowed prior to the pension deduction coming into operation. Accumulated property, whether in or out of Australia, to the value of £310 or upwards will disqualify for a pension, as will also an applicant's direct or indirect deprivation of himself of such property with the object of obtaining a pension. In the case of husband and wife, except where they are living apart pursuant to any decree, judgment, order or deed of

separation, the net capital value of the accumulated property of each is deemed to be half the total net capital value of the accumulated property of both, and the amount of property in such case allowed prior to deduction is £50 if including, and £25 if not including a home.

9. **Character of Applicant for Pension.**—In all the State Acts provision was made that the recipients of old-age pensions should be persons of good moral character, and, in New South Wales and Victoria, imprisonment for extended periods would act as a disqualification. In the Commonwealth Act it is also provided that "no person shall receive an old-age pension unless he is of good character," but a similar provision is not made in the case of invalidity.

10. **Number of Commonwealth Claims and Pensioners.**—During the first year of practical working of the Commonwealth Act, viz., that ended 30th June, 1910, the number of cases considered has been 76,168. Of these 39,875 were cases in which a State old-age pension was exchanged for one payable by the Commonwealth. The remaining 36,293 were new applications received during the year, of which 30,526 were granted, 3921 were rejected, and 1846 were still in course consideration on 30th June, 1910. Details of the several States are as follows :—

COMMONWEALTH OLD-AGE PENSION BUSINESS.—YEAR ENDED 30th JUNE, 1910.

State.	State Pensions exchanged for C'wealth.	New Applications.				Total Cases Considered.	Total Claims Admitted during Year.
		Granted.	Rejected.	In Course of Consideration.	Total Received.		
N.S.W. ...	21,292	5,729	1,047	812	7,588	28,880	27,021
Victoria ...	11,945	9,952	1,229	441	11,622	23,567	21,897
Queensland ...	6,638	2,561	500	174	3,235	9,873	9,199

West. Australia ...		2,515	315	162	2,992	2,992	2,515
Tasmania ...		3,438	204	124	3,766	3,766	3,438
Commonwealth	39,875	30,526	3,921	1,846	36,293	76,168	70,401

11. **Pensions Current on 30th June, 1910.**—The total number of pensions current on 30th June, 1910, was 65,492, or 4909 less than the number of claims admitted, due to the fact that 4498 pensions lapsed by death, and 411 by cancellation during the year. Details for the several States are as follows :—

COMMONWEALTH OLD-AGE PENSIONS CURRENT 30th JUNE, 1910.

State.	Claims Admitted.	Discontinuance by		Pensions current on 30th June, 1910.	
		Death.	Cancellation.	Number.	Per 1000 of Population.
New South Wales	27,021	1,680	126	25,215	15.28
Victoria	21,897	1,576	103	20,218	15.56
Queensland	9,199	548	90	8,561	14.52
South Australia	6,331	365	74	5,892	14.04
Western Australia	2,515	147	7	2,361	8.45
Tasmania	3,438	182	11	3,245	17.69
Total	70,401	4,498	411	65,492	14.81

12. **Sexes of Pensioners.**—Of the 65,492 persons in receipt of pension at 30th June, 1910, 31,781, or 48½ per cent., were male and 33,711, or 51½ per cent., were female. Details for the several States are as follows :—

SEXES OF PENSIONERS, 30th JUNE, 1910.

State.	Males.	Females.	Total.	*Masculinity.
New South Wales	12,046	13,169	25,215	91.47

Western Australia	1,329	1,032	2,361	128.78
Tasmania	1,418	1,827	3,245	77.61
Total	31,781	33,711	65,492	94.27

* Number of males to each 100 females.

13. **Ages and Conjugal Condition of Pensioners Admitted during 1909-10.**—The recorded ages of the 30,526 persons to whom pensions were granted during the year 1909-10 varied considerably, ranging from 436 at age 60 to 1 at age 104. Particulars for quinquennial age groups are as follows :—

Age at Admission	Males				Females.				Grand Total.
	Single.	Married.	Widowed	Total.	Single.	Married.	Widowed	Total.	
60-64	182	531	180	893	162	615	1,060	1,837	2,730
65-69 ...	1,237	3,185	1,497	5,919	379	2,359	3,534	6,272	12,191
70-74	775	2,042	1,141	3,958	200	1,133	2,537	3,870	7,828
75-79	362	1,171	927	2,460	69	548	1,804	2,421	4,881
80-84	123	426	462	1,011	31	160	854	1,045	2,056
85-89	37	120	173	330	6	28	277	311	641
90-94	7	26	48	81	1	4	82	87	168
95-99	4	3	11	18	2	...	7	9	27
100-104	...	1	1	2	...	...	2	2	4
Total ...	2,727	7,505	4,440	14,672	850	4,847	10,157	15,854	30,526

14. **Amount Paid in Pensions.**—During the year 1909-10 the total amount paid in pensions was £1,497,330 distributed as follows over the several States :—

AMOUNT PAID IN COMMONWEALTH OLD AGE PENSIONS, 1909-10.

State.	Pension Payments.		State.	Pension Payments.	
	Amount Paid.	Per Head of Population.		Amount Paid.	Per Head of Population.
	£	s. d.		£	s. d.
New South Wales ...	594,440	7 4	Western Australia ...	46,302	3 5
Victoria	470,656	7 3	Tasmania ...	71,088	7 7
Queensland ...	196,476	6 10			
South Australia ...	118,368	5 8	Total ...	1,497,330	6 10

15. **Cost of Administration.**—Under the State regime the cost of administration differed considerably in the several States and for 1908-9 represented in New South Wales 4.17 per cent. of the amount actually paid in pensions. In Victoria for the same year the corresponding percentage was 0.70. During the year 1909-10 the total cost to the

Commonwealth of administering the Old-Age Pensions Department was £37,146, or 2.48 per cent. of the amount actually paid in pensions. As this total includes the cost of initiating the system in the three States of South Australia, Western Australia, and Tasmania, as well as extending it in the other three States, it is probable that the cost of administration in future years will represent a smaller percentage on the amount paid in pensions. Details concerning the cost of administration for 1909-10 are as follows:—

COST OF ADMINISTERING COMMONWEALTH OLD-AGE PENSIONS, 1909-10.

	£
Salaries	6,557
Temporary assistance	5,058
Services of magistrates, registrars, clerks of courts, and police ...	8,475
Commission to Postmaster-General's Dept., at 12s. 6d. per £100 paid	8,959

16. **Estimated Cost of Commonwealth Old-age Pension Scheme.**—In the first two issues of the Year Book estimates of the probable cost of the Commonwealth scheme were given. The former of these, based largely on the old-age pension experience of New South Wales, taken in conjunction with the census results of 31st March, 1901, and the subsequent estimates of increase of population, brought out a sum of £1,580,000 as representing the probable cost, including administration, if the New South Wales scheme had operated throughout the Commonwealth during 1906-7. In the second issue of the Year Book the results of a more extensive investigation were published. These were obtained from an analysis of the New Zealand old-age pension experience, combined with the Australian Census results of 1881, 1891 and 1901, and gave an estimate for each year from 1909-10 to 1926-7 of the probable cost, including administration, of the Commonwealth scheme as provided in the original Act. The figures so obtained for the year 1909-10, were £1,440,000; for 1914-15, £1,616,000, and for 1919-20, £1,854,000. The reduction of the residential qualification from 25 to 20 years under the Amending Act of 1909, had the effect of somewhat increasing the number eligible for pensions, and consequently of increasing the probable cost. The extent of this increase was estimated at 4 per cent., and in the third issue of the Year Book the estimated cost under the present system, on the assumption that the Commonwealth conditions would not differ materially from those of New Zealand, was given as follows:—1909-10, £1,498,000; 1914-15, £1,681,000; and 1919-20, £1,928,000. It will be seen that the actual cost for 1909-10, inclusive of administration, viz., £1,534,476, exceeded this last estimate by £36,476, or practically by the cost of administration.

With reference to the probable cost of invalidity pensions for the Commonwealth, the only experience available is that of New South Wales, where the number in force on 30th June, 1909, was 3714, and the cost, inclusive of administration, was approximately £79,200. On this basis, the cost of such a scheme for the Commonwealth, as a whole, may be roughly estimated at about £210,000 per annum for the present, increasing in subsequent years probably in proportion to the population.

17. **Liability Undertaken in Granting Old-age Pensions.**—As an indication of the extent of the responsibility which an old-age pension scheme involves, it may be mentioned that in connection with the evidence tendered to the Commonwealth Commission on Old-age Pensions a computation was made of the total liability in respect of accrued pensions which the Commonwealth would have incurred if, at 31st March, 1901, the date of the Census, 39 per cent. of the persons aged sixty-five and upwards were entitled to pensions of ten shillings per week. The present value at that date of the liability so computed was £10,415,820. (See Minutes of Evidence of Royal Commission on Old-age Pensions, p. 80.)

§ 4. Local Option.

1. **General.**—The principles of local option as to the sale of fermented and spirituous liquors have been applied in all the States of the Commonwealth. The last State to adopt these principles was Western Australia, where provision was made for a system of local option by the Licensing Act, 1911.

2. **New South Wales.**—The Acts in force relating to local option in this State are the Liquor Amendment Acts 1905 and 1907. There were formerly two Acts which dealt with the subject, viv., the Licensing Acts 1882 and 1883, consolidated by the Liquor Act 1898. Under the Act of 1905, which came into force on the 1st January, 1906, the local option vote is to be taken in every electorate on the day fixed for the poll therein at each general election. The option with regard to licenses extends to publichouses, wineshops, and clubs, and the persons entitled to vote are those entered on the Parliamentary electoral rolls.

(i.) *Resolutions to be Submitted.* Except where resolution (*c*)—see below—has previously been carried, and is in force in an electorate, the following resolutions are to be submitted:—(*a*) That the number of existing licenses continue. (*b*) That the number of existing licenses be reduced. (*c*) That no licenses be granted in the electorate. Where resolution (*c*) has previously been carried the resolution to be submitted is:—(*d*) That licenses be restored in the electorate. Resolutions (*a*) and (*b*) are carried by a simple majority of the votes given, but neither resolutions (*c*) nor (*d*) will be carried unless at least three-fifths of the votes given are in favour thereof, whilst at least 30 per cent. of the number of electors on the rolls must vote for such resolution. If resolution (*c*) is not carried, the votes given in favour of that resolution are to be added to the votes given for resolution (*b*).

(ii.) *Effects of Resolutions.* The effects of carrying the resolutions are as follow:—If resolution (*a*) is carried, the number of licenses may not exceed the number at the time of taking the vote. If resolution (*b*) is carried, the number of licenses must be reduced, and may be reduced to three-fourths the number at the time of voting. If resolution (*c*) is carried, no licenses may be granted, renewed, or transferred. If resolution (*d*) is carried, licenses may be granted, renewed, and transferred, but so that the number of licenses is not greater than the number held when resolution (*c*) was carried, nor less than half such number.

For the purpose of effecting a reduction under resolution (*b*), a special court determines the reduction to be made in the number of existing licenses, and decides which premises are to be closed. The best conducted premises are given a preference over others. If resolution (*c*) is carried, it is to take effect at the expiration of three years from the date of the vote.

(iii.) *Local Option Votes, 1907 and 1910.* The first local option vote under the Act of 1905 was taken at the general election in 1907, and the second at the election in 1910. The following statement shews the number of electorates in which each of the resolutions was carried:—

NEW SOUTH WALES.—EFFECTS OF LOCAL OPTION VOTES, 1907 and 1910.

Particulars.	General Election, 1907.		General Election, 1910.	
	Number of Electorates.	Number of Votes.	Number of Electorates.	Number of Votes.
Results in favour of—				
(*a*) Continuance	25	209,384	76	324,973
(*b*) Reduction	65	75,706	14	38,856
(*c*) No license	Nil	178,580	Nil	212,889

3. Victoria.—The Acts dealing with the subject of local option as to the sale of fermented and spirituous liquors in this State are the Licensing Acts 1890, 1906, and 1907. Other Acts, now repealed, which dealt with the subject are the Licensing Acts 1876, 1885, and 1888.

The last division of the Act of 1906 relates to the subject of local option; this division, however, does not come into force until the 1st January, 1917. In the meantime, in order to reduce the number of victuallers' licenses in Victoria, a Licenses Reduction Board is constituted.

(i.) *The Licenses Reduction Board.* Although the operations of this Board are not conducted in accordance with the principles of local option, the duties of the Board are, until the 31st December, 1916, after which date a system of local option comes into force under the Act of 1906, to reduce the number of licenses in excess of the statutory number, and to award compensation according to the scheme provided for by that Act. The Board consists of three members at a salary of £800 per annum each, who may not engage in any business or employment other than the duties of their office as members of the Board. The Board was first appointed on the 21st May, 1907. A Compensation Fund has also been established under the Act, and is raised by means of a compensation fee at the rate of 3 per cent. on the value of liquor purchased by every licensed victualler. The owner of the premises is chargeable with two-thirds, and the tenant with one-third of the compensation fee. The total amount paid into the Compensation Fund was £48,233 for the year 1907, £48,543 for 1908, £49,300 for 1909, and £48,875 for 1910. When any reduction of licensed premises has been made, the remaining hotels, which will be benefited, are to bear a *pro rata* assessment to make up the amount of license fees lost. The amount so lost up to the end of the year 1910 was £5790, which sum has been apportioned among 1408 hotels in proportion to the benefit which, in the opinion of the Board, they will derive from the closing. The maximum compensation, which is payable out of the Compensation Fund referred to above, is to be based on the results of the three years preceding the 31st December, 1906, in the case of owners, and of the three years preceding the 31st December, 1905, in the case of licensees. Up to the 31st December, 1910, 410 hotels had been closed by the Board, 129 of this number having surrendered their licenses. In all cases compensation was awarded, the total paid amounting to £194,989, or an average of £475 each. 127 of these hotels were situated in the metropolitan district, while the remaining 283 were in country districts. In 61 cases no claims for compensation were made by the licensees. The following table shews particulars of the operations of the Board up to the 31st December, 1910.

No reduction of any licensed premises is allowed in any licensing district in which the number of licensed premises is below the statutory number, but new licenses may, until 1917, be granted in such districts provided that a majority of the electors vote in favour of the increase, and that at least one-third of the number of electors on the roll record their votes.

VICTORIA.—OPERATIONS OF LICENSES REDUCTION BOARD, 31st DECEMBER, 1910.

Particulars.	Licenses in December, 1906.			Hotels Deprived of Licenses	Compensation Awarded.		Hotels Surrendered.	Compensation Awarded.	
	Number in Existence.	Statutory Number.	Number in Excess.		Owner.	Licensee.		Owner.	Licensee.
					£	£		£	£
Metropolitan & Suburban	1,020	877	401	125	89,800	15,202	2	2,371	519
Country	2,440	1,622	976	156	51,170	8,708	127	24,397	2,822
*Total ...	3,460	2,499	1,377	281	140,970	23,910	129	26,768	3,341

* In some districts the number of hotels was below the statutory number; in these districts the total number of hotels less than the statutory number was 418.

(ii.) *Local Option Resolutions.* A local option vote of the electors is to be taken in every electoral district for the Legislative Assembly on the day fixed for the poll at each general election after the 1st January, 1917. The resolutions to be submitted, the majorities necessary, and the effects of carrying the resolutions are the same as specified in the case of New South Wales. Where any license existing before the 1st February, 1886, is cancelled as the result of a local option vote, the owner and licensee have each a claim to be paid out of the Compensation Fund, but only to the extent that such fund is from time to time available. If it appear to the Treasurer that there is not sufficient money in the fund to meet the claims, he may require every licensed victualler in Victoria to pay an additional compensation fee in order to satisfy the claims.

4. **Queensland.**—In Queensland the subject of local option is dealt with in Part VI. (sections 114 to 126) of the Licensing Act 1885. The provisions of that part of the Act may be applied in any municipality or division, or any subdivision of either, or in any other area which forms part of a municipality or division, and also forms part of one licensing district.

(i.) *Resolutions to be Submitted.* Any number, not less than one-sixth, of the ratepayers in an area may, by notice in writing, require the chairman of the local authority to take a poll of the ratepayers for or against the adoption of all or any of the following resolutions to have effect within the area, viz.:—(*a*) That the sale of intoxicating liquors be prohibited. (*b*) That the number of licenses be reduced to a certain number, specified in the notice, not less than two-thirds of the existing number. (*c*) That no new licenses be granted. The persons entitled to vote are those whose names are on the voters' roll or rate-book of the municipality or division of which the area forms part, as rated in respect of property within the area. Resolutions (*b*) and (*c*) may be carried by a simple majority, but resolution (*a*) cannot be carried unless "a majority of two-thirds of the votes recorded in respect of that resolution . . . is in favour of its adoption."

(ii.) *Effects of Resolutions.* If resolution (*a*) is adopted, it comes into force on the 30th June in the year following that in which the notice requiring the poll was given. If (*b*) is adopted, the licensing authority must restrict the total number of licenses and certificates granted or renewed to or within the number specified. If resolution (*c*) is adopted the licensing authority may not grant any new certificates for a licensed victualler's license or wine-seller's license.

(iii.) *Re-submission of Resolutions.* If resolution (*a*) is adopted, a poll may not be demanded again until after the expiration of three years from the date of adoption, and in such case a poll may be taken on resolution (*a*) only. If (*b*) is adopted, a poll may be

again demanded on it or on the question of a further reduction, or on the adoption of the resolutions (*a*) or (*c*), but not until the expiration of two years after the last poll was taken. If resolution (*c*) is adopted, a poll may again be demanded on it or on resolutions (*a*) or (*b*), but not until the expiration of two years after the last poll was taken. If all the resolutions are rejected, a poll may not be demanded again until after the expiration of two years from the date of the last poll.

(iv.) *Resolutions Adopted, 1909.* At the end of the year 1909, resolution (*a*) was in force in three areas in Queensland, viz., the Tambourine shire, subdivision No. 3; Tiaro shire, Bauple district; and Inglewood shire (town of Silverspur). Up to the same date a poll as to resolution (*b*) had not been demanded in any area. The following statement shews the number of areas in which each resolution was either in force or precluded up to the 31st December, 1909:—

QUEENSLAND.—NUMBER OF AREAS IN WHICH LOCAL OPTION RESOLUTIONS WERE IN FORCE OR PRECLUDED FROM ADOPTION, 31st DECEMBER, 1909.

Particulars.	Resolution (*a*).	Resolution (*b*).	Resolution (*c*).	Total.
No. of areas in which resolutions in force ...	3	0	87	90
No. of areas in which resolutions precluded from being put in force	0	0	10	10
Total	3	0	97	100

The only resolution upon which a poll had been demanded within the metropolitan district (ten-miles radius) was resolution (*c*); this resolution is in force in thirty-three areas within the metropolitan district and has not been precluded in any area within that district.

5. **South Australia.** In this State the subject of local option is now regulated by Part V. of the Licensing Act 1908. Acts which formerly dealt with the subject were the Licensed Victuallers Amendment Act 1891, the Licensed Victuallers Further Amendment Act 1896, and the Local Option Act 1905.

Under the Licensing Act of 1908 each electoral district for the House of Assembly is constituted a local option district, and each electoral district may be divided into local option districts by proclamation of the Governor. A quorum consisting of 500 electors, or one-tenth of the total number of electors, whichever be the smaller number, in any district may petition the Governor for a local option poll. The persons entitled to vote at the poll are those whose names appear on the electoral roll and who reside in the local option district. The option extends to (*a*) publicans' licenses, (*b*) wine licenses, (*c*) storekeepers' Australian wine licenses, (*d*) storekeepers' licenses, and (*e*) club licenses.

(i.) *Resolutions to be Submitted.* The following are the resolutions which are to be submitted, under the Act of 1908, at every poll:—(*a*) That the number of licenses be reduced. (*b*) That the number of licenses be not increased or reduced. (*c*) That the number of licenses be increased in the discretion of the Licensing Bench. Any one of the resolutions is carried by a majority of the valid votes recorded. If the votes recorded in favour of resolution (*a*) do not constitute a majority, such votes are

to be added to the votes in favour of resolution (*b*). If the sum of the votes recorded in favour of resolutions (*a*) and (*b*) do not constitute a majority, such votes are to be added to those recorded in favour of resolution (*c*).

(ii.) *Effects of Resolutions.* As to each class of license of which there are not less than three licenses current within the local option district at the date of the poll, the first resolution is to be taken to mean that the number of licenses so current be reduced by one-third, and as to each class of license of which there are less than three current, the first resolution is to be taken as equivalent to the second resolution.

The constitution of special Benches consisting of three members, appointed by the Governor, is provided for in order to give effect to the first resolution. A special Bench also deals with resolutions for the reduction of licenses adopted before the passing of the Act of 1908, but not then given effect to.

(iii.) *Resolutions Adopted.* Under the Acts prior to that of 1908 resolutions to reduce the number of licenses had been adopted in nine districts, in four of which, however, the polls were subsequently declared void. Special Benches were appointed in January, 1909, to deal with the determinations of electors in those districts in which the results of the polls were in favour of reducing the number of licenses, viz., in the districts of Port Adelaide, East Torrens, and Sturt. In accordance with the determinations of these Benches it was decided in February and March, 1909, that the following licenses, namely—thirty-five publicans', one wine, eleven storekeepers' colonial wine, and one storekeeper's—should not be renewed.

(iv.) *Local Option Polls, 1910.* On the 2nd April, 1910, local option polls were taken under the Act of 1908 in twenty-four districts; the electors in the remaining nine local option districts did not petition for polls. Resolution (*a*), that the number of licenses be reduced, was carried in only one district; in the remaining 23 districts resolution (*b*), that the number of licenses be not increased or reduced, was carried.

6. **Western Australia.**—The law relating to Local Option in Western Australia is contained in Part V. (sections 75 to 86) of the Licensing Act 1911, which was assented to on 16th February, 1911, and came into force on the 7th April following. Prior to the passing of this Act there was no provision for any system of Local Option in Western Australia.

(i.) *Resolutions to be Submitted.* Under the above-mentioned Act, a vote of electors is to be taken in every district in or before April, 1911, and in every third year thereafter (1920 excepted). The resolutions to be submitted are:—(*a*) That the number of licenses existing in the district continue. (*b*) That the number of licenses existing in the district be increased. (*c*) That the number of licenses existing in the district be reduced. (*d*) That no licenses be granted or renewed in the district. If resolution (*d*) has been previously carried and is in force in the district the resolution submitted will be (*e*) That licenses be restored in the district. The resolutions (*a*), (*c*), and (*d*) are not to be submitted to the electors until after the 21st December, 1920. At the taking of every local option vote, the following questions will also be put before the electors:—(1) Do you vote that all new publican's general licenses in the district shall be held by the State? and (2) Are you in favour of State management throughout the district? Resolutions (*a*), (*b*), and (*c*) are deemed to be carried if a majority in number of the votes given is in favour of any such resolution, provided that if resolution (*b*) has not been carried, the votes given in favour of that resolution shall, if resolution (*a*) has been submitted at the same time, be added to the votes given for resolution (*a*) and shall be deemed to have been given in favour of resolution (*a*). Resolution (*d*) is carried if three-fifths at least in number of the votes given are in favour of that resolution, provided

that where it has not been carried, the votes given for it shall be added to those given for resolution (*c*). Resolution (*e*) is carried if three-fifths at least in number of the votes given are in favour of it. It is also provided that resolution (*d*) or (*e*) shall not be carried unless thirty per cent. or more of the number of electors in the licensing district vote for such resolution.

(ii.) *Effect of Resolutions.* If resolution (*a*) is carried, or in the case of a local option taken before the end of the year 1920, if resolution (*b*) is negatived, the number of licenses shall not exceed the number at the time of taking the vote. If resolution (*b*) is carried, the Licensing Court may increase the number of licenses. If resolution (*c*) is carried, the number of licenses at the time of taking the vote shall be reduced and may be reduced to three-fourths of such number. If resolution (*d*) is carried, no licenses shall be granted, renewed or transferred. If resolution (*e*) is carried, licenses may be granted, renewed and transferred, but so that the number of licenses shall not be greater than the number held when the resolution (*d*) was carried in the district, and if it is not carried, the resolution (*d*) previously carried shall continue to have effect.

7. **Tasmania.**—In this State the subject of local option is dealt with in Part VI. (sections 72 to 84) of the Licensing Act 1902. Other Acts which formerly dealt with the subject, but now repealed, are the Licensing Acts 1889 and 1890, the Inn Keepers Relief Act 1894, and the Licensing Act Amendment Act 1898. Under the Act of 1902, opposition to the grant of a license may be made (i.) by any resident ratepayer, (ii.) by petition of ratepayers resident in the neighbourhood, or (iii.) by local option poll.

(i.) *Opposition by Resident Ratepayer.* Any ratepayer resident in the district in which a house in respect of which an application for an hotel or publichouse certificate is intended to be made is situated, may, by giving five days' notice to the Clerk of Petty Sessions, oppose the grant of the certificate before the Licensing Bench. The objections which may be taken to the granting of a certificate for an hotel or publichouse license are as follows:—(*a*) That the applicant is of bad character; (*b*) that he has been convicted of certain specified offences; and (*c*) that the house in respect of which the application is made does not comply with the requirements of the Act. The objections which may be taken to the granting of a provisional certificate for an hotel license are:—(*a*) That the house does not comply with the requirements of the Act, and (*b*) that an hotel is not required in the neighbourhood.

(ii.) *Petition of Resident Ratepayers.* The ratepayers resident in the neighbourhood of a house in respect of which an application for a license is made may petition the Licensing Bench against the granting of such license. The neighbourhood referred to is defined as meaning a space within a radius of 200 yards from the front door of the house if within a city, within a radius of 500 yards if within a town, and within a radius of one mile if the house is not situate within a city or town. If the petition is directed against the granting of a provisional certificate, and is signed by a majority of the resident ratepayers, the bench must refuse to grant the certificate.

(iii.) *Local Option Poll.* Any number of ratepayers, not less than seven, resident in the neighbourhood of the house in respect of which a provisional certificate for an hotel license has been applied for, may require, by petition lodged with the Clerk of Petty Sessions, that a poll of the ratepayers resident in the neighbourhood be taken upon the question whether such provisional certificate be granted or not. If a majority of the votes taken be against the granting of the certificate the Licensing Bench must refuse to grant it.

Particulars as to operations under Part VI. of the Act are not available.

§ 5. Valuation of Commonwealth Production.

The want of uniformity in methods of compilation and presentation of Australian statistics renders it an extremely difficult task to make anything like a satisfactory valuation of the various elements of production. At present there is so little accurate statistical knowledge regarding such industries as forestry, fisheries, poultry, and bee-farming, that any valuation of the production therefrom can only be regarded as the roughest approximation. As a matter of fact complete information as to value of production in all States is available in regard to the mining industry alone, and even in this case adjustments have to be made before the returns are strictly comparable. Careful estimates have been made in some of the States in connection with the value of production from the agricultural and pastoral industries, and where such returns are not available estimates have been made which, it is believed, in the main give fairly accurate results. In the case of manufactories, five of the States in 1908 collected statistics of the value of production, while for the sixth State, Tasmania, an estimate has been prepared which it is believed gives a fair approximation. While the difficulties in the way of obtaining adequate valuations for all classes of production are serious enough at the present time they are still more pronounced in seeking to obtain information as to values for earlier years, when the returns were far more incomplete. It must be clearly understood, therefore, that the values given in the succeeding tables are, in general, approximations only. With the adoption of the forms and methods of tabulation agreed upon at the Statisticians' Conference of 1906 it is hoped, however, that at no distant date fairly complete valuations will be available for all industries, and the returns collected in 1909 certainly shew a considerable improvement over those of previous years. In the meantime the figures quoted must be taken with all their limitations. The table hereunder shews the approximate value of the production from all industries during the year 1909:—

ESTIMATED VALUE OF PRODUCTION FROM INDUSTRIES, 1909.

State.	Agriculture.	Pastoral.	Dairy, Poultry, & Bee-farming.	Forestry and Fisheries.	Mining.	Manufacturing.* (Val. added in Process of Manuf.)	Total.
	£1000	£1000.	£1000.	£1000.	£1000.	£1000.	£1000.
N.S. Wales ...	13,196	23,403	5,377	1,201	7,407	15,013	65,597
Victoria ...	12,036	8,546	5,511	742	2,901	12,809	42,545
Queensland ...	3,485	11,862	2,088	1,036	3,655	4,439	26,565
South Aust. ...	7,459	3,263	1,198	193	478	3,877	16,468
West. Australia	2,912	2,792	335	1,066	7,059	2,161	16,325
Tasmania ...	1,968	998	555	224	1,545	1,719	7,009
C'wealth ...	41,056	50,864	15,064	4,462	23,045	40,018	174,509

* These amounts differ from those given in Section XIII., Manufacturing Industries, owing to certain products which are there included having been included in Dairy Farming and Forestry in this table.

A glance at the figures in the above table will give some idea of the distribution of the great producing industries throughout the Commonwealth. Thus Victoria and New South Wales, as might naturally be expected, take the leading position in Agriculture, with South Australia and Queensland following. In Pastoral Production, New South Wales is easily first, with Queensland second. In dairy, poultry, and bee farming Victoria occupies the leading position, followed in order by New South Wales, Queensland, and South Australia, while in Forestry and Fisheries, and in Mining, New South Wales and

Western Australia occupy first and second place respectively with Queensland third in each case. Manufactories on an extensive scale are at present practically confined to New South Wales and Victoria.

The total production from all industries was £174,509,000, equal to an average of £40 7s. 8d. per inhabitant.

In the next table will be found the value of production at decennial intervals since 1871, and for the year 1909. The figures for the Census years have been taken from "Australia and New Zealand," and, in view of what has been said in a previous paragraph, must be regarded as very rough estimates only:—

ESTIMATED VALUE OF PRODUCTION, 1872 to 1909.

State.	1871.	1881.	1891.	1901.	1909.	Development* since 1871.
	£1000.	£1000.	£1000.	£1000.	£1000.	
New South Wales ...	15,379	25,180	36,740	38,954	65,597	4.3
Victoria	19,260	22,750	30,320	30,807	42,545	2.2
Queensland	3,995	10,200	14,274	16,933	26,565	6.6
South Australia ...	5,228	8,457	9,026	10,314	16,468	3.1
Western Australia ...	707	943	1,806	12,544	16,325	23.1
Tasmania	2,131	3,586	3,921	5,033	7,009	3.3
Commonwealth ...	46,700	71,116	96,087	114,585	174,509	3.7
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.

* Ratio of value of production for 1909 to that for 1871.

APPENDIX.

Recent information and returns which have come to hand since the various sections of this book were sent to press, are given below.

SECTION II.

DISCOVERY, COLONISATION, AND FEDERATION OF AUSTRALIA.

§ 3. The Creation of the Several Colonies.

14. **Proposed Transfer of the Northern Territory to the Commonwealth, p. 22.** The Northern Territory Acceptance Act was assented to on the 16th November, 1910, and came into force by proclamation on the 1st January, 1911. Under this Act the Northern Territory was accepted by the Commonwealth as a Territory under the authority of the Commonwealth, by the name of the Northern Territory of Australia. The acceptance included the Palmerston and Pine Creek and the Port Augusta railways. (See page 711 hereof.) On the 25th November, 1910, the Northern Territory (Administration) Act, 1910, was assented to, and came into force on the same day as the Acceptance Act. The Administration Act provides for the appointment of an Administrator, for the continuance of State laws, and for the application of certain Commonwealth Acts in the Territory; it also directs that the State Courts should continue to have jurisdiction in the Territory, and it empowers the Governor-General to make Ordinances having the force of law in the Territory.

§ 7. Creation of the Commonwealth.

2. **Summary of the Commonwealth Constitution.** (i.) *Chapter I.—The Parliament. Part V., Powers of the Parliament (sections 51 to 60),* **p. 39.*** Two proposed laws for the alteration of the Constitution were submitted to the people for acceptance or rejection on the 26th April, 1911. They were (A) The Constitution Alteration (Legislative Powers) 1910, and (B) the Constitution Alteration (Monopolies) 1910. If, in a majority of the States, a majority of the electors voting approve the proposed laws, and if a majority of all the electors voting also approve them, they are presented to the Governor-General for the King's assent.

(A) *Constitution Alteration (Legislative Powers) 1910.* The object of this proposed law is to extend the powers of the Commonwealth Government (under section 51 of the Constitution) in four directions, viz.—(*a*) Trade and Commerce, (*b*) Corporations, (*c*) Industrial matters, and (*d*) Trusts and monopolies.

---

* See also Section XXVII. *Industrial Unionism and Industrial Legislation*, para. 6, page 1067.

(*a*) *Trade and Commerce.* In Section 51, para. (i.) of the Constitution it is proposed to omit the words "with other countries, and among the States," so as to give the Commonwealth Parliament power to legislate with respect to trade and commerce, without limitation.

(*b*) *Corporations.* It is proposed to omit the words (para. xx.) "Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth," and to insert in lieu thereof the words—"Corporations including (*a*) the creation, dissolution, regulation, and control of corporations; (*b*) corporations formed under the law of a State (except any corporation formed solely for religious, charitable, scientific or artistic purposes, and not for the acquisition of gain by the corporation or its members), including their dissolution, regulation, and control; and (*c*) foreign corporations, including their regulation and control."

(*c*) *Industrial Matters.* In para. xxxv. it is proposed to omit the words "Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State," and to insert in lieu thereof the words "Labour and employment, including (*a*) the wages and conditions of labour and employment in any trade, industry, or calling; and (*b*) the prevention and settlement of industrial disputes, including disputes in relation to employment on or about railways, the property of any State."

(*d*) *Trusts and Monopolies.* It is proposed to amend Section 51 of the Constitution by adding at the end thereof the following paragraph:—"(xl.) Combinations and monopolies in relation to the production, manufacture, or supply of goods or services."

(B) *Constitution Alteration (Monopolies) 1910.* The object of this proposed law is to alter the Constitution by inserting, after Section 51 thereof, the following section. "51A. When each House of Parliament, in the same session, has by resolution declared "that the industry or business of producing, manufacturing, or supplying goods, or of "supplying any specified services, is the subject of any monopoly, the Parliament shall "have power to make laws for carrying on the industry or business by or under the "control of the Commonwealth, and acquiring for that purpose on just terms any "property used in connection with the industry or business."

Complete particulars as to the results of the Referenda on the above proposals were not available in time for publication herein. The following table, however, shews the number of votes in favour of, and against, each of the proposed laws, as on the 1st May, 1911. The outstanding returns at that date were not sufficiently numerous to affect the results; it will be seen, therefore, that neither of the proposed laws was approved by the people.

COMMONWEALTH REFERENDA—RESULTS OF VOTING AS AT THE 1st MAY, 1911.

Particulars.	Legislative Powers.			Monopolies.		
	In Favour.	Against.	Majority Against.	In Favour.	Against.	Majority Against.
	Number.	Number.	Number.	Number.	Number.	Number.
New South Wales	128,011	225,202	97,191	127,656	222,402	94,746
Victoria	165,079	262,536	97,457	165,524	260,785	95,261

* Majority in favour.

(ii). *Chapter VIII.—Alteration of the Constitution*, **p. 44.** *Footnote.* The Constitution has also been altered by the Surplus Revenue Act 1910 (for provisions of which see page 800).

SECTION IV.

POPULATION.

§ 4. Elements of Growth of Population.

3. **Net Immigration, p. 131.**—The following table gives particulars of net immigration for the year 1910 :—

NET IMMIGRATION,* 1910.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.A.	Tas.	C'wlth.
Arrivals	273,573	222,457	91,221	84,039	31,403	35,377	95,692
Departures	270,402	211,852	81,066	74,157	24,538	38,508	58,145
Excess of arrivals over departures	3,171	10,605	10,155	9,882	6,865	—3,131	37,547

Note.— — signifies excess of departures over arrivals. * Figures for States represent Interstate and Oversea migration; those for Commonwealth represent Oversea migration only.

4. **Total Increase, p. 133.**—The following table gives particulars of the total increase in population for each State and for the Commonwealth during the year 1910 :—

TOTAL INCREASE OF POPULATION, 1910.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W.A.	Tas.	C'wlth.
Excess of births over deaths ...	29,286	16,705	10,425	6,484	4,845	3,466	71,211
Excess of arrivals over departures	3,171	10,605	10,155	9,882	6,865	—3,131	37,547
Total increase ...	32,457	27,310	20,580	16,366	11,710	335	108,758

Note.— — signifies excess of departures over arrivals.

§ 8. Enumerations and Estimates.

5. **Estimates of Population, pp. 140 to 144.**—The following table shews the estimated population of each State and the Commonwealth on the 31st December, 1910 :—

ESTIMATED POPULATION ON 31st DECEMBER, 1910.

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	C'wealth.
Males ...	879,955	671,308	321,920	231,999	164,828	95,539	2,365,549
Females ...	780,465	653,073	271,314	200,414	120,425	91,656	2,117,347
Total ...	1,660,420	1,324,381	593,234	432,413	285,253	187,195	4,482,896

SECTION V.

VITAL STATISTICS.

§ 1. Births.

1. **Male and Female Births, p. 166.**—The total number of male and female births registered, and the birth rates per 1000 of the population in each State and in the Commonwealth, during the year 1910 were as follows :—

BIRTHS AND BIRTH RATES, 1910.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
Males ...	23,368	16,412	8,260	5,423	3,855	2,888	60,206
Females ...	22,076	15,025	7,909	5,157	3,730	2,698	56,595
Total ...	45,444	31,437	16,169	10,580	7,585	5,586	116,801
Birth rates ...	27.56	24.12	27.58	25.08	27.17	30.26	26.40

§ 2. Marriages.

1. **Marriages, p. 179.**—The following statement shews the number of marriages registered in each State and the Commonwealth, and the marriage rates per 1000 of the mean population, during the year 1910 :—

MARRIAGES AND MARRIAGE RATES, 1910.

Particulars.	N.S W	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
No. of marriages	14,307	10,239	4,768	3,678	2,107	1,493	36,592
Marriage rates*	8 68	7.86	8.13	8.72	7.55	8.09	8.27

* Number of marriages, not persons married, per 1000 of mean population.

3. Deaths.

1. **Male and Female Deaths, p. 186.**—The number of deaths registered in each State and in the Commonwealth during 1910, and the death rates per 1000 of the mean population, are shewn in the following table:—

MALE AND FEMALE DEATHS AND DEATH RATES, 1910.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
Male	9,339	8,128	3,594	2,235	1,760	1,098	26,154
Female ...	6,819	6,604	2,150	1,861	980	1,022	19,436
Total	16,158	14,732	5,744	4,096	2,740	2,120	45,590
Death rates ...	9.80	11.30	9.80	9.71	9.81	11.49	10.30

SECTION VI.

LAND TENURE AND SETTLEMENT.

§ 2. Land Legislation in Individual States.

4. **South Australia and the Northern Territory, pp. 241-2. (See also Northern Territory, p. 255.)** Under the Northern Territory (Administration) Act 1910, which came into force on the 1st January, 1911, it is provided that no Crown lands in the Territory shall be sold or disposed of for any estate of freehold, except in pursuance of some contract entered into before the commencement of the Act.

SECTION VIII.

AGRICULTURAL PRODUCTION.

§ 4. Wheat.

1. **Progress of Wheat Growing, p. 366.**—The following table shews the estimated area under wheat and the prospective yields of wheat in each State and the Commonwealth for the season 1910-11:—

ESTIMATED AREAS UNDER WHEAT AND PROSPECTIVE YIELDS, 1910-11.

Particulars.	N.S.W.	Vic.*	Q'land.	S. Aust.	W. Aust.	Tas.	Cwlth.
Estimated area ... Acres	2,155,140	2,398,089	103,935	2,045,890	619,710	43,022	7,365,786
Prospective yield ... Bush.	23,500,000	34,813,019	1,310,171	24,375,835	7,594,264	1,071,248	92,664,537
Average yield per acre ...	10.90	14.52	12.61	11.91	12.25	24.90	12.58

* Final Figures.

SECTION XII.

MINES AND MINING.

§ 2. Gold.

2. **Production of Gold at Various Periods, p. 495.**—The Australian gold yield for 1910 is shewn in the subjoined table. The figures are open to final revision, but only to a slight extent:—

GOLD RAISED IN AUSTRALIA, 1910.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.*	W. Aust.	Tas.*	C'wealth.
Quantity ... Fine ozs.	189,214	578,860	440,784	12,000	1,470,627	45,000	2,736,485
Value ... ... £	803,730	2,458,841	1,872,331	50,973	6,246,826	191,148	11,623,849

* Approximate.

The quantity raised in New Zealand during the year 1910 was 446,192 fine ounces, valued at £1,895,303, making the total yield for Australasia 3,182,677 fine ounces, valued at £13,519,152.

SECTION XVII.

ROADS AND RAILWAYS.

§ 2. Railways. (b) Government Railways.

3. **Interstate Communication (page 701).**—The report of the Railway War Conference has been issued. Information in regard thereto may be found in *Section XXVIII., Defence*, page 100.

SECTION XIX.

SECTION XXV.

GENERAL GOVERNMENT.

§ 1. Scheme of Parliamentary Government.

7. Powers and Functions of the Governor-General and Governors (page 959).—The Rt. Hon. the Earl of Dudley, P.C., G.C.M.G., G.C.V.O., etc., will retire in July, 1911, from the Governor-Generalship of the Commonwealth; he will be succeeded by the Rt. Hon. Lord Denman, K.C.V.O., etc.

The Governorship of the State of Victoria will be vacated by Sir Thomas Gibson-Carmichael, Bart., LL.D., K.C.M.G., on 19th May 1911; his successor will be Sir John Fleetwood Fuller, Bart., who will be sworn in on the 24th May, 1911.

3. Administrative Government.

Tasmania page 978).—Other Acts now administered by the Chief Secretary's Department are as follow:—Explosives, Factories, Wages Boards, Machinery, Medica Practitioners, and Midwifery Acts. The word Coroners should be deleted from this list of Acts administered.
